Pricing Practices

EXTENSION OF REMARKS
OF

HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. KEARNS. Mr. Speaker, looking at the history of the investigations and orders of the Federal Trade Commission in reference to basing point practices, it is easy to feel that our real trouble is with a faulty interpretation of the antitrust laws by our administrative bodies and the courts. It is true that the philosophy and theory of economic practice held by some of the lawyers in the Department of Justice and by representatives of the Federal Trade Commission do not seem to square with what industry generally regards as good economic practice, which will be referred to later.

However, it is plain that the trouble goes deeper than that. The trouble comes, I think, from basically unsound provisions in our antitrust laws. These provisions lead to confusing interpretations which have produced serious results.

The present antitrust law incorporates the amendments of the Robinson-Patman Act of 1936. When that legislation was pending in the House of Representatives, a member of the conference committee handling the bill stated: "You might as well know that this bill contains many inconsistencies and the courts will have the devil's own job to unravel the tangle." That has proven to be the case. We have had such a welter of decisions, both by the Federal Trade Commission and the courts, that lawyers scarcely know how to advise their clients.

The law as it now stands provides, in part, as follows:

United States Code, section 13 (a): It shall be unlawful for any person engaged in commerce * * * to discriminate in price between different purchasers of commodities of like grade and quality * * * where the effect of such discrimination may be substantially to lessen competition or tend to create a monopoly—or to injure or destroy or prevent competition. * * *

Section 13 (b): Upon proof being made * * * that there has been discrimination * * * the burden of rebutting the prima facie case thus made by showing justification shall be upon the person charged with a violation of this section * * * provided, however, that nothing contained in * * * this title shall prevent a seller rebutting a prima facie case thus made by showing that his lower price or the furnishing of services or facilities to any purchaser or purchasers was made in good faith to meet an equally low price of a competitor, or the services or facilities furnished by a competitor.

In the first Cement case, the Federal Trade Commission entered an order against the multiple basing point delivered price of cement. The court of appeals set it aside on September 20, 1946. In that case the court of appeals said:

Numerous bills have been introduced in Congress, seeking to outlaw the basing-price price system. Countless time has been spent in hearings by congressional committees before whom it has been assailed and defended. The pages of the CONGRESSIONAL RECORD bear mute but indisputable proof of the fact that Congress has repeatedly refused to declare its use illegal. * * * Notwithstanding this congressional attitude * * * this court is now urged to hold that this system is illegal per se * * * and to require that cement be sold on an f. o. b. basis. In our judgment, the question of whether the basing-point price system should be declared illegal rests clearly within the legislative domain.

However, the Supreme Court of the United States in the last Cement case held that the basing-point price system followed by the cement industry resulted in unlawful discriminations which substantially lessened competition and tended to create a monopoly in commerce. The Supreme Court did not agree with the court of appeals in the first Cement case that the question of illegality was one solely for Congress.

There were elements in the Cement case bearing on the point of conspiracy in restraint of trade which might not be found present in the pricing situation in other industries. These elements certainly contributed heavily to the final decision of the Supreme Court. Perhaps the basing point price systems of other industries would not be found to be unlawfully discriminatory. Basic industry, however, cannot be left in a state of uncertainty dependent upon what the Federal Trade Commission and the courts might declare in the future as to past practices.

Therefore, it seems clear that the problem should be attacked at its source and a good look taken at the provisions of the antitrust laws. Unfortunately, as long as any degree of uncertainty exists, the various schools of economic thinking move farther and farther apart. Since one school is represented by the present official attitude of the Federal Trade Commission and the Department of Justice, supported by the language of the Supreme Court in the Cement case, it will be profitable to take a look at their philosophy on the basing point price question.

At a symposium under the Robinson-Patman Act held in New York on January 22, 1947, the associate general counsel of the Federal Trade Commission, Mr. Walter B. Woodin, was asked the following question:

If (a manufacturer) ships into territory where he has to absorb some kind of freight in order to sell at all, is it your view that his action reduces competition and is inherently collusive?

Answer:

I would say that setting up a system in which not merely two but all members of the industry indulge in that systematic form of freight absorption, there is ground for the inference that it is the purpose to accomplish * * * indentity of delivered price, and, that being so, it raises a serious question under the statute whether that is good faith to meet an equally low price of a competitor.

Mr. Woodin further stated:

They (manufacturers) are not at liberty under the law, as I see it, to go into distant markets and take less for their commodity than they get at home if the result be adverse to the interests of competition.

Whereupon, he was asked this question:

Would not the inevitable result of that theory be to destroy this country as a national economic unit and to break it up into a series of little "Balkan" principalities, each one of which would be dominated by local competitors—which would have definite boundary lines determined by freight, so that other people living outside any of those areas could not ship into an area which, freight-wise, is nearer some mill other than their own?

Mr. Woodin answered:

A mill which cannot profitably absorb freight into a certain market by rail could profitably absorb it and could sell into that market and deliver into that market if they adopt a cheaper form of transportation.

He said further:

I personally have no enthusiasm about making a price level high enough to permit

everybody to sell everywhere * * * the question is whether we must have a national market for all of our products, or should have a national market for all of our products. Why not a series of sectional markets into which the people who can deliver there at the lowest cost because of their proximity to the delivery point? Why shouldn't they have a monopoly there, since you want to call it that, but it will consist only and result only from the fact that they are able to make a lower price that would keep other people out.

He was then asked:

If you had the country divided into separate economic units or little "Balkan" principalities, what motive would there be for any one inhabitant of any one of those "Balkan" countries to invade the territory of another? Would you not have in the end a far more rigid structure than you have at the present time because there would be no incentive to break that down?

Mr. Woodin answered:

I don't see how it can be any more rigid than we had it at the time when the cement base price went through the depression and for 5 years afterward without a change of 1 cent.

He was then asked:

But if the Commission * * * put every one of those cement mills in straitjackets so that they could not lawfully ship into territory where they did not have the advantage in freight rates, do you think there would be any greater flexibility in cement prices?

Mr. Woodin answered:

I certainly do, and, in addition to flexibility, there would be a lower level. This whole delivered price philosophy makes the freight advantage the sole determinant * * * and that means that all the other advantages, consisting of differences in efficiency and manufacture and things of that kind, are simply swallowed up. They are not given the effect that they would have under a real competitive system.

Mr. Woodin further stated:

There is no way I know of in economics or law, and it probably isn't desirable anyway, to prevent the manufacturer that has the advantage in delivered cost from using it to make a lower price and keep his competitor across the country out of his market. I think it might be very desirable that he do so.

I have set forth these questions and answers at some length because I have not found any place a better statement of the underlying thinking of some of the representatives of our Government agencies on this particular point.

The question is whether or not, as a matter of economic development, Balkanizing the country from a business standpoint will produce lower prices than we now have under our basing-point systems. In some instances, there is no question but that it will increase prices. For example, take a basic commodity manufacturer who has no competition within a fairly large area. He will certainly raise his prices to the point where they will be just under a competitor's f. o. b. mill price plus freight.

But, in addition to the higher prices resulting from the Balkanization of the country, is the further fact that, for instance, a fabricator of steel will not know what his price is. If he is located in Youngstown, Ohio, his delivered steel price from Sharon and Youngstown will be less than his delivered steel price from Pittsburgh.

The development of the basing-point system of distributing basic commodities answered just that objection. The entire American economic system is based upon the historic patterns of distribution which have grown up over the years in American industry. I think it can be fairly said that the delivered-price system is a thoroughly American way of handling the distribution of basic commodities over large continental areas. No other nation has such widely dispersed production like we have. In no other country is the influence of a large continental area a real factor. Basing-point or delivery pricing is a system which industry and the public generally have considered good from an economic standpoint.

Thus, we have before us a first-class conflict between what people like us regard as sound business practice and what our administrative bodies and the United States Supreme Court regard as practice contrary to public policy.

We are never going to get the question settled until this conflict is reconciled. It seems to me it could be reconciled by amending the antitrust laws to provide that absorption of delivery costs will not be discrimination within the meaning of the first part of section 13 (a) and will not be prima facie evidence of a conspiracy in restraint of trade.

Perhaps nothing more would be required than an amendment to section 13 (a) or 13 (b), as follows:

Provided further, That nothing contained in this title shall prevent a seller from absorbing delivery costs in good faith to meet or better the price of a competitor.

This follows language of section 13 (b) except that it reads "to meet or better" rather than "to meet." We have some court decisions which hold that the language of the present law means only "to meet" and not "to better."

In suggesting the above amendment to the present law, I have not overlooked other serious questions involved. From time to time, it has been proven that reduced prices, freight absorption, and the granting of services or facilities, have been used by sellers to lessen competition by driving out competitors; and this practice has contributed to the growth of monopoly. Therefore, the law must express a public policy against this and similar practices.

The amendment only makes it possible for a seller to absorb delivery costs in good faith to meet or better the price competition. The seller, under the suggested amendment, would still have to get as much for his product at a distant point as he gets at the mill location. He could, however, absorb delivery costs in every market in the country, to meet competition.

It seems to me further that this type of amendment would meet a good portion of the objection of the opposing school of thought, which is, in Mr. Woodin's words:

This whole delivered-price philosophy makes the freight advantage the sole determinant * * * and that means that all the other advantages, consisting of differences in efficiency and manufacture and things of that kind are simply swallowed up.

Permitting a seller to absorb freight in good faith to meet or better the price of a competitor would not make freight advantage the sole determinant.

The Coal Situation

REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. ALLEN of Illinois. Mr. Speaker, I rise at this time to once again remind the leadership of the Congress of the very serious situation confronting the Nation today because of the existing coal strike. I full well realize that this subject must be on the minds of many other Members of this body at this very moment. I am certain that I speak for a great many of them, and further I am very certain that I speak for the minority membership.

On January 6, 1950, I went to the White House to urge that the President recognize the serious situation existing and that he use his offices to prevent further human as well as economic suffering. This plea fell on deaf ears. On the following Monday, January 9, in company with many of my colleagues, I attended a meeting of the Members of the Congress from the Middle West to study what steps should be taken to remedy the situation. I am constrained to state that the attendance at that meeting was made up almost entirely of Members of the Republican Party.

On January 12, 1950, I introduced a concurrent resolution, along with several other Members of the Congress, directing the President that it was the sense of the Congress that he should take necessary remedial action.

On that same date I asked that the House consider these resolutions.

On January 26 I took the floor of this House and asked the Speaker to join with the leadership of the Senate in requesting the President of the United States to take the necessary action which would bring relief to the Nation. I explained then and in the past that the Congress had given the President the authority to act.

Now again today I make the plea to recognize the situation we have allowed the Nation to be placed in.

I believe that the people of this Nation are entitled to know the facts concerning the efforts we of the minority have made to forestall the crisis we have today:

First. We have asked the President to act. He has refused to do so until such a late date that the situation is completely out of hand and the health, safety, and welfare of the people have been seriously jeopardized.

Second. The leadership of this House as well as the leadership of the United

States Senate are in that position because they have large working majorities in both of the Houses of Congress. This leadership enjoys a personal conference with the President at least once each week. They either have failed to discuss this question with the President or they have failed to convince the President, who is of the same political faith as they, that he should act.

Third. Failing this, this same Democratic leadership has failed to take any action in the Congress. We must all know that they, and they alone, can take such action for they are the leaders of the majority party. We of the minority cannot even have our pleas considered because we are lacking in voting strength.

I have pointed out the above situation so as to make clear where the blame rests in this crisis and who must bear the responsibility for it. There is only one answer and that is the administration and the administration's leadership in the Congress.

I am certain that many, many Members will join with me in stating clearly that we have not in the past nor will we be guilty in the future of sacrificing the prestige of the Government on the political altar to gain political favor with group selfishness.

I state once and for all that I, as well as many Members of the Congress have taken every action possible to have obviated this coal situation, but our hands have thus far been tied, and they have been tied by the President and the Democratic leadership of the House and Senate of the Congress of the United States.

Happenings in Washington

EXTENSION OF REMARKS
OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 28 (legislative day of Wednesday, February 22), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address entitled "Happenings in Washington," delivered by me on February 27, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HAPPENINGS IN WASHINGTON

(Program No. 19)

My fellow Pennsylvanians, this is ED MARTIN speaking to you from the Nation's Capital and bringing you another discussion of happenings in Washington.

Congress has begun work on a new tax bill—a matter which affects every home and every individual in the United States.

There has been a great deal of misunderstanding about Federal taxes because they are divided into two main classifications—direct taxes, such as the income tax, and hidden taxes, which are included in the price of everything we buy.

Even those in the low-income brackets who pay no Federal income tax at all are not tax exempt. Many others who are subject to income taxes are not aware of how much more the Government is taking from their pockets through concealed taxation.

If our people realized that all of them, even those on the relief rolls, are paying heavy Federal taxes—then taxes all around would be lower today. Because, then, our people would rise up unanimously and would demand less spending and less waste in government.

You all know where I stand. I am a member of the Senate Finance Committee, which handles all tax legislation. On that committee I have been fighting consistently for lower taxes and government at lower cost. On the Senate floor and in public and private meetings I have been trying to make our people understand that taxes can be reduced only if the Government spending is cut down.

I think you will remember that during my term as Governor of Pennsylvania, we were able to reduce State taxes by $322,900,000. This was done despite increased appropriations for health, education, welfare, conservation, stream clearance, and mental and penal institutions.

At present, the Ways and Means Committee of the House is conducting hearings on the new tax bill which will include reduction of some of the Federal excise taxes. I have been fighting to reduce those taxes since I came to Washington. And I have been fighting to reduce and to disclose to the public the hidden taxes they pay, the ones they are not even aware of.

These excises and hidden taxes are not soak-the-rich taxes. They are poor man's taxes. They hit the poor harder than they hit the rich. I'll prove that to you in a moment.

Let us consider first the excise situation which affects every one of you. You pay it when you buy a radio set, when you go to the movies, when you buy an electric refrigerator, when you buy a wedding ring, an alarm clock, or an electric-light bulb.

You pay it when you buy a lipstick, or talcum powder, or even the oils and creams to soothe the chafed skin of a young baby.

You pay it on your monthly telephone bill, your gas and electric bill, your railroad or bus ticket, and when you send a telegram. You pay taxes on a thousand other things used in your daily living. This Government calls them luxuries.

They are unfair. They are discriminatory. All too often they are without rhyme or reason. And they hit the little fellow harder than the man with money.

I could go on indefinitely with these things. Now how is the little man hit? Well, it doesn't matter if you earned a million dollars or only a thousand dollars in 1949, you've got to pay the same tax for shaving lotion and baby oil, and telephone bills, and many other necessities of daily living.

These taxes have no relation to what you earn. They fall far more heavily on the poor man than on the man with a high income.

I want to assure you that I shall work without let-up in the Senate Finance Committee toward getting rid of these taxes. And I suggest that you write to your Congressmen and make your views known, too. Now is the time to do it.

Some of the excises are hidden taxes. By that I mean you do not pay them directly as tax, the way you do when you buy a woman's handbag, a wrist watch, or a can of talcum powder.

These excises are paid by the manufacturer but are concealed in the total purchase price you pay. You are not told that a part of the price is made up of taxes. All you know is that prices are high. You blame it on the manufacturer, and the dealer, without realizing how much is tax.

There are other concealed taxes, in addition to the excises.

I want to call attention particularly at this time to all these hidden taxes. They are part of the price of everything you buy: food, clothing, shelter, fuel and light, insurance, amusements, and even streetcar transportation.

I think that our people should make clear to Congress that they want as many as possible of the hidden taxes eliminated and that they want to know what taxes they pay. They don't want to be fooled.

Let me point out the huge amount of taxes which are concealed but which you pay just the same.

A recent survey disclosed that the cost of a pair of shoes includes no less than 502 hidden or indirect taxes. Can you imagine that?

That should give the mother who buys shoes for three or four children something to think about. She pays the taxes on the shoe factory, the machinery, the leather, the canvas lining of the shoes, the rubber heels, and everything else that entered into the making of the shoes. Can you imagine how much cheaper the shoes would be without those hidden taxes?

And let me remind you that shoes used to be cheaper back in the days before all the taxes were loaded on by the Federal, State, and local governments.

In the cost of a loaf of bread there are 151 different, distinct and separate taxes. In a quart of milk, 78 taxes. In a plow, 142 taxes. In a woman's cotton dress, 125 taxes. In a cake of soap, 154 different taxes. In a woman's hat, 150 taxes.

And in an egg—one of those surplus eggs that the Government buys up and stores in caves in the ground—100 different hidden taxes.

Do you know that about 25 percent of the rent you pay is hidden taxes?

All of these things were cheaper when taxes were lower and fewer. They will be cheaper again, if the public insists that the Government tax less and spend less.

Consider a new automobile. It has 206 hidden taxes. Suppose you buy a new car for about $1,600. Well, your taxes on that car—most of them hidden and indirect—come to about $350. Without those taxes you could buy the same automobile for $1,250.

Recently a research group made a study of how these hundreds of hidden taxes affect the little man.

It found a family of four whose only income was $80 a month. Imagine trying to live on that, without any taxes at all.

That family spent every penny trying to live. And of the $80 which it spent each month, $10.29 was taken away in hidden taxes. That poor family was paying out in taxes $123.48 a year.

Another survey was made of a family of four making $200 a month. That family paid out $26.23 each month in hidden taxes on food, clothing, shelter, and so on. It paid concealed taxes of $314.76 a year.

Here is an interesting angle. Neither of the wage earners were required to pay a penny in income taxes. Apparently they were tax exempt, but did not realize how much of their small income was actually being taken away by these painless, hidden taxes.

They thought the Government was not taxing them at all. They were unaware that 13 cents out of every dollar was quietly taken away from them by these hidden taxes.

In the same manner so many of our people are being fooled today.

Let us trace one of these items and see what is meant by hidden taxes. Take the cotton dress which has 125 different taxes by the time your wife buys it in the store.

You must start back with the bale of cotton. There are taxes on the land, on the farming implements, for the school district,

etc. These are included as part of the cost of raising the cotton and are passed along in the price of the bale.

Then at the cotton gin many other taxes are added and passed on to the plant where the cotton is spun and woven.

Then there is the factory where the dress is made which adds its taxes and passes them along to the wholesaler in the cost. And, of course, the accessories—the buttons and the trimmings—all came up from raw material and gathered taxes on the way.

The wholesaler has his taxes and the retailer has his. In order for them to make a profit and stay in business, these taxes must be added to the cost of the dress. Your wife pays.

It has been figured out that a simple cotton dress, costing $7.85 has no less than $2.20 worth of hidden taxes included in the price.

Why do we have all these hidden taxes? Why must they be piled up on top of the excise taxes, direct and indirect, and the heavy Federal income tax?

The answer is simple. We have them because of the high cost of Government.

We have them because the Federal Government is spending the people's earnings at the rate of more than $42,000,000,000 a year while State and local governments add more than twenty billion to the total.

We have them because we are burdened with a national debt that now stands at more than $256,000,000,000, and is climbing higher.

We have them because the administration had abandoned all thought of a balanced budget and is committed to a program of continued deficit financing.

And finally we have them because the administration does not dare let the people realize how heavily they are being taxed to meet the reckless spending.

So they conceal part of the taxes. And when taxes are hidden, they can be pushed on to more people. They can be—and are—foisted on to low-income people as well as those with higher incomes. And the low-income groups don't realize how much they are being taxed.

That is shrewd political trickery. It has been figured out very cleverly. Tax the rich man where it shows—on his corporation and his large income. It makes the people who aren't rich, and that's most of us, feel they are being favored.

Tax the poor man where it doesn't show, with hidden taxes that he doesn't realize he is being forced to pay.

There you have the formula which has emerged from this administration. Tax the rich where it shows and the poor where it doesn't show.

These things are something for you to think about.

And, if you ever want to get out from under this tax burden, they are something for you to shout about and act about.

Just as long as you fool yourselves that the Government is giving you a lot of things free, you are going to continue to pay these taxes.

This is ED MARTIN, speaking to you from the Nation's Capital. I will be with you again in 2 weeks. Thank you for your attention.

United States Headed for Socialism

EXTENSION OF REMARKS

OF

HON. HAROLD O. LOVRE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. LOVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert an editorial which appeared in the American Press in the February 1950 issue. This emphatically indicates that an overwhelming majority, 78 percent of the weekly newspaper editors of the Nation, fear that the United States is headed for socialism. This is another danger signal which should be heeded, so that this disastrous trend may be reversed.

The editorial follows:

SEVENTY-EIGHT PERCENT OF COUNTRY EDITORS FEAR UNITED STATES IS HEADED FOR SOCIALISM

This startling fact was unearthed by the American Press magazine as the result of a poll which it has been conducting for the primary purpose of finding out what the weekly newspaper editors of the United States think it is most important for Congress to accomplish at the present session.

The 3-page questionnaire, which was answered by over 500 editors representing every State in the Union, concluded with the question, "Do you fear that our Nation is headed toward socialism?" All but 22 percent answered "Yes."

The fear seems to be based on what many of the editors refer to as welfare-state measures, as well as on the size of the national debt, huge Government costs and an unbalanced budget. Many believe that Congress' action on compulsory health-insurance legislation will determine whether or not we are going socialistic. Eighty-nine percent of the editors expressed opposition to this measure.

GOVERNMENT FINANCES

But of greatest immediate concern is Government finances. In answer to the question: "What do you consider to be the two most important things for Congress to accomplish at the new session?" 79 percent demanded a balanced budget, reduction of Government costs, or cuts in Federal pay rolls.

Although tax reforms were considered second most important need, only 21 percent asked for immediate tax reductions, regardless of whether or not the budget is balanced. Many of those felt that if taxes were reduced reduction in Government costs would thus be forced.

Thirty-nine percent said they favored tax reductions only if the budget can be balanced and another 36 percent advised leaving taxes as high as they are and create a surplus, if possible, to pay off the debt; 3 percent of the editors favored increasing taxes to meet the debt. But 85 percent would like to see the tax laws rewritten and simplified.

In addition to Government costs and finances, the five next most important things for Congress to do, in the opinion of the editors are:

Enact reforms proposed by Hoover Commission.

Curb welfare-state bills.

Strengthen and clarify foreign policy.

Strengthen and streamline defense; take action to restore the confidence of business in the future.

Sentiments of many of the editors were expressed by 359 who commented, "Unless our Government ceases to be the world's worst businessman, our burdens will continue to increase until a breaking point is reached. Why can't our so-called elected Representatives stop playing politics long enough to see the danger signs and get some sensible laws enacted to encourage free enterprise? What does a young man starting out have to look forward to under the present set-up? They, the lawmakers, seem to have forgotten the basic principles which have made this country as great and strong as it is to date."

Among the country editors, whose combined newspapers have a readership of around 70,000,000 people, only a handful of those replying to the questionnaire indicated general approval of the administration's domestic programs, but many felt that Congress was too steeped in politics to do anything about it. Fourteen of those replying to the question about the most important thing for Congress to do gave the facetious answer, "Go home" or "Adjourn," and many said, "Forget politics."

Remarks by Hon. Herbert H. Lehman, of New York, on the Signing of the Niagara Diversion Treaty

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, February 28 (legislative day of Wednesday, February 22), 1950

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I issued yesterday in connection with the signing, on February 27, 1950, of the Niagara Diversion Treaty between the United States and Canada.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

I am happy to learn of the signature of the long-awaited treaty between Canada and the United States covering the added diversions from the Niagara River. This treaty has been signed as a supplement to the Boundary Waters Treaty of 1909 and as such carries out the promise given in that treaty for the use of the waters of the Niagara for the benefit of the peoples of the United States and Canada.

Under the terms of Executive agreements entered into during the course of the war, Canada has already been receiving the benefits of more water diversions than the United States. This was necessary at the time in order to permit Canada to make her great contribution to the common war effort.

Now we in the United States have the opportunity to make use of the great potential riches with which nature endowed us in the from of the Niagara. The drop of the Niagara waters from the level of Lake Erie to the level of Lake Ontario provides us with potentials for power as great or greater than the greatest hydro-power works in all of the United States. We can expect to be able to develop from these waters an increase of 1,132,000 kilowatts or 7,900,000,000 kilowatt-hours above the amount which we are already deriving from the Niagara. All this will be done, according to the terms of the treaty, without diminishing in any way the great scenic beauties of the Niagara Falls which have been the pride of New York State and of the United States for more than a century.

This development promises to the people of New York State a great new source of cheap power—power for farms, for homes, and for factories. New sources of electric energy and new comforts may be provided for tens of thousands of our farm dwellers and new employment to hundreds of thousands of our city workers.

I and all of us who have been working and studying the Niagara water-power development envison this development as a source of power in association with that

other great source of power potential in the same river basin, the St. Lawrence. If these two great projects are progressively and speedily brought into actual operation, not only New York State but all of the Northeast will be direct beneficiaries of this vast new source of man-saving energy. Of course New York State will receive the most immediate and the greatest direct benefit, but through these power projects there can be a new flowering of this entire area and a new dynamic growth in the entire region. No mere compilation of kilowatt-hours can describe the great additions to our national riches which are now in sight.

For many years I have been hoping for the day when these vast benefits for the people could begin to be derived from the Niagara. Many of the pioneers in hydroelectric development have been working for long years on this project. Many men have dreamed great dreams of what the Niagara could do for the people. Now these hopes, this work, and these dreams are one step closer to realization.

I shall press for the speedy ratification of this treaty when it is submitted to the Senate. The people of New York have reason to hail this day as a great day. The people of the Nation should likewise take note.

Relations Between Ireland and the United States

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 28 (legislative day of Wednesday, February 22), 1950

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Arthur Krock, published in the New York Times of February 28, 1950, commenting on a dinner in honor of Sean Nunan, retiring Minister of Eire.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN THE NATION—GILDING AN ANCIENT LINK BETWEEN TWO CAPITALS

(By Arthur Krock)

WASHINGTON, February 27.—There was a stag dinner party tonight in honor of Sean Nunan, the retiring Minister of Eire, and certain recent developments suffused the occasion with an unusual degree of the wit and sentiment that always prevail when those of Irish stock foregather. This highly respected envoy was returning to Dublin, to the No. 2 post in the Foreign Office; his legation here and ours in Eire had been raised to embassies; the present United States Minister, George A. Garrett, was to be our first Ambassador to the Republic; and everyone was saying good things about Ireland's first Ambassador to Washington, John J. Hearne.

What more could possibly have been needed to make a warm-hearted occasion, further considering that Irishmen, transplanted or growing native, were those principally concerned?

The American politicians who attended must have come with a special glow under their shirt fronts. For long has it been known that the most popular thing an American politician can do, whatever his origin, unless his constituents are all descendants of the invading breed at Boyne Water and still embattled with King James, is to praise the Irish. Even in heavily Anglo-Saxon Mississippi the late Senator Byron Patton Harrison was the more beloved because he signed himself and was known only as Pat.

This sentimental warmth of feeling in the United States toward the Irish has been notably displayed once more by the welcome Washington gave to the news that the legation of Eire has been raised to an embassy. Except for the Vatican, where for 2 years there has been an Ambassador of Eire, the only major diplomatic post created by Dublin is the new one here.

DE VALERA'S VIEW

It is not the fault of the United States that the elevation was not made some years ago. But Eamon de Valera throughout the days of his primacy was, by the Washington test, the most unpopular type of administrator—he believed a nation should live within its income and also be frugal in spending the public revenues. Apparently on that same policy the Swiss maintain only a ministry here. An embassy costs more to operate than a legation, particularly in this Capital. And, though doubtless Mr. de Valera had other reasons for keeping only a Minister here when nearly every other small country in the world was substituting Ambassadors, his fiscal policy was always understood to be important among them.

Whatever his reasons, the envoy of Eire continued for a long time to follow in the protocols, and sit at dinner tables below the envoys of countries which were savage-infested wildernesses when St. Patrick was writing Foid Fiada, "The Cry of the Deer"; still were when Pierce Ferriter, last hold-out against Cromwell, who hanged him in 1653, was writing his poems; and were not much more when Owen Roe O'Sullivan's Jacobite verses were the vogue in 1790. Now, with the elevation of the Eire legate, there are to be 14 out of 52 in the diplomatic corps with the rank of Minister whom he will outrank in the capital of a nation which has so many links with his own.

In the protocols Ambassador Hearne will take his place just after the Ambassador of Guatemala and 10 files below the Ambassador of Israel, whose advent to Washington from the nation that reemerged from the rubble of history was the most romantic experience of the diplomatic corps here until the creation of an Irish Ambassador. Incidentally, both events touch on the statement by George William Russell that "after the spiritual powers there is nothing in the world more unconquerable than the spirit of nationality [which] * * * in Ireland will persist even though the mightiest of material powers be its neighbor."

CAREFULLY NEGOTIATED

There is no reason to believe that the pleasure in Washington over the new accord with Eire exceeds that in Dublin, or that Mr. Garrett's promotion is less popular there than here. He earned it on his official record of cooperation and accomplishment in the common interest of the two countries, and the new Ambassadress has won as many golden opinions as he has.

As dispatches to this newspaper have noted, an Irish heroine figures in the proceedings, which is traditional in the history of the land where, in County Roscommon, she was born. An enthusiastic Washington dispatch and the headline over it last Saturday related how Miss Mary Cummings, manager of the 1925 F Street Club, had made a one-woman campaign with high personages in Washington to elevate the two legations and to assure Mr. Garrett got the recognition he deserved.

But, despite the soft and gallant impeachment, it would be a mistake to assume that such matters are determined in clubs—either here or in Dublin—or that the President, acting somewhat like a kindly oriental despot, decides on Ambassadors because of such zeal as Miss Cummings displayed in this instance.

The transition of the legations to embassies was carefully negotiated for some time by the Department of State and the Department for External Affairs in Dublin, and then officially recommended to the President and the Prime Minister. Mr. Garrett was not only promoted on his record; he had many powerful endorsements from Democratic leaders in Congress.

What Miss Cummings did was to make sure that nobody forgot to see both things through. Including, by the way, the President.

Jaycee Distinguished Service Award to Alfred James Dickinson

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 28 (legislative day of Wednesday, February 22), 1950

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a statement in connection with the Jaycee distinguished service award to Alfred James Dickinson, of Richmond, Va., who was named the outstanding young man of Virginia for 1949 by the Virginia Junior Chamber of Commerce.

This is a well-deserved tribute to Mr. Dickinson and is a very high compliment, as this annual award by the Junior Chamber of Commerce of Virginia is made only after the most exhaustive investigation and consideration to see that it is based upon merit, and is fully deserved.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

DANVILLE, February 25.—Alfred James Dickinson, 33, of Richmond, tonight was named the outstanding young man of Virginia for 1949 by the Virginia Junior Chamber of Commerce. Announcement of the recipient was made by Atty. Gen. J. Lindsay Almond, Jr., at a banquet in Hotel Danville for directors and members of the Virginia junior chamber.

Attorney General Almond served with Dr. Dabney S. Lancaster, president of Longwood College, and Russell B. Newton, president of Dan River Mills, as judges in the selection of Mr. Dickinson to receive the Jaycee distinguished service award. Mr. Dickinson was nominated by Walter B. Gillette. Robert L. Stone, of Richmond, was Jaycee chairman of the distinguished service award committee.

Mr. Dickinson, who last month was named Richmond's outstanding young man of 1949, has actively encouraged young men to take an interest in community and civic affairs. As president of the general alumni association of the University of Richmond, he urged the younger alumni to become active in alumni affairs. And as a member of the Richmond central committee of the American Legion, he emphasized the need for veterans to maintain unselfish motives. He has also given much time to obtaining financial aid for young men seeking higher education.

A native of Eufaula, Ala., Mr. Dickinson attended high school in Newport News. He was graduated from the University of Richmond in 1937 and from the Harvard University Graduate School of Business Administration in 1939.

He became personal assistant to the comptroller of the Virginia-Carolina Chemical

Corp. in 1939. Following service with the FBI and the Marine Corps, Air Combat Intelligence, he returned to the purchasing department of the Virginia-Carolina Chemical Corp. where he was named acting manager in May 1947, and manager in July 1948.

His civic associations include: President, Richmond Junior Chamber of Commerce; past commander, American Legion Post 316, Richmond; and a member of American Red Cross, Richmond Tuberculosis Association, Public Relations Club of Richmond, Harvard Club of Virginia, Country Club of Virginia, Phi Beta Kappa, Omicron Delta Kappa, and Phi Gamma Delta. He is also a worker in the Richmond area community chest.

Mr. Dickinson is married and has two children.

Joint Committee on Nonessential Federal Expenditures

EXTENSION OF REMARKS

OF

HON. JOHN C. STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Tuesday, February 28 (legislative day of Wednesday, February 22), 1950

Mr. STENNIS. Mr. President, there appeared in the February 27 edition of the Evening Star an editorial entitled "A Valuable Publicity Medium," which points out one of the fine services rendered by the Joint Committee on Nonessential Federal Expenditures. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD, as it is of value to the Congress and the people of the Nation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A VALUABLE PUBLICITY MEDIUM

Senator HUMPHREY, Democrat of Minnesota, wants to abolish the Byrd Committee on Nonessential Federal Expenditures on the ground that it is used only as a publicity medium. But a lot of people who are more worried about Federal spending than Senator HUMPHREY seems to be will contend that the committee's publicity activities are a very good reason for continuing it in existence.

It is true that Senator BYRD and his colleagues of the joint group have publicized freely and often the inefficiencies and extravagances of the Government. The committee has kept the spotlight focused on the growing size of the executive establishment, a trend that is all the more disturbing in view of the fact that the war emergency ended nearly 5 years ago. It is hard to measure the benefits of this publicity in specific terms. There is good cause to believe, however, that the watchdog role of the Byrd committee has had a restraining effect not only on the departments and independent agencies but on Congress as well.

To those who regard governmental retrenchment and thrift as old-fashioned and unnecessary, the joint committee's frequent reports on Federal expansion and spending are understandably irritating. That, in itself, is as good an argument as any for making certain that the committee keeps up the good work. The relatively small cost of maintaining this congressional publicity medium is a profitable investment, the returns on which in terms of administrative savings can be large indeed.

Displaced Persons Legislation

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 28 (legislative day of Wednesday, February 22), 1950

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article relating to displaced persons legislation, from the Labor Record, of Joliet, Ill., for February 23, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AFL AND CIO REAFFIRM SUPPORT OF LIBERALIZED DP LEGISLATION

WASHINGTON, D. C.—The American Federation of Labor and the Congress of Industrial Organizations have recently reaffirmed their stand in favor of liberalizing the Displaced Persons Act.

The CIO voiced its approval of a DP bill submitted by Senator HARLEY M. KILGORE, Democrat, of West Virginia, as substitute legislation for the bill previously reported out of the Senate Judiciary Committee by its chairman, Senator PAT MCCARRAN, Democrat, of Nevada.

Both AFL and CIO reiterated their support of H. R. 4567, which is the liberalizing legislation enacted by the House of Representatives last session. In addition, they stated their opposition to amendments which seeks to prohibit further admissions of displaced persons whenever unemployment in the United States reaches 4,000,000 or whenever the number of married couples living in doubled-up dwelling units exceeds 2,000,000.

CIO Legislative Director Nathan Cowan declared: "We call upon the Senate to carry forward in the American tradition of equity, justice, and recognition of human dignity by passing at the earliest possible moment the substitute displaced persons bill offered by Senator KILGORE and his colleagues."

The AFL executive council issued a statement pointing out that the AFL would be the first to protest against legislation which actually undermines the job security of American workers or which really restricts their housing opportunities.

"But we know from experience," the AFL statement read, "that the admission of displaced persons at a limited rate, widely dispersed throughout the country and in practice dispatched to areas of labor shortage, does not in any way jeopardize employment opportunities of American workers nor seriously aggravate housing shortages."

KILGORE submitted his substitute bill with a minority report on the Judiciary Committee's displaced-persons bill. The report indicated that a majority of the committee members now favor amendments to the present DP law which are more liberal than those contained in the committee bill. Senators FRANK P. GRAHAM, Democrat, of North Carolina, and HOMER FERGUSON, Republican, of Michigan, joined with Senator KILGORE in signing the minority report. In addition, Senators WARREN G. MAGNUSON, Democrat, of Washington, and ESTES KEFAUVER, Democrat, of Tennessee, signed a supplemental statement associating themselves with the views of the minority report, and two other Senators, HERBERT R. O'CONOR, Democrat, of Maryland, and ALEXANDER WILEY, Republican, of Wisconsin, filed a separate statement in which they advocated liberalizing the committee bill.

The substitute bill provides for the admission of 339,000 displaced persons, as in the House bill; retention of the International Refugee Organization definition of displaced person, which does not include German expellees; removal of the 40 percent—so-called Baltic—preference, the 30-percent agricultural requirement, and the in-camp priority; a more economic administration of the law; and a bar against the issuance of any visa to any person who has or does adhere to, advocate, and follow "the principles of any political and economic system or philosophy directed toward the destruction of free competitive enterprise and the revolutionary overthrow of representative governments."

Organized Gambling

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 28 (legislative day of Wednesday, February 22), 1950

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that an editorial from a very fine west Texas newspaper, the San Angelo Standard-Times, be printed in the Appendix of the RECORD. The editorial, entitled "Gambling Problem," points up a growing national problem which Congress and the Nation must meet and solve in the near future.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GAMBLING PROBLEM

The situation with respect to organized gambling, to which Mr. Truman recently called attention, is not a new one. It is, rather, a new phase of an old trouble, gangsterism.

When Federal prohibition was enacted, the opportunities in bootlegging tempted many members of the underworld and the powerful and unscrupulous bootleg gangs became such a stench in the country's nostrils that the eighteenth amendment was presently repealed. This forced the outlaw element to seek new fields for its activities. It turned for a while to "protection" racketeering, which in due time was largely broken up. It engaged in racketeering that involved many labor unions, and while this evil has not been wholly eliminated, by any means, it is less noisome than it formerly was.

Gambling in its various forms, from slot machines and policy games on up to racetrack betting, sumptuous poker-palaces and the field of sports in general offered a natural and inviting field for underworld figures. They have moved into it and it has become a highly organized activity, with many ramifications and with many devices for catering to the ever-present gambling spirit.

Probably it can be broken up, by united action on the part of law enforcement agencies, before it becomes too hateful. The public conscience, however, must be more fully aroused on the subject before anything effective can be done.

Addresses at Testimonial Dinner to Hon. Albert W. Hawkes

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Tuesday, February 28 (legislative day of Wednesday, February 22), 1950

Mr. BRICKER. Mr. President, on October 27, 1949, a testimonial dinner was given to one of our former distinguished colleagues, Hon. Albert W. Hawkes, by the New Jersey Chapter of Pro America, at the Hotel Surburban, in East Orange, N. J. Mrs. George E. Stringfellow, president of the New Jersey Chapter of Pro America, presided and introduced the various speakers. I ask unanimous consent that the remarks made by Mrs. Stringfellow be printed in the Appendix of the RECORD, together with the address by the junior Senator from Missouri [Mr. KEM], and remarks by Dr. CHARLES A. EATON, dean of the New Jersey congressional delegation, in introducing our colleague, the senior Senator from Virginia [Mr. BYRD], who made the principal address of the evening. I also ask that the address delivered by the Senator from Virginia be printed in the Appendix of the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

Mrs. STRINGFELLOW. Pro America is composed of a group of citizens who place the welfare of their country above sectional and personal interest. Its purpose is to fight the destructive influences that imperil the sacred heritage bequeathed to us by our forefathers. There is gathered in this huge audience tonight to do honor to the Honorable Albert W. Hawkes, who served New Jersey and the Nation as United States Senator, citizens from as far west as Chicago and from as far south as Tennessee. We regret that the limitation of space prevented many of Senator Hawkes' friends and admirers from being here tonight to share in honoring this truly great American. Pro America is citing him as a good citizen because he has had the courage, character and tenacity of purpose to defend and support the ideals and principles which made this a great Nation.

One of, if not the most acute deficit in the world today, is intellectual integrity, an ingredient with which Senator Albert W. Hawkes is so richly endowed, and it is this priceless ingredient which attracts the members of Pro America to Senator Hawkes and others like him. Unfortunately, however, there are too few.

Dr. CHARLES A. EATON, dean of the New Jersey congressional delegation, a statesman who has rendered remarkable service to the people of this State and Nation, has graciously accepted our invitation to act as toastmaster of this great dinner given in honor of his friend, Senator Albert W. Hawkes.

Hon. JAMES F. KEM. Dr. Eaton, Senator and Mrs. Hawkes, Mrs. Stringfellow, ladies and gentleman. After listening to Dr. EATON'S delicious shafts of humor, I am reminded that a young and aspiring author once asked Will Rogers if the field of humor was crowded. Will Rogers replied: "No; it isn't crowded, except when Congress is in session."

It is a privilege to be here tonight to join the friends and neighbors of the Hawkes in doing them honor. It was my good fortune to serve with Al Hawkes for 2 years in the United States Senate. I had the opportunity to observe, at close range, his courage and his forthrightness, his ability to think clearly, and to express himself so cogently that no man could misunderstand.

He believes in the American way of life, the American system of free enterprise and personal initiative. He believes in a solvent America; he opposes the doctrines of Karl Marx, whether they are paraded under the banner of communism or under the banner of socialism.

But from these principles he never bends a single inch before any wind or political expediency.

As all of you know, Senator Hawkes' career has been characterized by good judgment, but never was his good judgment shown quite so well as when he wooed and won the belle of Missouri, the prettiest girl in Warrensburg.

I am glad to be here tonight. I am not going to detain you because I know you are anxious to hear the great Senator from Virginia, Hon. HARRY F. BYRD, the principal speaker of the evening.

I do want to say, though, that we Missourians, Senator BYRD, claim a proprietary interest in the Hawkes. We extend them our best wishes and wish them many years of happiness.

Dr. EATON. It is with profound pleasure that I introduce the next speaker, Senator HARRY F. BYRD, of Virginia. I do not believe that we have in public life in this country a greater interpreter of the issues confronting the American people than Senator BYRD. His life is a great story. He was a member of the Virginia State Senate. He was Governor of Virginia. He has been since 1934 United States Senator from Virginia. And I have often said, knowing the representatives of that great State in both Houses of Congress for a long time that if we turned the Government of the United States to them—in spite of the fact that they bear the name Democrats—we would have an American Government of the highest possible type.

Senator BYRD, we welcome you as a true friend of our friend Senator Hawkes, as a great American, and as a Member of the House of Representatives I am happy to have the privilege of presenting a Senator.

Senator BYRD, we welcome you to New Jersey, and if ever you feel constrained to change your place of residence, you cannot find a finer place for raising apples, raising a disturbance, or raising anything you please, than in New Jersey.

Hon. HARRY F. BYRD. Mr. Toastmaster, friends of Al Hawkes, I first want to thank my very dear friend, Congressman EATON, for the all-too-gracious introduction he has given me. He has the confidence and respect of the entire Congress of the United States, Republicans, Constitutional Democrats, and New Deal Democrats.

I bring to you the greetings of the old Commonwealth of Virginia, and I know there are thousands of Virginians who would like to be here tonight to pay tribute to our distinguished guest of honor, because they think as he does, and as you do.

I see by the pamphlet that was put at my table that this organization welcomes Republicans, Constitutional Democrats, and Independents. I see that nothing is said about New Deal Democrats or Fair Deal Democrats. I do not know whether that was an intentional omission or not. I assume that I can join under the title of Constitutional Democrats.

From time to time I am accused, in the Senate of the United States, of voting with the Republicans. In my last campaign for the Senate, I was accused by my opponent of voting with the Republicans 86 percent, and he said, in fact, that I voted with the Republicans more than they voted with themselves.

My reply to that was not to debate the issues, but merely to say that my name began with a "B," I stood at the front of the list and voted first, and the Republicans voted with me.

I am proud of the fact that I was one of 16 southern Democrats to stand shoulder to shoulder with Senator TAFT when the President of the United States endeavored to repeal the Taft-Hartley Act. And had it not been for these southern Democrats who left their party on this issue, the Taft-Hartley Act would have been repealed, and that would have been a great and colossal catastrophe, let me say, ladies and gentlemen, to this great country of ours. [Great applause.]

I want to pay a simple tribute to a simple man—to one who is a great citizen; to one who symbolizes the true American spirit to as great a degree, I think, as any man I know. After all, simplicity of thought and action without subterfuge or evasion is one of the greatest of human attributes. Such simplicity has been the base of the lasting fame of one of the greatest of all Americans—Abraham Lincoln. To my mind, if there ever was a man who personified the ideal public servant, it is my friend, and your friend—Al Hawkes.

I have often thought that, while some men may accomplish great deeds and thereby advance the progress of the world, yet one of the greatest services any man can render is to become a symbol of a great cause for the public good.

Al Hawkes was one of the first to see our march to socialistic Government when he said in the Senate:

"Unless the people redeem their morals, rebuild their character, and recognize the mandates of their God differently than they are doing, they will not have the fiber and the courage to do the things necessary to pay for the preservation of individual freedom in its true sense.

"So long," said Senator Hawkes, "as the majority of our people seek to give less for a dollar, they will get less for a dollar, and if they are going to be led astray by the philosophy that you can get something for nothing, or that the world owes a living to the indolent, the shiftless, and the sluggards—there is no hope for the redemption of America.

"Honest people should beget honesty in their representatives, and intelligence in the selection of representatives is vital to the preservation of representative democracy."

For this program he began an unyielding campaign which he carried to the people and fought for on the floor of the Senate—to preserve the fundamental principles of Government that have made America great, and which present to us today our only hope for future progress. Thus, his prodigious efforts for soundness in Government made him, in the minds and hearts of millions of Americans, a symbol of truth and courage.

His great success as a businessman; his service as president of the United States Chamber of Commerce gave him a clearer sight than most of us could have of the imperative necessity of the continuation of the free enterprise system as the foundation stone of our democratic institutions.

He labored for the kind of Government which stimulates individual initiative, through a private enterprise system operating in the fullest freedom of democracy, to develop and produce more of what people need at a cost they can afford.

He fought the kind of Government which, through excessive spending, debt, and oppressive taxes, stifles individual initiative to the point that state subsidy and restriction,

and dole and regimentation are required to maintain a sham in the name of free enterprise and democracy.

He knew that without American solvency our constitutional freedoms will disappear at home and there will be no deterrent to communism abroad.

It was in this situation that vast new expenditures for federalized activities were proposed at home and vast new expenditures for economic, social, and military programs were proposed for nations abroad.

He said over and over again that our friends overseas who seek American aid and comfort must realize their only hope lies in our continued solvency. And, by the same token, those at home, who, through membership in pressure groups or otherwise, continue to wring more and more political pap from the Federal Treasury through extension of federalized programs, should not contend that they are not consciously promoting an economy to be planned and directed by the National Government at the expense of the free-enterprise system operating in the full freedom of democracy.

If increasing taxes or deficits to meet continuously higher Federal expenditures is to be our course, he argued, it is obvious that neither our system nor our form of government can endure. He emphasized that if this is to be our fate, there remain two all-important questions, and he asked: How long can what remains of our private enterprise system and our democratic form of government endure our folly? What will we contrive as a substitute for the doctrines which have made us great?

As to the answer to the first question, he said time and time again that red lights of danger are flashing now.

As to the answer to the second question, he said that he knew of no one who regards the British mess as something more desirable. It is probable though, he predicted, that whatever mechanism our pressure groups at home concoct will be worse.

What Al Hawkes stands for has been called capitalism, reaction, conservatism, feudalism, etc. What he has opposed has been called socialism, welfare state, statism, collectivism, etc. What these words mean, despite recent newspaper controversy, will make little difference in terms of freedom for individual initiative if we throw over our well-tried system and form of government.

I know of no man of my acquaintance—and I say this without flattery but with all the sincerity of my heart—I know of no person of my acquaintance who has given to his fellow citizens an example of unselfishness and selflessness in public service such as Al Hawkes has done for so many years and in so many ways. He numbers among his friends the rich and the poor, and it can be said of him that he is one of the most respected and beloved men from a very large circle of acquaintances.

He is a master of self-judgment and self-control. He possesses special qualities of mind and heart—qualities that are both natural and acquired.

My own devotion for Al Hawkes comes from two sources: One is my pure admiration for the man—for his ability and highly governed mind which has found pleasure in nothing but the true and the just. The other is his friendship for me, which he has shown in so many ways. I have never known a sweeter character or a friend I love more. I shall always treasure the numerous letters he has written me and his thoughtful kindness. To me, his character is carved out of the granite of true loyalty and sincerity. He has a private life and a public career which we may proudly hold up for emulation and tribute. I am sure that today the source of his greatest satisfaction comes from a gathering of his friends such as are here tonight and in their love and confidence.

To review his career is to pay tribute to the opportunities made possible to every man and woman in America today under a system of government which gives to every citizen an equal opportunity for success, depending upon their own ability and their own spirit. Here is a man beloved and honored as few men are. Why? Because, in this free country, he began his career at the bottom and, with an invincible spirit, he overcame all obstacles, and, as he climbed the ladder of business and political success, he kept his touch with those less fortunate than himself.

So, we, his friends, gather here tonight in this testimonial to a great character. We do so in the elation of a devoted admiration for Al Hawkes, the man; Al Hawkes, the devoted friend and admired public servant—the man whom every person in this room would be proud to emulate.

His real wealth is not in stocks, bonds, or buildings, but he has a wealth greater and more imperishable—a wealth of a myriad of life-long friends; the wealth of the consciousness that his life has been guided by the desire to lend a helping hand to those in distress and in need; to give comfort to the unhappy; to make living better for his friends and associates, and the consciousness on his part that he has met in the fullest measure every single responsibility that has come to him, both in his public and private life. I verily believe that his greatest pleasure is the opportunity to do a kindness; to give happiness and to help the under-privileged.

In my service in the United States Senate, I do not believe I have served with a Senator more fearless or more conscious of the necessity of preserving this great Nation from the inroads of state socialism, statism, collectivism, or whatever you may call it. He sacrificed his political career for his principles. As his close friend and intimate, I observed him in many trying situations and never once did he falter in doing the right thing, no matter how unpopular, for the moment, that action was.

When the Fair Employment Practices legislation was before the Senate, by general agreement of all Senators, Senator Hawkes made the most impressive and ablest argument against the passage of that legislation. I have no doubt he suffered for it among certain groups of the electorate of his State.

I feel tonight that perhaps the greatest compliment I can pay to Al Hawkes is to say that he stood foresquare on these great principles during his service in the Senate, just as did my distinguished colleague, the late Senator Carter Glass. If I were asked to name the two men who were willing, from my personal knowledge, to risk, without hesitation, their political fortunes in support of great principles, these are the two I would name. Knowing both men intimately, as I did, they had many characteristics in common.

On June 19, 1948, Al Hawkes delivered his valedictory address. On page 9060 of the CONGRESSIONAL RECORD of June 19, 1948, there is this line following the ending of his speech:

"Applause, Senators rising."

In my 17 years of service in the Senate, I have seen this occur only two or three times. To those who are not familiar with the rules and customs of the Senate, it is difficult to appreciate the real significance of this ovation. The rules prohibit applause in the Senate. The rules prohibit the Senators from making a demonstration by rising as a body. Yet, as a tribute to the sincerity and indomitable spirit of this great public servant who had served in the Senate a much shorter time than most of his colleagues, he was accorded this unusual honor by the greatest deliberative body in the world. No man who ever served in the United States Senate could fail to be intensely proud of these three very uncommon words in the CONGRESSIONAL RECORD—"Applause, Senators rising."

From this great speech of his, I will quote several sentences only. All of you should read it in full. He said, on that June day just before adjournment of the Senate:

"I have known for a great many years that the label Republican or Democrat is not the vital thing in the preservation of the United States of America. The great question is this: Does a citizen or representative of the people believe in the American system and wish to preserve and improve it, or is he one of those who wish to exchange a success for a failure, by following what I call un-American activities?

"My experience here will enable me to continue making a contribution toward the preservation of our form of government and our institutions.

"From the standpoint of service to his country, no man could fail to have sorrow and regret at leaving the Senate. No personal gratification in looking forward to more ease and comfort could possibly compensate for the loss of opportunity to continue in this great deliberative body as a servant of the people.

"There was nothing here I wanted for myself when I arrived, except the opportunity to serve the people and help preserve in our mutual interest the rights and opportunities which developed under our American system of freemen."

Al Hawkes is a shining example of that rare product of our public life—a statesman without fear and without reproach. Here is a man who is honored everywhere. He is known because his name means the conception of the highest type of public official—a gentleman unafraid; a statesman whose life and character provide an inspiration to the rest of us.

Samuel Butler said a long time ago that "every man's work is always a picture of himself." If this be true, then in the long perspective of the work of Albert W. Hawkes, his countrymen will find an enlightened vision that has enabled him to find the way of right service and a strong honesty that has kept him steadfastly on that way; a character that has been proof alike against the trials of dark times and the temptations of happier times; a life governed by convictions that constitute a compass by which he guides his ship of life and so keeps the ship true to the course of high honor and good conscience, whether the weather be fair or foul.

Of my own association with him and his many kind and considerate acts toward me, I can only speak with feeling of deep emotion. Our friendship has been close and intimate. One of the greatest privileges of my life—and one for which I shall be eternally grateful—is that of being his colleague, and, still better, of being a friend of Al Hawkes in our joint service in the Senate of the United States. I admire and love him with a deep devotion.

I like to think of Al Hawkes as a symbol of what the American citizen should desire to be, so as to preserve those things that have made America great, and standing for those things necessary to protect and fortify this great representative democracy bequeathed to us as a sacred heritage by the blood and labor of those who have gone before.

And so he stands, always for the things that are good in life; and for the things that will continue to make his country better. He has applied his rugged individual experiences to the benefit of all his fellow men.

He asks no quarter with justice. His forthrightness not infrequently brings criticism down upon him, but I have never known him to go long without vindication.

Like Benjamin Hill, he believes that:

"He who saves his country
Saves all things
And all things saved
Shall bless him.
But he who lets his country die
Lets all things die
And all things dying
Shall curse him."

A man who really made a great President, but who was never fully appreciated—John Tyler, of Virginia—when he resigned from the United States Senate because the Legislature of Virginia instructed him to take action contrary to his convictions, said:

"I shall carry with me into retirement the principles which I brought with me into public office and, by the surrender of the high station to which I was called by the voice of the people of Virginia, I shall set an example to my children which shall teach them to regard as nothing place and office when either is to be attained or held at the sacrifice of honor."

Al Hawkes, in a similar situation, would have done exactly as Senator Tyler—later President Tyler—because his devotion to principle outweighs every other consideration.

Tonight, the best that you and I can say to Al Hawkes is that he has kept the faith. He can live with his conscience, and his work as a leader has only just begun, because, if this Nation is to be saved, it can be done only by the courage and indomitable will, and the patriotism of such men as Al Hawkes.

I know I voice the hope of his many friends here tonight, and the many thousands elsewhere, in saying to him: May the Lord bless you and give you the happiness you so richly deserve in this life and, ultimately, the peace eternal for which all of us pray in the life to come. May you prosper in all you do, and we, your friends, want you to know of the depth of our love and appreciation for you; of our respect and affection for you and all of yours. I propose a toast to all of the Hawkeses: May their shadow never grow less. In the words of the CONGRESSIONAL RECORD, I say: "Applause, Senators rising."

The Employment Assistance Act of 1950

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks I would like to include my statement and analysis of a bill I have introduced today entitled "The Employment Assistance Act of 1950."

In July 1949 I joined with many other Members of the House and Senate in sponsoring the economic expansion bill, a measure that should already have become the law of the land.

If the economic expansion bill had become law, we would now have in effect a broad and balanced program to achieve the President's objective of a $300,000,000,000 economy within the next 4 or 5 years. We would not be in the position that we are in today of being unable to deal decisively with present areas of serious unemployment. We would not be in the position that we are in today of being insufficiently prepared for any possible failure of the economy to expand in the future.

It is high time that public hearings be held on the economic expansion bill by the Committees on Banking and Currency in both Houses of Congress. These hearings should start without delay.

But the unemployed men and women in California—and the unemployed men and women in other States throughout the country—are today in no position to wait upon the outcome of protracted hearings on a complex program. Many of them by this time have exhausted their unemployment-insurance benefits. They need immediate action.

For the last 2 years unemployment in California has been much more serious than unemployment in the United States as a whole. In 1948, unemployment in California averaged almost 300,000 persons—or 6.8 percent of the California labor force. This was twice the percentage of unemployment for the Nation as a whole. In 1949, the number of men and women out of work in California increased to an average of about 417,000—or close to 9.4 percent of the California labor force. If the number of unemployed in the United States had risen throughout the country to the same high level in 1949 as it did in California, we would have had in 1949 an army of unemployed made up of more than 5,800,000 people.

This unemployment situation in California is not concentrated in any one spot. It is distributed throughout the State. In November 1949, for example, all of the important labor-market areas were classified by the Labor Department as D areas—that is, areas having a labor surplus of 7 to 12 percent of the labor force. The only exception to this statement is San Diego—and San Diego was in the E classification, which means that more than 12 percent of the labor force in San Diego was unemployed.

These facts, in my judgment, call for immediate action.

I am, therefore, introducing today a bill to provide for immediate action.

This bill is entitled "The Employment Assistance Act of 1950." Its purpose is dual. First, it provides a program for direct and prompt handling of serious unemployment wherever and whenever it arises. Second, it provides for the development of a long-range program for resources development and public works, the kind of long-range program which is indispensable if we are to be equipped to deal with local problems if and when they arise. Let me briefly summarize these provisions.

Title I sets forth the program for handling areas of serious unemployment.

Under section 101, the Secretary of Labor would make a detailed study of employment and unemployment, and certify to the President any area or industry in which special action is needed.

Under section 102, steps would be taken to channel government contracts or government loans to areas or industries that have been certified as serious unemployment areas. This would provide a statutory strengthening of the present operations along this line that are being handled in Mr. John Steelman's office in the White House.

Under section 103, there would be established a $2,200,000,000 emergency reserve fund for urban and rural unemployment. These funds would only be used for areas or industries certified under section 101 and where other Federal, State, or local funds would not be available in sufficient amounts. The money could be used to augment existing Federal works programs, to allow the Secretary of Agriculture to establish a rural conservation program, and for grants to States and cities on a matching basis for both construction and nonconstruction projects. Part of this fund would also be available for increasing the funds available to the various Federal agencies for procurement and stock piling.

Under section 104, provision would be made to help unemployed workers obtain vocational education or training for positions that could thereby be obtained. The Labor Department would also be authorized to assist unemployed workers to move to other areas of the country where the local employment office certifies that jobs are available.

Title II sets forth a long-range program for resources development and public works.

Under section 201, the President would transmit to Congress in his annual Economic Report an appraisal of the long-range needs for resources development and public-works projects, both on a national and regional basis. Regional surveys of needs would be made through the appropriate Government agencies and with the assistance of State, local, and regional development agencies and of universities and colleges.

Section 202 provides for developing and maintaining at all times a large-scale shelf of plans for rural and urban projects. The objective would be to have at all times a shelf of projects. To promote a large-scale shelf of this type, a State and local advance planning fund would be established. From this fund non-interest-bearing loans would be made to cities and States for both the development of blueprints and the acquisition of sites. In addition, a Federal advance planning fund for $100,000,000 would be set up to assist Federal agencies in developing blueprints and acquiring sites.

Section 203 provides for direct credit assistance to city and State governments for the financing of work on resources development and public-works projects. Under this section, RFC loans up to a total limitation of $1,000,000,000 could be made at low-interest rates for periods of up to 60 years.

Title III contains the administrative provisions of the act. This title recognizes that the administration of the act must be vested in the President. The Council of Economic Advisers would assist the President by providing for the

preparation and maintenance of a national inventory of State, local, and Federal plans and operations with respect to resources development and public works. It would also advise him on the need for accelerating or decelerating the programs provided for under the act.

I should like at this point to quote from the lucid and enlightening economic analysis which was given to the President at the beginning of this year by the distinguished economists who comprise his Council of Economic Advisers. I quote from the section entitled "Economic Trouble Spots" in the Council's Annual Economic Review, which was transmitted to the Congress on January 6, 1950, together with the Economic Report of the President:

> Despite the high levels of employment throughout the Nation, there are some areas with quite heavy unemployment, and with far less than maximum levels of production and business activity. This presents a challenge, because there cannot be maximum employment and production throughout the Nation so long as some areas are relatively depressed; and there is always danger that economic dislocations in spot areas may spread if they are not remedied.

The words of the President's economic advisers provide a warning that should not fall on deaf ears. The situation they describe provides a challenge that must not be dodged. It must be met; and if the economic trouble spots of today are not to drag the country down into a Nation-wide depression, it must be met promptly.

The Economic Assistance Act of 1950 which I am introducing today is the first concrete proposal that has yet been submitted to the Congress for meeting this challenge. I urge that committee hearings be initiated on this measure at once.

Mr. Speaker, in closing I wish to include a letter which I have written to Representative EDWARD J. HART, vice chairman of the Joint Committee on the Economic Report, on February 25, 1950, requesting that his committee sponsor a study of the Pacific Coast States:

> DEAR MR. HART: The joint committee's print, the Economy of the South, has been of great interest to me. Your recent subcommittee report on unemployment stressed the need for further regional studies. It is my understanding that the Joint Committee on the Economic Report has asked the National Planning Association to sponsor a study of New England, and that a study may be suggested for the intermountain area.
>
> I am writing you to inquire if it would be possible for the joint committee to request the National Planning Association to sponsor a study of the Pacific Coast States. The impact of Federal programs on this region has been and will in the future be tremendously significant in the development of this great region. I can assure you of a real interest on the part of labor, business, agriculture, educational institutions, private research organizations, foundations, and individuals in such an undertaking.
>
> Your committee is in a unique position to study the regional problems and is to be commended for initiating the studies that you now have under way. I hope that something can be worked out for the far West.
>
> Sincerely yours,
>
> HELEN GAHAGAN DOUGLAS.

New Districts for Old

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. ELLIOTT. Mr. Speaker, the seventeenth decennial census to be taken beginning April 1, 1950, will reveal among other things the steady growth of our country—a gain of some twenty millions of people in the past 10 years. Some sections of the country have grown more rapidly than others. Some States will lose representation in the United States House of Representatives; others will gain. I include as a part of my remarks, a very interesting and instructive article styled, "How Reapportionment Works: New Districts for Old" from the Congress at Work section of Senior Scholastic Magazine for February 1950:

HOW REAPPORTIONMENT WORKS—NEW DISTRICTS FOR OLD

Do you live in one of the west coast States—California, Washington, or Oregon? Then it's a sure thing that your home State will soon have more seats in the House of Representatives than it now has. But if you're a New Yorker, a Pennsylvanian, or a Missourian your State will take a cut in its number of Congressmen.

Each State's number (or quota) of Representatives is based on its population. The quotas are reapportioned every 10 years, following Uncle Sam's regular census. The total number of Representatives is now fixed at 435. Therefore one State's gain—resulting from an increased share of our population—must be a sister State's loss. And the Pacific States, which have been on the receiving end of a huge westward migration in the past 10 years, are sure to be the biggest gainers after the 1950 census.

The Constitution provides (art. I, sec. 2) that "the House of Representatives shall be composed of Members chosen every second year by the people of the several States." At first the States were allowed to select their Representatives by several different methods. But in 1842 Congress passed a law requiring that all States entitled to more than one Representative be divided into districts. Each Representative was to be elected by the voters of a district.

Later this law was amended to allow for the election of Representatives at Large for any additional Members which a State might be allotted after a new census. These Representatives at Large are elected by all the people of the State. Once a State is redistricted Representatives at Large are eliminated. (Redistricting may take years. Ohio and Connecticut still elect a Representative at Large on the basis of the 1940 reapportionment.)

Similarly, when a State's congressional quota is reduced, the State may elect all of its Representatives at Large, until new districts are set up.

When the First Congress met in 1789 there were 65 Members in the House of Representatives. Membership in the House increased steadily as the Nation's population grew and as new States were admitted. By 1840 there were 232 Members; by 1900 the House numbered 386. After the 1910 census the figure reached 435, and there it was pegged. Congress decided that this was the largest number of Congressmen which could work efficiently together.

Thus in 1920 Congress first faced the problem of reapportioning within the limit of 435 Members, rather than simply increasing the number of its Members. But Representatives from States which had lost population were reluctant to legislate their States—and perhaps themselves—out of House seats. Congress failed to act, and no change was made on the basis of the 1920 census.

In 1929 Congress passed a law to prevent this from happening again. The law stated that reapportionment must automatically follow each 10-year census, based on mathematical procedures. Reapportionment was carried out after the 1930 and 1940 censuses. The chart below predicts what will happen in 1950.

If a State loses one of its Representatives, this does not necessarily mean that the State's population has declined. It may simply mean that its population increase has not kept pace with the national rate. New York, for instance, has increased its population since 1940 by more than 6 percent. But the national gain since 1940 has been about 13 percent.

Those States which lose or gain Representatives are faced with the problem of redistricting their States. Redistricting is carried out by the State legislatures. Under ideal conditions here is how this is done: Let's take Oregon as an example. Oregon's 1,736,000 citizens will probably be entitled to five Representatives. The State's present four districts would be altered to make room for a fifth district, so that each Representative would have a district with about 347,200 people.

But attempts are sometimes made by the majority party in the State legislature to underplay the voting strength of its opponents. It does this by trying to crowd voters of the opposition parties into a few districts, and put its own voting strength into a larger number of smaller districts.

This practice often creates districts of odd shapes, and from this fact it gets its name—gerrymandering. Back in 1812 one of these oddly shaped districts was created in Massachusetts, when Elbridge Gerry was governor. A cartoonist discovered that this district could be made to look like a strange lizard, merely by adding claws, teeth, and wings. According to the story the cartoonist asked, "How's that for a salamander?" A bystander, who blamed the governor for the unfair redistricting, answered, "Better call it a gerrymander."

Congress tried to curtail gerrymandering in 1842 by ruling that congressional districts were to be of "contiguous and compact territory, and of approximately equal population. By now most State constitutions contain these same provisions, but they are not always strictly observed. In some cases legal action may be brought against the party creating gerrymandered districts. Some States make it possible to put the question up to the voters.

Will your State's representation change?

State	Population	A	B	C
Alabama	2,920,000	9	9	------
Arizona	745,000	2	2	------
Arkansas	1,964,000	7	6	------

Wyoming	284,000	1	1	

NOTE.—Populations are 1949 Census Bureau estimates. Column A: Present representation in the House. Column B: "Best guess" on new distribution after the 1950 census. Column C: For you to fill in after the new reapportionment is made.

Mr. Speaker, I also include an article from part I of the same magazine headed "Counting 150,000,000 noses" which gives something of the history of the census in this country and discusses the plans presently being laid by the Bureau of the Census for the 1950 census.

COUNTING 150,000,000 NOSES

Mark Saturday, April 1, 1950, as a red-letter day on your calendar. It's not because we want you to start preparing April Fool's Day jokes for your friends now. But that is the day that Uncle Sam asks his 150,000,000 nieces and nephews to stand up and be counted.

Once every 10 years April 1 becomes C-day—the date chosen for the Decennial Census of Population of the United States. Every man, woman, and child is counted. This year more than 140,000 census takers (called enumerators) will visit every home in the land. In cities and towns it will take them as long as 2 weeks to reach everyone in their districts. In farming areas and remote regions like snow-swept plateaus of the Rockies, nose counting will not be completed until the end of April. In Alaska (for our Territories are included in the census), enumerators are already on their way to isolated Eskimo villages above the Arctic Circle.

While the census taker may not reach your home on April 1, he will be asking about you and your family and your home as of that date. The next-door neighbor's baby, born on March 31, will be counted as part of the family. But the television set your family buys on April 3 will not be counted as part of your family's household equipment, since it won't be in your living room on C-day.

The United States was the first nation to provide for a regular census of its population. Of course, we didn't take the first census. That goes back to Biblical days, when King David took a census of all men in Israel. But the United States was the first to arrange in advance for a census to be taken at certain intervals (in our case, every 10 years).

It came about as an almost accidental byproduct of that famous series of meetings in Philadelphia in 1787—when the United States Constitution was written in near-secrecy throughout a sweltering summer. After long argument the Constitution makers decided that the States should be equally represented in the United States Senate, but that they should be represented in proportion to their population in the House of Representatives. But how would the representation of each State be determined? Article I, section 2, of the Constitution answered the question: A fixed number of Representatives were chosen for the first meeting of Congress. Thereafter, Congress was to direct a census-taking every 10 years to determine population.

The first census was taken by United States marshals in 1790. As the decades rolled on new population censuses were taken, marking the growth and development of our Nation, and changing the representation of the States within the House of Representatives.

PAGING MR. JEFFERSON

From the very beginning our Nation's leaders decided that it would be valuable to learn more from the census than simply the total number of people. The 1790 census—the first one—determined how many men were over and under 16. This was intended to measure the possible military strength of the Nation. That first census was performed in a crude, fairly inaccurate manner. The census taker in Philadelphia, for instance, accidentally skipped Thomas Jefferson. The statesman had to pen his famous signature to a list posted in a public square for such overlooked citizens.

Each decade the census took on more importance and was performed more carefully and thoroughly. Congress decided, too, that the Government could make good use of additional facts, so new questions were added to the census—about schooling, jobs, age, and place of birth.

Soon it was decided that there should be other censuses beside the population count every 10 years. A census of manufacturing was started in 1810. Agriculture was added in 1840. But it was not until 1902 that a permanent Census Bureau of the Government was established. The Bureau, under the Department of Commerce, is now the year-around fact finder of the Nation.

Besides the population census, the Bureau makes censuses of manufacturing, business, and agriculture at 5-year intervals. The Bureau also makes monthly surveys on current population and business trends. For these surveys only a small sampling is taken, scientifically chosen to present an accurate picture of the Nation as a whole.

The mountainous stacks of statistics do not simply gather dust in Government storage space. Tabulations based on them are used, for instance, by manufacturers of diapers who want to learn about future increase in the number of their customers; by airlines plotting out new routes in areas of increased population; by labor and business groups to judge past, present, and future economic conditions; by social scientists studying how we live; and by Government agencies which must have a guide for their activities.

Individual Census Bureau figures (like your maiden aunt's age) are strictly confidential. But totals or averages of figures (like the number of unmarried women) are available to all, through books, pamphlets, and reports published by the Census Bureau.

Now, let's take a look at the 1950 census. What will the census enumerator ask you and your family?

On his giant-size chart the enumerator will make a record of these facts for every one of our 150,000,000 people: Name, relationship to the head of the family, race, sex, age, whether married or single, State or country of birth, whether the person is a citizen, whether he is working or not, and what kind of work he does.

The enumerator will ask additional questions of every fifth person: Where the person lived a year ago, where his parents were born, how far he has gone in school, whether or not he is a war veteran, and the income he received in 1949 from all sources, as well as the income received by his relatives in the same household.

The proposed question on income has met with some objection from a group of Republican Congressmen. They believe that it is unnecessary prying to ask a person exactly how much money he makes, particularly since he may have to reveal the information to an enumerator who may be his next-door neighbor.

However, the Census Bureau points out that this information, when assembled in totals and averages, will be useful to industries seeking markets for their goods, and for other purposes. In addition, the enumerator is sworn, under penalty, not to reveal the information to anyone.

But suppose a person does not wish to reveal his income to the enumerator. In this case he has the privilege of sending this information directly to the Census Bureau in an envelope supplied him by the enumerator. In this way the information will be known only to the Census Bureau in Washington. It cannot be used for any other purpose, such as taxation.

The 1950 census of housing will be taken at the same time as the population census. Your parents will be asked detailed questions about your apartment or home. The newest question on this housing census will be whether your family has a television set. Other standard questions refer to the number of rooms in the housing unit, the kind of plumbing, heating, and kitchen equipment, and the rent paid or value of the property.

For the Nation's 6,300,000 farm families the 1950 census means a little extra "paper work." For this year, too, the agriculture census will be taken. If you live on a farm, your family can expect to receive a questionnaire from the Government by mail. This is to be filled out by individual farmers. When the enumerator comes in April, he will pick up these completed forms, or help farmers complete them.

The 1950 census will have an international aspect. Plans have been worked out so that all Latin-American nations will be counting noses in 1950. (The only exception is Argentina, which took a census in 1947.) Many government workers from Latin America are in the United Staes now, being trained in modern methods of census taking. For a number of nations this will be the first complete population census. Population experts hope that eventually a world-wide census can be taken simultaneously in every nation.

With new electric machinery and thousands of extra workers, the Census Bureau will get to work on its gigantic counting job as soon as the census-takers have turned in their reports. By December 1, 1950, the Bureau must give President Truman the final population tally, so that reapportionment of the House of Representatives may take place promptly. Preliminary estimates of State and local populations will be available by early next summer.

WHAT WE WILL LEARN

Census experts already know some of the things which are certain to be revealed. These predictions are based on preliminary surveys of sample areas which are going on all the time. Some of these results will show:

1. Our total population will be slightly above 150,000,000—a gain of 19,000,000 over 1940. When congressional districts are rearranged to meet this increase, our Congressmen will each be representing an average of about 330,000 people, a 10 percent gain over 1940.

2. For the first time in our history, women will outnumber men. In 1940, men had the edge by half a million. Reason for the change is that immigration, which used to be in the millions every year, has declined sharply over the past several decades. The great majority of immigrants are men.

3. There will be an average of about 50 Americans to every square mile. In 1790

there were less than five people to every square mile.

4. The move from the farm to the city has continued. Statistics will probably show, too, that 9 out of 10 of those who left farms since 1940 are under 25 years of age. This is a serious problem for the future of American agriculture.

Nearly everyone realizes that it is only good citizenship to cooperate with the census-taking. We will all benefit from the information gained, and we're more than a little curious to know how much our State or community has gained in population over the past eventful decade. Answering questions for the census enumerator, courteously and accurately, is as much a civic duty as voting. The law provides a penalty for those who refuse to answer census questions or who make deliberately false answers. These penalties almost never have to be used, for citizens are eager to cooperate voluntarily.

Country Editors Fear Socialism

EXTENSION OF REMARKS
OF

HON. W. KINGSLAND MACY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. MACY. Mr. Speaker, under permission to extend my remarks this date, I am pleased to include the following article from the current issue of the American Press, February 1950, entitled "Seventy-eight Percent of Country Editors Fear United States Is Headed for Socialism":

SEVENTY-EIGHT PERCENT OF COUNTRY EDITORS FEAR UNITED STATES IS HEADED FOR SOCIALISM

Over 500 editors, in reply to the American Press poll, tell what action they think Congress should take on leading issue of 1950.

A total of 78 percent of the country editors of America fear that our Nation is headed toward socialism.

This startling fact was unearthed by the American Press magazine as the result of a poll which it has been conducting for the primary purpose of finding out what the weekly newspaper editors of the United States think it is most important for Congress to accomplish at the present session.

The three-page questionnaire, which was answered by over 500 editors representing every State in the Union, concluded with the question, "Do you fear that our Nation is headed toward socialism?" All but 22 percent answered "Yes."

The fear seems to be based on what many of the editors refer to as welfare-state measures, as well as on the size of the national debt, huge Government costs, and an unbalanced budget. Many believe that Congress' action on compulsory health insurance legislation will determine whether or not we are going socialistic. Eighty-nine percent of the editors expressed opposition to this measure.

GOVERNMENT FINANCES

But of greatest immediate concern is Government finances. In answer to the question: "What do you consider to be the two most important things for Congress to accomplish at the new session?" Seventy-nine percent demanded a balanced budget, reduction of Government costs or cuts in Federal pay rolls.

Although tax reforms were considered second most-important need, only 21 percent asked for immediate tax reductions, regardless of whether or not the budget is balanced. Many of those felt that if taxes were reduced reduction in Government costs would thus be forced.

Thirty-nine percent said they favored tax reductions only if the budget can be balanced, and another 36 percent advised leaving taxes as high as they are and create a surplus, if possible, to pay off the debt. Three percent of the editors favored increasing taxes to meet the debt. But 85 percent would like to see the tax laws rewritten and simplified.

In addition to Government costs and finances, the five next most important things for Congress to do, in the opinion of the editors, are:

Enact reforms proposed by Hoover Commission.

Curb welfare-state bills.

Strengthen and clarify foreign policy.

Strengthen and streamline defense.

Take action to restore the confidence of business in the future.

Sentiments of many of the editors were expressed by (359) who commented: "Unless our Government ceases to be the world's worst businessman, our burdens will continue to increase until a breaking point is reached. Why can't our so-called elected representatives stop playing politics long enough to see the danger signs and get some sensible laws enacted to encourage free enterprise? What does a young man starting out have to look forward to under the present set-up? They, the lawmakers, seem to have forgotten the basic principles which have made this country as great and strong as it is to date."

Among the country editors, whose combined newspapers have a readership of around 70,000,000 people, only a handful of those replying to the questionnaire indicated general approval of the administration's domestic programs, but many felt that Congress was too steeped in politics to do anything about it. Fourteen of those replying to the question about the most important thing for Congress to do gave the facetious answer, "Go home" or "Adjourn," and many said, "Forget politics."

A summary of the questions and answers follows, with typical comments:

LABOR LAWS

Question. What do you think should be done about the Taft-Hartley law?

Answer. Repealed, 5 percent; made less stringent, 11 percent; left as it is, 57 percent; made more stringent, 26 percent; no answer, 1 percent.

GOVERNMENT COSTS

Question. Assuming that everyone would like to see Government costs cut, check each of the following proposals which you think would be practical and advisable.

Answer (in order of mentions).

Major reduction in number of Federal employees, 90 percent.

Reduction of farm subsidies, 64 percent.

Across-the-board cut in funds provided for all Government departments, 62 percent.

Reduction of Federal expenditures for social services, 53 percent.

Reduction of funds for aiding foreign countries, 54 percent.

Reduction of Federal funds for housing, 37 percent.

Reduction of funds for veterans, 31 percent.

Reduction of Federal expenditures for schools, hospitals, and institutions, 21 percent.

Reduction in appropriations for armed forces, 20 percent.

INCOME TAXES

Question. Which of the following come closest to your views on what should be done about income taxes?

Answer (according to popularity).

Reduce taxes only if the budget can be balanced, 39 percent.

Leave taxes as they are to balance the budget and create a surplus if possible, 36 percent.

Reduce taxes by 20 percent immediately, regardless of whether the budget will or will not be balanced, 21 percent.

Increase taxes in order to help reduce the national debt, 3 percent.

No answer, 1 percent.

LUXURY TAXES

Question. Do you favor repeal of the so-called luxury taxes on cosmetics, furs, jewelry, etc.?

Answer. Yes, 62 percent; no, 37 percent; no answer, 1 percent .

LIQUOR AND CIGARETTE TAX

Question. Do you favor repeal, reduction, or increase of taxes on liquor and cigarettes?

Answer. Repeal, 3 percent; reduction, 21 percent; increase, 36 percent; no change, 30 percent; no answer, 10 percent.

INCOME-TAX LAW

Question: Would you like Congress to rewrite and simplify the income-tax law?

Answer: Yes, 85 percent; no, 11 percent; no answer, 4 percent.

EXEMPTIONS

Question. If income-tax law is simplified, would you favor elimination of all exemptions for contributions, medical expenses, etc., everything except deductions for dependents, to be offset by a lower over-all tax rate?

Answer. Yes, 55 percent; no, 37 percent; no answer, 8 percent.

PROPORTION OF TAX

Question. If income-tax law is rewritten, would you like to see a change in the proportion paid by various groups? If so, do you think reduction should be given to lower-income group, middle-income group, or high-income group?

Answer: No change, 34 percent; lower, 26 percent; middle, 33 percent; high, 7 percent.

SOCIAL-SECURITY EXPANSION

Question. Do you favor expansion of social security to include those not now covered by it?

Answer. Yes, 49 percent; no, 46 percent; no answer, 5 percent.

SOCIAL-SECURITY INCREASES

Question. Do you approve of increases in benefits from social security?

Answer. Yes, 36 percent; no, 59 percent; no answer, 5 percent.

COMPULSORY HEALTH INSURANCE

Question. Do you favor a Federal system of compulsory health insurance, to be paid by an additional pay-roll tax on employers and employees, plus funds from the Federal Treasury?

Answer. Yes, 8 percent; no, 89 percent; no answer, 3 percent.

LIQUOR-AD BAN

Question. Are you for or against the bill which would prohibit the advertising of alcoholic beverages?

Answer. For, 20 percent; against, 79 percent; no answer, 1 percent.

PROHIBITION

Question. Would you like to see the prohibition of the sale of alcoholic beverages reenacted?

Answer. Yes. 14 percent; no, 86 percent.

MILITARY TRAINING

Question. Do you favor compulsory military training?

Answer. Yes, 57 percent; no, 41 percent; no answer, 2 percent.

DEPARTMENT OF JUSTICE

Question. Do you agree with those who charge that the Department of Justice is discriminating against big business?

Answer. Yes, 55 percent; no, 38 percent; no answer, 7 percent.

CENTRALIZATION

Question. Do you think more governmental authority, and the expense it entails should be turned over to the States by the Federal Government?

Answer. Yes, 71 percent; no, 23 percent; no answer, 6 percent.

SOCIALISM

Question. Do you fear that our Nation is headed toward socialism?

Answer. Yes, 78 percent; no, 21 percent; no answer, 1 percent.

Electrical Roll-Call Conduit

REMARKS

OF

HON. JAMES E. NOLAND

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. NOLAND. Mr. Speaker, yesterday I introduced a resolution which would direct the Committee on Reconstruction and Remodeling of the House Chamber to install electrical conduits in the floor of the House in the event that some future Congress should adopt an electrical roll-call system for the House of Representatives. On the last two Calendar Wednesdays the House of Representatives must have been a very foolish spectacle indeed to those persons sitting in the galleries on either day.

On Wednesday, February 15, dilatory motions by various Members resulted in eight roll calls, which consumed slightly more than 4 hours. After sitting from 12 noon until 4:10 p. m., the House finally spent about 40 minutes considering legislation and then adjourned.

Wednesday last the House indulged in 11 roll calls, which consumed approximately 5½ hours, and which kept the House in session until 3:20 a. m. With an electrical roll-call system, not only would most of this time have been saved but dilatory motions would probably never have been made, because their effectiveness would have been reduced to a minimum. Therefore, the House of Representatives could have adjourned at 11 o'clock and still have had more time for actual debate and consideration.

The temper of the House was such at 3 a. m. that considered judgment was reduced to a minimum. The amendments adopted to the FEPC legislation were of such a nature that the gentleman from Ohio [Mr. HUBER] was impelled to remark facetiously, "Mr. Chairman, in view of the number of amendments that have been adopted, I ask unanimous consent that the remainder be adopted en masse."

These senseless maneuvers of the last 2 weeks merely emphasize the great amount of time lost in each session of Congress, going through the antiquated motions of roll and quorum calls, name by name.

Last session, when the Congress labored long and hard until October 19, some 25 or 30 legislative days were consumed entirely by this slow-motion roll call.

I do not say that an electrical system would reduce the time of the Congress spent in session, but it is a fact that such a system would allow more time for debate and consideration, or it would allow more time for a Member to spend in his office carrying on important work that necessitates his presence there.

I know that the proposal for an electrical roll-call system has not met with overwhelming support from some Members of the House. Therefore, the question arises, What are some of the disadvantages which would arise from the use of an electrical roll-call system?

Since the procedure would move much more rapidly, and there would only be 12 or 15 minutes for Members to assemble, it is very likely that some Members would miss more quorum calls than at present. On the other hand, with such a system, Members of Congress would not be encouraged to take advantage of the delay which now occurs when a quorum call or a roll call is under way.

Another objection which has been heard is that such a system would call for more recorded votes. This would not necessarily be the case, but would depend upon the adaptation of the electrical system to the rules of the House. However, for my part, I believe that the people are entitled to know how their Congressmen voted on every issue, and when I came to Congress, I never suspected that there would be so many times that we could act without being recorded for the people back home to read about it in the RECORD.

Probably another objection to an electrical system is that when the time came for voting, the results of the voting would be accomplished much more rapidly. In other words, the leadership on both sides of the House would have to do their work off the floor, rather than waiting for the confusion which ensues in a call by voice. I think that most of us would agree that party machinery would work with better oiled precision if more information was distributed before a Member actually came to the floor of the House.

I believe that the advantages of the electrical roll call system far outweigh the disadvantages. It has already been stated that approximately 25 legislative days would be saved per session by an electrical system. Surely, this in itself would warrant adoption because it would give much more time for consideration or debate, or for time spent in the Member's office.

With this system there would be much less confusion on the floor of the House. Each Member would have his own seat from which he would cast his vote. Surely this would present a much more orderly legislative picture to persons sitting in the gallery than the one we have now.

It was suggested by one Member that television be installed in the House Chamber to provide the people of America with a picture of their Congress at work. It seems evident to me that with the present system we could never afford to have a television picture of the workings of this body go out on radio and television waves to the people of America.

I think the automatic roll call system would call for better organized leadership in both parties which, in turn, would make for more orderly legislative procedure on the floor of the House.

It seems to me that the advantages of an electrical roll call system far outweigh the disadvantages, and the disadvantages that are present could be surmounted by better organization and a little more work.

The thing which should be of great concern to the House at this time is the necessity for laying electrical conduits in the floor at the time renovation of the lower part of the Chamber takes place at the end of this session of Congress. After spending millions of dollars to improve the Chamber future Congresses would greatly hesitate to tear up the floor, at great cost, to install a new system of recording the votes of the House. The decision to be made at this time is not whether we are going to adopt the electrical roll call system, but whether we are going to spend twenty-five or thirty thousand dollars, and make it possible for a future Congress to adopt the system if it sees fit.

It would seem a grave error to me to fail to lay the electrical conduits in the floor when the Chamber renovation is undertaken at the end of this session.

Democracy is a developing thing. Legislative procedure should not be allowed to stand still. To repeat a statement I made last year, In the days of the jet plane, the atomic and hydrogen bombs, and the strato-rockets, is there any reason why we should cling to the antiquated roll call of 1789?

The Real Issue on Co-Op Taxation

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks I would like to include my statement before the House Ways and Means Committee on February 23, at the hearings on tax revision under the subject of tax treatment of cooperatives:

Grover Cleveland once said that to "understand a problem one must first understand how it got to be a problem."

The current hearings on the tax status of cooperatives did not happen by accident. They have been forced upon the Ways and Means Committee as part of a concerted and very well-financed campaign against the cooperatives.

The campaign or attack is directed less against the cooperatives and their tax status than against the cooperatives as democratic, nonprofit business enterprises.

The Ways and Means Committee of this House of Congress held extensive and exhaustive hearings on this same subject a couple of years ago, and, with all of the evidence in, found no reason to change the current tax situation. Why, then are we forced

to these hearings today? Primarily because of the work of two organizations—the National Tax Equality Association and its parallel organization, the National Associated Businessmen, both of whom are under the guidance and direction of a team of highly skilled public relations counsels, Loring A. Schuler and Vernon Scott.

The National Tax Equality Association, according to the quarterly lobby reports No. A–1954–212–2541–2805 filed with the Clerk of the House of Representatives, collected more than $500,000 ($536,132.39) in 1949 which was devoted primarily to a running attack on the cooperatives.

We have no information as to the amount of money collected by the National Associated Businessmen. Their financial status would be of interest to this committee and to the Lobby Investigation Committee.

The National Tax Equality Association reported 138 contributors of $500 or more in 1949 of which 43 are power companies. The other large contributors are petroleum companies, grain dealers, and hardware dealers, all of whom have been upset because the farmers and consumers of America have taken advantage of their right to go into business for themselves.

You may ask why the power companies should be interested in the question of taxation of cooperatives. Their chief concern is with the rural electric cooperatives which have brought electric light and power to more than 2,500,000 American farm homes. The power companies were reluctant to provide power in America's rural areas until the cooperatives took the initiative under the Rural Electrification Administration. America has no finer institutions than these rural electric cooperatives as the continued active support of that program on Capitol Hill indicates.

The grain operators were the first to organize against the cooperatives. They took the initiative in forming first the League for the Protection of Private Enterprise which was then changed to become the Central Coordinating Group, Inc. and finally to become the National Tax Equality Association. The president of the National Tax Equality Association until very recently was Ben C. McCabe, Minneapolis grain man who was also president of the International Elevator Co. of that city. The grain dealers became exasperated when the farmers who grow the grain felt that they were not getting their fair share of the sales price of their product and decided to establish their own elevators and grain terminals.

The smoothest of the participants in the National Tax Equality Association are the oil companies which hit upon a rather effective formula for participating in this attack against cooperatives without subjecting themselves to unpleasant publicity. The only major oil company listed as a contributor to the National Tax Equality Association is the Standard Oil Co., Chicago (Standard of Indiana). The other oil companies have contributed in substantial quantities, but at the suggestions of the solicitors have made their contributions less than $500 a year. They are therefore not subject to listing when the lobby reports are filed with the Clerk of the House. The fact that they are contributing is indicated by a letter signed by T. A. Helling, president of the Eldorado Refining Co.; J. N. Champlin, president of the Champlin Refining Co., and H. E. Zoller, president of the Derby Oil Co. The letter was addressed to oil companies and followed the usual NTEA line by claiming quite falsely that the loss to the Treasury Department from Federal income tax over the next 5 years will be considerably in excess of $1,000,000,000.

The letter accuses the cooperatives of growing at a tremendous rate "out of money that you and I and other taxpayers must pay to support our Government." They accuse the cooperatives of constituting a political as well as a subsidized competitive threat.

Then to give the oil companies a quiet tip as to the amount of their contribution Messrs. Helling, Champlin, and Zoller conclude: "Our own contribution to aid in the fight has averaged from $200 to $300 this year. We would appreciate your consideration of a substantial contribution to help insure that the fight is successful. Any one of us will be glad to transmit your check to the National Tax Equality Association if you would like to send it in our care."

This pleasant little letter dated January 16, 1950, was followed by a letter from the National Tax Equality Association January 19, 1950, pointing out that the recipients have received letters from Messrs. Helling, Champlin, and Zoller and declaring: "We hope that your company will see fit to align itself with the many others in the industry who are supporting the fight, and I venture to suggest that a subscription to National Tax Equality Association of $100 would be in line with the support of other concerns of a size approximately equal to yours. Sincerely, Garner M. Lester, president."

This National Tax Equality Association has resorted to all of the familiar pressure gadgets typical in a lobbying organization. They printed several million "phony bucks" attacking the cooperatives. The bills were so nearly identical to United States currency that the Secret Service of the Treasury Department asked the National Tax Equality Association to stop circulating the propaganda throw-aways. Undoubtedly most, if not all, of the members of the Ways and Means Committee have had hundreds if not thousands of these sent to their desks during the last few months.

The most insidious trick of all was a "phony" Christmas card which the NTEA circulated in huge quantities with the request that they be mailed to Senators and Congressmen. One of my colleagues from a western State got 5,000 of these Christmas cards himself.

The latest device—as you might well suspect—is a chain letter urging that businessmen write the Members of the Congress and tie this campaign against the cooperatives into repeal of the wartime excise taxes. In this letter the National Tax Equality Association again says, "The Congress can raise $1,000,000,000 without increasing taxes by taxing the untaxed corporations." You will undoubtedly be subject soon to another deluge, for the letter calls for action saying, "If this is done millions of letters will reach the Congress this session and definite action will result." The authors of the letter fail to state what action they expect your committee to take. But they concluded with this pleasant little ditty:

"If you break this chain
Please don't complain
When excise taxes give you a pain
And income tax goes up again."

The chain letter carefully says, "Address Congressmen, care of the House Office Building; Senators, care of the Senate Office Building, Washington, D. C."

Now, what is the fighting all about?

Congressman NOAH MASON has before this body a bill which would do two things. The first would repeal section 101 (12) of the Internal Revenue Code, which provides tax exemption for agricultural cooperatives which choose to qualify for it.

The second part of Congressman MASON'S bill would put a direct, and I believe unconstitutional, tax on patronage savings which are returned to the members of the cooperative associations. By a great stretch of the imagination the Congressman has come to the conclusion that these repayments—which are in essence a return to the user of part of the price he paid for a commodity or service which he received—are the same as profits and are therefore income. The courts of the United States have consistently ruled that these are not profits and therefore are not subject to income tax.

Section 101 (12) of the Internal Revenue Code, adopted in 1916, was not a measure to confer a favor on cooperatives. It was part of the agricultural policy of the United States. It was an attempt to encourage the farmers to do things for themselves and to help bring America a more prosperous agriculture. It is very difficult for an organization to qualify under this provision; as a result less than half (only 5,000 of more than 10,000 eligible) of the cooperatives who might be eligible for it choose not to take advantage of it. This exemption from Federal income-tax payments is the only tax advantage extended to cooperatives of any kind. The cooperatives pay all other State, local, and Federal taxes. More than half of the farmers cooperatives pay Federal income taxes, and all of the city consumer cooperatives pay them since they have no possible exemption under the law.

The slogan "Tax the untaxed first" is designed to confuse and malign. It accuses the cooperatives of being tax-dodgers. I am surprised that the cooperatives have not filed libel suits against the National Tax Equality Association and the National Associated Businessmen for this frankly libelous slogan.

I believe that it will continue to be the agricultural policy of the United States to continue to encourage the agricultural cooperatives. If, however, that policy is to be changed, it should be changed only in the light of and after careful reexamination of our entire agricultural policy.

The real intent of the National Tax Equality Association and the National Associated Businessmen, however, is revealed in the final section of the Mason bill which would tax, in the hands of the cooperatives, the repayments which by law they are obligated to pay out to their members and which in no sense of the word can be interpreted as profits. This second section of the Mason bill would obviously penalize the cooperatives by placing on them a tax which is not placed on any other form of business enterprise. As you know, it is the right of any businessman at any time to pay a share of his earnings back to his customers and not pay tax on those refunds.

The cooperatives have, over the years, proved themselves to be business enterprises of which America may well be proud.

It would be a tragedy for this Congress to take action under pressures of the kinds which have been demonstrated before this committee in the last few months and the last few days.

Repeal of Wartime Excise Taxes

REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. PHILBIN. Mr. Speaker, I must once again urge immediate repeal of wartime excise taxes. These taxes were enacted during the war and there is no justification for their continuance. I rejoice that the House Ways and Means Committee has initiated action to eliminate them from the tax structure. I

have requested the Committee to include electric and gas cooking appliances and water heaters in the list of commodities to be relieved of wartime taxation.

On numerous occasions I have stated my opposition to these unwarranted taxes. It is most encouraging to note that President Truman, high Cabinet officers, and many colleagues in the Congress have taken the position that these onerous levies should be largely eliminated.

Many of these taxes strike at necessities, nonluxuries. Women's handbags for example are clearly articles of everyday use. How such an essential as baby oil ever was included in these taxable items is a mystery but obviously such a tax is entirely indefensible. In a degree the same is true of taxes on transportation, admissions, communications, and stoves and cooking appliances as well as other articles. The sole argument for such levies is that they are necessary in order to secure essential revenue for the Federal Government. There are many good economists in business and who believe that if these taxes were lifted the Treasury would greatly benefit by the increased income that would result to manufacturers, distributors, and retailers.

I fully recognize that it may be desirable or necessary to make up any financial deficiency which might result from the elimination of these taxes, yet it well may be that readjustment in current expenditures and new revenue from the industries affected by wartime excise taxes would enable the Congress to avoid the imposition of burdensome new taxes.

It is reassuring to note that the Ways and Means Committee is now working on repeal measures. Our financial and tax problems are extremely serious and undoubtedly complex and the sooner we move toward simplification of the tax structure and sound readjustment of our fiscal condition, the better assurance we will have of full employment, high wages, continued prosperity as security for the American people.

This Government and the incomparable economic system which supports it can be weakened and shattered and brought to a condition of stalemate and collapse by the evils of high taxes and regimentation. This is not theory. This is a fact which we have vividly before us in the experience and example of certain European countries which have wrecked their economy by overtaxing, overspending, overregulating business and social institutions. This is in truth the road to serfdom. If we would avoid similar experience the Congress must take action now to preserve the vitality and strength of the American productive machinery and thus secure, not for any class or group but for the average American citizen the fundamental God-given right of life, liberty, and the pursuit of happiness under a sound, progressive, healthy, and humane democracy.

Obviously it is the duty of Congress under the Constitution to promote the welfare of the American people. This can best be achieved by securing our freedoms to think, to speak, to believe and to work as unfettered Americans. Free initiative and enterprise is one of the strongest weapons the Nation possesses to insure prosperity and the national welfare and we must not permit these invaluable attributes to be stultified by excessive taxation and ultimately obliterated by regimented Government.

Seattle Voters Will Vote for Program of Decent Homes in Good Environment

EXTENSION OF REMARKS

OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. MITCHELL. Mr. Speaker, in a few weeks a local municipal election will take place in my home city of Seattle, Wash., which has Nation-wide importance. On March 14 the people of Seattle will vote to use or not to use Federal funds for low-rent public housing in Seattle.

Seattle, in these last few weeks, has become the battleground where the national real-estate lobby and its local adherents have taken up the selfish fight which they lost decisively in the Congress last year.

I need not remind the Members of this House of the vindictive boast with which the vanquished real-estate lobbyists retired from the congressional battlefield last summer. They then declared that having lost the issue in Washington they would take it up again in the local communities.

LOBBY CONTINUES FIGHT

Now they are trying to make good on that threat. They have turned their attention from Washington, D. C., to Seattle, Wash. There perhaps they thought their old and empty slogans would find a fertile field. Perhaps they believed Seattle was an easy place to start a national comeback. Evidently they thought that the citizens of Seattle were so uninformed as not to see through the falsification and name calling so as to find the real issue and the real answer.

I believe that they have misjudged our citizens. They have made the fatal error of thinking that the voter cannot understand the fundamental fact that a decent home and living environment are the rightful heritage of every American family and every American child. I believe that on March 14 the citizens of Seattle will vote overwhelmingly to bring public low-rent housing to Seattle for the benefit of low-income families now living in overcrowded, indecent, and insanitary places.

Last September in carrying out its responsibilities to the citizens of Seattle under State and Federal law, the Seattle Housing Authority recommended to the city council and the mayor that they join in an application to the Public Housing Administration for 1,221 additional units of low-rent public housing pursuant to the Housing Act of 1949. The city council after full public hearings endorsed the Housing Authority's application by a 7 to 2 majority.

Using the technique which the national real-estate lobby has recommended, and is using in numbers of smaller places throughout the Nation such as St. Petersburg, Fla., and Waco, Tex., the local adherents of that lobby decided to use referendum procedure to put the ordinance on the ballot in a municipal election. In a well-financed campaign, the necessary signatures were obtained on a referendum petition, and the issue went on the ballot.

DELAYING TACTICS USED

Why has this technique been used? First, because it delays the public low-rent housing program, and, secondly, because the lobbyists are hopeful that in an election with a small turn-out of voters they can hoodwink and frighten a sufficient minority to win. They would like to be able to point to Seattle as the first large city that had the opportunity to vote on the low-rent public housing program and to say the people turned it down.

My belief is that the real-estate lobby will be disappointed. Seattle civic leaders, Democrats, Republicans, church people, veterans' groups, and every segment of organized labor have joined together to support the principles of low-rent public housing. They have formed a Citizens' Housing Committee which is answering the real-estate lobby blow by blow and word for word. They are bringing the facts to the people and the facts speak for themselves.

On Sunday, February 19, the Seattle Times, a leading daily in my home city, called for the voters of Seattle to answer three questions before voting on the public-housing issue in the municipal election.

As a voter in Seattle, I want to answer these questions and state the reasons for my answers. If my responsibilities in Congress were not demanding my attention here, I should be answering these questions at home where I vote. As it is I shall cast an absentee ballot and vote to go forward with the low-rent public housing program in Seattle.

PRINCIPLE OF PUBLIC HOUSING HAS APPROVAL

First, the Seattle Times asks, "Do I approve the principle of public housing in general?" If the Seattle Times means the housing proposal on which Seattle votes March 14, my answer is clearly "Yes." By public housing I mean the low-rent public housing proposed by the Seattle Housing Authority and ratified by a forward-looking city council which was made possible by the program of the United States Housing Act of 1937, as amended, and expanded by the Housing Act of 1949.

This program provides homes only for families of low income who are unable to afford private, safe, and sanitary housing. I approve of such a program. That program assures a decent neighborhood environment to Seattle families not now being properly served by private housing. It assures these low-rent tenants a fair rent so that funds remain in order that they can feed and clothe their families adequately with the remainder of their incomes.

Yes, I believe wholeheartedly in a principle and a program which provides homes in a decent environment as the center of family life, rather than the sorry substitute of the street corner, the filthy alley, and the doorway of the crowded slum. I approve the principle of low-rent public housing for families which cannot afford decent private housing. In this, the only field where public housing is suggested, I agree with a well-known Seattle home builder who wrote me, "it has been utterly impossible for builders to cover this field."

SEATTLE NEEDS LOW-RENT PUBLIC HOUSING

Secondly, the Seattle Times asks me as a voter whether Seattle genuinely needs additional low-rent public housing now. Again my answer is an emphatic "Yes."

The 1940 census found 25,000 substandard dwelling units in Seattle. The Seattle Housing Authority found in September 1949 that there were 18,500 low-income families who would be eligible for low-rent public housing of which 7,500 families were in great housing need. These statistics speak for themselves. They are bulwarked and underlined by my own personal knowledge of the hundreds of Seattle families now living in hotels and rooming houses not designed for family occupancy. They are high lighted by my own visits to the areas in my city where because of race or color hundreds of families are crowded into unhealthy slums. They are made vivid by my memories of the 2,800 units of temporary war housing in Seattle which are full of low- and middle-income families who cannot find adequate homes they can afford on the private market.

Finally, the Seattle Times asks should I as voter in the city election vote "Yes" on the referendum if there is a real need for the 1,221 units even if I do not believe in public housing. This question, resultant of the first two, I also answer "Yes" for the doubters.

Our fathers and our grandfathers who settled the Pacific Northwest came to a country where they could fashion with their own hands homes for themselves with the abundant materials available. During the war, and since, thousands upon thousands of new pioneers have come to my city and my State to find homes for themselves and their families. We take pride in our mounting population and the opportunities these newcomers find among us. But we cannot take pride in the dwellings in which they must live, if they are overcrowded and forced into substandard, inadequate shelter.

We in Seattle are proud of our city and its people. We want to be proud of the homes in which they live. In voting for further low-rent housing, we must remember the lesson of our only present low-rent public housing project, Yesler Terrace, with its 868 apartments.

YESLER TERRACE A GOOD EXAMPLE

In its short 8 years of life more than 2,900 families have lived in these Yesler Terrace apartments. Yesler Terrace has a great record of taking low-income families out of the slums and broken-down walk-ups, off the streets, and out of the trailer camps. It has given them a fresh and happy start in a good home in a fine neighborhood. It has launched them on the road to an income and an outlook which lead them to buy or rent the good homes provided by the private home-building industry.

Our first low-rent project has proved its worth to Seattle again and again. On March 14 I shall vote to bring more low-rent housing to Seattle so that the job started on Yesler Terrace can be completed and no low-income family by virtue of its income, its size, or its color shall be forced to live out its life in a slum.

Mr. Speaker, I believe calling this Seattle problem to the attention of the Members is fully justified because the real-estate lobby will not limit its activities to Seattle alone. As I have pointed out, there is a concerted Nation-wide drive to nullify the housing objectives we have endorsed in this Congress. To illustrate, I ask leave to include with these remarks the following excerpts from a dispatch which appeared in the Washington Evening Star of February 23, 1950:

HOME BUILDERS PLAN DETERMINED FIGHT TO STOP PUBLIC HOUSING

CHICAGO, February 23.—The Nation's home builders today prepared to carry on a determined fight in cities and towns in an attempt to stop public housing projects "at the local level."

This decision was reached after it was learned the association would seek to raise immediately more than $100,000 for a public-relations program.

Electing a President of the United States

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. HOPE. Mr. Speaker, the Senate of the United States has recently passed Senate Joint Resolution No. 2, commonly known as the Lodge-Gossett resolution. This proposed constitutional amendment will in all probability come before the House of Representatives in the near future.

A former able and distinguished Member of this House, later a justice of the Kansas Supreme Court, the late Honorable Homer Hoch, took a great interest during his service in Congress in the questions involved in the election of the President and Vice President. The July 1944 issue of the Kansas Judicial Council Bulletin contained an article by Justice Hoch, entitled "Electing a President of the United States." I have seen no clearer or abler discussion of the question involved in the Lodge-Gossett resolution than is contained in this article by Justice Hoch. Because I believe that it should be read by every Member of the House of Representatives, I am including it herewith as a part of my remarks:

ELECTING A PRESIDENT OF THE UNITED STATES

(By Justice Homer Hoch, Kansas Supreme Court)

Few people, apparently, regard the method provided by the Constitution for electing a President as a matter of much importance. Comment on the subject consists largely of facetious reference, every 4 years, to the electoral college. And yet, in the opinion of most students of government, this part of our constitutional machinery is not only undemocratic but has very serious defects fraught with real public dangers. To these defects and potential dangers we give little or no concern, our presidential elections having ridden along, in the main, on fairly even keel. Until some emergency arises in a time of tense public feeling which may precipitate a political crisis we just can't be bothered. It is quite like the traditional Irishman's leaky roof, which didn't need fixing while the weather was fair and couldn't be fixed when it was raining.

Briefly stated, the serious defects of the present system are: First, a President may be elected—and has been—not only without having received the most popular votes but without having received as many electoral votes as his principal opponent; second, the votes of the minority in each State are not only uncounted for the candidate for whom they are cast, but in effect are actually counted for the opposing candidate; third, the provisions for electing a President in case no candidate receives a majority of the electoral votes are so defective that an impasse might easily occur, with no means provided in the Constitution for securing a President.

Debates in the Constitutional Convention related almost as much to the methods of selecting personnel as they did to the principles upon which the new Federal Government was to be established. And wisely so. Whatever the form of government, it must be administered by men, and while a government bad in substance cannot be sanctified by administration, a government good in principle may be perverted into tyranny by the men who run it. It was only natural, therefore, that having drawn the outlines of a central government of limited, delegated powers, with separate and coordinate branches for law making, law interpreting, and law enforcing, the Constitution Convention should debate at great length the methods of selecting those who were to exercise the various Federal powers.

It is, of course, out of the question to attempt, here, a review of those debates. The principal decisions which were reached as to the legislative and judicial branches are familiar to nearly all. The National Legislature was to be bicameral—with one Chamber directly representing the people, and the other representing the sovereign States. Without this major compromise between the large and small States, which gave representation in the House on the basis of population and gave each State the same representation in the Senate, the Constitution probably would not have been ratified. The principle of this compromise was carried over into the election of a President by giving to each State one electoral vote for each of its Representatives and its two Senators. Two important changes have been made as to election of Representatives and Senators. The Constitution originally provided, in effect, that in the apportionment of Representatives among the States a slave should be counted as three-fifths of a person. With the abolition of slavery this strange political and mathematical provision was formally eliminated by the fourteenth amendment. Senators were elected by the State legislatures until 1913, when the seventeenth amendment providing for their election by popular vote was adopted. As to the judiciary, one of the principal decisions of the framers of the Constitution was to fortify independence of judicial action by a life tenure for Federal judges. Whether this provision is a wise one has long been a question for debate. These and other interesting questions have more or less pertinent relation to our immediate subject but per-

missible length of this paper prevents their discussion here.

We come to the subject of this paper—the method provided for electing the executive head of the Federal Government. Few subjects before the Convention aroused such extended and acrimonious debate. At least four or five proposals were seriously considered. The so-called Virginia plan, the Pinkney plan, and the New Jersey plan all proposed that the President be elected by Congress. George Mason, of Virginia, one of the most active members of the Convention and a man with a distinguished record as a patriot and statesman, said that it was "as natural to refer the proper character for chief magistrate to the people as it would be to refer a trial of colors to a blind man." And because of his dissatisfaction with the Constitution as adopted he became one of three framers who refused to sign it, and together with Patrick Henry led the fight against its ratification by Virginia.

The Convention first adopted a resolution providing that Congress should name electors who in turn should select a President. Two days later the Convention reversed its action and provided for election of the electors by the State legislatures. A week later it again reversed itself and passed a resolution providing for election of the President directly by Congress, with a 7-year term. Finally the electoral-college system was adopted as we now have it, except for one important change, to be presently noted, which was made by the twelfth amendment in 1804. The plan was taken from a similar provision in the Constitution of Maryland. It was designed largely for a nonpartisan government—political parties not then having fully developed. Apparently the primary principle which the framers thought they were adopting was the selection of a President by a group of men especially fitted for the task. These electors were to select a President much as a board of directors selects a manager for a corporation. Alexander Hamilton wrote in the Federalist: "It is equally desirable that the immediate election should be made by men most capable of analyzing the qualities adapted to the station and acting under circumstances favorable to deliberation, and to a judicious combination of all the reasons and inducements that were proper to govern their choice. A small number of persons, selected by their fellow citizens from the general mass, will be most likely to possess the information and discernment requisite to so complicated an investigation." It is one of the interesting developments of our constitutional history that without any change in the law this fundamental principle soon ceased to operate. The electors became mere instruments for registering the popular vote of the States. Nevertheless, the Hamilton theory was the one upon which the electoral system was based. After Washington's two terms, when Jefferson and Adams were the leading contenders, three electors who were members of the Jefferson party voted for Adams and yet their act aroused no public resentment. But the bitter controversies and personal animosities engendered in the 4 years of John Adams' term—largely by his temper and ineptitude in dealing with those around him—brought a radical change in sentiment concerning the election of a President. This turmoil terminated in the bitter Jefferson and Burr controversy in Congress. The Constitution provided that the electors should meet in their respective States and vote by ballot for two persons. No separate vote for President and Vice President was cast. These ballots were to be sealed and transmitted to the President of the Senate and by him opened and counted in the presence of the Senate and the House. The person receiving the highest vote was to be President and the next highest to be Vice President. At the first election Washington received 69 votes and John Adams 34, the latter thus becoming Vice President. In the election of 1796 Adams became President on a margin of only 3 votes over Jefferson, who became Vice President.

The election of 1800 was an intense one with Adams and Pinckney on one ticket and Jefferson and Burr on another. Jefferson and Burr each had 73 electoral votes and Adams and Pinckney 65. The Constitution provided, as heretofore noted, that each elector should vote for two persons, and it further provided that if there should be a tie vote the election should be made by the House of Representatives from among those whose votes were tied. Jefferson and Burr were tied. While there probably was not a single elector who voted for Burr with the intention that he should be President—the understanding being that he was to be Vice President if Jefferson were elected President—the constitutional provision as it then existed made it possible for the House to select either Jefferson or Burr. The feeling against Jefferson was intense among most of the Federalists, who were in full control of the House. And so a movement sprang up to name Burr instead of Jefferson. Not that the Federalists hated Burr less but that they hated Jefferson more. It was an unconscionable proposal—to which the brilliant but unprincipled Burr gave covert consent—but it would have prevailed had it not been for the opposition of a few Federalists, the most aggressive and influential one being Jefferson's arch political enemy, Alexander Hamilton. Had it not been for Hamilton, Burr probably would have been President instead of Jefferson. Hamilton wrote to Gouverneur Morris, "I trust the Federalists will not finally be so mad as to vote for Burr. I speak with intimate and accurate knowledge of character. His elevation can only promote the purposes of the desperate and the profligate. If there be a man in the world I ought to hate it is Jefferson. With Burr I have always been personally well, but the public good must be paramount to every private consideration." This service of Hamilton became an enduring monument to his high-mindedness.

As a result of this Jefferson-Burr incident the twelfth amendment was submitted and ratified in 1804. The electors now vote separately for President and Vice President, and in the case there is a tie vote for President, selection is made by the House from the three highest. In case there is a tie vote for Vice President, selection must be made by the Senate from the two highest on the list.

Both under the original Constitution and under the twelfth amendment the State legislatures have power to determine the method of naming electors. Originally electors were selected by the legislatures and as late as 1824 there were still six States that so selected them. South Carolina did not provide for election of the electors by the people until after the Civil War.

In 1824, at the close of the Monroe administration, there again occurred a bitter contest in the House of Representatives over the election of President, accompanied by personal charges and public scandal. That contest, which resulted from the unfortunate provisions of the Constitution, fomented strife and ill will which endured for many years. Out of a total popular vote of less than 400,000, Andrew Jackson had a majority of about 50,000 over John Quincy Adams, and had 99 electoral votes as against 84 for Adams. But Henry Clay and Crawford, of Georgia, who were also candidates, together had 87 electoral votes, which are sufficient to prevent Jackson having a majority of the total number. This threw the election into the House of Representatives, where Adams was elected by the vote of 13 States as against 7 for Jackson. Thus it came about that Jackson, with substantially more popular votes and with 15 more electoral votes than Adams, lost the Presidency and Adams won it. Had the times been just ripe for it, such a result might well have caused serious public uprising.

It would transgress the limits of this paper to narrate at length the circumstances and political upheaval incident to the Hayes-Tilden contest in 1876. The close of the election left the result in doubt. In four States contests took place with both sides claiming the electoral vote of the State. It is generally conceded that Tilden had a popular majority of approximately a quarter of a million. The 22 electoral votes in dispute were sufficient to turn the election either way. Public feeling ran high. Finally Congress—with doubtful constitutional warrant—created a commission to decide the contests from the disputed States. The commission, consisting of five Members from the House, five Members from the Senate, and five members of the Supreme Court, decided the various contests amidst the most intense excitement and bitterness, giving the election to Hayes by 1 electoral vote—185 to 184. Only wise counsel, to which Tilden patriotically contributed by his course of moderation, prevented uprising and possible civil war. All this would have been prevented by some simple changes in the constitutional provisions for election of a President.

I have not yet spoken of the most illogical and indefensible part of the present system. I refer to its disfranchisement, in every State, of the minority voters. A plurality of 1,000, of 100, even of 1 vote in a vote of 5,000,000 in New York State swings that State's 47 electoral votes. Thus, as many as two and a half million voters in that State may not only be denied representation in the electoral vote, but actually have their votes counted for the candidate they oppose. A like result does happen to all minority votes in every State every time we elect a President. I know of nothing in our constitutional system more illogical or undemocratic.

Not only is this disfranchisement of the minority voters in every State indefensible, in my opinion, but the provision for election by the House of Representatives in case of a tie is both illogical and inadequate for meeting contingencies. Although the apportionment of electoral votes among the States is based largely on population, the population factor is entirely disregarded when the election is thrown into the House. In that event each State has 1 vote. Nevada, with 1 Member and with 3 electoral votes, has the same 1 vote in a House election of a President as New York, with 45 members and 47 electoral votes. And if a State delegation in Congress happens to be tied, the State loses its vote entirely. Furthermore, the Constitution requires a majority of all the States to elect. It is surprising that a situation has not already arisen where no candidate could get a majority of the States. With three or more parties represented in the House it could easily happen that no eligible candidate could get a majority of all the States. It is true that if the House fails to elect a President the Vice President is to act as President, but a like provision obtains for election of a Vice President by the Senate and the Senate might easily be unable to elect a Vice President. If such a situation should arise the Constitution has no answer to it. Nor is there any provision for another election. What is the answer?

In itself the answer is not difficult. But unfortunately the obstacle of democratic inertia, of commanding the attention and convincing the understanding of the electorate to a point of action is very great. At various times in our history public-spirited men have sought to arouse public interest in the matter and to secure submission of a constitutional amendment, but to no avail. Senator Benton, of Missouri, agitated the subject in the eighteen twenties and thirties,

and in the seventies Senator Morton, of Indiana, made it his legislative hobby and submitted a very able and convincing committee report and recommendation. In the nineties DeArmond, of Missouri, as chairman of the Judiciary Committee, submitted another and similar report. In recent years Congressman Lea, of California, able and public-spirited, has followed in their footsteps and has several times secured a favorable committee report. But always the deeply needed change gets lost in the maze of matters which carry a more immediate and material appeal to Members and to constituencies. We are waiting for the big rain before fixing the roof.

Space will not permit discussion of various proposals that have been made. I will therefore only briefly state the plan which seems to me to be the simplest, the fairest, and the most likely to be ratified if submitted as a constitutional amendment. The heart of the plan, which has been called the proportional plan, is to divide the electoral vote of each State in the same proportion as the popular vote of that State. For instance, if two-thirds of the Kansas voters vote for the Republican candidate and one-third for the Democratic candidate, the former would get two-thirds of our electoral votes and the latter would get one-third. Thus every voter, whether in the majority or in the minority, would have his vote registered and represented in the election of a President. No voter would be disfranchised, as millions of them virtually are now in every Presidential election. There are two reasons which appeal to me for favoring the submission of such an amendment rather than one which disregards the States entirely and determines the result on the popular vote of the country as a whole. The first reason is that it would preserve the principle of the compromise—to which reference has been made—between the large and small States in the creation of Congress—House Members according to the State population but equal representation in the Senate. This compromise tends to lessen somewhat the comparative influence of the large and rich States—a consideration which I believe has been proved fair and wholesome from the standpoint of national unity. To make the point plainer, the plan would not disturb the electoral apportionment which gives Kansas, and every other State, one elector for each Senator as well as one for each Member of the House. Election by the whole popular vote of the Nation, computed as a unit, would disregard the historic compromise between large and small States and give undue influence to the heavy population of certain States. The second reason is that there would be little hope of securing the adoption of an amendment which discarded the present allocation of electoral votes among the States and provided for election by the popular vote of the Nation as a whole.

In dividing the electoral vote of a State under the proportional plan, small fractional numbers would be disregarded unless necessary to determine the result. The technical features are simple enough, not difficult of operation, but need not here be discussed in detail. The plan would remove uncertainty, render the election of a President by the House of Representatives—with its potentialities of scandal and bitterness already demonstrated historically—forever unnecessary and take away the serious possibility that some day we may find ourselves without a President and with no constitutional way to get one. It would wipe out the present disfranchisement of minority voters in the several States and prevent any candidate with less electoral votes than his opponent from becoming President.

Secretary Acheson and the Hiss Case

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. ROONEY. Under leave to extend my remarks in the RECORD, I include the following article by David Lawrence, from the New York Herald Tribune for February 28, 1950:

TODAY IN WASHINGTON—ACHESON'S ASSERTION OF FRIENDSHIP FOR HISS CALLED EXAMPLE OF PRACTICAL CHRISTIANITY

(By David Lawrence)

WASHINGTON, February 28.—Secretary of State Acheson stands in the middle of a cross-fire which may unfortunately have an adverse effect on the development of world politics at a critical time in history.

The Secretary, on the one hand, is accused of expressing friendship for a man convicted of perjury in a case involving the transmission of secrets to the Communist government in Moscow while, on the other hand, he is accused of standing too firmly against renewed discussions with that same Communist government and of being opposed to a new approach in Russian-American relations. On top of this come the criticisms directed toward the Department of State for alleged leanings toward the Communist regime in China and a considerable hullabaloo in Congress about disloyal employees in the Department of State said to have Communist sympathies.

The inconsistency of these different forms of attack is apparent, for obviously Mr. Acheson couldn't be a friend of communism in the Far East and opposed to it in Europe. The truth is that he is as deeply hostile to communism as anybody inside or outside the Government. The policy being adopted now in the Far East is one originating in military expediency rather than ideology, and it was decided on long before Mr. Acheson became Secretary of State—in fact, when General Marshall was at the helm.

CRITICIZED ON HISS CASE

Perhaps the most direct criticism of Mr. Acheson has come because of what he said after Alger Hiss was convicted. Many people hold that he has a right, of course, to entertain views of sympathy toward his friend and to doubt the guilt of Hiss but that, as Secretary of State, he shouldn't have commented at all. This is tantamount to saying that, when a man becomes a public official, he must cease to have human feelings and that a Secretary of State or any other public official is prohibited by political expediency from expressing himself on any moral question that arises.

Actually, when the Acheson nomination was up for confirmation, the Senate Foreign Relations Committee interjected the personal issue and asked Mr. Acheson about his friendship for Hiss, for whom he had acted for a brief interval as counsel before a House committee.

When the jury rendered its verdict of guilt, Mr. Acheson didn't attempt to dodge the inevitable recurrence of the same question when put to him by the reporters. He did not say, however, as has been misrepresented since, that he believed Hiss innocent. He expressed no view on that phase of it but simply pointed out, in effect, that, irrespective of whether Hiss went to jail or not, he would continue to give him his friendship.

CHRISTIAN SPIRIT

This is a far cry from condoning treason or any other crime. It assumed merely that Hiss, by the verdict if nothing else, had already received more punishment before his countrymen than a jail sentence could inflict. It assumed, too, that the rehabilitation of a man gone wrong is an obligation imposed on society as a whole—now recognized as an enlightened attitude in penology. It assumed also that the Christian spirit is not something to which men may pay lip service on Sundays but which they sometimes forget on week days because it might bring down upon them cynical charges of mawkishness or softness. There are many things more precious to Dean Acheson than public office, and one of them is the belief that a man must live with his conscience for years to come.

It is a sign of progress—not decadence—when public officials begin to have respect for moral values, courageously eschew hypocrisy and are ready to take the consequences of their utterances. It would be discouraging indeed if, amid all the professions of righteousness as contrasted with the atheistic world of communism, democracy which is so eloquent in its espousal of Christianity in the abstract should become critical of its concrete practice by high officials in the happenings of everyday life.

Truman Gives School Children Vacation—But in the Cold

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, President Truman's refusal to enforce the Taft-Hartley Act gives the school children of Flint an unwelcome vacation.

The following is what the Flint News Advertiser has to say editorially about the situation:

TRUMAN POLITICS CLOSE FLINT'S SCHOOLS

Flint today is getting a bitter taste of what Missouri politics, played to the hilt in the White House, can do to the national welfare.

Today's taste, bitter as it may be, will be nothing compared to the throat-choking pill to be administered in the next week or two as the coal strike throttles our industrial, educational, and social life.

All this because one man was so busy currying votes that he refused to recognize the emergency when it arose weeks and months ago.

Harry Truman has handled this strike as a Missouri politician, not as President of the United States—that's why 4,300 of our children are home from school today, perhaps 10,000 next week, fires dying down in homes and business places, and cities all over the country holding emergency meetings to save as much as possible out of the debacle.

Without going too far into the issues at stake in the strike—issues must become secondary when human suffering is a result—it is safe to say that John Lewis' United Mine Workers and the mine operators have been jockeying for position for months.

That, perhaps, is their privilege as long as no innocent bystanders got hurt.

Months ago, however, it became evident to anyone who could read the newspapers

that someone was going to get hurt pretty soon.

That was the time when Harry Truman, as referee, should have stepped in and blown the whistle. Harry, however, was too busy counting the house, looking for the congressional seats his party might pick up this fall and the votes he might garner himself in '52 if he could get out of the scrape without using that horrible old Taft-Hartley law.

Week after week, reporters trooped into the President's press conference and asked the same question. Did the President feel that the coal strike constituted a national emergency yet?

Week after week the answer was the same. No, the President didn't think there was an emergency. News-service reporters wrote that story so often that it grew monotonous.

A month ago, the director of the United States Bureau of Mines reported to the President that the supply of coal above ground was critically short.

Mr. Truman let another week pass even after this warning, then, instead of blowing the whistle with the Taft-Hartley law when he realized that the game was getting rough, he suggested a compromise to get the miners back in the pit.

That didn't work worth sour apples.

Finally, 2 weeks ago, the President reluctantly invoked the Taft-Hartley law.

Unfortunately, the ostrich had kept his head buried in the sand too long. The President's patience outlasted our coal piles.

Even if the coal miners should return to work now under a Taft-Hartley injunction to save their treasury from heavy fines, it will be weeks before new supplies of coal filter through to Flint.

Prompt, courageous action by our President as late as a month ago could have forestalled the inconvenience and outright suffering many persons in Flint now face. Instead, Harry Truman preferred to play it like a small-time politician.

How long must our school remain closed, our homes unheated because of these two-bit politics?

How stubborn can a Missouri mule get?

Needy Persons Compelled to Support Chrysler Strike

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, the UAW-CIO and its officers have much to say about civil rights, about discrimination.

The UAW-CIO's practices are to the contrary.

Note this letter from a union man:

Congressman CLARE HOFFMAN,
Washington, D. C.

GENTLEMEN: For God's sake don't repeal the Taft-Hartley law, especially where the contributions to politicians is concerned. If they do, when we (the common herd, as Roosevelt used to call us) get through feeding politicians, we won't have a dime, for every time they elect a new dog catcher up to Congressman, we would have to kick in. If you can change it so they can't assess us for strikes, it would help a lot, for I and my wife have been sick most of the winter and now we are assessed $12 for the Chrysler strike.

So keep the Taft-Hartley, only put teeth in it.

Tax Incentives for the Mining Industry

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. WHITE of Idaho. Mr. Speaker, while we are spending millions of dollars of the American taxpayers' money in developing mining properties in foreign lands, I think the time has arrived when we should do something for our domestic metal-mining industry which faces very serious problems.

This is not merely the concern of the mining industry; it affects every single individual in the United States because the production of raw materials—the products from our mines, farms, and forests—form the arch which supports our entire domestic economy. The combined income of agriculture and mining is always one-fifth of our entire national income, and every billion-dollar loss to either agriculture or mining will cause a loss of $5,000,000,000 in our national income.

Mr. Paul B. Jessup, attorney, accountant, and comptroller of one of the largest mining companies in the Coeur d'Alene mining district of north Idaho has prepared the following paper relating to tax incentives for the mining industry which I trust will be read by my colleagues and all others interested in maintaining a stable domestic economy:

TAX TREATMENT FOR NEW MINING VENTURES AND PRODUCING MINES

INTRODUCTORY

Taxes are an important factor in the overall problem of incentives to mine exploration and development.

In general, three different methods have been employed to accomplish this incentive objective, namely, subsidies, income tax relief, and to a limited extent, RFC loans.

Other incentives that should be given consideration are (1) liberalization of the restrictions imposed upon mine financing by the Federal Securities Act of 1933. (2) Revision of the United States mineral laws, particularly the discovery requirements of the law.

You will note that subsidies will be discussed at other sessions of this meeting, along with the matter of the effect of the Securities Act on mine financing and the proposed revision of the mineral laws. Therefore, no time will be devoted to these matters, except to point out that they are a part of the incentive program.

TAX INCENTIVES

The topic for discussion at this session is that of tax treatment for new mining ventures and producing mines. It is obvious that the difference in the character of these activities require different tax treatment.

In general, tax relief to mining enterprises can be divided into two types, (1) relief to the enterprise itself, (2) relief to the owners of the enterprise. The latter becomes important when the enterprise is conducted under corporate form.

The tax relief that has been given by Congress has been devoted to the enterprise proper rather than to its owners.

RELIEF TO MINING ENTERPRISES

Tax relief to mining enterprises can be classified under the following headings:

1. Treatment of exploration and development costs.
2. Depletion allowances.
3. Depreciation and amortization allowances.
4. Loss carry-overs and carry-backs.
5. Outright tax reduction or tax elimination for a period of time (Canadian system).

The latter is a product of the Canadian income tax laws and has not been adopted in this country. The previous speaker on the program has adequately covered this item.

The treatment of the other items under our income tax laws presupposes the ultimate existence of a producing mine. This we all know can be an erroneous assumption. I will briefly discuss each of these items in the order enumerated.

1. Treatment of exploration and development costs: The present law permits the amortization of the cost of exploration and development over the life of the enterprise. This presupposes the existence of something valuable to extract as a basis of amortization. No special provision is made for the treatment of capital expenditures incurred in the hope of developing a valuable mine, which does not materialize, except under the general theory of abandonment.

Today most of the development and exploration activities are conducted by the larger and better financed mining corporations. Existing law requires the capitalization or exploration expenditures. If the exploration program is not successful, the only tax relief that can be secured is through abandonment, which is a stiff penalty to pay for the privilege, particularly where such activities are conducted in mineral ground owned by the concern doing the exploratory work.

In my opinion, the option given the oil industry of either capitalizing intangible drilling and development costs or charging the same off as an expense should likewise be accorded the metal-mining industry with respect to its intangible development and exploration costs. The additional privilege accorded the oil industry of charging off its capitalized intangible drilling costs as an ordinary loss during the year the well becomes completed and was nonproductive should also be given the metal-mining industry during the year its development or exploratory activities are terminated at any particular property as being fruitless.

The extension of these privileges to metal mining would be a substantial tax incentive to development and exploration. As the principle has already been established in the oil industry, Congress should have no legitimate objection to such extension.

2. Depletion allowances: Most of you are familiar with the depletion laws governing metal mines. For the benefit of those who are not, this privilege is accorded by law to producing mines either on a cost or percentage basis, whichever provides the greater allowance. The term cost is used to include March 1, 1913, value.

Percentage depletion for metal mines was adopted as a substitute for discovery depletion under the Revenue Act of 1932. The original law required the taxpayer to make an election on its first return whether or not to adopt the percentage method. If this election was not made, cost depletion was mandatory. The Revenue Act of 1942 disposed of this election requirement and provided that the deduction would be cost or percentage depletion, whichever was greater. In doing this, Congress simply accorded to the metal-mining industry the same right that had been granted the oil industry since the percentage-depletion deduction was granted the latter under the Revenue Act of 1926.

I shall not take the time to go into the pros and cons of the arguments which raged for years on the subject of percentage depletion

which now seems firmly established. I do want to point out, however, that, in spite of the contention of the Bureau of Internal Revenue to the contrary, the present depletion laws are an all-important incentive to the metal-mining industry. I know from personal experience and observation that they provided a source of funds which are being utilized in exploratory and development activities. The only question in my mind is whether or not the existing percentage-depletion rate of 15 percent of the gross income from the property shouldn't be increased to a rate commensurate with the 27½ percent rate allowed the oil industry as an additional incentive to metal mining.

3. Depreciation and amortization allowances: Depreciation is allowed upon plant and equipment. The term "amortization" is usually applied to capital expenditures which do not have any tangible worth outside of their utilization in the mining enterprise, such as shafts and cross-cuts. After a mine has reached the producing stage such amortizable outlays are in the nature of deferred mining expenses which should be amortized over the life of the ore benefited by their installation. They should not be a part of the depletion base at this stage of the mining operation. The law should be clarified so that there can be no question on this matter. GCM 139543 is a sound statement of mine accounting principles, although questioned by some judicial decisions such as the Repplier Coal Company case.

Mine depreciation is usually calculated on the basis of a unit of time or unit of production. If the estimated life of the mine is less than the economic life of the depreciable asset, the depreciation should be based on the life of the mine often on a unit of production basis. If the reverse is true it is often calculated on a straight-line basis, using the economic life of the depreciable asset as the basis for the calculation. Normally, the unit of production basis for calculating depreciation is the most equitable method. It has the advantage of providing larger depreciation allowances in years of greater production and smaller allowances in years of lesser production. It also makes it more probable that the depreciable cost of the assets will be fully recovered when the mine is exhausted.

The subject of depreciation immediately brings to mind the matter of accelerated depreciation as an exploration and development incentive. There is no doubt that this would be beneficial. My own personal opinion is that the attitude of the Bureau in cutting down depreciation reductions over the past few years has not only resulted in an economic loss in wasted time on the part of the taxing authorities and taxpayers involved, but has also resulted in the Government's losing millions of dollars in tax revenues during the recent high tax rate years. If the law would permit the taxpayer to set its own depreciation method and rate so long as it was not entirely out of reason, the Government, over a period of time, would lose nothing, and eliminate useless arguments with taxpayers. Under these circumstances if the taxpayer made an error in deducting accelerated depreciation it would only have itself to blame.

4. Net loss carry-over and carry-back: During years of high tax rates loss carry-overs and carry-backs are of great importance from the standpoint of an equitable distribution of the tax burden. Without the allowance for losses beyond the year when they are incurred, taxpayers pay a very unequal rate of tax over a period of years. In addition, some of them lose substantially on depreciation and depletion deductions. It is unfortunate that the demands of governmental revenue require the computation of the income tax on an annual basis. Of the two, the loss carry-over is probably more important than the loss carry-back. It at least has the merit of not involving the administrative inconvenience that is occasioned by the latter. However, during high tax-rate periods, a fair and equitable distribution of the tax load should not be sacrificed for administrative convenience.

From the standpoint of an incentive for exploration and development there is a great deal to be said for the 2-year carry-back and the 5-year carry forward of losses. Under proper provisions permitting such losses in the original instance it could provide a corporate incentive to take risks on exploration and development programs. Also, wealthy individuals in high surtax brackets could well afford to risk their capital in natural-resource ventures. This is particularly true at the present time in the oil industry, where in addition to the loss deduction privileges allowed, the percentage depletion deduction rate of 27½ percent is in itself an incentive in the event the venture should prove successful. Similar treatment accorded the metal-mining industry might increase this type of risk capital.

RELIEF TO THE OWNERS OF NATURAL RESOURCES

So far our attention has been directed to the matter of incentives to the enterprise itself. As most enterprises of this character would undoubtedly be conducted in the corporate form, some consideration should be given the incentives for shareholders risking their investment in the same. This approach to the incentive problem has been conspicuous by its absence.

Generally speaking two things could be done to make natural-resource investments more attractive to corporate shareholders. They are as follows: (1) Provide for the recoupment of the shareholder's investment where the enterprise is profitable, and (2) facilitate the charge-off of stock losses where it proves unprofitable.

1. Recoupment of investment: Congress should consider the possibility of levying no tax upon dividends received from mining corporations until the shareholder's investment in the stock is entirely recouped. The shareholder in a wasting asset industry who holds his stock has received no profit until this eventuality occurs. Undoubtedly there may be some difficulties in working out such a plan, but I believe some fair plan could be developed to recognize this principle.

2. Facilitation of charge-offs: The law could certainly be improved in this respect. It is probably important from a mining-investment standpoint to retain the capital-gain provisions with respect to profits on the sale or exchange of mining stocks. However, from an investment standpoint, the allowance of ordinary losses on worthlessness, and the liberalization of the determination of the requirements for worthlessness, should merit serious consideration.

CONCLUSION

The particular points I have mentioned are not the only ones which need consideration. Nor are the remedies I have suggested the only ways in which improvement might be made. But I am convinced they would help and I am sure that we must have real improvement in our tax law if we are to foster and maintain our mining industry.

The Armament Race in the Near East

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. MULTER. Mr. Speaker, more than a week ago, on Monday, February 20, I placed in the RECORD the text of a memorandum on the rearmament of the Arab states which had been submitted that day to the Department of State by a delegation of the American Zionist Council. On that occasion I said that the British rearmament of the Arabs will lead to a general armaments race in the Near East and to an inevitable renewal of warfare in that part of the world which will result in the most dire consequences.

I regret to note that the first half of that warning has already come true—much sooner than I anticipated. The armaments race in the Near East is now on in full swing. In view of this most rapid development, I now fear to think when the second half of my warning about the inevitable renewal of warfare and its dire consequences will come true, as it must if we proceed with our present blind policy.

We learned from yesterday's newspapers that Israel has approached our Government with a request that it be permitted to purchase arms in this country. Instead of devoting its full attention to settling its economic problems, absorb the many new immigrants who have entered Israel in the past year and a half, settle them in its rural and urban areas, and integrate them into its economy, Israel is now forced against its will to turn its attention to problems of rearmament, security of its population, and the future existence of the state.

The unfortunate part of it is that our country is, directly or indirectly, a partner to Britain's task of rearming the Arabs. American arms obtained by Britain from this country are being diverted to the Near East, where they are resold to Egypt and other Arab countries. I have always been a consistent supporter of economic aid to Britain, but, at the same time, it was always my feeling that such aid should be for specified purposes and within specific limitations of the United Nations Charter.

In fact, on January 24, 1949, I introduced a bill in this House to amend section 118 of Public Law 472 of the Eightieth Congress by adding the following proviso:

> No money under this act shall be granted, lent, or used to or for any country which violates any provision of the Charter of the United Nations or, directly or indirectly, engages in acts of aggression so long as such acts continue.

Mr. Speaker, Britain's action in arming the Arab states is a violation in spirit, if not in letter, of the UN Charter and will most assuredly lead to acts of aggression against a long-suffering and peaceful people. By our support and approval of Britain's action we are condoning such deeds and encouraging Arab aggression. We still have time to forestall bloodshed, but time is running out fast. We may awaken some fine morning to discover that we have a full-scale war on our hands in the Near East, and this time those forces who thrive on chaos and spread their ideologies in times of disorder may beat us to the punch.

Today's New York Herald Tribune has an excellent editorial on the subject,

Arms and the Near East, which I commend to the attention of all Members. It is as follows:

ARMS AND THE NEAR EAST

The latest Israeli request for permission to export arms from the United States and Great Britain illuminates the stark fact that there is no peace in the Near East. Britain, under her old treaties, has resumed the shipment of weapons to the Arab states; the United States has lifted its embargo on such exports in accordance with the United Nations decision, and has licensed some sales to Israel. An arms race is on in the wake of the Palestine war.

But, as in all similar situations, it is not the arms that constitute the real danger of war—rather it is the will to use them. Peace certainly would not be insured by continuing British military aid to the Arabs, while the Israelis were debarred from obtaining weapons from the west. It would not be forwarded if the United States and Great Britain were to enter into a competition to see which nation could supply the greatest amount of arms to the contending parties. Even a new embargo by the western powers, although it might reduce some of the tension in the Palestine region, would not necessarily remove the fundamental threat. Both sides would seek other sources of supply; and if they found them in the Communist bloc of states, the situation would be worsened all around.

The real answer to the problem does not lie in any juggling of arms shipments but in the conclusion of peace treaties among the nations involved in the Palestine embroglio. The present armistice must be replaced by a genuine agreement which will permit the necessarily slow growth of mutual trust and cooperation. A workable solution of the question of Jerusalem must be found, and the United Nations as a body, the United States and Great Britain as interested powers must exert their influence to bring the parties to terms.

The armistice agreements give a practical basis for a settlement; there have been substantial advances toward resolving disputes over boundaries, the refugees and the like. Both Israel and the Arab states have domestic problems which clamor for undivided attention, and make heavy demands upon all the resources of skill, energy, and wealth that are available. Neither side can hope to obtain more, in terms of national prosperity and stability, from war than it would achieve by peaceful methods; indeed, war promises only disaster. If peace, a real peace, were made the first objective on the agenda of Israel, the Arab states, the United States and Britain, the arms race would be relegated to a subsidiary importance, and would die away of inanition.

Income-Tax Exemption for the Disabled

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1950

Mr. JAVITS. Mr. Speaker, yesterday I introduced legislation extending to the physically disabled the same $600 additional income-tax exemption now granted to the blind. By alleviating some of the Federal income-tax burden on these disabled persons who, in spite of their infirmities, have overcome great physical obstacles and have become productive citizens contributing to the welfare of their communities, we will lift some of them out of the borderline area of becoming public charges, and will encourage others to greater efforts toward becoming self-sustaining. The initial loss of actual revenue to the Federal Government as a result of this bill would be very small.

There are about 101,000 disabled in this country today who would be eligible under the bill and many of these do not have sufficient disability to be included. To qualify for the additional exemption the bill defines a "disabled individual" as—

An individual who, by reason of a medically demonstrable physical defect or infirmity (whether congenital or acquired by accident or illness), is permanently and totally incapacitated to perform normal remunerative employment or work, or has permanently lost the use of a hand or a foot, or has permanently lost his hearing or speech.

Milking the Long Cow

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. O'SULLIVAN. Mr. Speaker, one certainly grows weary of seeing bad, big business after having lost a long legal fight to then rush into Congress and try to get a law passed legalizing for the future their previous wrongdoings. That is just what is sought to be done here today.

When this same bill was before the House of Representatives on July 7, 1949, I spoke at length against this legislation, as pages 9069 and 9070 of the permanent RECORD will disclose. I voted against this bill then, as I also did today.

This bill reeks with selfishness. Even in the face of the atomic and hydrogen bomb scare which requires the dispersing of perhaps all industry throughout the Republic, selfish, big business wants to still centralize it in the future as they have done in the past. The fate of the Republic does not seem to be of any importance to them as I view it.

Some time ago in a labor magazine I saw a cartoon entitled "Milking the Long Cow" which is very applicable to this bill, S. 1008, which was under consideration by the House today. This cartoon pictured a cow with one front foot planted in the Midwest and the other front foot in the State of Texas. The cow was eating the rich forage all about her. One hind foot of the cow was in New York and the other hind foot was in Pennsylvania. On each side of the cow was a man sitting on a milk stool, with a pail between his knees, and his head pressed firmly in the cow's flank, milking as fast as he could. That cartoon well illustrates the present bill.

I have urged all of my acquaintances, who are the real friends of small business, to vote against this bad, bad bill of the big, bad, business interests. Congress should not permit selfish, greedy, and all-consuming big businesses to milk the long cow any longer.

This morning the volatile, voluble, and valuable gentleman from Pennsylvania [Mr. RICH] seemed to think that President Truman somehow was in a hole, which was a decidedly unrealistic statement to put it mildly, but anyone who voted to let the long cow be milked any longer, will be not only in a deep political hole but will have a 5-ton tombstone on that grave to keep him in it, with an inscription, I suppose thereon, "He sacrificed his political life to bad, big business' un-American thinking."

Aid to Southeast Asia

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the New York Times of February 26, 1950, entitled "Aid to Southeast Asia":

AID TO SOUTHEAST ASIA

The dispatch of a technical mission to Southeast Asia to study the fashion in which economic aid can be best used is a sound plan. It is earnestly to be hoped that the mission will have impressed upon it the need for prompt action. There are many things to be done and some of them will be more effective if they are done quickly.

The immediate problem throughout the area is the restoration of production. For the time being, at least, the stability of southeast Asia and its opportunity to make longer range advances in the whole balance of economy is dependent upon getting back into the world market with a specific group of raw materials. The various, and often commendable, plans for industrialization at different levels and for large-scale diversification of production will simply have to wait until the basic economy is put back on a level of paying its own way. What that boils down to is sugar, coconuts, hemp and tobacco in the Philippines, rubber, tin, kapok, pepper, pineapples and petroleum in Malaya and Indonesia, rice in Indochina and Thailand, and rice, oil and teak in Burma.

A viable economy of southeast Asia will have to be, for some years to come, an economy based on close connection with the needs of the Western World plus the production of rice for food needs in the deficit Asiatic areas. This is not economic "colonialism"; it is just plain common sense. It is not a matter of proving or disproving any group of economic and political theories; it is a matter of seeing to it that a large number of persons have enough to eat and that the sufficiency be provided as quickly as possible.

This economy cannot be restored, however, in a power vacuum. There must be some degree of political stability if products are to be grown and marketed. We have already seen what terrorism can do in Malaya and what civil unrest can do in Burma. Political insecurity can be quickly translated into economic stagnation.

The United States, therefore, must give some assurances in policy that will contribute to the desired and indeed imperative

political stability. A mission to study needs and how they can be met is a good thing. But we already face the accusation of "all talk and no deeds" in the Far East. The study of needs must be coupled with the firm resolve to meet those needs, not through some hopeful planning for the distant future but through assistance here and now.

The Purchasing Power of Our Dollar

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. REED of New York. Mr. Speaker, I have received a letter from a very distinguished constituent, Charles G. Cady, of Weston's Mills, New York, dealing with some history on currency which is very pertinent to our present fiscal situation.

We are traveling rapidly towards currency depreciation, which means, of course, a form of national bankruptcy that leads to the reduction of the purchasing power of our dollar.

This, of course, will have a devastating effect upon the security of those who in years past purchased insurance policies paid for retirement, and put their hard-earned money into annuities. Even now there are those who are proposing to cover up our deficit until after this year's campaign by putting in a plan of anticipatory tax revision on corporations. This is not a new device. In some countries reckless spenders in charge of the government resorted to this fraud to cover up deficits and keep on spending.

Under leave to extend, heretofore granted, I am inserting Mr. Cady's letter in the RECORD:

On the chance that the following may not have come to your attention, I am venturing to submit it to you for use whenever the occasion may arise.

When the war broke out by the American Colonists against the British Crown in 1775, the total money supply in the Colonies was about $10,000,000 in gold and silver coins—"Specie."

The new Continental Congress found taxation difficult and so turned to the printing press to finance its military expenses. It printed $2,000,000 of paper, redeemable in specie, dollar for dollar. It became popular. It was all the Congress intended to print. But it was such an easy way to meet the war expenses that the people demanded more of it be printed. While that first $2,000,000 had plenty of specie back of it, it circulated practically at par. But as more was issued it steadily depreciated. Prices rose rapidly and the value of the continental dollars in comparison with specie as rapidly fell.

The Continental Congress issued $6,000,000 of the paper money in 1775, and larger issues each year till it had printed $140,000,000 in 1779, only 4 years later. By 1780, or in 5 years, Congress had printed so much paper money that a paper dollar was worth in circulation, only 1 cent of real money. The current expression for uselessness was that "It was not worth a continental."

The Continental Congress and individual State governments tried every coercive means available to prevent the prevailing rise of prices. Price-control laws were passed. Also laws to compel creditors and merchants to accept continentals at par with specie. In 1775, Congress resolved "That if any person shall hereafter be so lost to all virtue and regard for his country as to refuse (to accept the continentals) such person shall be deemed an enemy of his country. General Putnam decreed that everyone refusing to receive continentals at par would have his goods seized and be imprisoned. The Council of Safety of Pennsylvania decreed that any violator of these control laws was a dangerous member of society, that the penalty for first offense would be the seizure of the goods and a heavy fine, and for the second offense, would be exiled from the State. Price control, particularly in Pennsylvania and New England, led to acute shortages and widespread violations. Self-appointed committees of citizens in New England looted stores at will, selling the goods from the shelves at fixed prices. The Council of Safety of Pennsylvania, learning that a cargo of salt was coming and that its price had been increased ordered it sold at a low price. From then till the end of the war, salt was almost unattainable in Pennsylvania. The Rhode Island State government decreed that if some people were in want and others were deemed to have too much, the justices of the peace might order the constables to break open the houses of the "haves" and supply the "have nots" with the goods at lawful prices (and the State was to pocket the proceeds). Connecticut decreed a rationing scheme prohibiting any person from buying more than a stipulated amount of food and other necessities. Purchases could not be made without a license from the State.

A discerning writer of that time, Peletiah Webster, summed up the experiment with the continental. "Paper money polluted the equity of our laws, turned them into engines of oppression, corrupted the justice of our public administration, destroyed the fortunes of thousands who had confidence in it." It went far to destroy the morality of our people.

Now note: In 1780 Congress repudiated its dollar for dollar promises and announced specie resumption at a rate of one specie dollar for 40 continentals. There followed a rapid fall in prices to a stable level.

Another writer of that day said: "It becomes rulers to learn from the catastrophe of our continental currency that money is upon a footing with commerce or religion. They all refuse to be the subject of law. It becomes the rulers of freemen to learn further that money is property, and that the least attempt to lessen its value in our pockets and chests is taxing us without our consent. It is the highest act of tyranny. We have tried every art and device to keep up the credit of paper money except one; we have never yet tried the effects of being honest."

Now, Mr. REED, do me one favor. Please look in your own pocketbook. You will find a $1 bill on which is printed "The United States will pay the bearer one silver dollar on demand." On your fives, tens, and twenties (I don't happen to go any higher), you will find "The United States of America will pay to the bearer on demand $5, $10, and $20." Another printed note, with nothing back of it but the promise to pay another of the same kind.

I worked hard, earned a little, saved a little, laid it away for that proverbial rainy day some 20 years ago. Then by Presidential decree my dollars were made worth only 58 cents each.

My sincere appreciation of your serious task.

RFC Pays for Itself

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. MULTER. Mr. Speaker, it will probably come as a surprise to some Members in this House that the Reconstruction Finance Corporation is a money maker instead of a money loser. Despite the recent difficulties with the loan to the Lustron Corp.—which, incidentally, may still be saved—RFC's losses have been less than one-half of 1 percent. At the same time its net profits after payment of all expenses are reported to be about $573,000,000, more than half of which it returned to the United States Treasury in the form of dividends.

Many Members will be interested to read the brief article on the subject by Carl Levin, RFC: Money Maker, published in the New York Herald Tribune, Sunday, February 19, 1950, which is as follows:

RFC: MONEY MAKER—POSSIBLE LOSS ON LUSTRON LOAN A RARITY IN HARD-BOILED AGENCY

(By Carl Levin)

WASHINGTON.—Government lending, at least when done by the Reconstruction Finance Corporation, remains a profitable and sound operation even when it becomes necessary to foreclose, as it did last week, on a borrower owing $37,500,000.

The decision to institute foreclosure proceedings against the Lustron Corp., manufacturer of all-steel prefabricated homes, with possible resulting RFC losses of $30,000,000, caused no high fevers at RFC.

A perusal of RFC's profit-and-loss statement makes clear that RFC is a hard-boiled lending outfit which, while it helps business and thus the Nation's economy, is primarily in the business of making money.

The Government-owned lending corporation was founded by Congress in 1932. At the direction of Congress it was involved in subsidy payments, stock piling, and war-plant financing during the war, which were not calculated to be profitable. Now it is engaged only in lending and investment.

Excluding intragovernment financing, it has made loans and investments in excess of $10,150,000,000. Its losses, after all operating expenses, have amounted to less than one-half of 1 percent of the amount it has disbursed. Its net profits, after paying all of its expenses, plus interest on the money which it has borrowed, are in the vicinity of $573,000,000.

Under the present Reconstruction Finance Corporation Act, which contains provisions fixing the amount of profits which RFC may retain, it has paid $308,700,000 of the $573,000,000 to the Treasury in the form of dividends.

As set up 18 years ago all of RFC's capital stock, $500,000,000 worth, was purchased by the Treasury. This gave the lending agency its original working capital. All but $100,000,000 worth of this has now been retired at par.

The agency formerly borrowed money from private lenders. Now all the money it needs to continue its lending operations is borrowed from the Treasury at an interest rate fixed by the Secretary of the Treasury, ac-

cording to a congressionally dictated formula. The rate usually is about 2 percent, based on the current average rate on outstanding marketable obligations of the United States. The rate charged borrowers usually is about twice that, 4 percent.

Currently RFC owes the Government, on notes, about $1,222,000,000, but if its past performance is any criterion this money is more than safe. It will earn well despite foreclosures such as that of the Lustron Corp., the loans to which, in the first place, were of a special nature because of the Government's interest in helping solve the critical postwar housing shortage.

And even in the case of Lustron, RFC officials point out, a reorganization may yet save RFC's investment.

British Pendulum Swings Back

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the New Hampshire Morning Union of February 27, 1950, entitled "British Pendulum Swings Back." The Union is published in Manchester, N. H.

BRITISH PENDULUM SWINGS BACK

The result of the British election indicates a definite reversal of a totalitarian trend that has been spreading recently over the Western World. For although the Laborites won a slim majority, the reduction of their lead in the House of Commons from 180 seats to a bare 1, with 12 "ridings" still to be heard from, registers a heavy swing of popular sentiment from 5 years ago. The Laborites got less than 46 percent of the popular vote.

A party in power in Britain needs at least a majority of at least 30 to carry on, due to the number of Government officials drawn from the parliamentary membership who are not usually on hand to vote on the floor of the Commons. This means that the laborites today are faced with the alternative of forming a coalition government or of calling a new election as soon as essential legislation is out of the way. It is practically impossible for them to carry on alone. When this result is taken with the recent Socialist defeats in Australia and New Zealand, the significance is inescapable.

The drubbing given the Communists and fellow travelers in the election is another indication that a reaction against the leftist trend has set in in Britain. All Communist candidates—numbering 100 in all—together with those who expressed sympathy with Russia, were completely wiped out. Even Communist William Galacher, who had represented his district in Scotland for 15 years, was decisively defeated. For the first time in many years, the British Parliament will have no Communists or fellow travelers in its ranks.

The British people apparently are awakening to the direction in which the Labor government has been taking the country. They were beguiled for a time by the lure of the social so-called benefits the Laborites held before them, and did not realize that socialism leads inevitably to the destruction of all individual initiative and the fixing of the iron grip of statism on the people. Perhaps the nationalization of the steel industry, which the Laborites voted but held in abeyance until after the election, began to call their attention to the fact that a return of the Laborites for another 5 years would mean that the nation would be irrevocably committed to socialism.

They have drawn back from that result, and let us hope that if another general election is called soon, they will put the final veto on the issue. The British are a hard-headed people, rooted in the democratic tradition, and it is inconceivable that they would see the freedom for which they fought for centuries wiped out by a return of government regimentation in which they would once more become puppets of the state. We here in the United States will do well to study the British reaction, for the same paralysis of socialism is creeping over us under the influence of bureaucrats fascinated by the Socialist way.

Sean Nunan's Farewell Address

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. MANSFIELD. Mr. Speaker, I am happy to insert in the RECORD, the farewell speech of Sean Nunan, Minister of Ireland to the United States.

It was with a sense of sadness that many of us attended the testimonial dinner for Sean last night at the Carlton Hotel. We will miss his smile, his courtesy, and his indomitable courage. We will remember his refreshing humor, his understanding, and his spirit of tolerance.

We all hope that in his new position as Assistant Secretary for External Affairs he will be able to visit us often so that we may continue to work with and for one another. Sean Nunan has not only ably represented his country in Washington; he has also represented us to Ireland.

We rejoice that we have known Sean and we wish him the best of everything in the years ahead. To Mrs. Nunan and Sean we say good luck and Godspeed and we—with them—look forward to that great day when the word "partition" will be replaced by "united." Then, and only then, will Ireland really come into its own.

Mr. Speaker, the speech of the Honorable Sean Nunan, Minister of Ireland to the United States, follows:

Mr. Secretary, Mr. Chief Justice, and my distinguished and dear friends, words are completely inadequate to express the very deep sense of gratitude I have in my heart for the many expressions of warm friendship made concerning me tonight, and for the wonderful friendship evidenced by the presence of such a distinguished gathering as is here.

I feel that personally I am not worthy of the honor you have done me, but I would be less than human if I did not feel tremendous pride and gratification at the tributes paid to me. I feel that in honoring me, Ireland's Minister to the United States, you are honoring Ireland—the motherland which cradled your forefathers and, indeed, some of you who are here tonight—the land whose people have contributed so greatly to the upbuilding and preservation of this great Republic of the United States. For the honor you pay to Ireland I am deeply grateful. For the tributes paid to me personally, I return a sincere, deep, and heartfelt "Thank you."

It is a difficult task for me to speak to you tonight, for my heart is heavy at the thought that I am saying "Goodbye" to so many dear and sincere friends of mine and of Ireland. "Goodbye" is a sad word, especially when a man reaches the three-score mark, and though I have every hope that I may come back occasionally, or some of you may come to Ireland, this may well be a final goodbye between some of us.

My heart is torn by two emotions—joy in the anticipation of going home to my own country, and sadness at the thought of leaving your great country—"the greater Ireland beyond the sea"—where so many of our people found refuge from an alien tyranny in years gone by, and where the opportunity of living as free men, which was denied them in their own country, was gladly afforded them. Which of these emotions will gain mastery in the years to come, I cannot say, but at the moment sadness is the predominant one.

When I look back over the period of 30 years since I first came to your shores, and recollect how the people of America helped my country in her efforts to attain independence, I am filled with gratitude. I came here in 1919 when the world was emerging from World War I, when America speaking through her great President, Woodrow Wilson, enunciated the ideal of the right of small nations to governments of their own choosing. We in Ireland had made our choice in 1916 and confirmed it in 1918—a Republic for all Ireland; but the will of the Irish people was denied by the then ruling power.

I came here with the President of the Irish Republic—Eamon De Valera—to plead Ireland's case to the liberty loving people of America and in the course of our stay here a drive for funds was made to enable the infant republic to survive. The people of America responded splendidly to the call and a sum of about $6,000,000 was subscribed for which bond certificates of the Irish Republic were issued. Without that financial help it would have been extremely difficult for the Irish Government to function. I had the honor of being the registrar of that bond issue and I say to you that it was one of the proudest moments of my life when the Irish Government repaid those bonds to the good people of America—and at $1.25 for each $1 subscribed. Those of you who remember that, were, I am sure, equally proud that Ireland did not default on her debt.

Ireland has come a long way since that time. Every vestige of allegiance or subservience to the power which for so many long and bitter years held our country in subjection has been obliterated in 26 of the 32 counties of Ireland by successive Irish governments, and a completely free and independent state is functioning there. But freedom and independence for three-quarters of the nation is not the ideal of the Irish Government or the Irish people. Complete freedom for, and the unity of, the whole of Ireland is the aim; but while great progress toward the attainment of that ideal has been made, the Republic of All Ireland has not yet been attained—because as you all know a part of our small island has been partitioned, despite the expressed voice of the Irish people. Our efforts to abolish the infamous border which divides our nation and country have been, and are still being, immensely aided by American opinion, and

Ireland will forever be grateful for the sympathy, and active assistance of her millions of friends in America.

I hope, and I believe, that in the final drive to that goal, Ireland can count on the continued sympathy and assistance of all lovers of true democracy in America, and that includes every American worthy of the name. We in Ireland want our country to be what your children proclaim America to be, when at assembly every morning they recite the Pledge to the Flag: "One Nation, indivisible, with liberty and justice for all."

On the other side of the ledger is to be found the record of the part played by Irishmen in the establishment of this great Republic of the United States. Our people are always to be found in the forefront of the fight for freedom everywhere, and particularly so in this Republic in whose successful fight for freedom from an oppressor, they played no small part. It is a matter of great pride to an Irishman to remember that, in the Revolutionary War, 50 percent of Washington's Army was born in Ireland. In the Congressional Library here in the city of Washington there is a copy of the Royal Gazette of October 27, 1779, No. 321, which reports the evidence given by Mr. Joseph Galloway, Speaker of the House of Assembly of Pennsylvania, before the English House of Commons, which was inquiring into the reason for the Revolution. In the course of the examination, Mr. Galloway was asked: "That part of the rebel army that enlisted in the service of the Congress were they chiefly composed of natives of America, or were the greatest part of them English, Scotch, and Irish?" He replied: "The names and places of their nativity being taken down, I can answer the question with precision. There were scarcely one-fourth natives of America—about one-half Irish—the other fourth were English and Scotch." We recall with pride those Irishmen who signed the Declaration of Independence; those men of Irish descent who occupied the highest offices in this Republic—men such as President Andrew Jackson, who declared that he had not one drop of blood in his veins that was not Irish. And we are proud to know that men of Irish blood are still occupying—with honor and dignity—such offices; as witness, Secretary Tobin, Secretary Matthews, and the Attorney General, to name but a few. Nor should I fail to include the Chief Justice in that honor roll for he has Irish blood in his veins, otherwise he would not be a member of the Friendly Sons of St. Patrick.

We glory in the knowledge that our people helped to bring freedom to this country, and we glory at the part they are playing to preserve that freedom, but it is saddening to reflect that the land from which they sprang does not yet completely enjoy the true freedom which they helped to bring to this great Nation.

Yet it is indeed most heartening to see in this room men who believed in, and worked for, Ireland's right to complete independence when I came here in 1919 and who, by their presence here, give evidence that they still are of that same belief.

I recollect meeting a tall, dark, and handsome young man in the city of Butte, Mont., in the year 1919, who was the driving force behind the Irish independence movement in the State of Montana at that time. He is still tall, dark, and handsome, though 31 years older. His name was, and is, JAMES E. MURRAY, now the distinguished Senator from that great State. His recent speech in the Senate on the question of partition is evidence that his belief in Ireland's right to unity is unchanged.

I also recollect that I sat on the same platform at an Irish independence meeting in Omaha, also in 1919, with the gentleman who is now the distinguished and able Secretary of the Navy. Evidently Secretary Matthews' belief is unchanged. And, that same year, at what I believe was one of the largest and most enthusiastic meetings in support of Irish independence ever held in Boston—and Boston has had many large and enthusiastic meetings—a young man of 18 years of age was definitely present. That young man is now the distinguished Secretary of Labor and our toastmaster tonight. I see, also, Dick Dalton who, when I came to New York in 1919 was treasurer of the Friends of Irish Freedom. And Joe Scott, whose message has just been read to you was in the forefront also 31 years ago. There are many such recollections crowding my memory tonight, but those I have mentioned will suffice as examples of the enduring belief of American citizens in the righteousness of Ireland's cause.

In my many years in America I have tried to interpret Ireland and her aspirations to the American people and from the evidence I have seen, and from the generous expressions made here tonight regarding my work, I feel that my efforts have not been in vain.

Not alone am I grateful to America for what she has done for my country, I am grateful for the opportunity she gave me personally. There was, as you may have noticed from the biographical sketch which the committee prepared and included on the program, an interregnum in my official career. I shall not discuss the reasons which brought it about. Anyhow, I came back to America in 1923 as an ordinary immigrant seeking to earn a living. I tried many things. I tried to sell bonds, for instance. But either I was no salesman or the people in New York did not have the same faith in the future of the corporations whose bonds I was trying to sell as the subscribers to the bonds of the Irish Republic had in the future of that Republic, because I sold very few bonds. I then transferred from the outside of the financial world to the inside and found myself as cashier in a stock-exchange house in Wall Street. During my years there, came the crash of 1929, with which, I am sure, most of you are familiar. Maybe you got burned as I did. I saw the ruin and despair which struck so many Americans then: I saw banks closed and people's savings gone, and I wondered would America ever recover from the blight that had fallen on her. It was then that the real fiber of the people showed itself. They did not spend too much time worrying about "what might have been," but under the bold leadership of their Government they buckled down to work and built up an even greater and more stable prosperity.

These experiences brought me into close touch with the man in the street—and I don't mean Wall Street exclusively—and gave me an understanding of the real America, such as I could never have obtained in official or diplomatic circles, and thereby, I believe, enabled me better to interpret America to my Government.

Yes, America has given me much, and in return I shall do all in my power to make stronger and better—if such be possible—the sincere bonds of friendship between our two countries.

I leave America with a heart overflowing with gratitude to the great people of a great country for the friendship they have shown to my country and to me. Part of me will always be here, for Mrs. Nunan—for whose love, help, and good counsel in all the ups and downs of my life I wish to pay public tribute. She would indeed be a proud woman could she but see this gathering in my honor, and she and I are leaving our only son—Dr. Seamus Nunan—here. He has chosen to be an American citizen—a good choice may I say—and to make his home in America. So to some slight degree I am giving something to America for all she has given me. I pray that Almighty God will continue to shower His blessings on your country and that peace and prosperity will be the lot of your people for all days.

I leave you, my dear friends, with a heavy heart, but I shall cherish always the memory of the wonderful friendship you have extended to me.

The memory of this evening will always remain with me as evidence of that friendship and this beautiful token which you have presented to me will be a constant reminder of it.

Again Mr. Secretary, Mr. Chief Justice, and my dear friends, thank you, and may God bless America.

Control of Congress Means Control of Nation

EXTENSION OF REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. VURSELL. Mr. Speaker, for months the big labor bosses from Washington have brazenly published through the press that they are raising millions of dollars they will spend to defeat all of us Congressmen who refused to take their dictation, and who voted for the Taft-Hartley law.

They claim that if they can defeat seventeen to twenty of us in the House, and six in the Senate, they can control the Congress. The danger in this statement is, that they are stating a fact, which should alarm every citizen.

Control of the Congress means control of the Nation. Control of the Congress by these dictatorial labor leaders would give them the power to put over their entire legislative program, such as the repeal of any labor legislation now on the statute books, the enactment of the Brannan farm plan, socialized medicine, socialized housing, and any legislation they choose. It would bring a one-sided socialistic labor government into power that could regiment and control every activity of the American people. Their grab for this power should awaken everyone.

I am opposed to the big labor leaders, or any other group taking over control of this government. I know the farmers and businessmen are opposed to it. It would do great damage to everyone, including the rank and file of labor.

The big labor bosses have sent out orders that I must be defeated in the coming campaign. Under such orders their hatchet men, with the high sounding names of the Southern Illinois Labor League for Political Education, opened their campaign to defeat me at Harrisburg, Ill., on Sunday, January 22.

John Marchiando, of Springfield, Ill., State president of the Progressive Mine Workers, who recently called a strike of 15,000 Progressive miners in Illinois which helped to make worse the shortage of coal for everyone, adding to the chaos of the coal strike, came down to Harris-

burg as one of the chief speakers at the meeting and told them:

Congressman VURSELL must be defeated because he is an enemy of labor.

Of course, I am not, and have never been an enemy of labor.

At this meeting my congressional opponent on the Democratic ticket addressed the meeting, composed of some 250 labor leaders, and made them this amazing promise: He said, "As far as labor is concerned, you can write your own ticket if I go to Congress."

Mr. Speaker, I do not believe in becoming a rubber stamp in the Congress for any one special group. No special group has ever had a pledge from me that it can write my legislative ticket or program in the Congress, and none will ever have such a pledge.

My policy has been to support legislation that is equally fair and just to all the people, including the three great segments of our economy—agriculture, labor, and business. I know that such legislation, fair to all, will bring the greatest prosperity to all of our citizens, including labor. That will continue to be my policy.

I am glad my opponent has squarely drawn the issue so the people of my district may understand what he stands for. Shall the Congress enact only the kind of legislation the big labor bosses want? Have not the 120,000,000 other citizens some rights that should be protected? I think they have.

The coal strike which has brought so much suffering to labor, industry, and the people generally is the best evidence of the chaos that will engulf the Nation if the big labor leaders are allowed to control the Congress and write their own ticket.

Mr. Speaker, such a statement to give a free rein to any group should defeat any candidate who makes it on any ticket.

How about the farmer, his wife, and family who work long hours to produce the food for our people and the hungry people of the world? Without his farm investment and effort, all the people would go hungry and there would be no prosperity in this country. The labor leaders are demanding the passage of the Brannan farm plan and socialized medicine. Ninety percent of the farmers are against both.

What about business concerns who invest billions in capital and employ millions of workers? Are they to be neglected and cast out as are the farmers?

It is wrong and dangerous to allow any one group to write a Congressman's legislative program. All of the great groups in our economy must be given equal and fair consideration in an attempt to do equal justice to all of them.

Let us preserve representative government and run the government in the interest of all the people, as the Constitution provides.

That will continue to be my policy. I do not believe the citizens of this district want the labor bosses to write their legislative ticket in the Congress. I am willing to trust the decision of our people on this most important issue.

Taxing Chartered Veterans' Organizations

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorandum of the Disabled American Veterans relative to certain recommendations of the Secretary of the Treasury for legislation to tax the business income of corporations exempt under section 101 of the Internal Revenue Code:

The Disabled American Veterans is deeply concerned with the present hearings being conducted by the House Committee on Ways and Means insofar as they pertain to the taxing of the business income of certain exempt corporations.

The DAV is a congressionally chartered veterans' organization authorized an exemption from the payment of Federal income tax pursuant to section 101 (8) of the Internal Revenue Code.

The House Committee on Ways and Means is conducting hearings on a number of measures designed to "close the loopholes" in existing revenue laws. One proposal before the committee is H. R. 5064 introduced by Congressman NOAH MASON of Illinois, a member of the Ways and Means Committee. This measure is intended to subject the business income of corporations exempt under section 101 of the Internal Revenue Code to the payment of Federal income tax.

The term "business income" is defined in H. R. 5064 to mean "the gross income derived from any activity of a kind which is recognized as an ordinary trade or business activity commonly engaged in by other persons for profit."

The principal income of the DAV is derived from two sources; (1) donations from recipients of Ident-O-Tags and (2) appropriations from the DAV Service Foundation.

The Ident-O-Tag is a small replica of a State automobile license tag. These tags are mailed to approximately 30,000,000 registered automobile owners in the United States each year. Each recipient is requested to return 25 cents or more to the DAV and a record of the name and address of each recipient of a tag is maintained by the DAV. In the event of the loss of key rings or any other article to which the Ident-O-Tag is attached, it states on the reverse side of the tag that if the article is mailed to the DAV, postage free, it will be returned by the DAV to the rightful owner.

The DAV Service Foundation is a nonprofit Ohio corporation organized by the DAV and operating under the terms of a trust agreement with the DAV. The Service Foundation undertakes various fund-raising projects and from time to time transfers money from its accumulated trust funds to the DAV to defray the costs of operating the DAV rehabilitation program.

For the fiscal year ending June 30, 1949, the gross income of the DAV from its Ident-O-Tag operation was $1,757,946.81. For the same period, the DAV received a transfer of funds from the DAV Service Foundation of $750,000. This makes a total gross income from these two sources of $2,507,946.81. The expense properly chargeable to the above items of income is $323,951.33, leaving a net income of $2,183,995.48.

The DAV maintains a full-time paid staff of approximately 250 national-service officers located in practically every facility of the Veterans' Administration throughout the United States. The function of these national-service officers is to assist veterans, the dependents of veterans and the survivors of deceased veterans in the proper presentation of their claims for benefits under laws administered by the Veterans' Administration. This service is entirely free and no charge whatsoever is made to any claimant, nor is it necessary that the claimant seeking representation by the DAV service officer be a member of the organization. The annual pay roll to maintain our claims and rehabilitation service is approximately $1,600,000 annually.

Our concern with the present recommendations of the Treasury Department is that in their efforts to tax the income of certain religious, charitable, educational and nonprofit organizations from business sources unrelated to their corporate functions, the Congress might use language in drafting a tax bill that could be interpreted by the Treasury Department as subjecting the income of the DAV from the above-described sources to income tax. If this should happen, it would result in a tax, based on the above figures, of approximately $830,000. Obviously this organization could not stand such an increase in its operating costs and at the same time continue its service set-up.

ADDITIONAL INCREASE PROPOSED BY CONGRESS AFFECTING DAV

The House of Representatives on February 9, 1950, passed H. R. 2945, a bill to increase the postal rates, and this measure is now pending before the Senate Committee on Post Office and Civil Service. H. R. 2945 increases third-class postal rates from 1 cent to 1½ cents per piece. If enacted into law, this measure will increase the third-class postage bill to the DAV by $150,000 annually.

If the House Committee on Ways and Means should favorably consider H. R. 5064 or similar legislation and the Senate should pass the already House-approved third-class postal increase it would result in increased annual cost to the DAV as follows:

	Present	Proposed
Cost of mailing 30,000,000 Ident-O-Tags	$300,000	$450,000
Federal income tax on income from Ident-O-Tags and DAV Service Foundation	None	830,000
Total	300,000	1,280,000

If the DAV should lose its tax-exempt status as a result of the enactment of H. R. 5064, or any other similar measure, and the Senate acts favorably on the House passed postal bill H. R. 2945. it can be seen from the above that it will have disastrous effects on our excellent veterans' claims service. We feel certain that the members of this committee and the Members of Congress generally do not intend to tax out of existence organizations performing a valuable public service to America's wartime disabled. We strongly urge each and every member of the committee to carefully consider the wording of any bill they report designed to tax the business income of exempt corporations. The definition of business income in any such amendment to the internal revenue laws should be carefully worded so that no ambiguity could possibly arise in the interpretation thereof by the Treasury Department and the courts. It should be made crystal clear that congressionally chartered veteran organizations performing a public service are not to lose their exempt status or that their sources of revenue shall not be defined as business income.

Russia Indoctrinating Japanese Prisoners With Communism

EXTENSION OF REMARKS

OF

HON. HAROLD O. LOVRE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. LOVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following account of Russian tactics to indoctrinate Japanese prisoners of war with Communist ideals and advance the Red movement in Asia. These contents comprised my weekly newsletter, In Washington With HAROLD LOVRE, for the week of February 20:

A tale of the clever tactics of Russia to indoctrinate Japanese prisoners of war with Communist ideals to advance the Red movement in Asia and discredit American policy has recently unfolded. Maj. Gen. C. A. Willoughby, G–2 of General MacArthur's Tokyo occupation forces has made available to the writer an official report revealing an incredible tale of Russian brutality and cunningness which shocks the imagination. This special report from the Far East command shows unbelievable Russian tactics employed upon Japanese war prisoners, most of whom were held as slaves in Siberian labor camps.

THOUSANDS DIED

While the United States in 1946 repatriated every Japanese regardless of where he was held, the Russians retained more than 2,000,000 military and civilian personnel. The Russians have fallen considerably behind the agreed 50,000 deliveries per month, although ample shipping space for the returnees has been made available by the American Far East command. In June 1949 Russia reported only 95,000 Japanese left to be repatriated. Japanese figures, however, show that there were still 469,000 prisoners in Soviet hands. The remaining 374,000 are presumably dead, because repeated requests have met with no answer.

Tales of privation, brutal treatment, overwork, and lack of medical care brought back to the homeland by the Japanese repatriates provoke little sympathy from Americans familiar with the treatment our servicemen received at the hands of the Nipponese. Yet behind the scheme lies a fiendish plot.

PW'S COMMUNIST INDOCTRINATED

The cunning Russian policy was long range in scope. The sick and the old were either repatriated early or allowed to die. The remainder were forced to do hard manual labor without sufficient food and medical care. A team of 50 grave diggers in one Siberian labor camp could not bury the dead fast enough.

Internees were carefully screened. High-ranking officers were put in one camp; middle-grade officers in another; enlisted men in another. An appeal was made to the latter group through condemning the so-called military caste system. American policy in the Pacific was blamed for the abject misery under which the PW's were forced to exist. Shipping space was refused by the "American capitalistic conquerors," the Russians said.

In 1946, when conditions were at their worst, there began a vast centrifugal Communist indoctrination program. The older PW's with fixed ideas had already died or been shipped back home. The "enlightenment" program was designed to foster distrust of the Japanese and hatred toward the Americans. An anti-Fascist group was thrust among the PW's, whose only hope, after seeing their companions die by the hundreds of starvation, was repatriation. A newspaper, published by specially trained Japanese, set about molding opinion along the Communist line. Living conditions for the survivors gradually improved. Even the Russian standard of living on the outside raised slowly. Imperialism, capitalism, and the military system were condemned. Gradually the intelligentsia was singled out for more comprehensive "enlightenment."

BECOME RED AGENTS

Consequently PW's arriving in Japan last year were fat and well-kept. They staged Communist demonstrations in Tokyo, singing the Nationale and waving red flags. Each returnee had been forced to sign a pledge to overthrow the Emperor system, establish a Communist government in Japan, and to join and support the Japanese Communist Party. By accomplishing the seemingly impossible task of flexing the rigid Japanese mind, an effective group of Communist agents and agitators were spread out in Japan.

Needless to say, this phase of the cold war has caused headaches for MacArthur's headquarters, who have published the accounts of Russian brutality in an attempt to discredit the Russians and the Japanese Communist Party.

Socialized Medicine

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include a resolution adopted by the Fine Arts Club of Exira, Iowa, my own home town. I wish to commend and congratulate the members of the club for expressing in this manner their opposition to compulsory Federal medical treatment for the people of America. Mr. Speaker, I take this means of letting the thousands of people all over our land who read the CONGRESSIONAL RECORD know that these well-informed ladies want no part of compulsory or socialized medicine imposed on the people of America.

The resolution follows:

Whereas the American family has received the finest quality of medical care available in any country in the world, developed under our system of free enterprise; and

Whereas compulsory health insurance, wherever tried, has caused a decline in national health and deterioration of medical standards, and facilities, to the detriment of family welfare; and

Whereas compulsory health insurance, wherever tried, has taken away the family's right to choosing its own family physician; and

Whereas invasion of family privacy and violation of the sanctity of the patient-physician relationship have proved to be one of the most objectionable features of compulsory health insurance, wherever tried; and

Whereas compulsory health insurance would result immediately in a tax of 3 percent on the income of the American working man, rising within a few years to 6 percent and higher, creating a new tax burden which would reduce household budgets and bring down family standards of living; and

Whereas Government control of medical services, by gradually undermining free enterprise and establishing heavy new tax burdens and unprecedented national deficits, would threaten national bankruptcy and encourage the spread of socialism, which would endanger the rights of our children to the individual freedoms which have been the American heritage: Now, therefore, be it

Resolved, That the Fine Arts Club of Exira, Iowa, does hereby go on record against any form of compulsory health insurance or any system of political medicine designed for national bureaucratic control; and be it further

Resolved, That a copy of this resolution be forwarded to each Senator from the State of Iowa, and the Representative from our district, and that said Senators and Representative be and are hereby respectfully requested to use every effort at their command to prevent the enactment of such legislation.

MAXINE WELLS,
President.

EULA SPOO,
Secretary.

Dated this 14th day of February 1950.

Protest Against the Abduction of Greek Children During the Greek Civil War

EXTENSION OF REMARKS

OF

HON. JAMES J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. DELANEY. Mr. Speaker, I wish to draw the attention of the Members of the House to the text of a protest which has been addressed to the President by Americans of Greek descent, in the hope of expediting the repatriation of 25,000 Greek children cruelly abducted by Communist guerrillas during the Greek civil war.

Since the text of the protest graphically describes the terrible wrong done to Greece and thousands of its innocent children, I introduce here a copy of the protest as it appeared in the National Herald, a Greek-language newspaper, published in New York.

The protest reads:

The Honorable HARRY S. TRUMAN,
President of the United States,
Washington, D. C.

DEAR MR. PRESIDENT: As you know, many thousands of Greek children who have been forcibly abducted from their homes in Greece, are presently being detained in Yugoslavia, Bulgaria, Rumania, Poland, Hungary, Czechoslovakia, and in the Soviet-occupied zone of Germany. The two unanimous resolutions passed by the United Nations General Assembly, one on November 27, 1948, and the other on November 17, 1949, which requested the prompt repatriation of these children have proved of no avail because of the lack of cooperation by the aforementioned governments.

It is necessary to put an end to this abominable crime against humanity. It is necessary to maintain law and order and to uphold the international authority of the United Nations' resolutions. It is upon these resolutions that the policies of all peace-loving nations, such as the United States, are based. As an American citizen, I strongly protest the flagrant disregard of the United Nations' resolutions which the above named governments have shown by continuing the

forcible detention of the Greek children. This is tantamount to the horrible crime of genocide.

I urge you, Mr. President, to call upon the United Nations Secretary General, the International Red Cross and the League of Red Cross Societies to continue and increase their noble efforts toward implementation of the United Nations' resolutions pertaining to the return of the Greek children. I urge you to call upon the honorable Members of the United States Congress and to direct the members of your State Department to support both morally and politically the United Nations' resolutions and to have their enforcement in mind when dealing with the aforementioned governments.

I know your special interest in this matter, Mr. President, I am certain that my protest will help to win this humanitarian battle to preserve basic human rights and freedoms in the world.

How Mr. Roosevelt Went to War

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks an editorial which appeared in the Chicago Sunday Tribune on February 26:

Former Prime Minister Churchill of Great Britain finally has dealt with American entry into World War II at Pearl Harbor. His recital, as it had appeared in the New York Times and Life magazine, should remove any surviving doubts about that historic episode. From the viewpoint of Mr. Churchill, Mr. Roosevelt, and the American war party, Pearl Harbor was not a disaster. It was a Godsend.

Mr. Churchill's narrative already had revealed that for a year and a half before the Japanese attack of December 7, 1941, he had pressed Mr. Roosevelt incessantly to get into the war at Britain's side. At the Atlantic Conference in August 1941, he informed Roosevelt's circle "that I would rather have an American declaration of war now and no supplies for 6 months than double the supplies and no declaration."

Recounting this to General Smuts, Prime Minister of South Africa, Churchill said: "We must not underrate his (Roosevelt's) constitutional difficulties. He may take action as Chief Executive, but only Congress can declare war. He went so far as to say to me, 'I may never declare war; I may make war. If I were to ask Congress to declare war they might argue about it for 3 months.'"

That was what Mr. Roosevelt was doing: making war. His problem was how to force a formal state of war upon the United States without having to rely upon the power solely reserved to Congress to declare war. Economic sanctions, unyielding diplomacy with Japan, and finally the tender of a humiliating series of demands accomplished the purpose. Pearl Harbor was the culmination of a calculated policy through which Roosevelt, by making war through the Presidential office, forced Congress to acknowledge the existence of war.

It will be remembered that the attack on the fleet in Hawaii was presented to the American people, who knew nothing at the time of this secret maneuvering, as a shocking surprise—an act of treachery on "a date which will live in infamy" by a nation which professed to be "looking toward the maintenance of peace in the Pacific."

How do these professions look to Mr. Churchill? He notes that the economic embargoes imposed by Mr. Roosevelt and Britain on Japan constituted a stranglehold. He says that when Secretary of State Hull, on November 26, 1941, suddenly abandoned the project of a 3 months' standstill with Japan, embodying the hope of a general settlement of all issues, and instead presented his 10 demands to the Japanese envoys, their distress may well have been sincere. He recalls that from the end of 1940 the Americans had pierced Japan's secret ciphers and were decoding large numbers of Japan's military and diplomatic messages. He states that the congressional investigation of Pearl Harbor in 1945–46 disclosed the failure to send positive alert orders through the military departments to their fleets and garrisons in exposed situations.

"I do not intend in these pages," writes Mr. Churchil, "to attempt to pronounce judgment upon this tremendous episode in American history. We know that all the great Americans around the President and in his confidence felt, as acutely as I did, the awful danger that Japan would attack British or Dutch possessions in the Far East, and would carefully avoid the United States, and that in consequence Congress would not sanction an American declaration of war. * * *

"The President and his trusted friends had long realized the grave risks of United States neutrality in the war against Hitler and all that he stood for, and had writhed under the restraints of a Congress whose House of Representatives had a few months before passed by only a single vote the necessary renewal of compulsory military service. * * * Roosevelt, Hull, Stimson, Knox, General Marshall, Admiral Stark, and, as a link between them all, Harry Hopkins, had but one mind. * * *

"A Japanese attack upon the United States was a vast simplification of their problems and their duty. How can we wonder that they regarded the actual form of the attack, or even its scale, as incomparably less important than the fact that the whole American Nation would be united for its own safety. * * * Moreover, they knew, earlier than we in Britain could know, the full and immediate purpose of their enemy."

They "knew the full and immediate purpose of their enemy." That is, they knew that the attack was coming and that it would fall on Pearl Harbor. But they did not order an all-out alert at Pearl Harbor. They let the blow fall on the fleet and 2,326 Americans who died. How could they know? Through the intercepted and decoded Japanese secret messages in their hands pointing to these very things. Why did they let Japan strike? Because it was "a vast simplification of their problems." It solved the difficulty of a Congress which would not declare war at Mr. Roosevelt's bidding. That problem had been outlined 13 days before the attack by Henry L. Stimson, Secretary of War, in saying of the Japanese:

"The question was how we should maneuver them into the position of firing the first shot without allowing too much danger to ourselves."

This is what Mr. Churchill tells us of Roosevelt and his trusted friends, who did not trust Congress or the American people.

Of himself, Mr. Churchill tells us that, after the attack, he informed Mr. Roosevelt immediately by telephone, "This certainly simplifies things." He says that the two high-ranking American officials who received the news of the attack with him at his country seat, Ambassador John Winant and W. Averell Harriman, "took the shock with admirable fortitude," as if "they had been delivered from a long pain."

"No American," states Mr. Churchill, "will think it wrong of me if I proclaim that to have the United States at our side was to me the greatest joy. * * * I knew the United States was in the war, up to the neck and in to the death. So we had won after all. * * * We had won the war. England would live; Britain would live; the commonwealth of nations and the Empire would live. * * * We should not be wiped out. Our history would not come to an end. * * * I went to bed and slept the sleep of the saved and of the thankful."

It was a cry of pure exaltation. Mr. Churchill's unrelenting struggle had succeeded. He had accomplished the mission of having Roosevelt pull the American people into the war to save England.

Such is the story of the date which will live in infamy.

Wartime Excise Taxes Should Be Repealed

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. VAN ZANDT. Mr. Speaker, we all realize the tremendous amount of sentiment in favor of wartime excise taxes.

On February 21 I appeared before the House Ways and Means Committee and conveyed to its membership the wishes of the majority of my constituents that wartime excise taxes be drastically reduced or repealed.

My statement before the House Ways and Means Committee is as follows:

Mr. Chairman, I represent approximately 300,000 people in the Twenty-second Congressional District of Pennsylvania comprised of the counties of Blair, Centre, and Clearfield. My purpose of appearing before you is to convey the wishes of the majority of my constituents that wartime excise taxes should be drastically reduced or repealed. My constituents are aware of the fact that the excise taxes were levied as a wartime measure and were supposed to be temporary.

For several year wide publicity has been given to the possibilities that Congress would repeal excise taxes. With the beginning of each session of Congress the story is renewed with the result that buyers resistance resembles a buyers strike.

In my congressional district, and I know it is the same in all other congressional districts, many firms are operating at a loss, while others have had to reduce operations and lay off employees. Without fear of contradiction I can assure you that some business firms in my congressional district have suffered a decline in business from 30 to 40 percent because of the retention of wartime excise taxes.

The losses to which I refer have by no means been confined to the so-called luxury items. Dealers in more essential products are also concerned over unfair and punitive excise taxes. For an illustration—taxes on transportation and communication were assessed solely to discourage wartime travel so that such systems would be readily available for war purposes rather than for the purpose of producing revenue.

The ordinary electric light bulb is in no sense a luxury, yet it is taxed 15 percent. On one hand we pride ourselves on the widespread use of electricity in American homes and industry. We have authorized the creation of the Rural Electrification

Administration to further the use of electricity and make it available to rural American. Then we come along and tax the electric light bulb which is an indispensable item in the use of electricity. This unfair and discriminatory excise tax on light bulbs is only one of many of these punitive taxes which should be repealed.

Another unfair and discriminatory tax is the 20 percent excise tax on the fur industry.

Since 1943 the excise tax on furs has produced revenues from $44,000,000 in 1943 to $97,000,000 in 1947. The fur industry, and especially the small furrier, has found it impossible to compete with other firms manufacturing wearing apparel that is sold tax free.

It is realized that the Federal Government needs tax revenue, but it is unfair to obtain such revenue by not only discriminating against an industry but threatening its very existence.

Let us consider the average American housewife who needs a warm winter coat, and who, by thrift and sacrifice, has saved $300 to buy a fur coat, and which she is certain to wear for at least 5 years.

When she visits her local store and selects her fur coat she finds that, instead of $300, the coat because of the excise tax, will cost her $360, or $60 more than she has to spend. Not having the extra $60 in her budget, she realizes she can purchase from another store a very fine fur trimmed cloth coat without paying any excise tax. This punitive tax drives this customer from the furrier to the store selling fur-trimmed cloth coats.

This situation is a serious one, not only for the fur industry, but especially for the small furrier.

In my congressional district furriers inform me that they have faced a buyers strike for many months. As a result they have had to reduce the number of employees 50 percent with the indication of a further reduction if the 20-percent excise tax on furs is not repealed.

Not only is the fur industry facing bankruptcy as a result of the buyers strike resulting from the 20-percent excise tax, but the importation of Russian furs is dealing a death blow to the industry.

Furriers in my congressional district employ on an average of 250 people and you all know what such employment means to the average community. I want you to know that the situation in the fur industry is desperate because of the 20-percent excise tax and I sincerely hope you intend to do something about it.

Another discriminatory tax that has lingered on since the close of World War II is the Federal amusement tax of 20 percent.

Like every congressional district I have many small movie theaters that provide the only form of recreation in many small industrial communities. We all know that a good movie furnishes needed relaxation during these trying days. Your physician will often tell you relax and forget your troubles. If you seek relaxation for your family by going to a neighborhood movie you are penalized 20 percent because the wartime excise tax is still in effect.

The excise taxes on freight, passenger travel, telegrams, telephone messages, jewelry, theater, luggage, furs, baby oil, and hundreds of other items too numerous to mention are hurting my constituents by destroying business, reducing employment and penalizing the American consumer when buying many of the necessities of life.

As I said in the beginning I am appearing before your committee on behalf of my constituents in the Twenty-second Congressional District of Pennsylvania. I join them in their vigorous protest over retention of wartime excise taxes and earnestly beseech you to take positive action by drastically reducing them or repealing them in their entirety.

Proposal for a Solution of Our Agricultural Problems

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from Mr. Fred W. Stilwell, of Sutherland, Iowa, in my congressional district. Mr. Stilwell offers a solution of our agricultural problems which is worthy of attention and study by all those who are interested in finding a solution to a most perplexing problem. I know Mr. Stilwell will welcome any comments and suggestions which Members of Congress or other interested persons may care to make.

SUTHERLAND, IOWA, *February 22, 1950.*

Hon. CHARLES B. HOEVEN,

Washington, D. C.

DEAR MR. HOEVEN: The following letter is not written from the viewpoint of a politician but with a desire to offer a sound solution of our agricultural problems.

During, and after the late war every farmer and stock raiser was urged to produce every pound of food he could grow. The farmer responded most generously, and the result was a volume of products that not only kept our people well fed, but supplied our Army and much of Europe as well. Every foot of land that could be cultivated was broken up and planted. Up to the past year most of these products have been sold, even above what has been termed, parity prices. But things have changed.

For the present, at least, there is no war. Europe is again producing well toward what she needs, and the amount of her production will be increasing each year. For the above reasons, we are facing a different condition and common sense dictates that we take the necessary steps to meet the situation. Europe will not buy a dollar's worth of farm products that she can raise, for two reasons: First, she hasn't the money to pay for it, and second, our prices are so high that she will not buy from us, if she can get the products from some other scource.

The result is a diminishing market for our farm products. What is the answer? There are two ways to meet this situation: First, reduce the volume of products in proportion to the reduced demand or, second, let the price drop low enough to stimulate larger purchases. The producers will resent rapidly dropping prices, so there is only one other reasonable method of meeting the situation—reduce the supply. Our farmers are intelligent, fair-minded men and if the condition is placed clearly before them they will realize its justice. It is the only way to keep the price of farm products in line with other products which the farmer buys. There are millions of acres now under cultivation that should be planted in grass and given a chance to renew its fertility. It would of course reduce the total volume of crops, but there would be less cost for production.

In any manufacturing, wholesale, or retail business, the merchant or manufacturer studies the conditions and would not consider producing or buying goods in excess of what he could sell at a profit. The farmer should do the same. In the long run he will benefit from following this plan.

The present law provides that the Government shall buy, and take off the local market a sufficient amount of the surplus products to maintain parity prices. If they cannot be sold there is only one way to get rid of them—destroy them. This method cannot go on. The Secretary says it will cost the Government above $6,000,000,000 this year to maintain parity prices. Every cent of this money must be taken from the United States Treasury and paid for by extra taxes. There is a bottom to the Treasury. We are scraping that bottom now.

In lieu of the present plan, Secretary Brannan proposes what is being called the Brannan plan. This provides for a direct subsidy to farmers and sale of the product at what the market will pay. In a statement made by Mr. Brannan on April 7, 1949, he says: "A third advantage of this system is that it would allow farm income to remain at a high-enough level to sustain abundant production while retail prices sought their supply and demand level in the market place. This level is bound to be reasonable for consumers because of the larger supplies brought out."

This is the most pernicious bid for votes that was ever proposed. It appeals to the cupidity of producers by providing high returns to the producers and to the avariciousness of the consumers through promising them cheap farm products. It is a piece of political chicanery of such magnitude that it is almost unbelievable. In addition to this he proposes that farmers be compelled to report to the Secretary a detailed report on how much they produced. Failure to do so would subject them to a fine of $500 for each offense, and if they make an error in their report they would be subject to a fine of $1,000 and a year in jail. (Comments not necessary.)

I propose the following substitute for both the above-named bills:

First, provide that the Secretary of Agriculture shall notify each producer what his allotment should be for the ensuing year.

Second, provide that each producer shall be required to acknowledge the receipt of the above request and send his agreement to comply. Those who have complied shall, before marketing time, send a statement to the Secretary, sworn to before a notary, that he has complied. Those who do this will be entitled to a subsidy of from 10 to 15 percent of the selling price of each product (amount to be fixed by congressional action). The total payment not to exceed the parity price. Those who failed to comply with the requirements may sell their products on the open market, but will not be entitled to a subsidy.

Third, provide that no one except owners or tenants of the property upon which the product is grown shall be entitled to subsidy.

Fourth, provide that the Government be not allowed to loan more than 75 percent of the prevailing market price on sealed products. No one who fails to comply with restrictions on acreage, as provided for above, shall be eligible to loans.

This proposed plan takes the matter of subsidies out of the hands of the Secretary and places it in the hands of Congress. It does, however, provide that the Secretary shall make the allotments. No other department or agency in the country is in a position to know better what the future market is likely to be. It is the intention to reduce acreage as nearly as possible to what will be required to supply what is needed. The subsidy is designed to take care of any discrepancies.

Most sincerely yours,

FRED W. STILWELL.

Rural Electrification Program Is an Investment in Tomorrow

EXTENSION OF REMARKS
OF
HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. JONES of Missouri. Mr. Speaker, on February 23 I had the privilege of attending the annual meeting of the Scott-New Madrid-Mississippi REA Co-op at Sikeston, Mo. This is one of four REA Co-ops now serving the rural areas in the Tenth Congressional District where REA has played an important part in the development of one of the richest agricultural sections of this Nation. The growth of REA in southeast Missouri has been an inspiration to the people of that section who are looking forward to further expansion through the availability of a sufficient supply of power to satisfy the ever-increasing demands. I am confident that this demand will be met within a comparatively short time with the completion of the new generating plant being built by the M & A Co-op, which should be in operation this year, and with the completion of the SPA transmission lines, which are being extended into that section from the Bull Shoals and Norfork Dams.

In the following talk which was given at the annual meeting at Sikeston, attended by a crowd estimated at nearly 4,000 enthusiastic REA members and boosters, I pointed out some of the things which have been responsible for the growth of this cooperative, which are just as applicable to the other co-ops in the district which I have the honor and privilege of representing. Because of the pride I have in the record which has been written by the REA Co-ops in southeast Missouri, and in order that others may become better acquainted with this record, I am having my talk printed in the Appendix of the RECORD:

Mr. Chairman, members of the Scott-New Madrid-Mississippi Co-op, and my other friends who are here today to attend the thirteenth annual meeting of this successfully operated REA co-op which is today serving more than 6,300 families throughout this area of southeast Missouri, which I have the honor and privilege of representing in the Congress of the United States.

It goes without saying that it is a pleasure for me to be here with you, else I would not have traveled the more than 1,000 miles by air, bus, and automobile in order to be with you on this occasion. However, I do want to express my appreciation to Judge Proffer and the other members of your board, and to Manager Zaricor for their courtesy and thoughtfulness in inviting me to participate in this program. I also want to express my appreciation to the management of the radio stations throughout this area for permitting this portion of the program to be broadcast to their listeners. It does give me an opportunity to extend my greetings to hundreds of my friends throughout this area whom I will not be privileged to see in person on this short visit. To them as well as to the hundreds who are assembled here at the armory in Sikeston—I should have said thousands, because it is estimated that there are around 3,000 people here today—I would again express a reminder that your Congressman is always glad to hear from you, to have your views and suggestions, and to learn how I may serve you better as your Representative in Washington.

I have said that I am happy to be here, but may I also say that nothing gives me more pleasure than to address an audience such as this. This is a different type audience than many, for this is a forward-looking group, a progressive group, one that is looking ahead, striving for greater accomplishments. I learned long ago that the farm family that has once enjoyed electricity on the farm is not interested in looking back, and certainly there is no desire to return to the so-called good old days.

We have some old-timers in this audience, old-timers in the sense that they were among the first to recognize the opportunities that could come from identifying themselves with the REA movement.

While I am not so old in years, I am proud of the fact that I was permitted to have a part in the early development of the REA program here in Missouri. As a member of the Missouri State Legislature from 1935 to 1944, it was my privilege to sponsor in the Missouri State Senate some of the first REA legislation that was passed. Some of you younger people, and some of you older ones who have taken this program for granted, may need to be reminded occasionally that rural electrification was not handed to the people of this Nation on a silver platter. The rapid spread and growth of rural electrification in the 15 years since the late President Roosevelt established REA by Executive order has been due in large part to the initiative and to persistence of men and women such as you who were willing to give their time and who were willing to wage a fight to get the things they wanted.

We, who got in this fight back in 1935, 1936, and 1937, can tell you some of the opposition which was provided by the power trusts, who had their lobbyists working in every State legislature in an effort to prevent the passage of enabling legislation which permitted and authorized the establishment of REA co-ops such as we have here in southeast Missouri. And, out of fairness to them, I wish to say that the power trusts, and the privately owned utility companies were not the only ones who fought REA in the early days. Many of our very best people, friends of yours and mine, who were sincere in their actions, and who were conscientious in their beliefs, were not only unwilling to assist in bringing rural electrification to the farm homes, but were honestly opposed to REA.

Actually, some of those who are now the most enthusiastic boosters of REA were of the opinion that there was not sufficient demand for electricity on the farm to justify the building of the transmission lines. Others were conscientious in their belief that the REA was some sort of a socialistic move in that the REA co-ops would encroach upon the business and interfere with the services which they felt should be supplied by the private power companies.

True, for years, the private power trusts had preached that it was economically unsound to attempt to take electric service to the farm, except in those instances where the farm happened to be along the route of a secondary distribution system. And even then the rates were exorbitant, as many of you know. Some of you in this room know that in the middle thirties it was not uncommon for a farmer to pay for the building of his own transmission line in order to connect up with some private utility line, and the cost was such that about the only use to which electricity was put was to provide lights in the home, and possibly a family refrigerator or a small electric pump.

Under those conditions, is it any wonder that when REA was established, there were less than 18,000 farm homes in the entire State of Missouri that were receiving electric current from a central distribution system. And get this figure now, back when REA was established, only 6.4 percent of the farms in Missouri were enjoying this electric service. Yet today, more than 150,000 farms, or approximately 65 percent of all the farm homes in Missouri are enjoying electric service, thanks to the development and expansion of the REA program. I have watched the development and growth of this co-op, the Scott-New Madrid-Mississippi Co-op, just as I have watched the similar development and growth of the Ozark border, the Black River, and the Pemiscot-Dunklin, and more recently the M & A Co-op, which is building the new generating plant at Poplar Bluff—I have watched the development of these Rural Electric Co-ops which serve this district because I have had a personal interest and a personal pride in having had a part in writing the legislation which has made possible this service which had so long been needed, and which you people, my people, here in southeast Missouri could never have had except for this REA program. This, in part explains why I am so happy to be here today, to join with you in this annual meeting, and to rejoice in the good news which is contained in the reports which have been made by your president, your secretary-treasurer, and your manager.

I am sure that each of you received as I did a copy of the operating statistics, showing the comparative annual statement for the past 4 years, and I am not going to take your time by reading this statement, but I would like to comment briefly on some of the figures that were contained therein.

From small beginnings you have grown in 11 or 12 years until you now have almost 1,300 miles of line energized, serving more than 6,300 farm homes and homes in small towns throughout this area. Furthermore, you represent a $2,000,000 local business—a business comparatively new to this community which you have developed. And when I say local business I mean everything the term should mean—you take a part in community affairs, you perform a community service, you pay taxes, and you are paying back interest on the money you borrowed for your start.

I doubt very seriously if anyone would suggest today that the REA is socialistic, either in its set-up, or in its democratic operation. True, the Federal Government has supplied the capital with which it was possible to finance the operation, but, as we all know, this money is being repaid with interest. As an evidence of the soundness of the financial set-up in this particular co-op, I am sure we are all proud of the fact that the Scott-New Madrid-Mississippi Co-op has not only met its payments as they have fallen due, but has actually paid nearly $30,000 in principal even before it came due. Other REA co-ops in Missouri have similar records of repayment of money borrowed from the Rural Electrification Administration.

You have accomplished great things here—and you have demonstrated that you are going to keep on doing great things. You have translated the REA lending program into miles of line and into service for members. You people have taken an idea and have made that idea a reality.

As I said before, I am proud of you because you have done this yourselves, through the democratic organization of a rural electric cooperative. Your participation in the affairs of your cooperative—attending the annual meeting in full force—and I believe that we can say that this is a full-force meeting here today—and voicing your individual opinions on the various issues requiring decisions by your cooperative—this participation is what strengthens your co-op.

Every individual in a democracy—and every individual member of a cooperative—has a share and a responsibility in the way that democracy or that cooperative functions. Unless we exercise our rights to "say our piece," to cast our ballots, our democracy and our cooperative cannot function with complete effectiveness.

This annual meeting gives you an opportunity to exercise your rights—and that is why, again, I am glad we have such a large turn-out here today to participate in this election where you are going to elect your board of directors. Remember, that when you vote for your board of directors you are not throwing away your own responsibilities—you are merely designating certain people to act for you in certain instances. As your Representative in Congress represents responsible to you for their actions, just as your Representative in Congress represents you in Washington and appreciates the responsibility and the obligation he has in conveying your wishes, your views, and your vote into action there in Washington, and that is why I am always glad to hear from you and to have your views and your suggestions on how you would like for me to represent you in Congress.

This annual meeting gives you also an opportunity to look ahead to the job still to be done. Actually, you have two major jobs to do—individually and as a cooperative.

The first is to see that your neighbors get electricity. All farmers in this area still without electric service are looking to you to bring them electric power that will do for them what it has already done for you. As individuals you can help your cooperative by telling these people that you intend to remain loyal to them, loyal to the principle of cooperation until all are served—every farm family not only here in Missouri but throughout the Nation—that they may have the opportunity to have rural electrification which has meant so much to the development of this section and the entire United States.

The second job is to make and keep your cooperative strong and sound. This is a job your board of directors cannot do alone. It is a job which is up to each of you. Your relationship is not that of a stockholder who is interested only in net profits or net earnings. Your cooperative is not a dealer; who serves you for profit alone.

You are a member of a group organized to supply a service you all need and are unable to obtain as individuals. You got electricity because you demanded it and because your Government took an interest in having you get it. Right here I would like to pay tribute to the late Honorable Orville Zimmerman whom all of you knew and who also played a prominent part in the Congress of the United States in writing this legislation at the same time that I was in the State legislature helping write legislation to tie the Federal and State legislation together, and Orville Zimmerman should be remembered by this crowd here today. And here again I would remind you that this service was brought to you through REA after private power companies had failed to grasp the opportunity that they had. REA would never have been born if the power companies had gone out and served this rural area. Incidentally, I might add, many of these same power companies today readily admit that they "missed the boat." Some of these companies appear to be ready, and by their actions have indicated a desire to cooperate with our REA co-ops in supplying power which is so badly needed to meet the ever-increasing demand and I commend them for that action. On the other hand other companies do not show this same spirit, and REA cannot afford to place the future of its thousands of members in the hands of the private power industry. We must continue to develop new sources of power on which we can depend.

In that connection I would remind you that you do not have Government-owned power. This electric distribution system around Sikeston—the poles and wire and transformers and meters and all of that other equipment—this system does not belong to the Government. This system belongs to you. REA does not operate your system. You operate the system through your board of directors and through the personnel selected by that board of directors to represent you and to operate this co-op.

When REA was established only 17,893 farms, or 6.4 percent, in the State of Missouri were receiving central station electric service. By the end of June 1949, that figure had risen to 148,523 farms, or 61.1 percent.

REA loans in Missouri have been made to 48 borrowers, 47 of which are cooperatives. Already they are operating more than 47,800 miles of line serving more than 158,500 farms and other rural consumers.

Rural people made the year 1949 the biggest in the history of REA, just as you have made 1949 the biggest year in the history of your co-op. Even so, there is a long way to go, particularly here in Missouri. Our State falls below the national average in percentage of farms electrified. Approximately 94,400 farms in the State of Missouri are still without service.

The problems you face in seeing that the unserved farms may get electric service at the earliest possible time are to some extent the problems that all rural electric cooperatives face. It is harder to build lines—and make them pay out—when you have to reach farm homes in thinner areas, where the population is scattered, where farm income is not so high, where power supplies are inadequate, and where the land itself presents serious obstacles.

One of the toughest restricting factors to co-op expansion in Missouri has been the power shortage, and I know of no co-op in the whole country which has felt this need more keenly than you have here in southeast Missouri in this Scott-New Madrid-Mississippi Co-op. Because of the lack of generation and transmission facilities in Missouri, it has been necessary for cooperatives in Missouri to seek their own sources of electric power.

We think we now have a solution to the power shortage which has been hampering your own expansion. Through cooperation, you and some of your neighboring co-ops, have formed a power cooperative, which has received a $2,900,000 loan for a generating plant and 112 miles of transmission line. Already construction is far along on this M. & A. Co-op on its new 10,000-kw. generating plant, near Poplar Bluff.

It is estimated that the facilities of this dual-fuel generating plant will supply the power requirements of three cooperatives, one of whom you are, which are estimated at 9,350 kilowatts for 1953. M. & A. has also submitted an application for a loan to extend service to five more rural distribution systems. In addition it has entered into wholesale power contracts with Southwestern Power Administration on the assumption that it would need a supply of power for all eight distribution cooperatives. While your cooperative has been severely handicapped through its inability to secure a sufficient amount of power to meet its growing demands, and has been forced to pay in some instances nearly three times as much as is set out in the contract with Southwestern Power Administration, I can assure you that this condition is rapidly being taken care of. While it will probably be 3 years before all of the demands will be satisfied through the power which will be available over the SPA lines, the availability of power through the M. & A. generating plant will greatly alleviate the situation here in southeast Missouri during the next few months. I have just been informed that they expect to have the M. & A. plant in operation by June of this year, and we hope that some of that power will be available to this co-op to help meet some of its demands.

It took several cooperatives, working together, to obtain the loan funds to overcome the power-shortage obstacle—and the fight is not yet won. It is just as essential that we get our own house in shape and that our own members cooperate.

I understand that one of the problems hampering the completion of the transmission line authorized by the loan to the power co-op is the problem of obtaining rights-of-way and easements. This is something about which each one of you, individually, can do something. You can learn the facts—you can discover for yourselves what it means to your members in terms of lower costs to get these rights-of-way and easements as soon as possible. You can learn what it means to your members in terms of adequate and dependable power supplies to hasten the completion of these transmission lines.

Good service at the lowest cost possible is one of the keystones of a successful cooperative. This new generating plant and the proposed transmission line are essential to your continuing good service.

It is up to each one of you then to learn the facts, tell your neighbors, and do what you can to speed up your own program.

In cases where your lines must cross the property of people who are not members of your cooperative, it might be a good thing for some of you to call on this nonmember on a neighborly basis to tell him what your line means to the community, what it has done for you and your friends, and how it can help others.

Even though you have solved—or on the way of solving—your own power shortage, other co-ops are not so fortunate. Here in Missouri co-ops have faced one of the bitterest, most vicious fights in rural electrification history. Even though your own battle is won, this fight is still on, and it is up to you to lend your cooperative strength to those others within the State, and to those others across the country, who are still making every effort to get power to meet their urgent needs.

The right to generate and the right to buy direct from public power sources is your only protection from high rates and inadequate service. Whether or not you exercise this right, it does stand as a bulwark of strength for you in your negotiations with other suppliers.

This demand that has backed up on the farms, this demand that has been created here in your own cooperative, it was not created by any power company; it is a demand you, as a cooperative, helped to create. You opened up new markets. The fact that your requirements will keep on growing adds urgency to your cause. Lend your support then to the power fight anywhere in the country, for it is your fight too.

As the REA program advances rural people are placing heavier demands on REA borrowers for reliable service and for power sufficient to meet their ever-growing needs. REA estimates that co-op members who were getting service 5 years ago have about doubled their power consumption since that time. Here in your own co-op this demand has jumped from an average use of 93 kilowatt-hours per member in 1946 to 145 kilowatt-hours in 1949, with more than a 20-percent increase in the last year alone, and I know that all of you members realize how that need has grown.

Much of the future expansion of rural electrification will be in terms of use—putting electricity to work to save time, labor,

and money on the farm. Efficient use of electricity by co-op members is directly related to your co-ops' financial security; the member who is getting good value for every dollar he invests in electricity and electrical equipment is the one who is not only in a better position to pay his power bill, but also has reason to be more interested in his electric co-op. That represents a dollar-and-cents value to both the member and the co-op.

However, we should also look at the program in terms of the people themselves—the women who find their household tasks made easier, the men who find their farm chores a little lighter, the children who have light for school study—all because electricity has come to the community.

Comfort, health, and other intangibles which add up to better rural living have improved vastly with the coming of power lines. Young people, who otherwise might see a future for themselves only away from the farm, find their imagination fired by the potentialities of farming with electricity. With relief from some of the drudgery of farm work, with new opportunities for diversified farming ahead, these young people have a new incentive for staying on the land, to help build their communities, and to put to work their talents for production and leadership.

Electricity is bringing greater diversification to farming enterprise. Farmers with electricity are able to do more for themselves and with less dependence on far-away factors over which they have no control.

Rural electrification is adding to the Nation's grass roots stability by making possible the development in rural areas of new industries. These rural industries—more than 10,000 of which have sprung up across the country along rural electric lines—are offering part-time employment and greater stability of income to rural people. Our own alfalfa mills in this section are only one example.

And of course there is the contribution that rural electrification is making to our small towns and cities. As farm people are getting electricity and are putting it to work they are adding new wealth for the community—the kind of new wealth that creates more business and more prosperity.

Most all of us, whether we are members already served or whether we are only members of this community, have benefited from the coming of rural electrification. Some have benefited directly from the money spent for construction, farm and home wiring, electrical equipment, and from the pay roll of this co-op. Others have benefited indirectly through the increased farm income electricity has helped to make possible.

These benefits are neither static nor are they temporary. They will continue and become even greater as electricity is taken to other rural neighborhoods, and as it is used more intensively on the farms already electrified.

I have an idea that many of the merchants here in Sikeston could list direct benefits which they have received. REA's experience has shown that for every dollar invested in line construction the farm consumer spends $4.50 or more in wiring, plumbing, appliances, and other equipment, which depends on the installation of electric service.

This equipment they buy, however, is not limited to electrical items. With a pressure water system, using an electric motor as a power source, the farm family wants a modern bathroom with all the plumbing equipment, bathtubs and lavatories, showers and sinks.

And strangely enough—or maybe it isn't strange—when a farm house gets bright new electric lights to replace the kerosene lamps, or the old Aladdin lamps, the farm wife wants new wall paper, or new curtains. All of these purchases add to the wealth of the business community.

As you advance toward the completion of your area coverage—service to all within your reach—these effects will spread and the general welfare of all the people in this State will improve.

We have natural resources for profitable agriculture, industry, and trade all around us. With electricity available, not just here and there, but in every nook and corner, we will have the means of developing these resources to the full.

I hope that all of you, whether members of the cooperative or only members of the community, will look upon your rural electrification program as a community service. Rural electrification in the Bootheel is an investment in tomorrow.

What you have already done is visible evidence of the ability of farm people to build and operate their own businesses. You have proved it can be done.

Because of this fine record, I hope this cooperative, its members, its directors, its office personnel, its line crews, I hope that they will all look forward to the future, not content with the past.

Your rural electrification program is an investment in the future. Your accomplishments are an inspiration for all of us. With the past as a guide, then, let us look ahead to a brighter future for all of our farm people. I thank you.

Regimenting the Farmers

EXTENSION OF REMARKS

OF

HON. BOYD TACKETT

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. TACKETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Shreveport Journal of February 15, 1950:

REGIMENTING THE FARMER

Representative BOYD TACKETT, of Arkansas, has charged that the Interior Department is attempting to circumvent the will and intent of Congress at the expense of the more than 1,000,000 of the Nation's farmers who are still without the benefits of electric service. He stated that funds which should be loaned for the purpose of building distribution lines to unserved farmers are being used by the Rural Electrification Administration to construct unnecessary generating plants and transmission systems for the primary benefit of another Federal agency—the Southwestern Power Administration. He said further that the SPA is using the REA "to foster their grandiose scheme at any cost. This * * * is just another step toward complete Government regimentation of the farmers."

Representative TACKETT has introduced a bill to correct this situation.

These charges should not come as a surprise to anyone. For many years there has been a determined effort within the Federal Government to use any and all means to socialize the electric industry, and to effect a virtually unlimited expansion of the power of the Government over agriculture and all other enterprise. The Southwestern Power Administration, like all the other similar bodies, existing and proposed, is a major weapon in this effort. Huge tax sums have been wasted, at the expense of us all, on the unnecessary generating and transmission facilities of which Mr. TACKETT spoke.

Socialism comes high. No one can escape the cost—in money, in reduced opportunity, and in lost liberty. And unless the march of socialism is stopped in the United States, increasing taxes will bleed the people white.

Veterans' Education and Training Program

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. EVINS. Mr. Speaker, in the report which the President recently submitted to the Congress he said, among other things concerning the veterans' education and training program:

The contribution which the Servicemen's Readjustment Act has made to the postwar development of the Nation's most important resource—its young men and women—is very great. * * * For the great majority of those who have made use of the education and training provisions of the Servicemen's Readjustment Act the law has been of real and lasting service.

There have been many unjustified criticisms of this program—but notwithstanding these criticisms, there has been great and lasting and incalculable benefits from the education and training program. The President, General Gray, the VA Administrator, and others recognize this fact as do the veterans themselves.

In this connection, I desire to have included in the RECORD two editorials—one from the Disabled American Veterans publication and another from the Nashville Tennessean both of recent date.

The editorials are as follows:

[From the Nashville Tennessean]

WELL SPENT

The Veterans' Administration has announced that a start is being made on the long task of closing down its veterans retraining and education program. As the curtain is lowered on this interesting demonstration of the gratitude of a democracy for the service of its young men in war, there will be discussions pro and con as to the benefits from the program.

For the expenditure of twenty-five to thirty billions of dollars by the greatest democratic nation in the world, what has it got to show?

First, according to a recent tabulation by AMVETS, World War II veterans organization, there have been nearly a million American boys and girls who have received a college education. Of this million more than 100,000 went on to graduate schools and a professional education. Not all of these veterans received their full college education at Government expense but all were well started and continued on their own after their GI benefits ran out.

Second, there were several million who received a trades education. In this field were centered some of the abuses of the Government's good intentions, which has led a minority to claim that all was wasted. A summary of the evidence would indicate that whatever their abuses may have been the benefits were sufficient to cancel them out.

The college education of a million American youths alone would appear as a long-range benefit sufficient to have justified the program. The Government has made a profitable investment playing the futures.

[From the Disabled American Veterans Semimonthly]

VOCATIONAL REHABILITATION

Considerable furor has been created by Veterans' Administrator Carl Gray's report to Congress on education and training under the Servicemen's Readjustment Act—commonly known as the GI bill.

The country's newspapers have been carrying front page stories which emphasize the tremendous cost of this program and how a great part of the funds is being wasted.

Last week President Truman called upon Congress to enact legislation which would eliminate fraud on the part of schools where veterans are training under the GI bill. He specifically called for strict control on the part of the VA to stop the belated growth of certain types of training where the veteran is being exploited at the cost of the taxpayer.

Certainly, the time has come to call a halt to fly-by-night schools whose chief interest is to rake in tuition fees from the Government without giving the veterans honest value in return.

In fact, such action should have been taken when the GI educational program was initiated.

From the standpoint of the DAV, however, current publicity regarding these abuses is detrimental and entirely unjust. The impression given the public in these reports is that all veteran training at Government expense is poorly managed and a waste of the taxpayers' money.

No mention is made of Public Law 16, the DAV law which is restricted solely to the training and education of disabled veterans. Training under this law is closely supervised by the VA, thereby eliminating graft and corruption on the part of the schools. Veterans are given vocational advisement, thus making it reasonably certain they are suited for the type of training contemplated.

Although press reports do not exonerate the Public Law 16 program from the general abuses of the GI bill, they cite cost figures which include all veteran education and training under both laws. Certainly this is not a fair or accurate report of the vocational rehabilitation program for disabled veterans.

In his recent report, Gray stated that the cost to the Federal Government for subsistence, tuition, equipment, books, and supplies under the GI bill has already exceeded $8,715,000,000. The press has done quite a job in emphasizing this tremendous cost but have failed to mention the comparatively small cost and lack of abuses under Public Law 16 training.

The entire cost of Public Law 16 since its beginning has been $1,000,000,000. In other words, Public Law 16 has cost the Government only one-ninth as much as the GI bill training.

These are facts the American public should know before condemning the entire veteran educational program.

Fifty States

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit an editorial from the New York Times, of February 26, 1950, entitled "Fifty States":

FIFTY STATES

The question of Alaskan and Hawaiian statehood is due to come before the House again this week. A bill to give statehood to Hawaii passed the House in 1947, and ever since then there has been considerable talk but no action. It seems to be indisputable that the bulk of the population of both territories wishes them to become States; the platforms of both major parties endorse the idea, differing only in degree of immediacy, and the historical development of the United States assuredly leads in this direction.

Although Alaska's population is only about 100,000 (of whom approximately two-thirds were born in the United States), there are more people in the area today than there were in at least a dozen of the continental territories at the time they became States of the Union. As for Hawaii, its 520,000 inhabitants are far more heterogeneous than those of Alaska; but even at that, almost 90 percent are American citizens, and the House report accompanying the statehood bill observes: "Certainly there is no area under United States jurisdiction where a greater complexity of races live so harmoniously."

The major objection in recent years to bringing either of these areas into the Union is the fact that they are not contiguous to the continental United States. Alaska is separated from this country by 870 miles of Canadian territory; Hawaii is 2,400 miles distant from the nearest point on the American mainland. This consideration would surely have been important in another era. But both Territories are less than 24 hours' flight from New York today, and thus they are actually far nearer in travel time than New York was to Boston when the Union was founded. With the annihiliation of distance there has likewise been annihilated the argument, based on distance, against statehood for these two areas, otherwise fully qualified to be integral parts of the Union.

Little Business and Big Government

EXTENSION OF REMARKS
OF
HON. BOYD TACKETT
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. TACKETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Industrial News Review:

LITTLE BUSINESS AND BIG GOVERNMENT

Nation's Business recently ran an article by Henry C. Link, of the Psychological Corporation, dealing with a survey made among little business to find out what this section of our industrial economy thinks of big business.

One of the questions was: "Would you rather compete with a private company (large or small) or with a Government corporation?" Ninety-two percent replied that they would rather compete with a private company, as against a mere 4 percent favoring a Government-owned business. The remaining 4 percent didn't know.

Another question asked: "Which, if any, of the following has produced the most difficult problems for your business: large companies, labor unions, Government bureaus, other small companies?" When the answers were tabulated, it was found that 58 percent said the Government bureaus had produced the toughest problems. Large companies and labor unions followed, with but 20 percent each.

It is clear from this that the smaller businesses of the country now realize that supergovernment is the worst menace they face—and that, though competition with other business may be difficult, to compete with Government is virtually impossible. Government has every advantage, it is free from taxes, regulation, and legislation that applies to other business. It makes laws to suit itself.

The people can control big business or little business. They can't control big government. It can hamstring and dominate all business, regardless of size.

Letter to the President

EXTENSION OF REMARKS
OF
HON. JAMES G. POLK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. POLK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written to the President of the United States by Hon. Adam Frick, of Portsmouth, Ohio:

DECEMBER 28, 1949.

Hon. HARRY S. TRUMAN,
President, Washington, D. C.

DEAR PRESIDENT: Vacations are over. You are about to impress upon the National Congress factors which, without, will not be best for the general welfare of our Commonwealth. These, I am certain, you have in mind. This has been done annually, embracing the events written in the Nation's history.

Notwithstanding that this has been done regularly, there are practices that have grown up—maybe not intentionally—which operate to the harm of a group of our people whose contribution to our welfare has been immeasurable. I speak of our farm folk.

It would be impossible for a young man to encumber himself with an obligation such as necessary to the payment of a family-sized farm essential to finance current living standards in this era of our advanced civilization, which makes necessary the family automobile, the telephone, the refrigerator, the hot bath, electric pump, the tractor, the combine, the corn harvester, and all these delightful conveniences, arising out of countless profitable, industrial enterprises, with a profit motive as their objective, without a very substantial compensating increase from our agriculture, to finance all of these modern devices. Therefore, the migration of the rural youth from the farm to the rapidly increasing industrial centers. Of course, the propagandists of the press and radio and the bureaucrats who feed on statistics which arise out of crop juggling make believe that food supplies are overabundant, and that the huge quantities make for lower prices, while every other thing advances. That's no answer to the millions underfed in this Republic, with soil resources depleted; forcing crop yields per acre far beyond the physical resources of our less acres, at the moment, with population increasing by the millions annually.

There remains a solution to these out-of-balance conditions, so that there may be anchored at our farms, greater numbers than at the moment, that food for the starving millions may not decrease. Let that be a very important part of your annual message to the Congress. The few farmers are infinitely unable to cope with

the millions off the farms, in the hope of any relief, without Government intervention. Stop gambling in farmers' commodities and there will be little need of any other kind of farm program. If supply and demand really have any value in our national welfare, we better have a larger supply of farm folk, and that real soon. Keep these factors in mind in compiling your message to the Congress on the state of the Nation. Now a happy New Year.

Very truly,

ADAM FRICK.

Sugar Production for Puerto Rico

EXTENSION OF REMARKS
OF

HON. A. FERNÓS-ISERN

RESIDENT COMMISSIONER FROM PUERTO RICO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. FERNÓS-ISERN. Mr. Speaker, I have introduced for the consideration of the Congress a resolution which would raise the annual raw-sugar-production quota for Puerto Rico from 910,000 tons to 1,150,000 tons. My purpose in introducing this measure is to alleviate unemployment in the island, to eliminate the ever-recurring annual accumulations of burdensome surplus stocks of sugar and create extra income, which is so sorely needed.

Many of my colleagues in this Chamber today have visited Puerto Rico. I am sure they shared in the same general impression there. They were struck with Puerto Rico's magnificent beauty—the green, rolling hills reaching up toward the blue, sun-filled sky, the gorgeous splendor of exotic tropical flowers and rushing surf scampering over the golden sands of the beaches which nearly surround the island.

Another spectacle of beauty in Puerto Rico are the leafy fingers of the green sugarcane, forever waving and swaying in the breezes which blow constantly from the sea. These sugar fields are in abundant evidence wherever one travels in Puerto Rico. They have much more significance than their pleasant appeal to the eye. For they represent Puerto Rico's lifeblood—its one-crop economy—upon which Puerto Rico depends for a living. Without sugar there would be no work in the island. Upon sugar, to the near exclusion of everything else, Puerto Rico stakes its economic lot.

Many have asked me why my people put all of their eggs in one basket and all their fields in sugar. I am asked why there is not more truck gardening done and a diversified crop program. As a matter of fact, we do try, insofar as is economically feasible, to raise some foodstuffs for ourselves, but we are exceedingly limited in our opportunities in this respect. First of all, Puerto Rico is just 35 miles wide and a hundred miles long. That gives us only 3,500 square miles, a large part of which is untillable—a great deal of it, mountains.

Completely dependent upon this little dot of land in the Caribbean are nearly 2,225,000 people. Puerto Rico is one of the most densely populated areas in the world. The crowded conditions there have been described this way:

If all the people in the world should come to the United States, there would be here a density of population roughly comparable to that which now prevails in Puerto Rico where there are 625 people per square mile. Since Puerto Rico's is almost entirely an agricultural economy, the burden placed upon the land in supporting so many people is great and stands in the way of efforts to raise living standards.

Since Puerto Rico's only resources are the tillable soil, the climate, and the muscle of its toiling people, it becomes urgently necessary to use every inch of land with full consideration as to what the total dollar yield of that land will be. We have found only two ways of getting a greater dollar yield from the land. One way is to plant sugar cane. The other is to industrialize.

We have planted sugar cane for hundreds of years and we are just now starting to use some of the land for factories. We hope some day to have enough factories in Puerto Rico to solve most of our economic and social ills. Meanwhile, we must depend on sugar.

The result of this situation, Mr. Speaker, is that Puerto Rico must import almost all of its food; nearly all of its clothing; and practically everything else it uses. These imports come from the United States in the form of cash purchases.

Unfortunately, Puerto Rico does not enjoy a favorable balance of trade with the mainland. Puerto Rico buys much more than it is able to sell. In 1947–1948, for example, purchases from the mainland amounted to $337,255,714, while Puerto Rico sold to the mainland goods amounting to $185,745,350. That $151,000,000 difference between these two figures has to be made up. Toward this end, some of the difference is made up by tourists traveling to Puerto Rico; some of it is made up by reason of the military forces stationed in Puerto Rico; some of it is made up by reason of various Federal services officed and operating in Puerto Rico; some of it comes from veteran benefits due our boys serving or having served under the colors, but it is an ever-present and always serious problem.

Mr. Speaker, because we live with this problem and are always keenly and consciously aware of it, we, in Puerto Rico, believe we should be permitted to more fully utilize our three natural resources of climate, muscle, and soil.

We are engaged in an all-out endeavor to help ourselves as much as we can. This we have called our Operation Bootstrap. We should like to raise and market, for domestic consumption, a quota of sugar more nearly in line with our ability to produce. This would be part of a correspondent Operation Boost from the Federal end.

When the Sugar Act of 1948 was enacted, the other domestic areas were assigned quotas for sugar production which reflected closely their ability to produce, or even better. Puerto Rico, on the other hand, was given a quota below its ability to produce.

The purpose of my resolution is to amend the Sugar Act of 1948 so as to correct this situation.

The amendment would increase Puerto Rico's quota by a net amount of 240,000 short tons annually. This would not in any way affect the quotas or production shares of other domestic areas, nor quotas agreed upon by treaty.

The present Sugar Act was adopted in 1947. During the previous year, under rationing, sugar consumption in the mainland, was under 6,000,000 tons. During 1947, when rationing was lifted, consumption was 7,448,000 tons, and for 1948, it was 7,343,000 tons. But in 1949, sugar consumption increased to 7,500,000 tons and the estimate for 1950 is again 7,500,000 tons. There is an evident tendency to increase. This fact, in itself, makes it appropriate now to reexamine and redetermine Puerto Rico's share under the domestic sugar production quotas.

This is an urgent matter to Puerto Rico. It would represent an additional income to the island of $25,000,000 per year. Twenty-five million dollars in Puerto Rico, where the only important disease comes from slow starvation, would mean 90 pounds of rice for every person in the island—rice purchased in Louisiana, Arkansas, or California. Twenty-five million dollars would represent additional purchasing power which would be exercised in the United States, thereby accruing to the economic advantage of the mainland worker, the mainland manufacturer, and the mainland farmer in Maine, New York, Illinois, California, Louisiana, Florida, and all the other States where Puerto Rico goes shopping. As it is, Puerto Rico's annual purchases from the mainland have been estimated to give permanent jobs the year around to 200,000 workers in the mainland.

Twenty-five million dollars of additional purchasing power for Puerto Rico is also a matter of direct concern to the mainland taxpayer. For Puerto Ricans would never be allowed by their fellow citizens of the mainland to starve. If we are unable or we are prevented from earning our livelihood, relief would certainly be forthcoming at the expense of the mainland taxpayer.

You see, Mr. Speaker, there is no American interest, whatsoever, which would be harmed in any way through the enactment of what I here propose. On the contrary, there are many classes of Americans who would benefit as a direct result of what I advocate. I hope that the Congress both assembled, and in the working commitees, will see fit to give this resolution prompt and favorable consideration and to speed it through the legislative machinery to early enactment.

Civil Rights

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. DAGUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include an editorial entitled "Progress on Civil Rights," which appeared in the Christian Science Monitor under date of February 27, 1950. The views expressed by this outstanding newspaper must strike a responsive note in the thinking of all those who believe that fair employment practices can be brought about by education and not by compulsion.

PROGRESS ON CIVIL RIGHTS

As we see it passage of a voluntary fair employment practices bill by the House of Representatives is a progressive step. It points the way to the kind of compromise measure which is not only most feasible politically but most likely to achieve real results in lessening discrimination.

The radicals on both sides of this question will disagree with our view. Those who believe they can establish social equality by passing a law denounce this measure as mere advice and toothless. Those who believe they can dam the tide of national conscience rising against discrimination denounce it as an entering wedge of Federal interference.

Fortunately neither extremist group can reasonably claim to represent the American people Fortunately discussion of this subject promises to weaken both camps by showing how impracticable their positions are. Further debate should also help to hammer out workable legislation which will have a good chance of accomplishing progressive measures of reform.

The achievement of open debate was one of the hopeful things about the action in the House. For weeks opponents of FEPC have tried to block a vote, and in the process have blocked debate. Much of the debate on Wednesday was mere maneuver or emotion, but in the long night session and in final consideration of the McConnell bill and the various amendments tacked onto it the House came much closer to genuine study of the problem.

Another hopeful feature was that there were splits on both sides. Some of these were over strategy. One group of Dixiecrats accepted a voluntary FEPC as a means of avoiding a compulsory one. Others rejected it as a breach in the wall. For the same reasons—in reverse—the advocates of compulsion divided. Some regarded the McConnell bill as worse than nothing, others as a means of keeping the issue alive. But some of the divisions which drew from advocates and opponents of a compulsory plan enough votes to pass a voluntary plan may be credited to a growing appreciation of the merits of moderation.

Should the Senate now filibuster the McConnell bill to death, it will be clear that moderation still has a long way to go. But the House vote came on top of two other recent evidences of some softening of opinion in both parties. The new Republican policy statement retreats very definitely from the 1948 platform demand for a compulsory FEPC. And President Truman, who has been the outstanding Democratic advocate, has twice taken pains to declare that he does not want an FEPC which will deprive a citizen of the right to run his own business.

So much could be done by the methods of education, conciliation, and publicity provided in the House bill that the enemies of discrimination should be willing to try it. So much needs to be done that opponents of compulsion should welcome this better way.

World Federal Government Is the Way to National Suicide

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, the Stars and Stripes published in Washington had a very interesting front-page editorial in its issue of February 23 entitled "National Suicide." I commend it to all Members and especially to my colleagues who have introduced world-government resolutions:

NATIONAL SUICIDE

It has been nearly 3 months since this veterans' spokesman has commented on the several proposals being advanced to form a world government and, since, we have tried to show that its formation and American participation in it would mean the loss of our own constitutional freedoms, but the suggested monstrosity has gained startling headway, and we deem it essential to discuss it further and to issue another warning to our countrymen that the thing is an ever-present danger that must be scotched as would be a poisonous reptile.

When we last wrote about the question in December, there were known to be more than 700 chapters in this Nation composed of people who were engaged in trying to set up a superworld state in which we would lose our identity and have but 1 lone voice in shaping its conduct. There are doubtless many more such groups now, and, believe it or not, they are made up of reputable businessmen, educators, economists, and statesmen, all earnestly bent on preserving the peace, or, at least, they think they are. Over a period of years, 22 State legislatures had memorialized the Congress to express itself for a world union to supersede the United Nations, and 13 Senators and 96 Representatives had subscribed to resolutions that would mean the end of United States sovereignty.

Whether it has been because of our loss by treachery of the secret of atom bombs, or the new hydrogen bomb development, or by just plain skulduggery, we are not prepared to say, but the movement has gained momentum. Although the State of Georgia has reversed itself and the New York Legislature refused to pass upon the deal, some 40 Senators have indicated they are now for it, and a total of 111 House Members are enmeshed. Not only that, but a Senate Subcommittee on Foreign Relations has been holding hearings on the suggested world union for some time. In a sense we are glad of that, because witnesses for the proposition have been found to be so much at odds with each other over the form a world federation should take that the fallacies of the whole business are beginning to rise to the top like the fat on a mess of cold broth. Only last week it developed startlingly that well-intentioned Congressmen, who have sponsored supporting resolutions because they are greatly disturbed about unfolding world conditions and are desperately anxious to seek peaceful solutions, are riding the crest of a wave without knowing what is causing the disturbance. Therefore, we feel that they should once more be told what the Nation's veterans know about this matter and how they feel about it.

There are four principal groups and several lesser ones that advocate the one-government world that is being proposed to the Congress in one form or another. These are, foremost, the international Communists who are working skillfully all over the globe to bring about a world empire over which they can rule and in which freedom-loving peoples will have no part. With perhaps a couple of exceptions, no Congressman would knowingly support such a group, but many are doing it unwittingly. Then there is the Federal union or union-now movement, headed by a left-wing former Rhodes scholar, and it has an appreciable backing. A citizens' committee for United Nations reform would pursue similar objectives, including establishment of a world police force with exclusive possession of the atomic bomb to keep our citizenry in order. The World Government Association, Inc., composed of numerous prominent Americans, is another that is dissatisfied with our form of self-rule and believes it to be decadent, and there are more, but the largest, the most potent, and best organized is the United World Federalists, Inc., with a list of officers that reads like Who's Who and includes, among the great, United States Senators.

When sounding off to the uninitiated, and while claiming the support of those 150 or so Members of Congress who have introduced or have added their names to pending resolutions, they talk "peace" as their only objective. However, their own literature gives the lie to it. They say that their movement is the way to avoid war and preserve American independence, but their printed words spell out entirely the loss of nationalism as we know it. It admits frankly, if one will but read, that its members while endorsing the United Nations, will work to "transform it into a world federal government." That is the absolute minimum objective, its adherents say.

United World Federation, in brief—and these are their own words—is designed to replace the United States Government and all others with a single union having a common set-up for defense, a joint foreign policy, a single postal system, unified trade relations, a uniform currency and what not, but it puts the blinders on the American people by stating, "This is the only way to bring about peace." Stripped of deceptive and confusing language, every one of these schemes are naked attempts to scrap the American Constitution, bring about the surrender of our national sovereignty and our right to plot our own course in the world. They would alter our social and economic systems. Clearly, they seek the ceding of all powers of government to a superstate in which this country could have but one lone vote and would be controlled by aliens.

The UWF goes so far as to propose that once the United States of America goes into the United World Federation, it can never get out. Its objectives could not be more ruinous, if they were written by Joe Stalin himself.

It is pointed out that some of the major veterans' organizations have passed resolutions which look to a strengthening of the United Nations. They wish to have the much-abused veto power abolished and add to the effectiveness of the World Court. Some have sought control of armaments and of atomic energy, and even a world police force under proper direction. These were high-minded ideals purposed to pre-

serve American institutions and entailing no loss of sovereignty, but the One Worlders say "me too" and point out that these things are just what they desire, but without adding that they ultimately look ahead to something far more patent. These say that even the President is with them because he said, in 1945, that the world is no longer county-size, no longer State-size, no longer Nation-size. They know that Mr. Truman was speaking for support of the UN, but they are adept at twisting phrases to their own use, so they praise the vision of the Chief Executive, of the veterans' organizations and of every sucker on the long list of subscribers who have loaned their good names to a proposition that would sell down the river every cherished American institution, every freedom that is held dear by our people and every incentive this Nation has ever had, which led our youth to shed their blood and die, if need be, to protect our independence.

This is a vicious thing that faces our beloved America, all suggested in the name of peace. Already our citizens have paid dearly in money, in goods, and in blood to preserve the things in which we believe and for which we have sacrificed through the ages. The far-fetched proposals now being discussed are doubtless intended by some to save what is left of democratic processes, but they can no more work than partial communism could be successful. That is doubtless why they are supported strongly by every fuzzy-minded incompetent with head in the clouds and opposed by realists. It is the answer to the favorable propaganda of every left-wing newspaper and periodical in print, and it is why those who have faith in American concepts of freedom are found in the opposing columns. If the people of this land would preserve their present way of life, they will fight world government with all they have. If the veterans of the country do not make an issue of it, they will be breaking faith with their honored dead. Democracy and tyranny cannot yoke up and pull as a team. Every sensible person wants world peace as a reality, but seeking it by surrender of sovereign rights can mean nothing but national suicide.

New Effort To Squander

EXTENSION OF REMARKS
OF
HON. BOYD TACKETT
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. TACKETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Leader and Arkansawyer, Stuttgart, Ark., for July 25, 1949:

NEW EFFORT TO SQUANDER

Another effort to squander millions of dollars in American taxpayers' money is before Congress at the present time. It is the request of the Southwest Power Administration for millions in funds to build power lines paralleling lines of privately owned, tax-paying utilities.

Down in Texas the SPA has an arrangement by which an electric company transports power generated at a Government dam to SPA customers. By using the electric company's lines, tax money is not spent for duplicating SPA lines at public expense. The contract between the electric company and SPA is a modern example of Government and business working together.

In Arkansas, Oklahoma, Missouri, Louisiana, and Mississippi—States in which the SPA also plans to expand its public-power system—the electric companies have offered to enter into a contract to do the same thing the Texas company is doing, transmit SPA power over their lines for the federally supported agency.

For several years SPA held the Texas contract up as a model, saying it wanted to work out such a plan in its other States. But now it appears that SPA has changed its mind. It doesn't want to use power company lines, but asks for millions of dollars from Congress to build duplicating power lines.

A Senate committee has reported that SPA should go ahead and work out a contract with the power companies to use their lines to haul its power from Government dams to its customers, the co-ops, municipalities, and others, who are given preference for the power.

If SPA were sincere when it said that the Texas contract is a good one, it should do as the Senate committee recommends and not seek to waste millions in tax funds for duplicating lines. In fact, the Senate and Congress shouldn't let it waste funds, and it is to be hoped the Arkansas delegation will help see to it that this is the result of pending congressional action.

Fair Employment Practices Act

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 22, 1950

Mrs. KELLY of New York. Mr. Speaker, a moral question involving the dignity of the human being is the underlying cause of the problems facing the world today. I find this same question in the major issues confronting the Eighty-first Congress.

It is apparent to me that the reason for our existence on this earth is being bypassed and forgotten. We are here to serve God and our fellowmen. Our courageous founding fathers, in establishing on this North American Continent, a new Nation, realized and gave recognition to the moral law. They founded a Government which is the only one in the world today which recognizes the dignity of the human being, his civil, his social, and his spiritual rights.

Our Declaration of Independence clearly sets forth our duties as citizens of these United States in these words:

That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed, that whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness.

To preserve these priceless principles, as trustees for our posterity, we must strengthen and support by Government action, legislation that will enforce these principles.

In this second session of the Eighty-first Congress, we have been called on to exert our powers to insure the rights of all our people in the pursuit of life, liberty, and happiness. This has been given the title of the civil-rights program. I support this program. For this reason, I voted against the McConnell amendment to the Fair Employment Practices bill. That this amendment was passed by the House by a vote of 221 to 178 is now history. I voted against the motion to recommit this bill because I knew that if such a motion carried, there would be no fair employment practices legislation enacted. When the vote on the final passage of this bill was taken, I voted for it. I did so in an effort to keep this measure alive, knowing that the bill would be referred to the Senate for action by that body. Had I voted against the final passage of this bill, it would have been a vote to kill FEPC for the session with no hope of reviving it until the next Congress. It was a poor alternative, but it was the only alternative.

Despite the coalition of Republicans and southern Democrats, I feel that great strides have been made toward the enactment of a Fair Employment Practices Act. This measure is now before the people of the United States in this congressional election year.

Carrier "Leyte" Conversion Job Belongs in Brooklyn Navy Yard

EXTENSION OF REMARKS
OF
HON. JAMES J. HEFFERNAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. HEFFERNAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include therein the following editorial from the Brooklyn Eagle of February 23, 1950:

CARRIER "LEYTE" CONVERSION JOB BELONGS IN BROOKLYN NAVY YARD

The controversy over where the Navy's big carrier *Leyte* is to be converted—modernized and refitted to handle bigger planes—is important to Brooklyn. If the job is sent to the Norfolk Navy Yard instead of the Brooklyn Navy Yard thousands of Brooklynites face the loss of their jobs.

The work force at the Brooklyn Navy Yard has already been drastically cut as a result of last year's economy slashes. Brooklynites accepted the lay-offs at that time because they were necessary. But unnecessary dismissals, made solely because work that would normally be done in the Brooklyn yard is sent elsewhere, would be intolerable.

The Brooklyn Navy Yard should have its fair share of work. It has been described as the largest and best-equipped shipyard in the world. Its valuable equipment, worth hundreds of thousands of dollars, should not be allowed to go to waste. What remains of its skilled force of technicians should not be cast adrift to disappear into other industries and other communities. They may be badly needed some day.

Among those battling to have the *Leyte* job assigned to Brooklyn is Local 43 of the A. F. of L. Boilermakers Brotherhood. Among the cogent arguments they make is that assignment of the job to Norfolk would mean a great deal of added expense to outfit the Norfolk yard to handle the big job. On the other hand, as the union points out, the Brooklyn yard is preeminently well equipped

for the job and has had two similar carrier conversions from which to gain all-important experience and know-how.

We are glad to support the local in its drive. We take it for granted that the full delegation of Brooklyn's Congressmen will do everything in their power to bring the *Leyte* conversion job to our local yard where it belongs.

Fearful Dilemma

EXTENSION OF REMARKS
OF
HON. CHARLES A. HALLECK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. HALLECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following editorial entitled "Fearful Dilemma," which appeared in the Washington (D. C.) Daily News on Tuesday, February 28, 1950:

FEARFUL DILEMMA

Senator MURRAY, prolabor Montana Democrat, thinks there are only two ways to achieve lasting peace in the coal industry:

1. Nationalization: Government purchase and permanent operation of the mines.

2. Government control of coal production.

Neither way, Senator MURRAY concedes, could end the present crisis quickly. And Senator MORSE, prolabor Oregon Republican, asserts that nationalization would be a bad mistake; a step down the road to state socialism.

So it would be, and a long step. Government control of coal production would be a shorter step toward the same destination, one which most Americans do not want to reach.

But the country's need for coal is now desperate. And in and out of Congress, many are saying that if John L. Lewis and the mine owners do not agree, and if the miners continue to defy the Taft-Hartley Act injunction, the Government must seize and operate the mines.

Then what? Congress can give the Government seizure power. It cannot, under the Constitution, give the Government power to make individual miners work in involuntary servitude.

The Government might induce the miners to work by confiscating all profits from seized mines and by negotiating a contract with Mr. Lewis on his terms, as it has done before.

That, however, would make a lasting solution for the coal industry's grave problems more difficult to find. And at least some mine owners might be unwilling or unable to take back and operate their properties on Mr. Lewis' terms. So the Government could find itself in permanent possession of coal mines and traveling to state socialism.

Here, then, is a fearful dilemma, with no apparent good way out. And nobody is helping to find a way out by gloating, as some are, or by mourning, as others are, that existing law in the form of the Taft-Hartley Act has been tried and has failed to protect the country.

The Taft-Hartley Act authorizes Federal court injunctions as a method of halting or delaying strikes that imperil or threaten to imperil national health and safety—of providing time for efforts to promote peaceful settlements. In the present coal strike that method has not been fairly tried.

First, for many months, President Truman, Senator MURRAY, and others encouraged disrespect for and defiance of the Taft-Hartley Act by denouncing it in terms almost as violent and farfetched as those used by Mr. Lewis and other professional union leaders.

Then, long after the coal strike obviously menaced national health and safety, Mr. Truman refused to invoke the Taft-Hartley Act. He waited until the country was almost out of coal and the crisis was full blown.

Mr. Truman waited too long. Mr. Truman, not the Taft-Hartley Act, has failed to protect the country.

Address of Hon. James A. Farley

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. DELANEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley, former Postmaster General and chairman of the Democratic National Committee, on behalf of Hon. HERBERT H. LEHMAN, over the Columbia Broadcasting System, New York City, October 31, 1949:

I am happy indeed to be addressing my fellow citizens of the State of New York on behalf of HERBERT H. LEHMAN, the candidate of the Democratic Party for the unexpired term in the United States Senate which was created by the resignation of Senator Robert F. Wagner. Our party is presenting to the voters for election to the great office of Senator one of its most distinguished sons, Governor LEHMAN.

When the voters 5 years ago reelected Senator Wagner, they decided between the parties, and they elected a Democrat to serve the 6-year term for which Senator Wagner was running. In ordinary course that Senatorial place would not have been contested again until next year. However, by reason of ill health Senator Wagner lately had to give up the office he had so honored. At the moment the incumbent in his position is a Republican, appointed interim Senator by a Republican governor to fill a place for which the voters had selected a Democrat. It is now time to reaffirm that party choice the voters made when they elected Senator Wagner, and in my judgment they are going to reaffirm it when they elect HERBERT H. LEHMAN United States Senator on November 8.

People everywhere are watching this contest. Our party could have made no better choice of candidate than HERBERT LEHMAN. He stands in the front ranks of leaders of our party in this State and in this Nation. For a high office that calls for many qualities of head and heart Governor LEHMAN is ideally suited.

The people of this State know Governor LEHMAN well, for 14 years, first as lieutenant governor and then for 10 years as governor, he became known, and favorably known, to every citizen of New York. During most of that time I was State chairman of my party, and in that position I had to deal with all groups and people interested in the affairs of the State. I had a chance to learn from them the good will they had toward HERBERT LEHMAN.

I have spoken of Governor LEHMAN'S 14 years of service in high State office. There are few records that approach his, either for length of service or quality of service. First, as lieutenant governor, when he took an important part in the administration headed by Governor Roosevelt, and later, as governor, when Franklin D. Roosevelt became President, HERBERT LEHMAN got very deeply into the affairs and into the hearts of millions of people. He learned the problems of our State, which are the kind of problems that constantly must be in the mind of a United States Senator from New York.

New York is a great agricultural State, and Governor LEHMAN by zeal and hard work became a useful and effective champion of the farmers' position.

The period of Governor LEHMAN'S official term was a period of problems and of progress. The harsh realities of the great depression, and some older evils, were problems with which he was at grips daily. Thus, the HERBERT LEHMAN who will take office as United States Senator next January will be the same man who has shown us New Yorkers what he is for in the field of labor and social legislation. When he was governor these are the things he fought for:

A minimum-wage law for women and children.

An anti-injunction law in labor disputes.

Extension of the workmen's compensation law to cover all occupational diseases.

An act requiring jury trials in labor-injunction-contempt proceedings.

A law compelling payment of prevailing wage rates on public works.

A 40-hour, 5-day week for public-works contracts.

A law raising the age limit at which children could leave school and go to work.

An act to regulate industrial homework.

A law to abolish the "yellow dog" contract.

A law declaring that the labor of human beings was not a commodity.

Legislation in most of these matters is now in effect and you may be used to them. But the point I am making is that these laws were not in effect when HERBERT LEHMAN first took office. They are things for which he fought, and fought hard, against a hostile Republican legislature. Due to his persistence, and to the ratifying votes from the people of this State, the goals he set were reached.

I repeat—these things we now accept. But we must not forget that the man who was largely responsible for their acceptance in this State is the man who is now the Democratic candidate for United States Senator. His record affords impressive examples of what he is disposed to do and is able to do.

The period of the thirties was a period of improvement in the position of organized labor. In the early thirties many of the unions which are now vigorous were very weak. Some of the unions now most active in our community life did not event exist. Then came the Federal legislation sponsored by the Democratic Party, the Wagner Act. That act was the Magna Carta of labor. For the first time workers were really free to choose who should represent them in unfettered collective bargaining. At the same time the Federal act was adopted, we in New York, under the leadership of HERBERT LEHMAN, adopted the little Wagner Act, which deals with labor problems within the State. Our little Wagner Act stands on the books today practically as it was written. It is interesting to note that the men whom Governor LEHMAN appointed to the New York State Labor Relations Board managed its affairs so ably that one heard very little of the complaints and bickering that were commonly heard about the operations of the National Labor Relations Board. In other words, here in the State of New York we had under the leadership of Governor LEHMAN wise administration of far-reaching labor laws.

Sometimes when a politician interests himself as deeply as Governor LEHMAN has in labor, extension of social services, and agricultural problems, it is thought that he must necessarily be disinterested in or hostile to business. However, this unique man, who

spent the early part of his life in active business, has always found loyal supporters in the ranks of business and has never been accused of being a business baiter. He is too hard-headed and too wise to indulge in senseless sniping at the economic system which has produced great results in this country. He knows that our business system, soundly run, is the productive machine whence came the other benefits which I have just mentioned.

Governor LEHMAN is to be preferred over his opponent, therefore, by reason of much broader and sustained experience. He knows the affairs of every town and county in this State. He knows where the interests of those towns and counties mesh with the Federal Government. In the Senate he will be outstanding for his knowledge of local problems.

In the field of foreign affairs, so much the concern nowadays of the United States Senate, Governor LEHMAN is widely experienced. As Administrator of UNRRA he gained the world viewpoint. He was in many countries. He worked on countless problems. He advised and counseled with many people in many lands. His qualifications in this field are unique and distinguished. It is argued that his opponent is well qualified in this field, too, and I do not gainsay it. But competence in the foreign field is only a part of what we ask in a United States Senator. Our domestic problems need attention, too. No one can seriously dispute my statement that in the great domestic field Governor LEHMAN is infinitely better qualified than his opponent. He is closer to the people and has been closer to the people for many years than has his opponent, whose activities have been in other fields.

In my judgment over the last two decades the Democratic Party has at all times taken the lead in legislation and in administrative action leading to improvement in the life of all of us. Not everything that we have tried or have done has been perfectly done. But we have been trying, and trying hard, to promote the general welfare. We have not spent our time wringing our hands and moaning, saying "No, no, I wouldn't do this. No, no, I wouldn't do that. This is bad and that is bad."

In the 1948 election many people were surprised that President Truman was elected and that the Democratic Party was given another mandate of power. There was one factor operating that many forgot, the economic factor. At the time of the 1948 election economic conditions, while not perfect, were very good. That unquestionably had its effect on the election. In my judgment the average American decided in his own interest to make no change in the national administration because he thought it was doing a good job.

On that basis I think New York next week should elect a Democratic Senator, a supporter of the national administration which was approved last year by the voters. After all, we in New York number 10 percent of the people of the United States, and it seems inconsistent that we now have no Senator representing us who is a member of the national party which has so lately received the approval of the voters. Governor LEHMAN will immediately take a high place in the councils of our party in the Senate. His wisdom and experience, his strength and his humane attitudes, will be welcomed by his colleagues.

I have just returned from a long business trip abroad. In the few days I have had at home I have learned with satisfaction that HERBERT LEHMAN will be supported at the polls on November 8 by all the strong legions that have elected him so many times before. He deserves well of the State which he has served well. I am confident when the voters have thought things over, and have weighed the experience and character that this great New Yorker possesses, they will overwhelmingly elect him United States Senator.

Before I conclude my broadcast, may I say to those who may be listening that I am very much interested in the election of Supreme Court Justice Charles W. Froessel to the office of associate justice of the court of appeals. Justice Froessel has had a long and fine career before the bar and as a justice of the supreme court has made a most enviable record. He is well and favorably known throughout the State in fraternal and communal circles and his great host of friends, like myself, who know him intimately can testify to his worth, ability, and fitness for the high office for which he has been nominated by the Democratic Party. Let me say to those who may be listening to me that I am just as much interested in the election of Judge Froessel as I am in the election of former Gov. HERBERT H. LEHMAN.

The Politics of the Rules Change

EXTENSION OF REMARKS

OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. SCUDDER. Mr. Speaker, public discussion of the operations and authority of the House of Representatives Committee on Rules has become so enmeshed among such glib phrases as "power grab" and "undemocratic" that I feel it highly worth while that some light be shed on the subject.

I doubt that any issue in recent years has been so misunderstood and misrepresented. There were two main reasons why I decided to vote to restore the rules which had been effective in the House for many years.

One. The most decisive influence on me was the question of whether we are going to make an effort to balance our national budget, or whether we would continue the "spendomania" which, I feel, will bankrupt our country unless it is halted.

Second. I had become increasingly convinced in the year that the change in rules had been in operation that the new method had not been properly thought out and had not proven successful.

To understand the importance of my first reason, we can examine the methods right in our California Legislature, where I had the honor to serve for 16 years. In Sacramento all spending bills reported out of standing committees must be sent to the ways and means committee. These measures are held up until the budget bill has been passed and signed by the governor. Then, in the wisdom of the ways and means committee, these bills are considered in light of ability to pay.

In Congress, bills authorizing expenditure of untold millions—even billions—of dollars are reported favorably by various committees. Only the Rules Committee had been set up to sift these bills, and its responsibility always has been to hold up measures which by their passage would upset the Government's financial condition.

Like the ways and means committee in Sacramento, the Rules Committee is the only body in the House which has an over-all view of the total cost of all proposed bills. No other committee can estimate accurately the effect of its legislation in relation to the total cost of all the measures reported by the other committees.

The so-called liberal rule instituted last year provided a way to bypass this check and bring out any bill some liberal-spending group wanted.

We must remember it was through watchdog tactics that the Rules Committee during the Eightieth Congress saved the taxpayers an estimated $14,000,000,000 in expenditures and balanced the budget for the first time since 1930. Funds were made available for the first time since that year to reduce our national debt.

When I voted for a return to the pre-1949 rules, I felt they must have had considerable merit. They were set up by the Democratic majority in the House in 1931, and served the purposes of the entire Roosevelt administration and Mr. Truman's first term, which included the Republican-controlled Eightieth Congress. They were satisfactory for 18 years. However, the 1948 Truman victory margin did not appear enough to administration strategists to push through their entire program. To strengthen their position, Truman forces enlarged the various committees and put the balance of committee power into the hands of Fair Deal supporters.

Then they pushed through the House, without permitting debate, a rule to let any committee chairman move a bill to the floor without clearance by the Rules Committee. This action may be taken at any time 21 days after the Rules Committee had received the bill; hence the name, "21-day rule."

The controversy concerning repeal of the 21-day rule and the restoration of the pre-1949 rules unfortunately centered around the Fair Employment Practices Commission legislation. It was said that since southern Democrats had heavy representation on the Rules Committee, they would continue to block the FEPC bill. When the 21-day rule was adopted this was one of the arguments set forth by those who favored the rules change.

I am sorry to say that some outside criticism was based on a misunderstanding of the House rules. Let me give you an example of how lacking some people are in information about the methods of Congress—and, unfortunately, they have spoken the loudest.

There is an aspirant to Congress in my district in California who recently said:

> SCUDDER's vote with the Dixiecrat-Republican coalition was a vote against effective democratic government—with a small "d"—and would have given a majority of one committee of the House of Representatives the power to decide what issues would be brought before Congress for debate and vote.

That gag-rule vote might have been the means of blocking the consideration of Central Valley project measures and other bills

of interest to California as well as the President's civil-rights program, against which it ostensibly was aimed.

This is a total misstatement of fact. The truth is that no committee of Congress—the Rules Committee or any other—can keep a majority of the House from exercising its will.

There are four methods in existence which insure the consideration of any important legislation.

The first method is the discharge petition: Any time 218 Members of the House—a majority—sign a petition, the bill they seek to consider must be brought to the House floor for a vote.

The second method is Calendar Wednesday: Every Wednesday the Clerk of the House calls the Committee Calendar, and any committee chairman who gains recognition when his turn comes may call up any bill in his committee without going through the Rules Committee.

The third method is suspension of the rules: Any Member may ask for suspension of the rules on any bill, and if two-thirds of the Members present vote to suspend the rules, the bill must be considered.

The fourth method is unanimous consent: Any Member may be recognized and ask unanimous consent to consider a bill. If there is no objection, the bill then may be considered. This admittedly is the most difficult method on a controversial measure, since a single objection suffices to block consideration.

Now let us see how the rules of the House—particularly with respect to the 21-day rule, which was sponsored to save the President's civil-rights program—have operated in recent weeks.

The FEPC bill became eligible to be called up under the 21-day rule in August 1949, but although Congress stayed in session until October 19 no effort was made by the Democratic leadership to do anything about FEPC. When Congress reconvened, the chairman of the House Committee on Education and Labor the gentleman from Michigan [Mr. LESINSKI] announced that he would not recognize him and the 21-day rule proved valueless in that respect.

Now, under what method did the FEPC legislation finally pass?

Finding it impossible to get any results from the 21-day rule, the proponents of FEPC brought it up under Calendar Wednesday and the bill was passed, with amendments, on February 22 and 23.

In other words, the FEPC bill finally was considered under a method that has existed in the House for 41 years and would have continued to exist, completely intact, whether the former power of the Rules Committee had been restored or not.

Consider this: In 14 months only two bills have been called up for consideration through the 21-day method and in both cases four other methods were available to bring the bills to the floor without going through the Rules Committee.

If there was a power grab involved in the controversy over the House rules, the 21-day rule itself constitutes the grab. The 21-day rule gives the Speaker of the House a great deal more power over legislation, as evidenced by the fact that Mr. LESINSKI never did receive recognition by the Speaker under the 21-day rule to bring FEPC to the House floor.

The rules of the House are very complex and I blame no one unfamiliar with legislative procedure for failure to understand their intricacies, but it should be remembered that the House consists of 435 Members and that every Congress sees approximately 20,000 legislative measures introduced. The rules of the House have been built out of practice and experience and they have been designed to make it possible for the most important legislation to have priority.

When the rules are tampered with in order to gain certain political objectives or to promote pet measures, the American people are done a great disservice.

What is needed in Congress is more serious and better-informed students of government who will consider the welfare of the people as a whole, and not bow to pressure to upset a tested and tried system simply to gain a single objective.

I think the preservation of the financial soundness of our Government is far too important to risk in such a haphazard fashion. I shall follow the dictates of my conscience in these matters and the knowledge that I have gained in my more than 17 years as a legislator and a Congressman. I am always willing to subscribe to change when change is necessary and beneficial and I always have done so, but I shall never misrepresent, or falsify, or veil my efforts behind any method to achieve any goal.

We must remember that necessary rules on legislative procedure, many times restrictive, have been largely responsible for the success of our form of government.

Free Federal Union

EXTENSION OF REMARKS

OF

HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, at the request of Eliot Blackwelder, chairman, Palo Alto chapter, Atlantic Union Committee, I am including herewith a petition from various interested citizens in Palo Alto, Calif.:

PALO ALTO, CALIF., *February 15, 1950.*

Being convinced that a union of the free democratic nations of the world offers the best hope of maintaining peace and preserving the world from subjugation by the Communists, we, the undersigned citizens of Palo Alto and vicinity, in California, request Congress to adopt House Concurrent Resolution 107–111, introduced in July 1949, which authorizes the President to invite the nations which sponsored the North Atlantic treaty to send delegates to a convention "to explore how far their peoples, and the peoples of such other democracies as the convention may invite to send delegates, can apply among them, within the framework of the United Nations, the principles of free federal union."

Mrs. David Starr Jordan; Mrs. Jean B. Blackwelder; Dr. Karl Brandt, economist, Food Research Institute, Stanford University; Russel V. Lee, M. D., director of the Palo Alto Clinic; Tom C. Christy, president of T. C. Christy Co.; Dr. I. James Quillen, professor of education, Stanford University; Mrs. Grace Gates Mitchell; Prof. Joseph J. Graham; Prof. George E. Osborne, professor of law, Stanford University; Mrs. Ethel Smith Dalmadge; Dr. George S. Parks, professor of chemistry, Stanford University; Mr. Gerald R. Dalmadge; Mrs. Anne Parks; Mrs. A. L. Bruce; Mrs. Dorothy B. Wiggins; Dr. Arthur D. Howard, professor of geology, Stanford University; Mr. Almon W. Copley, electrical engineer (retired); Mr. Ithiel de Sola Pool, Hoover War Library; Mrs. Barbara W. Law; Dr. Gordon F. Ferris, professor of entomology, Stanford University; Dr. Eliot Blackwelder, professor of geology (retired); Dr. Robert E. Swain, professor of chemistry (retired); Dr. Ira L. Wiggins, director of the Natural History Museum, Stanford University.

Farm Bureau Group Backs Taxation of Co-op's Profits

EXTENSION OF REMARKS

OF

HON. PAUL C. JONES

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. JONES of Missouri. Mr. Speaker, under leave to extend my remarks in the Appendix, I herewith request publication of the following article, appearing in the Washington Daily News, wherein it is reported that the American Farm Bureau Federation has adopted a most commendable position relative to the taxation of part of the profits of farm cooperatives:

FARM BUREAU GROUP BACKS TAXATION OF CO-OPS' PROFITS

(By James Daniel)

The American Farm Bureau Federation favors Federal taxation of part of the profits of farm cooperatives.

Breaking ranks with other farm organization, the powerful federation told the tax-writing House Ways and Means Committee it believed co-ops should pay income taxes on profits which they did not return or assign to their patrons.

Such a policy would affect approximately half of the Nation's 10,000 farm cooperatives. These are the co-ops which claim full statutory tax exemption, including the privilege of building up cash reserves not treated as the property of patrons.

Donald Kirkpatrick, chief counsel for the Farm Bureau Federation, said his organization was unalterably and aggressively opposed, however, to applying the Federal corporation tax to profits which were distributed or clearly assigned to patrons. Such profits, he said, were really rebates and belonged to the patrons.

The federation's testimony caused a stir among witnesses gathered here to oppose a drive by the National Tax Equality Associ-

ation to have all co-op profits taxed at the same rate as ordinary corporation earnings. This rate is 38 percent after $50,000.

Mr. Kirkpatrick told the Ways and Means Committee there was some dispute as to who represented co-op patrons, the regular farm organizations or the associations established by co-op managements. He said the Farm Bureau Federation had encouraged its members to organize hundreds of co-ops and consequently felt entitled to speak for co-op patrons as federation members.

The Farmers Union, meanwhile, sided with the co-op leadership in opposing any Federal taxation of cooperatives. A National Grange representative said that elimination of the tax exemption would yield little Federal revenue.

All co-op and farm organization witnesses contended that co-op profits paid out in cash or some form of script, such as stock or certificates of indebtedness, should not be taxed while in the possession of the co-ops.

Ordinary corporations pay Federal income taxes before dividends are paid to stockholders. Stockholders then pay an additional tax on their dividends as personal income. But farm witnesses said co-ops primarily were in competition with partnerships and single-owner businesses, which escape the so-called double taxation of corporation profits.

Representative WILBUR M. MILLS, Democrat of Arkansas, said he had heard that many farmers didn't report co-op dividends on their personal income-tax returns. He suggested co-ops might withhold 10 percent of each dividend. At the end of a year, he said, farmers could apply the tax withheld to their own income-tax payment, or claim a rebate if the amount of their income-tax liability didn't require the full credit.

Slaves of Speculation

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. GROSS. Mr. Speaker, through the years I have protested at every opportunity against the system whereby speculators are permitted to manipulate prices of food and fiber produced by the farmers of this Nation.

Through the years, vast fortunes have been amassed by men who are known as market traders but who in reality are nothing more than glorified gamblers. As far as the farmers are concerned, these men play with loaded dice and stacked decks for they can whipsaw the markets regardless of the adversities that bear down heavily on the unprotected producer of the raw material of the farms.

It has always been rather amusing to hear the hue and cry that is raised when efforts are made to legalize various forms of gambling in the States, Nation, and local communities yet a full blast of public indignation has never been turned upon this sinister and legalized gambling as practiced on the various grain and commodity exchanges.

How long would the manufacturers of tractors, automobiles, combines, and other products which the farmer must buy continue to pile up huge profits if the selling price of these products were subject to a speculative market? As a matter of fact, how long would the manufacturers and retailers of these and other products stay in business at all if their prices were whipsawed up and down, day by day, by a bunch of gamblers?

Would not it be just as logical to establish a so-called congressional exchange here in Washington, D. C., and permit a bunch of gamblers and speculators to fix the wages of Representatives and Senators each day on the basis of alleged accomplishment in the matter of legislation?

The time is long past due for abolishment of this form of victimizing those who produce the new wealth of these United States.

Mr. Speaker, I submit herewith the following excellent article on this subject which is taken from the recent annual report of the Farmers Union Grain Terminal Association, which maintains general offices at St. Paul, Minn.:

Far from the land and untouched by the seasons men stand in vast halls where a farmer is seldom seen and play the role of the Fates. It is nature who spins the thread, making it thick or thin. But these men draw it out and cut it off. These are the speculators on the trading floors of the grain exchanges. With a move of the hand they send the price of the farmers' grain climbing high or crashing down.

Often the farmer's grain has not been planted, very often it has not been harvested, but the prices are already made. In no other business is there a comparable situation of price-setting by men who neither produce nor use the product.

The greatest of these temples of chance which set the farmer's price is the Chicago Board of Trade. Its monument to free trading is the $25,000,000, 44-story Board of Trade building. It is topped with a giant statue of Ceres, Goddess of Grain, who looks down on the stone and brick and the milling throngs in La Salle Street. This is what the profits from the farmer's grain built, as it also helped build Chicago. There are similar markets in Minneapolis, Duluth, Kansas City, and Omaha. But the greatest of all is Chicago's. Very little actual grain is handled in Chicago, but the Chicago Board of Trade accounts for more than 80 percent of all futures trading on all markets.

When the Chicago Grain Exchange was organized in 1848, there were no grain hedges or futures trading. It did not become a general practice until 1854. And it was not until 1884 that the Supreme Court established that contracts for future delivery were valid.

That was the period, too, of frenzied speculative corners. Some of the operations of the speculators in the 1880's and 1890's seem almost unbelievable now. In May of 1887, one grain clique announced it held 10,000,000 bushels of cash wheat and had 30,000,000 more for June delivery. In one day the trading exceeded 100,000,000 bushels. Losses were more than $8,000,000. In another operation, a group of speculators reported it held 45,000,000 bushels, while another had 30,000,000. In that hectic year about 15 Board of Trade firms failed.

In 1888 the most powerful operator on the board of trade made himself famous and millions of dollars by a corner in wheat. Ten years later another Chicago millionaire dropped $10,000,000 in an unsuccessful effort to achieve the same goal. A meat packer by the name of Armour proved his nemesis. Armour sold wheat short and used icebreakers to get boatloads of grain out of Duluth and into Chicago in December in time to fulfill his contracts.

What did all these speculative frenzies have to do with the farmer? Nothing. There was no tangible evidence that the farmer had ever benefited, but plenty that he had been harmed. The public was aroused. Congress investigated.

The farmer wondered, and as he wondered his anger rose. What kind of a business was this that could buy and sell a hundred times over the actual amount of grain that is harvested in the United States? In the biggest futures trading year in its history in 1925, the Chicago Board of Trade recorded transactions on 26,900,000,000 bushels of grain. In that year the farmer harvested less than 5,000,000,000 bushels of grain. During the depression the futures trading dropped to 10,000,000,000 bushels in 1932. But that was still more than double the total of all the grain grown in the United States that year.

In 1922 the Federal Government stepped in to regulate grain trading with the establishment of the Grain Futures Administration. In 1936 Congress passed the more stringent Commodity Exchange Act, which opened the doors of the grain exchanges to the farmer and his cooperative. The futures market is, in fact, a speculative market. The grain traders say that it is the heart of existing grain trade mechanism.

But is it a necessity or a luxury? The farmer still wonders. Nearly all of the grain exchanges outside of the United States already are partly or wholly closed. The Winnipeg Grain Exchange has been operating on "half-time" for many years.

The farmer knows that speculation is only one force among many that set the price cycles. But like any form of gambling, it opens the market to hysterical panics and booms. During periods of inflation it helps to force prices up to levels which the consumer cannot afford to pay. During periods of depression it helps to force prices down to a level which bankrupts the farmer. The farmer has a right to ask, "Is this necessary?"

The size of the farmer's monthly telephone bill is not determined by the price at which American Telephone & Telegraph stock is quoted on the New York Stock Exchange. Neither is the price of a Chevrolet truck set by trading in General Motors stock.

Yet, the price of wheat that goes into bread, the wool and cotton that goes into clothes, is determined in substantial part by the futures prices on the New York and Chicago exchanges. The consumer has a right to join with the farmer and ask, "Is this necessary?"

Surplus Food Commodities

EXTENSION OF REMARKS
OF
HON. HAROLD O. LOVRE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. LOVRE. Mr. Speaker, I am including a list of names and addresses of State offices in North and South Dakota which can approve applications of welfare agencies for surplus food for distribution to needy families. This supplements the lists submitted by the gentleman from Massachusetts [Mr. HESELTON], the gentleman from California [Mr. PHILLIPS], the gentleman from Oregon

[Mr. ANGELL], and the gentleman from Iowa [Mr. HOEVEN].

NORTH AND SOUTH DAKOTA

North Dakota: O. F. Beyer, area supervisor, 623 Wabash, Chicago, Ill.

South Dakota: Harold S. Freeman, State superintendent of public instruction, Pierre, S. Dak.

Country Editors Say United States Headed for Socialism

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent, I include in the RECORD a most informative editorial from the Livingston Manor Times, of Livingston Manor, in my district:

COUNTRY EDITORS SAY UNITED STATES HEADED FOR SOCIALISM

A total of 78 percent of the country editors of America fear that our country is headed toward socialism, according to a survey conducted by the American Press magazine. A three-page questionnaire was sent to 500 country editors all over the United States, and included the editor of the Livingston Manor Times.

The survey is interesting because editors usually reflect the opinions of the average citizen in their community. Although tax reforms were included second in importance, the editors listed five important things for Congress to do, as follows:

Enact reforms proposed by the Hoover Commission.

Curb welfare-state bills.

Strengthen and streamline defense and take action to restore confidence of business in the future.

On the present Taft-Hartley bill, 57 percent voted to leave it as it is. Your editor, with 26 percent more, advised making it more stringent. Only 5 percent wanted it repealed.

In curtailment of Government costs, we joined with 90 percent other editors in suggesting a major reduction in the number of Federal employees; went along with 62 percent in favor of repeal of luxury taxes; voted with 85 percent in favor of income-tax simplification; voted with 49 percent in favor of social-security expansion; voted with 59 percent against any increase in social-security benefits; voted against any ban on liquor advertising with 79 percent of the editors; and voted with 57 percent in favor of compulsory military training.

Only 14 percent of the editors voted in favor of a return to prohibition, 86 percent including your editor voted against it. Only 23 percent voted that governmental authority and the expense it entails should remain as it is. This paper with 71 percent of the other editors felt that considerable authority should be returned to the States, to take care of their individual problems.

On the question of compulsory health insurance 89 percent voted in favor.

On the vote for a reduction of aid to foreign countries, 54 percent voted in favor of a reduction. (We voted to eliminate it entirely.)

On the vote for reduction of farm subsidies, 64 percent of the editors voted in favor of reduction. We voted to eliminate all subsidies, as unfair to the average citizen and taxpayer.

One of the closest fights was on the question of income taxes, showing 39 percent in favor of reducing taxes only if the budget can be balanced; 36 percent who voted to leave taxes as they are to balance the budget and create a surplus if possible and 21 percent who voted that taxes should be reduced 20 percent immediately, whether the budget is balanced or not. We voted with the 21 percent, as we felt that with a reduction in the number of Federal employees, reduction in subsidies and elimination of Marshall fund aid, and elimination of crackpot theories there would be more than ample to balance the budget.

EDITOR'S NOTE.—We were surprised to learn that a majority of the country editors felt about the same as we do about national affairs. Even with a sharp curtailment in national expenditures it will take a lifetime of taxpaying by our children and grandchildren to take this Government out of the red. We could be a very happy Nation if we could eliminate the burden of taxation which now takes very close to 40 cents out of every dollar we earn. It is also interesting to realize that probably 50 percent of the editors who answered the questions sent out by the American Press Association were presumably democratic in policy, while they might not favor many of the theories of the New Deal or the Square or Fair Deal.

The Coal Situation

EXTENSION OF REMARKS

OF

HON. CHARLES A. HALLECK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. HALLECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Not Just a Gesture," which appeared in the Indianapolis (Ind.) Star on February 25, 1950, as follows:

NOT JUST A GESTURE

Passage of a substitute for the Administration's Fair Employment Practices bill by the House was not, as an ardent Fair Dealer put it, "just a gesture." It was a solid victory both for civil rights and for common sense. The House-passed bill creates an FEPC which would work closely with State and local agencies to discourage discrimination in employment because of race or religion. It would not have police powers of enforcement, which too many departments of government are using now to harass the people. It would have tremendous influence, however, through its power to investigate to publicize its findings and to persuade employers to bar discriminatory practices.

Prejudice is not something that can be forced out of existence by fines and imprisonment. It cannot be cured by police action, but only by education and publicity and voluntary acceptance of equal rights. This country is too big, and its social structure too varied for any single Federal agency to set out a rule of thumb banning employment discrimination that will be fair, just, and effective. Each community must work out its own problems.

What a Federal FEPC can do, is to show these communities how to ease discriminations, and to bring the full light of publicity on those areas where discrimination is the most severe. One of the main reasons for the existence of discrimination is public ignorance of the problems of those minorities that are hard pressed.

We hope the Senate follows the example of the big majority of the House and passes an FEPC bill which uses the means of persuasion and education rather than force. We congratulate every member of the Hoosier delegation in the House in both parties for his vote on this FEPC bill.

The American Press Poll

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. RICH. Mr. Speaker, according to an article in the American Press, February 1950 issue, 78 percent of country editors fear United States is headed for socialism. Over 500 editors in reply to the American Press poll, tell what action they think Congress should take on leading issues of 1950.

In answer to the question, "What do you consider to be the two most important things for Congress to accomplish at the new session?" 79 percent demanded a balanced budget, reduction of Government costs or cuts in Federal pay rolls; 85 percent would like to see the tax laws rewritten and simplified.

The editors also advocate the following:

Enact reforms proposed by Hoover Commission.

Curb welfare-state bills.

Strengthen and clarify foreign policy.

Strengthen and streamline defense.

Take action to restore the confidence of business in the future.

To the question: "Assuming that everyone would like to see Government costs cut, check each of the following proposals which you think would be practical and advisable," the following answers were forthcoming:

Major reduction in number of Federal employees, 90 percent.

Reduction of farm subsidies, 64 percent.

Across-the-board cut in funds provided for all Government departments, 62 percent.

Reduction of funds for aiding foreign countries, 54 percent.

Reduction of Federal expenditures for social services, 53 percent.

Reduction of Federal funds for housing, 37 percent.

Reduction of funds for veterans, 31 percent.

Reduction of Federal expenditures for schools, hospitals, and institutions, 21 percent.

Reduction in appropriations for armed forces, 20 percent.

What editors want done about proposed legislation:

Compulsory health insurance: Yes, 8 percent; no, 89 percent; no answer, 3 percent.

Taft-Hartley law: Repeal, 5 percent; less stringent, 10 percent; no changes,

57 percent; more stringent, 26 percent; no answer, 1 percent.

Liquor and cigarette taxes: Repeal, 3 percent; reduce, 21 percent; increase, 36 percent; no change, 30 percent; no answer, 10 percent.

Luxury taxes: Repeal, 62 percent; no, 37 percent; no answer, 1 percent.

Income-tax simplification: Yes, 85 percent; no, 11 percent; no answer, 4 percent.

Social-security expansion: Yes, 49 percent; no, 46 percent; no answer, 5 percent.

Increase social-security benefits: Yes, 36 percent; no, 59 percent; no answer, 5 percent.

Ban on liquor ads: For, 20 percent; against, 79 percent; no answer, 1 percent.

Compulsory military training: For, 57 percent; against, 41 percent; no answer, 2 percent.

Last Year Out of Every Hundred Oil Wells Drilled, 85 Were Costly Failures—Only 15 Percent Resulted in Profit to the Operators—Producers Can Only Stay in Business by Discovering New Wells as Sources of Supply as Old Wells Run Dry—This Entails the Hazardous Risk of Even More Invested Capital

---

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. BOYKIN. Mr. Speaker, I noticed in the papers on Thursday last that congressional sanction will be sought to increase the importation of oil from foreign countries in order to increase dollar credits in Great Britain.

Almost immediately I came upon another similar proposal from a high official of Government. This time it was that Congress should provide unemployment wages to such of our workers as will lose their jobs due to the planned importation in the coming year of a billion dollars worth of foreign manufactured goods to be imported into this country, in order to give the foreign nations more dollar credits.

Mr. Speaker, I am definitely against legislation looking to these ends. I am in favor of retaining American markets for all products of the soil and the toil of the peoples of our country to the American producers of those products, who work in the mines, the mills, in our factories, and on our farms.

There is still another economically unsound and fallacious proposal being considered as of this very hour by the Ways and Means Committee of this House. This, sir, has to do with changing the historic rate of depletion on our oil and gas wells in these United States. The immediate effect of that proposal, if enacted into law, would be to curtail, if not abate almost in toto, all exploratory operations looking to the development of new sources of oil and other petroleum products in our own country.

Mr. Speaker, nothing in life should be permitted to imperil the economic strength and the well-being of the people of these United States, for upon that strength, well-being, and security is dependent not alone the peace and security of our own Nation, but the peace and security of the world.

I have no conception whatever as to the mental processes that cause American public officials to even consider—much less make—such proposals.

First, we tax our people or put them under greater bonded debt to give billions of dollars in Marshall-plan aid to rehabilitate the foreign governments after we rebuild their industrial plants with that money and set them up in business to produce goods identical with those historically produced in America; next we proceed to make arrangements whereby the rehabilitated foreign industries and workers can drive our own manufacturers out of our own foreign markets with which we long served our manufactured goods.

Now the ECA wants the American consumers to buy these foreign made goods—pay them cash for what we import, shut down our own factories and tax our own people still more to pay unemployment wages to the American workers who lose their jobs as a result of the increased imports.

Mr. Speaker, I cannot conceive of this House giving serious consideration to such a proposal, regardless of the source from which it stems.

To dry up our domestic sources of oil would without question increase unemployment in these United States, decrease the availability of that highly strategic material to our armed forces and increase the cost of our national defense.

In my address to this House on the proposal to reduce the rate of depletion on oil and gas wells in order to increase the Federal revenue—and which talk I made last Wednesday, stated:

> Second only to the defense of this Nation and the continuing efforts to promote peace throughout the world, is the problem of keeping our people gainfully employed.
>
> For this Congress to upset the oil economy of our country would certainly add to the now increasing unemployment of our peoples, and certainly entail a loss to our own national economy which would outshadow any additional tax revenue that might temporarily be collected by the Federal Government in the next 12 or 24 months.
>
> Unemployment in these United States is now markedly on the increase. The United States Bureau of the Census reported that there are now four and one-half million unemployed in these United States. Furthermore, they pointed out that this figure had risen 1,000,000 between December and January—to a new postwar high of four and one-half million persons on the rolls of the unemployed.

Mr. Speaker, at that time I further stated:

> If we change the historic rate of depletion now applied, the increased cost of maintaining the armed services of the Nation—which today use directly and indirectly hundreds of millions of gallons of various types of gasoline, lubricating oils, and gaseous fuels—will have to be met by increasing the appropriation which we in this Congress make annually for the support of our Army, Navy, and our Air Force.

Mr. Speaker, there was no menace to our national defense in World War I and World War II comparable to the danger and damage inflicted by the submarine blockade established by the Germans. This is a matter about which I am fully informed with respect to World War I inasmuch as it was a shipbuilding firm which I organized that won the award for having built more ships in United States Gulf ports in World War I than all other shipyards put together. World War I saw a frenzied rush to build ships in order to offset the losses from the pack of submarines that the German Kaiser had then unleashed against American shipping.

The same kind of submarine warfare was unleashed in World War II. Billions were spent to replace the ships that were being sunk practically every hour of the day and night.

It was not generally known during World War II, submarine sinkings had become so bad that all ships were under order to return to land-locked harbors at night if they were within a certain range of shore.

It is a matter of record that persons standing on the shore actually saw the enemy submarines chasing merchant vessels around a promontory in Mobile Bay.

It is common knowledge today that the greatest strength the Russians could pit against us would be that infamous pack of schnorkel submarines which they captured from the Germans—and the additional hundreds of that type now in course of construction in shipyards behind the iron curtain.

With these facts in mind, need I point out to this House what would happen if the next war found these United States wholly dependent upon foreign sources for oil. I would have you know that they would be so dependent were this Congress to change the existing rate of depletion on our oil wells.

As I stated last Thursday, the money which the independent, the wildcats, and the major oil companies reinvest in the exploration and the development of new oil fields in order to insure the domestic needs of this Nation is money which they recaptured from the capital invested in the oil wells which are now being or have been pumped dry during more than a quarter of a century that the developers of the petroleum industry have used this historically established rate of depletion.

The depletion reserves which they establish constitute sort of a revolving fund, which is constantly being reinvested, to insure this Nation an adequate supply of petroleum and petroleum products more needful and necessary each day to the defense of this country.

Mr. Speaker, I am reliably and authoritatively informed that even under the rates now applicable to the petroleum industry with respect to depletion that profits in the oil industry during the past 25 years have averaged 25 percent less

than have the profits of the average manufacturing corporations in these United States. A comparative study between the profits of the petroleum industry and the manufacturing industry disclosed that only in the year of 1933 and in the darkest days of the depression did the oil industry show a greater return than that of manufacturers, and in that year the oil companies earned a mere 1 percent on the net worth.

In still another year—that of 1925—25 years ago—they earned as much as did the manufacturers.

Mr. Speaker, in the year 1949 just closed—the profits of the oil industry showed a greater marked decline than those for industrial corporations in general. While the capital investment of the petroleum industry has been rapidly increased, the result has been that the rate of return on the net worth has probably dropped substantially below that of industrial corporations.

That fact becomes evident to even the most casual observer concerned with analyzing investment returns. In the 10-year period ending in 1948, and including all the so-called prosperous war years, the dividends paid by the large oil companies averaged less than 5 percent of the net worth, while dividends paid by industrial corporations was slightly more than 7 percent.

Mr. Speaker, I would have you and my colleagues who sit in this House realize that the oil companies of these United States have been compelled to sink back into exploratory and other development work more than half of all the earnings in order to replace the wells which have become depleted by pumping in order to provide the necessary expansion to keep up their operations.

Additionally thereto, they have been compelled to go into the market and borrow substantial sums of money as is evidenced by the fact that in the years 1944 to 1948, 21 of these companies secured more than a billion dollars of outside capital by borrowing and the issuance of outstanding stocks. All of these funds in addition to stockholders' earnings were retained in the business and reinvested in furthering the development of the industry.

It is highly significant that the stockholders' investment in 21 companies alone increased by nearly $5,000,000,000 between 1937 and 1938, whereas the average high and low quotations on the stocks of the companies' security values show an increase of but $3,200,000,000 in a highly inflated security market.

I am laboring this House with statistical figures because to my personal knowledge and experience they reflect a feeling on the part of investors that most of the funds invested in recent years have been made in high-cost property and which will be even less profitable properties than those which are now being pumped out and depleted.

Mr. Speaker, and it seems most appropriate that I should address you personally with respect to this question, because of the fact that your home town of Bonham, Tex., is virtually in the heart of America's greatest oil-producing area. I don't have to tell SAM RAYBURN that in exploring for oil only 15 out of every 100 wells drilled are productive of oil. Moreover, I don't have to remind the Speaker that in further development work in a discovered oil field 85 percent of all additional wells drilled are found to be dry holes.

I knew, Mr. Speaker, when I drilled Boykin Well No. 1 in Washington County, Ala., that despite the most incursive and intensive geodetic work and geology, and the use of the most modern and expensive methods of exploration, 85 percent of all wells drilled, at the loss of hundreds of millions of investment capital, were costly failures that brought in nothing but dry holes.

Mr. Speaker, so you see there is nothing new about the expenses of and the hazards faced by the oil industry as I have just recited them. It was because of these facts that the second session of the Sixty-ninth Congress, which met 25 years ago, realized that oil operators could only be expected to risk their capital if they were allowed to recover on successful ventures the costs on their unsuccessful ventures.

Because of the risks and the hazards involved in these oil operations, the operators, of a certainty, must be permitted to realize a gain on all of their successful wells in order to compensate for the loss that is made on the unsuccessful ones which they develop.

The question of the per centum rates of depletion has nothing to do with past costs. It is replacement cost which has to be counted as the capital necessary to be recovered before this Government begins to tax the oil properties if we are to encourage our operators into continuing to take the hazards of losing their capital in these financial risks.

This Congress has recognized that principle since the day that taxes were first made applicable to income by the Federal Government. In that act provision was made to permit oil and gas producers or at least those who were successful in the business to recover capital value.

It was because of the foregoing that the Sixty-ninth Congress authorized a percentage depletion allowance on the production of oil and gas. They did so because they recognized the tremendously hazardous nature of exploration by these resources and because unlike any other business transaction, oil production values and sale are the sole basic capital asset of the owners.

It was only after extended studies had been made looking to more extensive exploratory operations in developing new oil fields that the Sixty-ninth Congress gave consideration to a modification of existing laws with respect to the percentage of depletion allowance on oil and gas production.

In consideration of the peculiar financial hazards involved in oil and gas production, the Congress provided for depletion based on the discovery value in 1918.

Congress in 1926 modified the law to provide that depletion of independent producing leases would be calculated on the basis of 27.5 percent of the gross income or 50 percent of the net income on each lease, whichever was the smaller, and all experiences in the United States during the past 25 years clearly show that the national economy in general and our oil economy in particular has tremendously benefited by the foresight of that Congress.

During the quarter century that this present allowance has been in effect it has proven admirably suited to the purpose of increasing development of oil and gas resources, in promoting the national welfare and security, and by protecting the capital values of petroleum properties so that the operators are able to extend the proven reserves and thus insure replacement of the oil and gas produced and consumed.

Mr. Speaker, there are innumerable reasons, not alone for continuing existing provisions and rates, but vital economic and fundamentally sound financial reasons why this House should give due consideration to increasing rather than decreasing the existing provisions.

The principal reasons for the continuation of the existent 27½-percent rate—from the standpoint of costs—are as follows:

First. Inasmuch as the tax provisions now in effect have been a major factor in providing adequate supplies of petroleum at low prices to promote the national defense and security they have become part and parcel of the industry's cost and price structure. One cannot forget for a moment that under the beneficence of existing depletion rates the United States petroleum industry has increased the domestic production of liquid fuels more than 250 percent between the years 1926 and 1948 while at the same time, and despite ever-increasing labor, material, transportation costs and tax rates, the price of gasoline and petroleum products in general show but a percentage of increase in their selling prices as compared to all other commodities. I am authoritatively and reliably advised from wholly disinterested and unselfish sources that any downward revision in tax regulation with respect to depletion would not do otherwise than jeopardize the future domestic supplies and inevitably increase prices to the consumer.

Second. No one will gainsay the fact that an increase in taxes on petroleum products would result in increasing production costs at least to the amount of the additional taxes and thereby influence price to the consumer. More important still, is the fact that increased taxes on oil production would immediately reduce the incentive for exploratory and development work by inhibiting the more extensive use of new venture capital. Argument might be made that if the upward price adjustment of the finished product was made promptly enough the effect on incentive to develop new sources of supply might be minimized, but it would be minimized only at the expense of the consumer taxpayers in paying a higher price for the finished product.

It is always to be remembered that the United States Government itself is probably one of the largest single consumers of oil and gas in these United States. Therefore, the Federal Government

would itself be called upon to pay increased prices for all petroleum products as a direct result of congressional action in effecting a downward revision in rates applicable to the depletion on oil wells.

I am advised by one of the tax experts in the Ways and Means Committee that an increase in tax of 20 cents a barrel on oil would have to be offset by an advance in price of approximately 35 cents a barrel in order that the industry realize the same net income after paying a tax rate of 38 percent.

It is because of that fact that I have said that if prices did not immediately advance in the amount equal to the increase in cost that the incentive to develop new resources and new sources of oil and gas would be reduced and the supply of domestic oils soon decline.

Mr. Speaker, to you my colleagues who now sit on the House Ways and Means Committee, and the House Armed Services Committee, I would particularly direct your attention to the fact that a decline in supply would directly imperil the national security by reducing domestic productive capacity thus making the United States more and more dependent on foreign oil supplies.

The records of our Government clearly give evidence that the impact of any changes on petroleum prices would necessarily be sharp and prompt because current price levels only permit a moderate return on the industry's investment even under existing tax provisions. Normally, it would be expected and assumed that operations on petroleum discovery and production should return large earnings because of the enormous hazard involved. The records, however, disclose that the rate of return on investment in petroleum operations has generally been less than that for manufacturing industry as a whole. It is, therefore, inconsistent with good business practices for this Congress to expect anybody to continuing the risk of additional capital in further oil development unless prices advanced at least enough to compensate for the oil tax for the higher costs resulting in any change of regulations whatever that might effect the industry.

The fundamental need for full comprehension of the danger inherent in changing the present regulations made applicable to oil and gas production lies in the peculiar and hazardous nature of petroleum production. Unlike other business activities the production of oil and gas involves the sale of a basic asset which the operator must replace at considerable risk and steadily increasing costs in order to continue in business. The oil and gas reserves constitute the principal capital asset of all petroleum producers, be they "independent," "wildcat" or "major" producers. These assets are entirely used up in the act of production and can only be replaced by risking more new capital to locate and develop new reserves.

Mr. Speaker, if we want to encourage, or shall I say even permit, our petroleum producers to stay in business, if this Congress desires to encourage the further risk of the venture capital necessary to the expansion of our oil production, our tax laws must continue to provide for the producers to recover as capital the replacement cost of oil.

The percentage depletion as historically used and applied recognizes the fact that the income from oil and gas production includes a return of the capital value of the properties which cannot be taxed as current income. In the absence of the existing rate of percentage depletion efficient oil operators who have been successful in developing oil reserves at low costs would be discouraged by high taxes from producing from their properties and would generally make the sale by selling them to others.

Mr. Speaker, now note this well. The new owner to whom they might sell would have a cost basis for his depletion comparable with the allowance for the percentage depletion currently used and which should be permitted the original operator if he continued to produce the property.

What sense, I ask, is there, Mr. Speaker, in compelling the original producer to sell his property, that others may exploit it in order to meet the letter and the spirit of a thoroughly unsound legislative request made to alter the historic rate of 27.5 percent that has been in use for the last quarter of a century?

Mr. Speaker, time, experience, and the returns enjoyed, not alone in income to the Federal Treasury, but in the volume of petroleum products to the American people have proven to be a simple as well as equitable method of allowing producers of oil and gas to recover their replacement costs of that peculiar asset as it is produced and sold.

The percentage depletion of 27.5 percent of the gross income has operated to carry out the original intent and purpose of Congress in the Revenue Act of 1926 in order to take into account the risks which result in a high proportion of unsuccessful venture in order to encourage the operator to engage in the search for oil.

Mr. Speaker, I know of no single industry in these United States which even approximates the magnitude of the petroleum industry that is in any manner comparable to it. I speak from experience when I say that I have paid dearly for the knowledge gained of the subject upon which I am addressing my colleagues today.

There was no pot of gold at the end of the rainbow which I hit in the dry hole 7,500 feet below the surface on my property in Alabama. Needless to say, after I lost the money spent on that venturesome investment, I more or less quit the oil business the day I hit bottom, and am now one of the thousands of wildcatters who ventured their hard-earned cash and accumulated savings in the quest for oil.

Thank God, however, there still are intrepid men who have since come into my State and having both a deep knowledge of and faith in the exploratory operations, the surface and deep geology, are willing to carry on and bring in an oil field that I am as sure exists beneath the surface as I am sure that I am standing here on this floor.

The congressionally established percentage depletion allowance established by this Congress is the primary factor that will operate to stimulate the expansion and drilling necessary to provide the supply of liquid fuels required by a dynamic economy for both peace and war in our modern world.

Ponder upon one statement which I hitherto made when I pointed out that the domestic production of petroleum liquids has increased by more than two and one-half times between the years 1926 and 1948.

Mr. Speaker, that abundant supply of petroleum has revolutionized American life. It has increased the production of our farmers and our workers. It has made life more agreeable, more pleasant and of greater ease for everyone.

Because of the ample supplies of petroleum that have been generated under existing economic forces, the price of petroleum products from the lowest grade of its waxes to the highest grade of its oils made use of for medicinal purposes, the prices of petroleum products to our people here in these United States have been so low that the great mass of the people have enjoyed the benefits of its existence in our soils, its production and marketing by our industry to an extent unequaled anywhere else in all the world.

Mr. Speaker, now hear me well on this. The price of gasoline in the service stations throughout the length and breadth of the United States today, exclusive of taxes, was only 1¼ cents per gallon more in 1949 than it was in 1926. This was again a mere 7 percent increase in price, as compared with an average increase of 55 percent for all other commodities, sold in general throughout our land.

The quality of gasoline sold, however, is so greatly superior to the quality of the gasoline sold in 1926 that the motorist of today can and does operate much heavier car, and for the same or less fuel cost per mile, than he drove the lighter car of 1926.

The Bureau of Labor Statistics—Index of Petroleum and Production Prices—shows that the price level in 1949 was only a mere 12 percent higher than in 1926, a gain far smaller than is the 55 percent advanced for commodities in general.

The marked success of the prevailing tax and other circumstances attending the production of adequate supplies of liquid fuels at low costs, does more to point out to this House the foolhardiness of risking a change that would destroy the adequacy and price of a commodity than all the words that can be spoken.

Mr. Speaker, custom and use by the petroleum industry have made the congressionally established tax provision applicable to that industry for the past quarter of a century an integral part of the economy under its costs and prices.

They have influenced the amount of oil discovered, the supply of oil, the cost

of production, and consequently the price of the finished product.

Moreover, the existing tax provisions have served the national interests by promoting the discovery and the development of oil, and by making available enormous quantities at low prices.

Cheap petroleum products have proven of inestimable worth to the entire national economy, to the great automobile industry, the rubber industry, to the highway-construction industry. Fuel oil has powered the locomotives on our great transcontinental railroads, our great steamships, and now it is largely heating our homes and institutions.

The enormous production of oil in these United States has stemmed out of and is directly traceable to the rates of depletion which made constant reinvestments possible. The Federal Government itself has received more money due to the special tax provision than it would ever have realized in the absence of such provision.

Mr. Speaker, in conclusion, let me say that the percentage-depletion allowance that this Congress in its wisdom extended to oil and gas production does not now nor has it ever applied to the refining, transportation and distribution of petroleum. These the Congress classified as being phases of business similar to, if not identical, to other American business enterprise in which the normal allowances for depletion is adequate to protect against the taxation of the capital invested as it is returned in the course of operations.

There is neither anything unjust, nor is there special treatment accorded to the American petroleum industry or the oil industry in general. They neither ask nor do they receive such special treatment. It was to the benefit of the Nation's economy that the Congress in its wisdom a quarter of a century ago enacted the legislation with respect to the rates of depletion on oil and gas development. That they were wise in doing it is made evident in every automobile that is traveling the highways of the United States today. It is evident in every oil burner installed to heat our homes, in every vehicle that we use in national defense whether it flies in the air, drives on land or floats or sinks into the ocean.

The winning of World War I and World War II has proven the wisdom of that Sixty-ninth Congress and the coming generations will bless us for continuing to make use of the experiences in the past and retaining the present rate of depletion.

Too Much Government

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. HOPE. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I submit the following editorial from the February 16 issue of the Pratt Union, a weekly newspaper published at Pratt, Kans.

I am glad to bring the views expressed in this editorial to the attention of the Congress and the country.

The basic troubles of the world, from war to human want, can in one way or another be charged to too much government. All-powerful government is simply a reflection of the loss of individual self-reliance, initiative, pride, independence of spirit, the will to work—the qualities which made possible the founding and the growth of this Republic. We, as a people, are fortunate that we have not yet gone so far on the welfare-state road that we cannot turn back. We can still save ourselves from the final disaster that has overcome so much of the world. But we, as a people, must do it ourselves. Big government will not do it for us. We must ask ourselves this question: "Are we willing, in return for a mirage of material security, for which we pay through exhorbitant taxation, to sacrifice those liberties for which men have fought and struggled for 2,000 years?"

Rearmament of the Arab States

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. McCORMACK. Mr. Speaker, unleave to extend my remarks in the RECORD, I include the following letter sent by me to the Secretary of State, with enclosures:

FEBRUARY 17, 1950.

Hon. DEAN ACHESON,
Secretary of State,
Washington, D. C.

DEAR SECRETARY ACHESON: I am enclosing a very interesting and informative letter that I have received from the Honorable Elihu D. Stone, of the American Zionist Council, 1200 Eighteenth Street, NW., Washington, D. C., Mr. Stone living in Boston and being a lifelong resident of Boston. I have known Mr. Stone for the past 35 years. He and I served together as far back as 1920 in the Massachusetts Legislature. I consider him one of my closest friends and an honorable and trustworthy gentleman and a fine American. For a number of years he was Assistant United States Attorney in Massachusetts. I refer to his background as a lawyer, as an individual and as a legislator and the long years that I have known him, so you will understand the reasons for the confidence that I have in him and his opinions.

You will note the within letter relates to a very important subject. I understand that William Green, president of the A. F. of L. and Philip Murray, president of the CIO, have taken this matter up with President Truman and that the President has told them he would take it up with the State Department. As this is such a matter of far-reaching importance, I assume that the President will take it up with you.

I know that President Truman, you and I and all others who recognize history, are very happy to establish in Palestine a free and independent Jewish nation, and also that we are anxious to see a strong and stable government established in Israel.

I know that there is a tremendous amount of concern about the arms that are being furnished to the Arabs by the British Government. In view of the extreme tension in that section of the world and the threat that the giving of such arms to the Arab nations might be to the security of Israel, it seems to me to be a justifiable fear. Certainly, the United States would not directly or indirectly be a party to any situation that would result in an armament race being started now by the Israel and the Arab nations. I am sure that you are also aware that there is a tremendous interest in this situation in the United States, and it is not confined to Americans of Jewish blood.

The within letter presents the views of Mr. Stone, whose views I respect and I know that he would not set forth his views, as stated in the within letter, unless he honestly felt that the circumstances and events warranted it.

I am respectfully forwarding Mr. Stone's letter and request that it receive the serious and immediate consideration of you and the State Department. I will appreciate an early reply on this matter.

Sincerely yours.

AMERICAN ZIONIST COUNCIL.
Washington, D. C., February 16, 1950.

Congressman JOHN W. McCORMACK,
Majority Leader,
House of Representatives,
Washington, D. C.

DEAR JOHN: I beg to be allowed the privilege of soliciting the exercise of your kind offices with reference to a problem in which American Jewry is deeply concerned—a problem of maintaining peace in the Near East.

As you know, through the United Jewish Appeal, American citizens of the Jewish faith are contributing millions of dollars to the Jewish Agency in Israel for the work of immigration and rehabilitation of tens of thousands of homeless Jews from Europe, known as the DP's, and from other countries.

However, it is distressing to learn from authoritative and reliable sources that peace in that part of the world is being threatened by the unprecedented rearmament of the Arab nations, particularly Egypt and Iraq, and that the source of the supply of arms is Great Britain.

I am enclosing herewith a memorandum which recites reliable facts relative to the Arab rearmament and the part played in it by England, as well as its accompanying threat of war based on authentic information coming from official and semiofficial Arab sources.

A study of the memorandum reveals warlike intentions of the neighboring Arab states against the State of Israel. They are energetically preparing themselves for what the Arab press describes as a "second round." The tremendous military appropriations in their budgets conclusively establishes extravagant military preparations on the part of the Arabs for action, and that action is intended against Israel—a fact which the Arabs do not conceal. The volume and the kind of arms purchased by the Arabs from England and other European nations cannot be said by any stretch of the imagination to be merely for the purpose of maintaining internal domestic tranquillity.

Our own country, the United States of America, is deeply concerned in the maintenance of peace throughout the world, including the Near East. It is recognized that peace is indivisible; an aggressive military act anywhere is a disturbance of the peace everywhere.

The United States, under the Atlantic Pact, is supplying arms and ammunition to the western European nations, including England, which constitutes in effect, a replacement of the arms shipped by England to the Arab nations. In fact, we have reason to believe that a part of the surplus of American arms left in England is today in the possession of Egypt and other Arab states. Thus, in effect, the arms are being paid for by the American taxpayer and, indirectly, the

United States is contributing toward the rearmament of the Arab nations. As a direct result Israel is compelled to divert a large part of its financial resources for armaments in order to meet the terrible threat of war.

I sincerely hope that, consistent with your official position, you will deem it proper to communicate with the Secretary of State, the Honorable Dean Acheson, to the end that this terrible armament race of the Near East, which broods no good for mankind, shall be stopped.

Indeed, the Department of State is possessed of the appropriate means for the purpose of impressing England, and the other countries in western Europe, with the evil consequences of the delivering of arms to the Arab countries whose warlike designs against Israel is a matter of public record.

I know, Congressman, of your love of peace and I am aware of your sincere friendship for the infant state of Israel, and the great service that you have rendered to the reconstitution of that state—a service which we shall always recall with deep gratitude. I am persuaded that you will not fail to see the justice of this plea and that you will act accordingly.

I believe that the views expounded by me are representative of the feelings and sentiments of American Jewry as a whole and, particularly, of the American Zionist movement with which I am affiliated.

With kind personal regards.

Sincerely,

ELIHU D. STONE.

MEMORANDUM ON REARMAMENT OF THE ARAB STATES

I

1. The Arab countries are now acquiring heavy arms which far exceed the necessities of defense or internal order. Even before the Security Council voted to lift the arms embargo on August 4, 1949, there were reports of an extraordinary arms program in Egypt. As soon as the embargo was lifted, these reports were confirmed.

2. The 1949–50 budget approved by the Egyptian Parliament is fixed at 187,457,280 Egyptian pounds, with income estimated at 157,827,500 pounds. Part of the deficit is to be financed from funds provided in 1948 under a special unexpended allocation for the Egyptian Army.

3. One-third of this budget—the extraordinary sum of £62,000,000 ($178,560,000)—is for rearmament.

4. Thus before the lifting of the arms embargo on June 9, 1949, the United Press reported that England had decided to lift the embargo and on June 18, 1949, the Manchester Guardian commented:

"The decision of the British Government to renew her supply of arms to the Arab countries, while Lausanne talks are carried out, sounds like a threat."

5. On September 4, 1949, after the arms embargo was lifted, the Beirut Broadcasting Station announced:

"During the Palestinian war an arrangement had been made to purchase several warships. The embargo detained the sending of the ships. Now, the embargo being lifted, the ships are due in Egypt. One ship is harbored in Malta and is ready to leave for Egypt. Three other ships are still in British ports and will be leaving for Egypt soon."

6. On October 17, 1949 the London correspondent of El Misri reported:

"A British source indicates the arms purchase of Egypt in Britain to be worth the sum of L£15,000,000."

7. Ten days later, October 27, 1949, the London Daily Telegraph said:

"It was announced here today that the Egyptian Government has approved the purchase from Britain of 61 military aircraft. This total is stated to comprise 40 Spitfire models, 9 Halifaxes, and 12 DH–113 night fighters, which were regarded here as a new type and hardly considered yet in the production stage. Egypt has a military mission at present in Britain. Spitfires are already in extensive use in the Egyptian Air Force, which is cooperating today with the RAF in a major exercise for the defense of the Suez Canal. The prospective purchases from Britain are part of a plan approved in May to spend about 53,000,000 pounds sterling on military equipment, including an armored division and an auxiliary air force. The Egyptian Government's intention to establish a factory in Egypt for the manufacture of 'fighter or Spitfire' planes and the agreement for this having been reached 'with a foreign goevrnment' were announced in the Senate here in July by the Minister of War and Marine, Haydar Pasha. The proportion of the cost of the aircraft from Britain that may be assigned against Egypt's sterling balances is not mentioned."

8. On October 31, 1949, the Overseas News Agency reported from London that the Egyptian airplane purchases include Vampire Mark Third fighters, which have a range of 1,080 miles, maximum speed of 580 miles, top ceiling of 37,000 feet, and equipment of four cannons. Another type of plane purchased by the Egyptians—the Venom—is still on the secret list, but is reported to be superior to the Vampire Jet.

9. This was confirmed on November 14, 1949, when the New York Times in a dispatch from London reported that an Egyptian purchasing mission had recently visited Britain and contracted with the DeHaviland Aircraft Co., Ltd., for a substantial order of jet fighter planes of the latest and swiftest model. It was unofficially reported that the mission had contracted for 5 full squadrons of Vampire Jet planes with all the necessary parts and spares—perhaps 75 or more—at a cost of about £30,000 each. These are to be developed by early 1951.

10. On November 13, 1949, the New York Post reported in a dispatch from London that the Egyptian purchasing mission was placing orders for $45,000,000 worth of artillery, jet aircraft, infantry equipment, and sea torpedo craft.

11. On November 16, 1949, the New York Compass reported in a dispatch from London that the Egyptians had signed a contract for immediate delivery of three more frigates from the British Navy, bringing Cairo's purchases up to six warships—three of which had been delivered. These ships, built between 1941 and 1943, have 2 4-inch guns and 10 antiaircraft guns, and are equipped with an antisubmarine weapon. Three ships delivered to the Royal Egyptian Navy have a displacement each of 1,470 tons, carrying 6 4-inch guns and 10 smaller guns. They have a complement of 180 men.

12. On January 25, 1950, a spokesman for the Government of Israel in Tel Aviv said that the Egyptian Government was also purchasing submarines, large quantities of tanks and artillery, as well as tens of thousands of automatic rifles, much of this in the form of American war surplus in Europe.

13. Egypt is not the only country involved in this rearmament program. On September 6, 1949, Emir Arselan, Lebanese Defense Minister, was quoted by Reuters to the effect that Lebanon had recently received from 5 to 10 training planes from England, and that another shipment was expected by the end of the month. On January 10, 1950, the Beirut Arabic radio reported that 20 aircraft had been sent from Egypt to Syria and another 20 would be sent shortly.

14. The Middle East Broadcasting Station announced on October 6, 1949:

"The Syrian Government is contacting the British aircraft manufacturers in order to buy from them airplanes. The Syrian Government also intends to send to England Syrian pilots to learn to pilot the jet airplanes."

15. On November 6, 1949, the United Press reported from Washington that middle-eastern countries—Saudi Arabia and others—had approached the United States for military aid and were seeking to participate in the $1,314,000,000 military-assistance program.

16. Manifestly, equipment of such range and striking power, as well as the armament plant recently purchased by Egypt from Germany, France, Sweden, and Italy, are intended for more than international order and security. While it is conceded that there may be internal unrest in Egypt—the inevitable consequence of poverty—the people are unarmed. Jet planes and tanks, destroyers, and submarines are not needed to subdue them.

II

17. It will be recalled that when the Security Council voted to lift the arms embargo on August 4, 1949, there was widespread concern lest an armament race develop in the Near East. Israel's representative, Aubrey S. Eban, told the Council:

"If the restraints imposed by the Security Council are entirely lifted and large-scale rearmament becomes the policy of Arab states, the Near East must become the scene of an armaments race. We ask ourselves whether the newly won peace is already so stable and so firm that it could easily survive the strains of that competition. The Security Council must take the responsibility of answering that question. For our part, we have no hesitation in saying that the most elementary prudence requires the maintenance of the Security Council's present arms policy. It is because we regard the armistice agreements as a highly notable and significant achievement that we urge the utmost caution on behalf of their preservation.

"The fact that the truce observer machinery is no longer to exist does not prevent the Security Council from affecting the arms policy of member states by a clear moral directive. Such an authoritative ruling by the Security Council would of itself, by the influence which it would exert on the arms supplying states, insulate the Near East against the worst dangers of an armaments race.

"In urging the clear expression of the Security Council's mature judgment, my delegation is conscious that this policy also conforms with the general welfare of the Near East. We do not profess to understand how, in the existing social and economic conditions of that area, any government can voluntarily wish to apply the greater part of its resources to the purchase of lethal weapons. The stability of democratic institutions throughout that region can be assured not by competition in the purchase of arms, but by cooperation in the tasks of social and economic development. This is the general doctrine which Israel upholds with respect to the needs of its regional environment. If the acquisition of arms is to be the main pursuit of all governments in this area, then in all questions arising between Israel and the Arab states the security consideration is bound to assume undue weight. In these circumstances we feel that there is nothing to be lost and much to be gained by calling upon member states to maintain the existing policy of the Security Council with respect to the supply of arms."

18. Members of the Security Council shared Mr. Eban's apprehension and there was general agreement that care and restraint must be exercised in the Middle East to prevent large-scale rearmament.

19. The representative of the United Kingdom, Sir Terrence Shone, said:

"In this connection, there is one matter to which Mr. Bunche referred briefly, and to which Mr. Eban referred at greater length this morning, and on which I should like to make a brief statement. I refer to the supply of war matériel. In this connection, I would again emphasize what I believe is

well known to members of this Council: the great respect which my government has paid to the requirements of the truce resolution (S. 723), despite our treaty obligations to Arab states. We are anxious to fulfill our engagements to them. This, of course, does not mean that we wish anything in the nature of an arms race, to which Mr. Eban made allusion, to develop in the Middle East or anywhere else. Far from it. Any supplies of arms which we may send would be for the internal security and defense requirements of the states concerned. These are legitimate requirements for any state, and, insofar as the Middle East is concerned, are indeed essential to the normal conditions which we wish to see restored. We, for our part, would not be in favor of middle eastern states acquiring war matériel in excess of their legitimate defense requirements, and we believe the states themselves would not wish to exceed such limitations."

20. Commenting on the statements of Mr. Eban and Sir Terrence Shone, Acting Mediator Bunche said:

"Certainly, should an arms race develop in that area as a result of the lifting of the existing injunction, it would not serve the interests of permanent peace in the Near East."

21. But Mr. Bunche pointed out that it would be impossible to maintain the arms embargo without proper truce-observation machinery. Continuing, he said:

"In the absence of a firm injunction coupled with observation machinery, the burden really seems to rest upon the states in a position to ship arms. Since there is no disarmament scheme of universal application, it would seem that the states of the Near East, as all others, would now be entitled to import such war materials as may be necessary to their national security.

"There are relatively few states in a position to ship arms in large quantities. Declarations by arms-exporting states that they would refrain from shipping heavy arms to any of the parties to the Palestine dispute in quantities clearly beyond the reasonable security needs of such parties will certainly be helpful and reassuring. In this regard I have heard with great interest the statement just made by the representative of the United Kingdom on this subject."

22. The statement by Senator AUSTIN strongly affirmed American opposition to a rearmament race, and he properly called for concentration of interest and concern in economic development, resettlement of refugees, the raising of standards of living. He stated:

"So far as the United States is concerned, it does not intend to allow the export of arms which would permit a competitive arms race in the area. Export of arms to that area of the world should be strictly limited to such arms as are within the scope of legitimate security requirements, again as recommended by Mr. Bunche. We hope that prudence will prevail not only among the parties but among all nations of the world which are in a position to supply arms and that they will pursue a policy similar to that which we intend to pursue.

"It is essential that the resources of that area be used for peaceful purposes, for economic development, for the resettlement of refugees, and for the achievement of higher standards of living for the populations of the area. It would be tragic and wholly wrong if the resources of the area were to be dissipated in an unproductive area race."

23. Mr. Chauvel, of France, said:

"I do not think that any country represented here, nor any other country, has the slightest interest in unleashing an armaments race in the Near East or anywhere else."

24. These declarations surely must remain the settled policy of the great powers who are pledged to uphold the peace. Regretfully, the confidence expressed in August can no longer be justified.

III

25. It has been the hope of all friends of both the Jewish and Arab peoples that Israel and the Arab states would soon find it possible to transform their armistice agreements into final lasting peace settlements. It is the conviction of most observers—based on the successful negotiations of the armistice accords—that such a peace settlement can be consummated if Israel and the Arab states can engage in direct negotiations.

26. But it is clear that such negotiations will be retarded rather than accelerated if the balance is upset in the Near East, if one side is rearmed and if the interests of the people are diverted to military channels. There are still war parties in every Arab state who are eager for a second round in which they can recoup their losses, remove the stigma, and exculpate themselves from the responsibility of their last defeat.

27. It may be argued that it is not the purpose of the Arab states to use their arms against Israel. What better evidence is available than the declarations of the Arabs themselves? They are being given the tools. They have announced their intentions. They have no other identifiable enemy in sight. What basis is there for the belief that "the second round" is not, in fact, in preparation?

28. Thus Egyptian journalists have written freely of a renewal of hostilities despite the conclusion of the armistice agreement, and high officials in Arab governments have made their views public.

29. On March 9, 1949, Mohammed Et'Tabi wrote in Akhar Sa'A, a Cairo weekly:

"The armistice may possibly be permanent, the Palestine problem may possibly be settled. And such a 'peace' may be lasting, but this would be but an official peace between governments, because the Arab peoples * * * will never make their peace with the Jews, but will continue to proclaim the blood feud between them, which they will recall each time the fate of the hundreds of thousands of refugees at the hands of the Jews be recalled. * * * This the Arab people will remember to the end of time * * * until Allah sends a saviour. For a second Hitler will yet arise from among the Arab peoples and then, woe to the Jews."

30. On May 14, 1949, 1 year to the day after the Egyptian forces had launched their unsuccessful invasion of Palestine, the Akhbar El Yom, a Cairo paper of standing in the court, wrote:

"The Palestine war is not yet over. Egyptian blood which drenched the soil of Palestine has laid a path along which we are in duty bound to tread to clinch the victory for which our martyrs fought."

31. A spokesman of the Egyptian foreign office was quoted on June 30, 1949, by the Near East Broadcasting Station as follows:

"We are still at war with the Jews even though the Egyptian Army has ceased firing."

32. On September 29, 1949, the Cairo weekly, Akhar Sa'A, describing life in Israel, wrote:

"This is a short account but the enemy against whom we fought but yesterday and against whom we may still fight at any minute * * * the fight is not yet over."

33. In Iraq, government leaders constantly speak the language of war. Thus, on May 1, 1949, the Iraqi Ministry of Defense assured the people that Iraqi brigades returning from the Palestine war were coming back merely to rest and to prepare for the renewal of the Holy War at some opportune moment in the future.

34. The Foreign Minister of Iraq was reported by a Cairo daily, El Ahram, on May 4, 1949, as telling parliament:

"We must all unite in strong opposition to Zionism in order utterly to destroy it."

35. On June 28, 1949, Radio Baghdad broadcast:

"The Jews are our enemies irrespective of how conciliatory they may be, and irrespective of how peaceful their intentions. We shall never cease planning for the day of revenge, for the second round, when the Jews will be driven from our soil."

36. On September 10, 1949, the same station, in its English translation, stated:

"The Arabs are determined to continue their struggle against Zionism to the very end. This small group of adventurers and thieves will regret they ever aroused the Arab people to open conflict."

37. On August 9, 1949, Dr. Fadel Jamali, Iraq's delegate to the United Nations, stated in Baghdad, according to Falastin and the Near East Broadcasting station:

"Unless the ministries of education in the various Arab countries plan now to educate a new generation of active youth who will not be satisfied with words alone, there is no doubt that the Arabs will lose the second round [of the war against Israel] just as they lost the first."

38. Similar talk of a second round comes from Syria. On June 27, 1949, Radio Damascus stated:

"The Arabs have lost the first round of the Palestine war because they followed the advice of the British and the Americans. They will not be so short-sighted in the second round. * * * We must increase our military strength and build a large number of ammunition factories. Then we shall be victorious, and the Jews will be thrown into the sea."

39. Even though the Syrian-Israel armistice agreement had been concluded, Al Nazzer, a Syrian daily paper, wrote on July 23, 1949:

"We would say frankly to all the Arab states and to all the Arab people now that the curtain has finally fallen on what we hope to be the first round of the Palestine struggle—may this armistice be of short duration, during which time we may endeavor to reinforce ourselves and increase our potential in order that we may destroy the dangers which surround us before they succeed in destroying us."

40. In Lebanon, former Foreign Minister Camille Chamoun told the press on March 22, 1949:

"The war in Palestine will be renewed sooner or later. The Arabs cannot rely on the armistic agreement with the Jews."

41. And the pan-Arab newspaper, El-Khayat, wrote on June 16, 1949:

"We are at war with the Jews. * * * And this war will not end until either we destroy the Jewish state or the Jews succeed in cementing their borders from the Euphrates to the Nile and from the Red Sea to the Cedars of Lebanon."

IV

42. If it is not the purpose of the Arab countries to use these arms for a second assault against Israel, then one must ask why are they being rearmed at such fantastic cost? Is it the belief of the proponents of this rearmament program that the Arab states can be regarded as worthy and reliable allies of the democratic countries in the event of another world conflict?

43. Past experience answers these questions. In the Second World War, Egypt remained a nonbelligerent and although the country was invaded by General Rommel's forces, the Egyptian army remained passive and the defense of Egypt was left to the British Army, including thousands of recruits from the Jewish population of Palestine. It is an ironic commentary that British arms are now going to Egypt and may be used against those who were the sole allies of the democratic forces in the Near East in the last war.

44. In Iraq in 1941, Nazi forces seized control of the Government and were finally

eliminated only after a show-down with the British Army. Palestine Jews took part in that action and they were active also to remove Nazi influence from Syria and Lebanon. Throughout the entire war, the Arab world remained aloof, although many of its leaders, like the former Mufti of Jerusalem, were actively on the side of the Axis and made their headquarters in Berlin.

45. Can the democratic forces regard Egypt or Iraq, or any other Arab country, as a shield of substance in the light of the past record, and in the light of Arab weakness in the war in Palestine? Although their forces and their arms far exceeded those of the nascent state of Israel, they were quickly overwhelmed in battle. Does this type of alliance fit into the mosaic of democracy's defense?

46. Quite apart from our natural feeling of sympathy for our Jewish kinsmen in Israel, we deem it our duty as Americans vitally concerned about American policy in the Near East and American defenses throughout the world to express the strongest misgivings on the military support of a dubious ally. The fact that it is Britain which is extending this generous aid should not obscure the fact of indirect American participation, for it is surplus American army equipment that is being used in many cases, and it is the United States which is today providing arms for those same countries which divert their stocks to the Near East.

47. For their part, the Arab states have an obligation to their Arab brethren who, victims of the Arab aggression against Israel, were forced to leave Palestine and who today are homeless refugees. If the Arab governments were disposed to expend their funds for resettlement projects, they would make a constructive contribution not only toward the regeneration of a people for whose misery they are primarily responsible, but in the development of their own underdeveloped countries.

48. When one considers that the Arab states are called upon by the United Nations to contribute but $6,000,000 for the relief of the Arab refugees, a tiny fraction of the money that Egypt alone is spending for rearmament, the antisocial and wasteful character of the armament program becomes tragically plain.

49. The people of the Near East must have peace. It is for the Governments of the United States, United Kingdom, and other great powers to use their best efforts to insure peace and tranquillity in the Near East so that its peoples may work together to raise the living standards of the entire area. To plunge these people into an armaments race is to serve the cause of their impoverishment, debasement, and destruction.

ELIHU D. STONE.

The Right To Compete

EXTENSION OF REMARKS
OF
HON. HARRY J. DAVENPORT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. DAVENPORT. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include a copy of a letter written by Ben Moreell, president of Jones & Laughlin Steel Corp., which was sent to all employees and shareholders of Jones & Laughlin:

THE RIGHT TO COMPETE

To Our Customers:

Jones & Laughlin Steel Corp. has carefully considered the recent decisions of the Federal courts in the Cement case and the Rigid Steel Conduit case and the interpretations placed upon those decisions by the Federal Trade Commission. As a result of this consideration and to avoid the possibility of violating these restrictive interpretations, Jones & Laughlin Steel Corp. reluctantly announces that, effective July 22, 1948, it will discontinue pricing its products on a competitive basis through freight absorption.

Prices are being announced today for all basic steel products produced at each of the corporation's plants. The cost to the customer henceforth will be, in each case, the price for the product at the producing plant plus the established charge for transportation.

In taking this action Jones & Laughlin Steel Corp. wishes to emphasize that this change is not made willingly. The decisions of the courts and the Federal Trade Commission have caused this action on our part. We disagree with these decisions and their application to our business. We believe that the new system of pricing caused by these decisions is contrary to the best interests of our customers, our employees, our stockholders, and the communities in which our plants and our customers' plants are located. This new system of pricing will radically restrict Nation-wide competition.

We take no issue with the decisions of the Federal Trade Commission and the courts in enforcing the Federal Trade Commission Act, the Sherman Act, and the Clayton Act as amended by the Robinson-Patman Act to the extent that they prohibit unfair methods of competition, price fixing, collusion, and monopolistic practices. The Commission and the courts, however, have gone far beyond these prohibitions, and in the opinion of many, including at least one member of the Federal Trade Commission, they have held that a general practice in which the seller absorbs transportation charges in order to meet competition in a distant market is itself illegal as a violation of statutory law. By these interpretations the Commission and the courts have, as a matter of plain fact, decidedly lessened, rather than promoted, competition.

We believe that an enforced continuation of this new pricing policy will promote monopolies in the areas immediately surrounding any given source of production by excluding competition from more distant sources, because of the transportation costs. In effect, a legal prohibition against meeting competition by absorbing freight will create tariff walls around each producing area. It will force the closing and relocation of mills and factories. It will restrict the sales of each company to the territory surrounding its own plant. It will curtail the development of low-cost production and distribution. It will deny to consumers a free choice of suppliers. It will lead to geographical concentration of industry, rather than dispersion which is desirable for national security. It will cost customers more money because they will pay more transportation costs when they buy from other than the nearest producer. Since costs will vary, depending upon the location of the supplier, consumers of steel will not be able to establish their costs in advance of actual purchases.

Jones & Laughlin believes that the Nation's basic industries and their customers, bound by such legal shackles, cannot continue the vigorous growth which is essential to the preservation of our country's industrial strength. We must seek relief from these bonds. We do not seek to perpetuate the basing-point system. We do not seek a rule which will permit the collection of phantom freight. All that we seek is the right to compete.

In order to restore this basic principle, we believe it is essential that the Congress amend the applicable laws. There should be no statutory prohibitions against charging lower mill prices to some customers than to others, when such lower prices are necessary to permit products to be sold in a distant market to compete with another producer more favorably located with respect to that market.

We are convinced that this position is economically sound and consistent with the meaning of the antitrust and antimonopoly laws as intended by the Congress. It is simple. It would not weaken the laws against price fixing, collusion, unfair competition, or monopolies.

A difference of opinion within the Federal Trade Commission itself and the dissenting opinions of the courts clearly indicate a need for clarifying legislation on this point.

The legislative history regarding attempts to outlaw the basing-point system by statute leaves no question that the Congress has not been willing to require uniform f. o. b. factory prices. The Supreme Court expressly recognized this in the Corn Products case in 1945. However, in the recent Cement case the Supreme Court has stated that the commonly used basing-point system is a violation of the Robinson Patman Act. In so doing, the Supreme Court has not sought to interpret the will of the Congress, but has engaged in judicial legislation.

We urge our customers and all others interested in the welfare of the country to give serious consideration to this matter. We believe that all will conclude, as we have, that prompt action by the Congress is essential if we are to continue to have the vigorous competition in this country which has been so fundamental to our national development.

Yours very truly,

BEN MOREELL,
President.

JULY 21, 1948.

General Motors Cost-of-Living Contract

EXTENSION OF REMARKS
OF
HON. FOSTER FURCOLO
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. FURCOLO. Mr. Speaker, the Members may be interested in the following remarks as broadcast by one of the very well informed radio commentators, the Washington correspondent, Joseph McCaffrey, on his weekly commentary over the Mutual Broadcasting System:

The announcement yesterday that General Motors, under its cost-of-living contract with the auto workers, will cut workers' wages 2 cents an hour and the price of its cars from $10 to $40, focuses attention on the coming contract negotiations this spring.

How well has the cost-of-living contract worked?

Management thinks it has worked most satisfactorily.

The General Motors executives are all for continuing the present contract as it is now written, for another year or, they hope, another 2 years.

But not so the Auto Workers Union.

The union leaders say they agreed to such a contract only because it was the only method by which they could break the united industry front against further wage boosts back in 1948. The union now would like to end the cost-of-living clause for a more liberal pension provision.

And this, if certain other factors are considered, may well mean a stalemate in negotiations.

Which will, in the end, mean a strike tying up one of the biggest auto plants in the Nation.

Here might well be an excellent opportunity for the Government to see if it can head off a strike before it happens.

And by this, I don't mean standing ready with the club of a court injunction.

Too often, the Government Mediation Service is called in after both parties have become so firmly entrenched in their positions that even the combined weight of the 12 apostles couldn't move them to agreement.

The time to begin heading off a strike is before the negotiations begin, before the bitterness has festered.

A strike may well be coming at General Motors, some people here claim to see it in the future—even before the parties involved start discussing a new contract.

Certainly the possibility of a strike at GM exists. Why not, because of that, begin now to determine how it can be—not just headed off—but settled, as strange as this may sound, before it happens.

The coal situation is an excellent example of how relations have deteriorated so that the lines have become so drawn, the negotiators so embittered, that not even the threat of a court injunction restores peace.

The General Motors situation, however, could well serve as a proving ground.

It may be something to think about and act upon now.

Substitute FEPC Bill

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Brooklyn Eagle of Sunday, February 26, 1950:

FATE OF SUBSTITUTE FEPC BILL UP TO SENATE

It is a source of real regret that the House failed to pass a strong fair employment practices bill along the lines the Truman administration proposed. The southern bloc's bitter fight waged against it was unfortunately aided by reactionary Republican elements. Certainly there has been a great need for this reform and when it is considered that conventions of both parties had endorsed the plan in principle there was good reason to have expected a different attitude when it reached the floor of the House.

After the administration bill had been defeated and a weakened version of FEPC was brought forward, loyal supporters of the original measure differed in their judgment as to the proper course to follow. Many, finding the substitute so weakened and without teeth, refused to go along. Others, including the entire Brooklyn delegation, supported it as the best that was possible to achieve at the moment. The final vote was 240 to 177.

Despite a natural disappointment, it does seem to us that those who made possible the passage of the substitute used the better judgment. Certainly they were realistic. With all its lack of teeth it does put the Federal Government on record against discrimination. We hope it will win the approval of the Senate so that some important ground breaking may now be done in this difficult field. It would be at least a step in the right direction.

Bill Boyd: The Oil Industry's No. 1 Man

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. TEAGUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article which appeared in the February 1950 issue of the Petroleum Engineer concerning Mr. William R. Boyd, Jr., retiring president of the American Petroleum Institute.

Bill Boyd, without a doubt, has had the most distinguished career in the oil industry of any living man today. He is a resident of Teague, Tex., in the Sixth Congressional District which I represent, and has returned to his home there to establish his personal law office for consulting practice only.

Bill Boyd has never lost contact with the country and small community people whom he was reared with. He served as the mayor of their city at Teague and went on to reach the most responsible and highest position in the oil industry. However, upon his recent retirement as president of the American Petroleum Institute it was no great change for him to return to the rural and small community life as he was still the same Bill Boyd.

PETROLIC PERSONALITIES

(By Dick Sneddon)

HOME IS THE HERO

Teague and Freestone County in east Texas really killed the fatted calf on Wednesday, January 18, when its favorite son, Bill Boyd, Jr., for 29 years the Pasha of the petroleum people, threw aside his mace, doffed his ermine wrap, and snuck back, not furtively, but eagerly, to the homey haunts of his boyhood. It wasn't that there was anything callous or even casual about the way he had been treated by the oil folks, for Bill is probably the best known and most universally liked person in the industry. He no doubt could have had his choice of a hundred executive positions when he decided to resign one of the top posts in American oildom, but he chose, instead, to go back to the old friends and familiar scenes of his youth. That old home-town yen grows stronger with the years, and yielding to it is as human as tears and laughter.

One of the qualities that lifted Bill Boyd to such a high altitude in the greatest industry extant is what the public-speaking experts call "audience contact." No matter what your stature businesswise, when he talks to you he has the faculty of excluding, or at least appearing to exclude, everything and everyone else. It is just you and Bill Boyd in a private discussion of a moot point or a brief, highly confidential story exchange. He has a way of unobtrusively making your interests his, which at once conveys the idea that he likes you, so, of course, you go for him in a big way. Along with this natural-born capacity to make friends and keep them, he has a fine administrative talent that has enabled him, as prexy of American Petroleum Institute, to resolve any and all differences that have arisen, and to bind a complexity of keenly competitive pet oleum people into a harmonious and distinctly effective entity.

"DEAR HEARTS AND GENTLE PEOPLE"

But returning to the celebration: It all started with an open house in Bill's new office at the entrance to his farm lodge, midway between Teague and Fairfield on United States Highway 84. Here his right hand was shaken so often and so vigorously that the arm has lengthened appreciably. We have heard, indeed, that he can now tie his shoelaces without stooping. From his office the multitude surged out onto the farm property where the Lone Star Gas Co. spudded in an oil well, Bill Boyd No. 1, so that the neophyte farmer won't feel too strange around the place. Besides you can get dry cows as well as dry wells, and even on a farm it isn't good to put all your eggs in one basket. Our Teague operative tells us that the first thing Bill did when he arrived at the farm was to check up and see how many cows were flowing and how many were on the pump.

Active in the spudding in of the new well, incidentally, were such petrolic luminaries as R. L. Wheelock, vice president of API; D. A. Hulcy, of Dallas, president of Lone Star Gas Co.; and Raymond J. Dillard, an executive of the J. K. Hughes Oil Co. Then followed a street parade, free movies and congratulatory speeches by all sorts of VIP's, including Senator Tom Connally, Congressman Olin Teague, Lt. Gov. G. C. Morris; Hines H. Baker, president of Humble Oil Co.; W. Alton Jones, president of Cities Service Oil Co., and a raft of civic dignitaries and other notables, all of whom said so many nice things about Bill Boyd, we wouldn't be a bit surprised if that other Bill Boyd they call Hopalong Cassidy is insane with jealousy. There is no need to recite the long list of Bill Boyd's accomplishments here. Every oil man in America knows him as well as we do, and every last one of them will rejoice in Teague's official recognition of his good qualities and good works. Now as he turns independent operator and gentleman farmer these same oil men will be wishing him the most of the best—and so will we.

The Pittsburgh Area and F. O. B. Mill Pricing

EXTENSION OF REMARKS
OF
HON. HARRY J. DAVENPORT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. DAVENPORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following paper presented to the Chamber of Commerce of the United States by Herbert Johnson, which I hope will throw some light on the basing-point issue:

THE PITTSBURGH AREA AND F. O. B. MILL PRICING

The chamber of commerce of Pittsburgh, Pa., appreciates this opportunity to participate in the second 1948 economic institute of the Chamber of Commerce of the United States, to discuss the interest which is at stake in the Pittsburgh area in the matter of delivered pricing. I, personally, am honored to have the privilege of presenting this problem on behalf of the Pittsburgh Chamber of Commerce.

We believe that it was the intent of the Congress in enacting the Sherman Act, the Clayton Act, the Robinson-Patman Act, the Federal Trade Commission Act, and other antitrust and antimonopoly statutes to protect the best interests of the entire economy. We believe that only by the administration of these laws to that end can the Nation be kept strong and free. Since all of these statutes and regulations are designed as rules and controls for business, we believe it is im-

perative that the rules be stated clearly and in terms comprehensible both to the interests subject to the regulation and to those who administer the controls. The present state of confusion as to the legality of any method of pricing other than straight f. o. b. mill pricing has been amply demonstrated not only in the 5 months since the decision in the Cement case became final, but also in the discussions of this institute.

It is not surprising that the Pittsburgh area should have been among the first to recognize the seriousness of the threat to competitive pricing and to attempt to appraise its impact upon the community. The cement industry and the steel industry were the first to announce their intention of abandoning former delivered-pricing practices. Had any incident been required to crystallize the problem for businessmen in the Pittsburgh district, these moves were sufficient.

The Chamber of Commerce of Pittsburgh has made a careful review of the entire problem in conjunction with the Smaller Manufacturers Council of Pittsburgh, sending out questionnaires to its entire membership and requesting expressions of opinion from all interested parties. Based on this survey, it is the consensus that mandatory f. o. b. mill pricing will be definitely detrimental to the best interests of Pittsburgh industry, large and small.

PITTSBURGH'S COMPETITIVE POSITION

Pittsburgh is universally known as a production center of iron and steel products. Despite the establishment and growth of steel-producing facilities in other sections of the United States, Pittsburgh is still the most important single producing location in the country. On the other hand, Pittsburgh industry has become remarkably diversified so that any consideration of the best interests of the community must take into account numerous industries in addition to iron and steel. For example, Pittsburgh is one of the principal centers of such important basic industries as aluminum, electrical equipment, glass, paint, food processing, coal chemicals, and petroleum products.

Pittsburgh is generally considered the home of giant industries. Although many large companies are located in Pittsburgh, such as United States Steel Corp., Aluminum Co. of America, Westinghouse Electric Corp., Jones & Laughlin Steel Corp., Gulf Oil Corp., H. J. Heinz Co., Koppers Co., Inc., Pittsburgh Consolidation Coal Co., Pittsburgh Steel Co., Pittsburgh Plate Glass Co., nevertheless, there are many hundreds of small manufacturers and fabricators located in this area. The interests of these small manufacturers are a primary concern, not only of the Chamber of Commerce of Pittsburgh but of the community as a whole for its own welfare.

The Smaller Manufacturers Council, which is a part of the Chamber of Commerce of Pittsburgh, has a membership of 235 firms ranging in size from companies employing 25 persons up to establishments with pay rolls of 500 people. This membership comprises approximately half of the total number of small manufacturers in the Pittsburgh district, according to a recent survey. All of these are important to the Pittsburgh area, not only in terms of their present significant contribution to the industry in the area but also because of their growth potential. In all probability, some of our large industries of tomorrow will develop from the smaller manufacturers of today.

The plight of these smaller manufacturers is a matter of great concern to the chamber of commerce. Many of these manufacturers depend upon widespread distribution of their products in order to maintain economical levels of production. By the same token, many of these manufacturers rely upon distant sources of raw materials. In a questionnaire circulated to members of the Chamber of Commerce of Pittsburgh, approximately 75 percent of the companies replying stated that they were unable in normal times to secure their requirements of raw materials or to sell their normal production within a radius of 100 miles of Pittsburgh. From this, it is apparent that an important part of Pittsburgh's smaller manufacturers will be seriously affected if they or their suppliers are denied the privilege of competing outside their local areas.

The following quotations represent a few typical comments made by smaller manufacturers in response to the questionnaire on f. o. b. mill pricing:

"The f. o. b. mill-pricing system may greatly reduce our potential market when the supply exceeds the demand for our production unless new methods for protecting our competitive position are developed successfully.

"Our business is national and our customers' plants are widely scattered. As a result, where we have recently quoted f. o. b. mill, we have lost old and valued customers. We prefer a basing-point plan as the best method on which we can compete with steel companies nearer the user.

"To sell the products we manufacture on an f. o. b. plant price will curtail and limit our marketing area, reducing our volume by 60 to 70 percent. Because of the reduced volume, the cost to the consumer will increase. We are of the opinion that the volume of our products, needed for economical production will not be forthcoming from the reduced marketing area.

"Several of our customers in the Midwest are complaining bitterly about this change of delivery in the steel industry. They say it has been hard enough to stay in business with the normal steel shortage and now this new ruling has added greatly to their problems.

"We are reasonably competitive west of the Allegheny Mountains. We would lose 20 percent of our business by losing our eastern market. Our plant is too small to be involved in moving. We would probably close up in preference to moving."

POTENTIAL EFFECTS OF MANDATORY F. O. B. MILL PRICING ON THE PITTSBURGH DISTRICT

There has been a great deal of speculation about the probable effect upon the national economy of continuing restrictions against competitive selling through freight absorption. It was contended by the proponents of f. o. b. mill pricing that numerous substantial advantages would accrue to the Nation's economy. The prediction was made that manufacturing industry would be decentralized so that production centers would be located nearer to fabricators and consumers. It was also prophesied that distant steel buyers would be benefited due to the fact that steel producers, since they would no longer absorb freight, would be willing to sell in distant as well as local markets. Those who favored competitive methods of selling held opposite views. It was their position that basic industries could not be decentralized and relocated since in most cases their location is dictated by proximity to raw materials. It was further contended that steel producers would be even more reluctant to sell in distant markets on an f. o. b. mill basis because of the fact that they would normally be unable to compete on a price basis and would, therefore, secure business only in times of short supply when there was already an abundant demand near home.

In the case of the Pittsburgh district certain of these disputed effects are no longer speculative. No steel production has been relocated. Distant steel buyers are finding themselves in a worse situation than formerly. Some of these remote fabricators either have moved to the area or have announced their intentions of establishing operations in the Pittsburgh district in order to improve their steel-supply situation. This solution, however, is not available to all manufacturers. For financial or other reasons a great many of the customers of Pittsburgh's steel mills will be unable to relocate. As a result the steel producers in the Pittsburgh area will still have the problem of selling their production and the many hundreds of small manufacturers already in the Pittsburgh area will be unable to sell their normal output unless all sellers are again permitted to meet price competition in distant markets by the absorption of transportation charges.

CONCLUSION

We firmly believe that the Nation as a whole and the communities which comprise the country, together with all industry, are benefited by competition. In our opinion, competition is a matter of involving many factors. Sellers compete for customers' favor in terms of quality, service, availability, and delivery. Assuming approximate equality of these factors, cost to the customer at point of use is generally determinative. It is for this reason that competition results in substantial identity of prices, particularly in the case of raw materials or products produced to the customer's specification. It is only by permitting the seller to exercise his own discretion in the matter of freight absorption that competitive equality at destination can be maintained. Without such competitive equality there is, in our opinion, no competition.

Since we believe that it is the intent of the antitrust laws to stimulate rather than eliminate competition, it appears obvious that the opportunity to compete in terms of price must be maintained.

There is an old adage to the effect that it is unwise to break up a winning combination. We believe that the progress of American industry has demonstrated that the factors of competition and the rules which sellers believed encouraged them to be competitive have been highly successful. Certainly in the Pittsburgh area, if one were to judge solely by results, one could not help but conclude that the system must have been, if not perfect, at least extremely conducive to industrial growth and development. We see no advantage in changing the system and substituting a disputed theory for a proved practice.

If there have been abuses in the past under competitive pricing methods, the abuses should be eradicated, and we believe the antitrust laws should be maintained to assist in the prosecution of such evils. However, we are not in agreement with a proposal which to us appears equivalent to a suggestion that we sink the ship because a few barnacles have attached themselves to the hull.

John C. Calhoun, Chairman of the State Democratic Executive Committee of Texas

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1950

Mr. TEAGUE. Mr. Speaker, our fellow Texans need not be reminded of the able leadership that the chairman of the State Democratic Executive Committee of Texas has demonstrated since September 1948. Many others among the

House of Representatives have experienced the warmth of his genuine friendship and his contagious humor. Mr. Calhoun is a resident of Corsicana, in the Sixth Texas District, which I am proud to represent in Congress.

Under leave to extend my remarks in the RECORD, I wish to include an article by Clint Pace which appeared in the Dallas Morning News of January 22, 1950, about this leader that Texans are mighty proud of:

CALHOUN FINDS GOOD HUMOR CALMS DEMOCRATIC TEMPERS

(By Clint Pace)

CORSICANA, TEX, January 21.—Late on the evening of September 14, 1948, the telephone rang at John Calhoun's home in Corsicana.

It was a newspaper reporter calling. He asked if he was speaking to the John Calhoun who had just been elected chairman of the State Democratic Executive Committee.

"No," said Calhoun, a roly-poly man of 67. "I'm John C. Calhoun. C, as in Calvin."

"That's what I thought," said the newspaper reporter. "You have just been elected State chairman at the Fort Worth convention."

"Well, I'll be ——," said Calhoun.

That was the introduction of John Calvin Calhoun, oil man, ex-mayor, domino player, part time politician and notary public to politics at the State level.

Since then, the happy Calhoun has become the laughing boy of Texas politics. Many times he has used his ready wit to stave off assorted political mayhem by members of the party's violently opposing factions. In 2 years, under Calhoun's soft-answer direction, the party's executive committee has moved from a brawling, aimless nest of trouble into a fairly well organized political unit.

Calhoun has always been a witty, humorous man, whose greatest jokes are on himself. But his quick wit has often been used to parry the thrusts of Democrats out to skin Democrats. When Calhoun took over the party leadership at the Fort Worth State convention in September 1948, he had become the referee of a continuing fight between liberals and conservatives. In many cases the differences had degenerated into personal feuds which dated back to the Austin convention in 1944.

The battle line was (and to an extent still is) drawn then. It was the Austin convention, in May, and the subsequent meeting in Dallas in September, which divided the party into New Dealers and Texas regulars and opened the first sores of a disease which threatened to ruin the party completely.

The disease was by no means cured in 1948, when Hillsboro's Bob Calvert declined to be State chairman again. The late Tom Tyson and Calvert decided that the new chairman would have to be a man acceptable to both hostile sides of the party and, therefore, must be a person who had taken a minor part in politics.

They settled on Beauford Jester's great and good friend, John Calhoun, of Corsicana, a man whom only a few delegates at the convention had ever heard of.

The vote was called on a motion to substitute Calhoun for Calvert, but the noes outrang the ayes. Yet Tyson, who later became secretary of the party, banged his gavel and announced Calhoun had been elected. There was a titter of laughter, but the delegates made no formal objection.

Calhoun might have been unacceptable to some of the liberals at the far left side, if they had known that Calhoun had committed, in 1944, the sin which the 1948 liberals found unforgivable. He had refused to bolt the May 1944 convention in Austin when the liberals marched out.

Calhoun, reviewing the bidding a few days ago, said his sympathies were with the bolting liberals.

"But my side was outvoted and I didn't think we should refuse to play simply because we couldn't pitch," he said.

The liberals, who had moved from the house to the senate chamber in the capitol, sent a message to Calhoun that he could be put on their list of delegates to the Chicago national convention. Calhoun refused the honor.

"I've never bolted a meeting yet," he told them. "I agree with your politics, but I'm a staying where I am because I believe in majority rule."

Four months later the liberals, in a riotous meeting in Dallas, recaptured control. But the big argument over Rooseveltian democracy had started and was to become the widest rift in the Texas party.

The differences had widened when the still-warring Democrats met in Fort Worth for the governors' convention in 1948. Calhoun had been left off the Navarro County list of delegates and on the night of his election to the party office was attending a rodeo. His mind was a long way from politics.

When he accepted the job with the blessing of another good friend, Beauford Jester, Calhoun knew he was starting to hoe the long row.

Part of the Calhoun political medicine was humor, liberally applied in the right places. And part was silence and soft answers which turned away wrath. Little by little he removed the cores of dissatisfaction by simply kidding them away or letting them die for want of discussion.

He believes now the party is farther away from revolt than it has been in 10 years. Part of that is because President Truman's victory in 1948 showed many Democrats that intraparty differences have little effect on the Nation's two-party system.

Calhoun is a strong advocate of the two-party system, but admits he doesn't care how small the Republican minority becomes. He is a New Dealer who believes history will make Franklin D. Roosevelt one of its all-time great men and Harry Truman one of its all-time great little men.

"I guess I wear the brass collar," he admitted. "But that doesn't mean that I believe everything the party does is exactly right.

"Little differences with the party doesn't mean anything, though. No man agrees with any other man 100 percent. No man agrees with everything in his lodge, his city council, or even his family.

"But I do believe in the broad base of the Democratic Party. It has done more for more people than any political organization in all history."

Calhoun believes agriculture is the key to the country's economy, and says only the Democrats have ever tried to improve the lot of the farmer.

"I don't care what you say," Calhoun declares. "Propped-up farm security is now our national security."

Why is he a New Dealer?

"Because you don't see old folks heading for the poor farm anymore. People trust their banks, and a workingman has a chance to be paid for what he contributes to his employer.

"You didn't have that under the old deal. It came about under the New Deal."

He believes in organized labor, but also thinks there should be a rule book by which both labor and management play, plus a referee to see that they stick to the rules.

Calhoun is not strictly the type person you would take for a liberal. He owns property, drives a new Cadillac, lives in a fine home and spends much of each day playing dominoes at the Corsicana Country Club. When he and his business partner and social pal, Joe Butler, want to spend a vacation in Florida, they just load up and go. When they get tired of loafing in the sunshine, they load up and come back.

He makes many jokes about the Democratic Party and tries to kid its members out of their differences with each other. He is interested in youngsters who give time to political thinking.

Not long ago he was addressing a group of Young Democrats in Dallas and told the story of the Arkansas farm woman who had 15 children. One day one of them fell into a barrel of tar. The mother ran to pull the sticky infant out. She looked at him a minute, then threw him back in the barrel.

"I can raise another one before I can clean you off," she said.

"That's how we feel about young Democrats," Calhoun went on. "We can train the young ones easier than we can clean up the old, party-bolting Democrats."

Calhoun was no more installed in the office of State chairman than a crisis arose. It concerned Wright Morrow, of Houston, whom the liberals wanted to throw out of the Democratic national executive committee because they felt he had not been as loyal to Truman as they were.

Calhoun remembered that Morrow had been nominated at the Brownwood convention 2 years before, had been confirmed by the national convention and the Philadelphia convention. That was majority and it was enough. Although he was on the short end of a 43-to-6 vote in the State committee, Calhoun stuck with Morrow. When the final fires died down, Morrow was retained on the national committee and serves there now.

After he was beaten in the committee meeting on the Morrow vote, Calhoun offered to resign as chairman. The committee refused his resignation. When Jester died, Calhoun—who believes the office of State chairman is the property of the governor's office—again offered to step down. Governor Allan Shivers asked him to stay on.

Calhoun served four terms as Corsicana mayor.

"This was after I had rendered the city notable service for 30 years as a notary public," Calhoun said. "I had one of the firmest notary seal squeezes in Navarro County."

Thirty-second Anniversary of Independence of Lithuania

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. GARMATZ. Mr. Speaker, on February 16, Lithuanians all over the world celebrated Republic of Lithuania Day, to commemorate the thirty-second anniversary of the founding of the Lithuanian Republic. This year again, as in the past, the Council of Lithuanian Societies of Baltimore, celebrated the occasion with a banquet, which I was privileged to attend.

The Governor of Maryland and the mayor of Baltimore issued the following proclamations:

GOVERNOR'S PROCLAMATION: REPUBLIC OF LITHUANIA DAY

EXECUTIVE DEPARTMENT,
Annapolis, Md., February 6, 1950.

Whereas in accordance with Joint Resolution No. 8 of the acts of the General Assem-

bly of Maryland of 1935, the Governor is directed to proclaim February 16 of each year for the observance and commemoration of the founding of the Republic of Lithuania; and

Whereas, February 16, 1950, will mark the thirty-second anniversary of the founding of the Republic of Lithuania; and

Now, therefore, I, William Preston Lane, Jr., Governor of the State of Maryland, do hereby proclaim Thursday, February 16, 1950, as Republic of Lithuania Day and request that the flag of the United States be displayed on all government buildings and urge that our people observe that day by appropriate ceremonies.

Given under my hand and the great seal of the State of Maryland. Done at the city of Annapolis, this 8th day of February, in the year of our Lord one thousand nine hundred and fifty.

[SEAL] WILLIAM PRESTON LANE, Jr.

By the Governor:

VIVIAN V. SIMPSON, *Secretary of State.*

PROCLAMATION BY MAYOR THOMAS D'ALESANDRO, JR., DESIGNATING THURSDAY, FEBRUARY 16, 1950, AS REPUBLIC OF LITHUANIA DAY

Whereas February 16 of each year has, by an act of the Maryland Assembly, been designated as Republic of Lithuania Day, commemorating the founding of the Lithuanian Republic; and

Whereas with the present condition of world unrest and with a majority of continental Europe under the control of a government who denies every right to the peoples of these lands, the Republic of Lithuania has been temporarily deprived of its God-given right to life, liberty, and the pursuit of happiness, which is the rightful heritage of every nation; and

Whereas despite the fact that Lithuania only seeks to work out its destiny in accordance with the rights and privileges won in a long struggle to obtain its independence as a republic, a totalitarian government with its attendant evils has been forced upon the Republic of Lithuania by the armed might of an aggressor nation; and

Whereas as long as America and its democratic form of government survive, there will be hope in Lithuania and in all the ravaged nations of the earth, for a better day to come; and

Whereas Baltimore, along with many other cities and towns in our great Nation, sympathizes with, and is justly proud of, the many citizens of Lithuanian ancestry or birth, who have found a haven of security here in America, where they can enjoy the freedoms which are being denied them in their native land, and all citizens who love liberty join in the prayer that Lithuania will soon again be able to maintain its status as a free nation:

Now, therefore, I, Thomas D'Alesandro, Jr., mayor of the city of Baltimore, by the power invested with me, do hereby proclaim Thursday, February 16, 1950, as Republic of Lithuania Day in Baltimore, and do urge all our citizens to give serious thought to the many cultural contributions made by Lithuania, and to the trials and tribulations that have befallen that country under the rule of an aggressor nation which temporarily deprives Lithuania of its rights and privileges as a free nation.

In witness whereof, I have hereunto set my hand and caused the great seal of the city of Baltimore to be affixed this 8th day of February in the year of our Lord 1950.

[SEAL] THOMAS D'ALESANDRO, Jr.,
Mayor.

Mr. Speaker, under permission to extend my remarks, it is my great pleasure to include in the RECORD, the remarks of the Reverend Louis J. Mendelis, pastor of St. Alphonsus Church; a translation of the speech delivered by the Honorable J. Kajeckas, attaché at the Lithuanian Legation; and my own remarks:

Mr. Chairman, before returning thanks to the good God for the blessings of this evening, may I be permitted, as pastor of St. Alphonsus Church and the spiritual leader of the 5,000 Lithuanians of Baltimore, in the name of more than 400 former displaced Lithuanians who have found a new home in Baltimore, to say a most profound thank you to our Congress and especially to our President, Mr. Truman, for the passage of the Displaced Persons Act of 1948.

Because of this act, not only more than 17,000 Lithuanians have been able to come to this country and taste some of that liberty that we Americans enjoy but make a definite contribution to our cultural and social life here in America.

I personally, in the name of these future citizens of our land and in my own name wish to thank the gentlemen present here tonight, Hon. Messrs. SASSCER, GARMATZ, FALLON, and BOLTON, for their part in helping my fellow-correligionists to come to this country. I ask them to thank the other Members of our Congress, and, if any of them have occasion to see Mr. Truman to thank him in our behalf.

My fond hope is that the Displaced Persons Act will be extended, that others may be able to enter our country to enjoy the blessings of liberty that we do. I can assure the gentlemen from Washington here tonight that none of the Lithuanian DP's are subversive or unappreciative of our way of life. I am confident that, God willing and helping, they will make excellent citizens of our land.

Moreover, before saying the prayer, I wish to add that we Americans should be conscientious in the use of our right to vote. At every election, whether it be city, State or national, we should go to the polls and cast our ballot for the candidate that we feel will best serve the interest of our country. If we ever lose our liberties, if we do not have a more efficient Government, it is because we have failed to do our duty at the polls. For several years now, I have spoken from the pulpit and urged our congregation to be faithful in the exercise of our rights as citizens of this land. God bless and save America from any "ism" that will enslave our country and its people.

REV. LOUIS J. MENDELIS, D. D.,
Pastor of St. Alphonsus Church.
FEBRUARY 16, 1950.

SPEECH DELIVERED BY THE HONORABLE J. KAJECKAS, ATTACHÉ, LITHUANIAN LEGATION, AT THIRTY-SECOND ANNIVERSARY OF LITHUANIAN INDEPENDENCE, FEBRUARY 16, 1950, IN BALTIMORE, MD.

On this Lithuanian Day, the Lithuanian people once more celebrate in mourning. One more commemoration of the resurrection of the Lithuanian state under the sign of Golgota. On this February 16, traditionally destined to rejoicing and to the enumeration of Lithuania's achievements, we are witnessing dreadful happenings affecting the Lithuanian people.

A Lithuanian in his homeland is not the host, but a slave. He is deprived not only of his homestead, of his generations-old modest belongings, but he is also expropriated of his labor, of his profession, of his family and of all his rights and freedoms. He no longer enjoys even the right to live, especially in his native country.

In Siberia, the Lithuanian deportees, who are still alive, are subjected to terrible physical and moral suffering. They have been deprived not only of their homeland, of their beloved ones, of all religious comfort, of all human rights and the minimum standard of living, but also of hope for a better future. These helpless victims are doomed to a slow death. This land of dread and fear is scattered with the bones of Lithuanian innocent people. From this paradise, as from Dante's pictured hell, there exists no way out under existing conditions.

Lithuanian refugees in western Germany are still suffering under the burden of exile, whereas, the lot of those scattered to the four winds, and who are now living in freedom, is not an easy one. The happiness and peace of mind of the Lithuanian Americans is also disturbed, for how can they enjoy life when their relatives and their beloved ones are being humiliated, deported, and murdered, when the country of their parents is plunged into blood and tears, converted into a huge cemetery, a land of misery and suffering? This cup of sorrow of the Lithuanian people unites us with all suffering Lithuanians, whether they are living beyond the seas, behind the iron curtain, or in the Siberian tundras. Nevertheless, we dare not despair. We shall never give comfort to the tyrant. If today we cannot rejoice, we at least can work for Lithuania's liberation. Until that day arrives, as we are deeply convinced it will, let us remind the world of the wrong inflicted on the Lithuanian nation, let us unmask the enemy of Lithuania and that of mankind, let us contribute to the liberation of Lithuania. Our efforts are not hopeless. No tyrant is eternal, and Lithuanians stand not alone. From the Baltic to the Black Sea, from Manchuria to India and Indochina, even within the Soviet Union's prewar boundaries, hundreds of millions of people are living under the same thought of liberation from the liberator. The free world understands and sympathizes with us. Year after year, the proclamations of the Governor of Maryland, as well as those of the heads of other States and cities, on Lithuania Day, and the presence of distinguished statesmen throughout America at observance ceremonies on that day, are vivid proof of that sympathy and solidarity. Also, in this connection, the following splendid editorial appeared in this morning's New York Times:

"LITHUANIAN INDEPENDENCE

"With courage that rises above despair, the Lithuanian nation today observes the thirty-second anniversary of its independence with ceremonies which will unite Lithuanians everywhere except in Lithuania itself. This sturdy people, speaking one of the oldest living languages, proclaimed their independence amid the flames of the First World War on February 16, 1918, ending generations of oppression by the Russian czars. Today, after another world war against tyranny and in defense of freedom, Lithuania, like the neighboring Baltic countries of Latvia and Estonia, is again under the iron heel of an oppressor. Only those who have escaped from this little country can still raise their voices in its behalf.

"The Soviet Government is attempting to Russify Lithuania by settling it with Russian Communists. According to charges submitted to the United Nations by the Supreme Lithuanian Committee of Liberation, some 600,000 Lithuanians out of a total population of less than 3,000,000 have already been deported to Russian slave-labor camps, killed, or starved to death, and the deportations are proceeding at the rate of 2,000 to 3,000 each month. A Lithuanian underground is still active, and Lithuanian independence is still recognized by the Government of the United States."

On this occasion I recall an episode from the Crusades for the liberation of the Holy Land. A greatly beloved commander of one of the expeditionary forces died on the way. Before his death, his only request was that his heart be taken by his soldiers and buried in the Holy Land. His wish was fulfilled. Approaching the Holy Land, a fierce battle broke out. The expeditionary force began to waiver and defeat seemed imminent. At that critical moment, the commander in

charge flung into the midst of the enemy forces the heart of the beloved commander. Like lions, the soldiers fought to recover the heart from the enemy and won the battle.

We, too, must not fail to avenge the desecration of the heart of Lithuania.

The shadow of the enemy of Lithuania and of mankind is growing longer and longer. The dawn of Lithuania's liberation and freedom is growing brighter.

President Franklin D. Roosevelt once said to a delegation of Lithuanian Americans that Lithuania will be free again. We fervently hope that the day is not far distant when another President will be able to announce the longed-for words that Lithuania is free again.

ADDRESS OF HON. EDWARD A. GARMATZ, OF MARYLAND

I consider it a real honor and privilege to be invited to attend this dinner commemorating the thirty-second anniversary of the Republic of Lithuania independence.

The celebration of the anniversary of Lithuania's independence is an event which is of significance, not only to Americans of Lithuanian descent, but to all Americans.

There are those who say that she has again lost her independence, but the United States Government does not. The United States Government has not recognized the incorporation of Lithuania into the Soviet Union, and continues to recognize the representative of independent Lithuania accredited to this country.

Shall the United States continue to support the rights of small nations to self-determination, the right to free and unfettered elections, the right to liberty and representative government?

Certainly, as Americans, we want our country to uphold these principles throughout the world, for these principles are fundamental to the permanent peace and security of the United States.

No people have a stronger claim to the right of self-government than do the people of Lithuania.

From the earliest times, the Lithuanian people had developed their own language, similar to the anscient Sanskrit, their own culture and traditions, their own government, their own nation.

They are not related to the Russians or to any of the other Slavic peoples, but descended from an ancient people, of a distinct nationality.

It is, therefore, not surprising that they desire to retain independence and self-government as a means by which to preserve the ideals near and dear to them, their culture, language, in short, their way of life.

During its day of independence since the First World War, Lithuania demonstrated that it had a decent respect for the opinions of mankind.

By its progress in its economic and cultural life, it demonstrated that its people were qualified to assume and discharge the responsibilities of independence.

It is apparent that on the basis of justice and right, on the basis of principles announced in the Atlantic Charter, no one should question Lithuania's right to independence.

But let there be no mistake where the United States stands. We have never condoned the acts of aggression as perpetrated by the Soviets. We refuse to recognize the predatory destruction of Lithuanian independence as valid.

We still regard Lithuania as an independent state.

On this anniversary of Lithuania's independence, we look forward to the day when we shall see Lithuania resume here admirable progress in self-government.

The spark of liberty has burned in the breasts of Lithuanians for centuries, and despite what has appeared at times to be overwhelming obstacles, the desire to be free has overcome all opposition.

It is my good fortune to know many citizens of Lithuanian ancestry. I can truthfully say you have added much to the civic welfare of your city, State, and Nation. You can very well feel proud of your achievements.

Mr. Speaker, at that time, the assembled group adopted the following resolutions:

"Whereas by overwhelming military forces Soviet Russia occupied Lithuania in 1940 and now arbitrarily deprives Lithuania, Latvia, and Estonia of their independent political life; and

"Whereas since the said occupation of Lithuania, the Union of Soviet Socialist Republics pursues a ruthless policy of planned liquidation, deportation and dispersion of the Lithuanian people in order to destroy the Lithuanian national entity; and

"Whereas the crime of genocide, which the Union of Soviet Socialist Republics is perpetrating upon the defenseless Lithuanian nation violates all principles of human rights and has been outlawed by the convention of the United Nations General Assembly; and

"Whereas the afore-stated genocide pact will be presented for action before the United States Senate: Therefore be it

"*Resolved*, That our representatives at the United Nations request that steps be taken by the General Assembly to impel the withdrawal of all Russian organizations from Lithuania; and be it further

"*Resolved*, That the United States Government enter into no peace settlement without the restoration of the freedom and independence of Lithuania and similar nations; and be it further

"*Resolved*, That we urge our esteemed members of the United States Senate to ratify the genocide convention."

The foregoing resolutions were adopted by unanimous vote at the Thirty-second anniversary of the Republic of Lithuania Day, under the sponsorship of the Council of Lithuanian Societies held this 16th day of February 1950, in the Lithuanian Hall, Baltimore, Md.

ANTHONY J. MICEIKA,
President.
MARTIN RAILA,
Secretary.

Mr. Speaker, in further connection with the anniversary celebration, another meeting was held on February 19, at which time the group had the pleasure of hearing the Honorable P. Zadeikis, Lithuanian Minister to the United States. A translation of his speech follows:

ENGLISH VERISON OF A SPEECH DELIVERED BY P. ZADEIKIS, LITHUANIAN MINISTER, ON THE OCCASION OF THE THIRTY-SECOND ANNIVERSARY OF LITHUANIA'S INDEPENDENCE

While Lithuanians in the United States, from the Atlantic to the Pacific, and in other free countries, may freely express their feelings on this occasion, the situation in their homeland, now behind the iron curtain since 1944, is simply deplorable because of the heavy hand of the Soviet regime: Forcible collectivization of farming and the continued brutal deportations of Lithuanian families have made life miserable. Instead of joyous songs and colorful processions, deadly silence prevails, and fear of Soviet police reigns supreme in every corner of the land.

There is little doubt that the Kremlin potentates by employing means of economic destruction, Sovietization, Russification, and, above all, by means of forcible deportations of the Lithuanian citizenry, and genocide in general, seek to break the will of the Lithuanian people to be free and independent. Though Mr. Stalin often appears in the role of a modern czar, nevertheless, he remains the old Ivan the Terrible. Moscow's efforts will be in vain, for the Lithuanian nation has survived many crises in the past; the Lithuanians have even coined this popular expression: "Be what may, Lithuania will always stay."

The Lithuanian people lived for 120 years under czarist enslavement. They were forbidden to print and read Lithuanian books, and even Lithuania's name had been officially buried. But what happened? For every act of Russian onslaught, the Lithuanian people had developed countermeasures. They printed Ausra (the Dawn) and other periodicals and books in a neighboring country, and even in the United States, and smuggled them into Lithuania, regardless of severe penalties, including exile to Siberia. When, on February 16, 1918, the opportunity came, Lithuanians were ready for action to regain their long-cherished independence. Independence was proclaimed in the city of Vilnius, the country's historic capital. Many Lithuanians returned from abroad to help rebuild the country. The Lithuanian people succeeded in hoisting their national flag in Vilnius, in Kaunas, and in Klaipeda by the sea. We do not doubt that Lithuania eventually will regain her freedom, though we must realize that before our people will witness the dawn of liberty, global events may yet retard the advance of liberation.

I understand that the present unhappy situation in my homeland is not an isolated problem, but it is a part of the geopolitical problem of northeastern Europe, which, at the same time, is a problem of the future united Europe. The prevailing belief that Russian expansionism can be checked by peaceful means tends toward revision as the free countries of the western world are forced to bolster their own defenses for the sake of security. The old rule, "si vis pacem, para bellum," still lives despite the existence of the United Nations. The ravaging character of imperialistic bolshevism still refuses to be localized. As far as Lithuania's future is concerned, I am inclined to believe that her liberation will spring from the universal realization that the freedom of any nation is everybody's business, that appeasement of any dictatorship is dangerous and futile; on the other hand, the regime of terror might be just a sign of weakness of the Soviet dictatorship, obsessed with mania grandioza. But the Soviet regime inwardly is far from happy. Russian history tells us that for 1,000 years there had been no order in Russian lands, though the lands were rich. There is no order now in Soviet Russia, for stable order must rest on the free will of the people, and that is taboo in the Soviet Union.

The Lithuanians often hope that the United States would adopt a more resolute diplomatic action to aid Lithuania's liberation. In this respect, we must constantly bear in mind that the United States Government, relying on international law and moral principles, is pursuing vigorously a realistic policy of peace with justice, benefiting the chances of small nations, including Lithuania. It is not a minor matter that Lithuania is recognized as a sovereign state which maintains her legations and her consulates, though nearly 10 years have elapsed since the extortion of her freedom by the use of force and deceit which was perpetrated on June 15, 1940. The farsighted American policy of the continued recognition of our country, and of the nonrecognition of Soviet imperialistic designs, accords opportunities for our people, especially for those of us who are living in freedom, to contribute and to participate in activities which will shorten the period of eclipse and terror. The policy of self-aggrandizement, at the expense of smaller neighboring nations, must be stigmatized, and the ideals and the principles of the Atlantic Charter must be revitalized.

Lest We Forget—Lithuania

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, may I bring to the attention of my colleagues that, on February 16, 1950, the people of Lithuania now living outside the orbit of the iron curtain, American citizens of Lithuanian extraction; yes, every lover of freedom, no matter in which country he resides, recalled that 32 years ago this small country of Lithuania regained her freedom and independence. Her people were happy and prosperous in their own sovereignty until they were again overrun by Russia.

Groups throughout this country assembled on February 16, 1950, and at these meetings remembered the peace and nonaggression pacts with the Baltic States, the Atlantic Charter, four freedoms, the United Nations Charter, the Yalta declaration, and the Potsdam agreement, and they wondered if these so-called solemn agreements had or have any sincere meaning to them, because they realize that this sturdy and freedom-loving country is now being destroyed as a nation and exterminated or enslaved as a people.

It is hoped that our Nation, and the other so-called democratic nations of the world will soon do a little more than acquiesce.

One of these meetings was held in my home city of Worcester, Mass., under the auspices of the Lithuanian Aid Society, and the following resolutions were enacted:

At a mass meeting held by Lithuanians of Worcester, Mass., under the auspices of the Lithuanian Aid Society on February 12, 1950, at the Lithuanian Naturalization Club Hall, Worcester, Mass., the following resolutions were unanimously adopted:

"Whereas the 16th day of February 1950 marks the thirty-second anniversary of the declaration of Lithuania as a free and independent republic, and her demonstration to the world of her ability of self-democratic government and progress;

"Whereas the unlawful-by-force-of-arms occupation of the Republic of Lithuania by Russia and the commitment of atrocities against her people, the destruction of her institutions, and her democratic form of government by Russia are continued at the present day;

"Whereas the Soviet Union has consistently and unilaterally violated all of the pacts or declarations solemnly underwritten by it, viz: Peace and nonaggression pacts with the Baltic States, the Atlantic Charter, four freedoms, United Nations Charter, Yalta declaration, and the Potsdam agreement:

"*Resolved*, That the Lithuanians of Worcester, Mass., do most vigorously condemn and protest against Russia's such unlawful force-of-arms occupation of the Republic of Lithuania and the commitment of atrocities against her people, the destruction of her institutions and her democratic form of government, the violation of pacts and peace treaties;

"*Resolved*, That the Lithuanians of Worcester, Mass., petition the Government of the United States of America to repudiate and terminate all secret pacts concluded, without the consent or knowledge of the Congress of the United States at Tehran, Yalta, and Potsdam, already unilaterally voided by Russia, and to reassert the principals of the Atlantic Charter by demanding that all Russian military forces, Government, and agents be forthwith evacuated from Lithuania and all other European countries now behind the iron curtain, and that Lithuania and her people be liberated and that she be restored as a free and independent Republic among the nations of the world according to the principals enunciated in the Atlantic Charter.

"*Resolved*, That a copy of these resolutions be forwarded to Harry S. Truman, the President of the United States of America, the Secretary of State the Honorable Dean Acheson, the Senators and Congressmen of the United States from Massachusetts, and to the press."

MICHAEL ZEMAITAITIS,
Chairman.
JULIUS P. KISKIS,
Secretary.

Thirty-second Anniversary of Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. PATTERSON. Mr. Speaker, I call to the attention of this body the very fine resolution adopted by the Waterbury Lithuanian-American Council on the observance of the thirty-second anniversary of the declaration of independence by the people of Lithuania.

An appeal is made therein for simple justice for the now oppressed Lithuanian citizens.

The long proud adherence of the Lithuanians to democratic principles is ample evidence of their opposition to the terrifying tactics of the Russian dictatorship.

WATERBURY LITHUANIAN-AMERICAN
COUNCIL,
Waterbury, Conn., February 25, 1950.
Hon. JAMES T. PATTERSON,
House of Representatives,
Washington, D. C.

SIR: Taking cognizance of the unspeakable oppression, persecution, and systematic extermination of the people of Lithuania at the hands of the occupying Russian Soviet authorities, in violation of the principles of the Atlantic Charter and of the obligations of membership in the United Nations, we, citizens of Waterbury, Conn., assembled on the 12th day of February 1950, at the St. Joseph's Hall, under the auspices of the Lithuanian American Council of Societies, for the observance of the thirty-second anniversary of the declaration of independence by the people of Lithuania, appeal to the President, Secretary of State, and Members of Congress of the United States—

To reaffirm the adherence to the principles of the Atlantic Charter in planning the restitution of peace;

To demand the withdrawal of the Russian armed forces, police, and political authorities from the territories of the Republics of Lithuania, Latvia, and Estonia;

To ratify the convention for the prevention and punishment of the crime of genocide;

To take an active initiative in the United Nations in demanding liberation of Lithuania, Latvia, and Estonia, and other countries now under the forcible enslavement by the Soviet Union;

To demand the punishment of the Russian Soviet criminals for the crimes of genocide perpetrated by them in occupied Lithuania and other countries outside the Soviet Union;

To enter into no discussions with Russia regarding the settlement of affairs pertaining to Lithuania and other countries without an active participation by representatives of the Supreme Lithuanian Committee of Liberation and representative bodies of other interested nations.

ALEXANDER J. ALEKSIS,
President.
NELL P. MESKUNAS,
Secretary.

Establishment of a Civilian Conservation Corps

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mrs. DOUGLAS. Mr. Speaker, today I had the privilege of introducing a bill to establish a Civilian Conservation Corps as a companion to the one introduced in the other body by the Honorable JAMES E. MURRAY, of Montana.

Under leave to extend my remarks I would like to include my analysis of the need for this bill:

The Corps thus established would be charged with conservation of our natural resources which were of necessity so badly neglected during the war years, and the development of human resources through the training, education, and performance of useful work in conservation by the youthful citizens of this country.

The purpose of the Civilian Conservation Corps is twofold:

1. It is a long-range program—to conserve the water, soil, forest, and other natural resources of this country which have become so badly depleted.

2. It has a short term, immediate purpose—to relieve the growing unemployment of young men in this country. As of January 1950, there were over 1,000,000 young men between the ages of 16 and 24 who were out of employment and looking for it.

In the 1930's when an earlier CCC was established under President Roosevelt's farseeing eye, beginnings were made in such conservation. The Dust Bowls of Oklahoma; the perennial and drastic floods everywhere; the droughts in the Midwest; the ever-increasing gullies and arroyas, the overgrazed lands in the Southwest; the numerous roads, ditches, and canals, man-made erosion which accelerated geologic or natural erosion, all were dramatic examples of the need for constant watching, anticipating, preventing, and repairing of natural and man-made destruction of our natural resources.

The success of the earlier CCC, which was established on July 1, 1937, and liquidated by June 30, 1943, has been attested by both officials and enrollees. Many of them felt that a similar program should be organized directly after the war.

Conservation and protection of our natural resources is a problem common to all America and its citizens—particularly to those as yet unborn. A well-known eastern university recently established a department of conservation in recognition of the need for further and continuing work in this field.

Last year at this time there were 2,700,000 unemployed. This year, as of January 1950, there were 4½ million, an increase of 66 percent, and from 4.4 percent to 7.3 percent of the civilian labor force. The greatest rise in unemployment has been among men.

Coupled with the need for employment of our young citizens is the need for further education which many of them cannot afford and the need for continuing medical care which the recent war revealed as still inadequate for a large part of our population.

All of these are provided for in the bill.

It should be made very clear that this is a regular, continuing program of conservation.

It is not emergency.

It is not military.

It is an entirely voluntary program.

It conserves natural resources.

It conserves human resources.

The Tobacco Program Has Operated at a Profit Both to the Farmers and to Uncle Sam—Why Invite the Fate of Potatoes for a Farm Program That Is Successful?

EXTENSION OF REMARKS
OF
HON. THOMAS R. UNDERWOOD
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. UNDERWOOD. Mr. Speaker, at hearings conducted before the Ways and Means Committee of the House of Representatives during the past week, a statement was made by John M. Berry, New Castle, Ky., vice president of the Burley Tobacco Growers Cooperative Association, opposing a graduated tax on cigarettes as proposed in H. R. 2016 and companion bills. Mr. Berry pointed out that the farm-loan program to support prices on burley tobacco through loans based on 90 percent of parity price has not cost the Government a cent, but on the contrary has made a profit of $10,000,000 from sales of tobacco in this country and abroad and has collected $15,000,000 in penalties on excess tobacco, making a total of $25,000,000 paid to the United States Treasury.

The tobacco program is one element of the farm program that is working satisfactorily. Why do we want to scuttle it with a tax change and invite the fate of potatoes?

Also, bear in mind that last year cigarettes paid $1,232,727,557.03 into the Federal Treasury. Uncle Sam is going to have to pay for it in two ways if a graduated tax is substituted. He will pay for the loss of revenue and he may have to pay to support the prices of a commodity that heretofore has never been on the sick list.

Mr. Berry said:

The organization for which I speak has been in the tobacco business as a grower organization for 29 years and since 1941 has been engaged under contract with Commodity Credit Corporation in the administration of the price-support program for Burley tobacco. It serves a membership of more than 225,000 tobacco growers in the States of Kentucky, West Virginia, Ohio, Indiana, and Missouri. In this extensive undertaking this organization's work has been highly successful and profitable for both the producers of Burley tobacco and the United States Government. It has demonstrated that the program for tobacco is practicable. This organization has a happy, harmonious, and loyal membership, and it therefore presumes to speak on behalf of Burley tobacco growers in opposition to a graduated tax on cigarettes as proposed by H. R. 2016 and the companion bills.

The production of a crop of Burley tobacco requires skill, hard work, careful planning, much equipment and capital, and practically all of the time of an entire year. Tobacco in the States named where our membership resides is the money crop and the agricultural economy of those States rests upon the culture of Burley tobacco in proportion to the extent it is grown. In Kentucky it accounts for better than 60 percent of the farm income of the State, and for doubtless 80 percent of the income of those producing it. It is therefore, the chief business interest of hundreds of thousands of the citizens of all the States mentioned. All engaged in its culture strive from 1 year's end to the next to produce a finer quality and better product to satisfy what for years has been a constantly growing demand of the smoking public's discriminating taste for the better-blended cigarette.

On the auction market, while the manufacturers of the costlier popular brands of cigarettes, buy both the highest- and the medium-priced tobaccos, the growers see those manufacturers buy the bulk of their burley crop for the manufacture of cigarettes at those prices which make the high market averages; and they know at once that but for the use of their product in cigarettes, and in the better popular brands, the price for the bulk of their crop would be distressingly low. And the fear of low prices haunts the memory of every tobacco grower.

The so-called economy brands now represent only as variously estimated from 1 percent to 3 percent of the market and therefore account for the disappearance of only a negligible part of the burley growers' production. They know that and for that reason oppose an arbitrary classification of cigarette manufacturers for tax purposes that would burden and handicap the class that provides them the principal outlet for the product of their work and sweat and investment.

The differential proposed is 30 percent. All people and all businesses strive to achieve a lower tax bracket. And it would be the vainest waste of time to think the manufacturers of the popular and costlier brands of cigarettes would not devise every conceivable plan to accomplish the possible saving in tax. By the proposal the Government would invite their doing so. While there may be many, three such obvious plans—all costly to the growers—are that manufacturers will buy the higher quality grades of tobacco at much lower prices, or refrain from buying them at all, or substitute cheaper lower quality grades at very much lower prices to the growers; and produce cigarettes that will easily enable them to maintain their position in the competitive market.

The choice of costlier tobaccos which, in the present market principally account for the tobacco farmers' highly satisfactory income, will inevitably pile up in the hands of this and other similar organizations under loans; and the program which has proven to be so practicable and profitable to growers and Government alike will be jeopardized by the burden of these dearer and undisposable tobaccos.

While it may not be admitted that the so-called economy cigarette is an inferior product it is by these bills classed, or distinguished, because of its cheaper retail price. Tradewise the classification is unwarranted for the economy brands and the high-priced brands compete in the same market and cater to the same taste. Each would displace the other. Competitors; therefore, the Government should treat them as equals, and not subsidize the one and burden the other in violation of the true and correct conception of an excise tax, and at the expense of the hundreds of thousands of bystanding tobacco growers for whom this organization speaks.

Public Interest in Organized Crime

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, February 28 (legislative day of Wednesday, February 22), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two of the many news articles written by Bob Considine, of the International News Service. Since they have to do with alleged national syndicates of gamblers and racketeers, these articles are particularly timely in view of the fact that yesterday the Committee on the Judiciary of the Senate approved Senate Resolution 202. This resolution authorizes the committee to investigate the use of the facilities of interstate commerce in furtherance of organized crime, which is in violation of the laws in the States where the crimes occur. The reports and conclusions set forth in these articles by Mr. Considine are additional evidence of the interest in ascertaining the full facts of this problem, and of having appropriate recommendations for legislation made to the Congress.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

HOODLUM EMPIRE
(Art. 1, February 13)

The subtle black stain of a hoodlum super-government, well protected politically, is slowly but surely spreading itself over the population centers of the United States.

Like communism, to which it has been compared by the director of the Greater Miami Crime Commission, it is superbly concealed, well-organized, and in some cases it has adopted the robes of legitimacy.

Unlike communism, it wallows in enormous profits, from gambling and other sources.

Abhoring violence as a rule, and letting cash and influence do their talking, the shrouded leaders of the hoodlum empire have expanded their influence from local police levels, to sheriffs, to mayors, to State legislatures, to governors, and either to—or toward—the Federal Government.

The national syndicate, which is operating more brazenly and with greater efficiency than ever before in the annals of crime, has its own cabinet, its own police forces, and what amounts to its own "foreign relations office"—emissaries and lobbyists planted in State capitals and apparently in Washington, D. C.

Wherever the syndicate moves, it corrupts.

William O'Dwyer, mayor of the Nation's greatest city, has publicly acknowledged that his own vast forces of law and order can no longer control one phase of the mob's operations—bookmaking. He has suggested, in effect, that the mob be legalized, in a desperate effort to stop the further pollution of New York police.

The mayors of such widely separated cities as New Orleans and Portland, Oreg., have informed their constituents that they are the targets of nationally operated mob efforts to remove them.

One branch of the national syndicate was powerful enough to make a deal with the elected officials of a certain Ohio city whereby on-the-lam hoodlums from other areas were given extra-territorial rights in that city, in exchange for the mobsters' protection of the city against lesser crimes.

In businessman roles, instead of frankly hoodlum roles, the national leaders of the syndicate have become powers in the political affairs of New York, Chicago, Detroit, Philadelphia, Atlantic City, Cleveland, Kansas City, Los Angeles, many smaller cities, and the States of Nevada and Florida.

Through campaign contributions and outright bribery, the syndicate has managed to reap favors that run the gamut from immunity to arrest to money-saving rezoning legislation for its ever-expanding real-estate holdings.

There is no racket too small to be overlooked. An honest Miami Beach councilman, Navy veteran, and lawyer, Melvin J. Richard, has told the Dade County grand jury that he was offered a $200,000-a-year income to countenance the operation of a simple punchboard racket.

The offer was made astutely, with a proposal to show him ways and means of remaining a white knight for better government. The gamblers' consternation was mighty when Richard rejected the offer. The syndicate's annual appropriation for "ice" (its bribes, political contributions, and sometimes ostentatious gifts to charities) can be estimated only by those accustomed to astronomical figures. The California Crime Commission, for example, estimates the "ice" for slot-machine protection alone at $400,000,000 in recent years.

The syndicate's armed forces no longer go in for such gaudy slayings as the St. Valentine's Day massacre. The top men of the organization continually counsel discretion, for shootings tend to rouse the suckers. The suckers, as any good syndicate man will tell you, are the people of the United States, ranging from the bootblack who plays his daily nickel on the numbers to high pressure $10,000-a-shot bettors who do business with the nigger bookmakers.

In the end, nobody can win except the men behind the bookie or the numbers writers. They have emerged from the underworld as reformed convicts of sometimes great standing in their communities. They know they cannot lose, for the American public will never stop gambling. They strive passionately for respectability, by and large, and stoop to violence only in great emergencies.

One of these emergencies arose a few years ago when Jack Le Tendre, New England gambler, resisted the attempt of New York gangsters to muscle into the rich sucker market of Broward County, Fla., which lies just to the north of Dade County—seat of Miami.

Le Tendre had built himself a nice place named La Boheme in Broward, where certain law officers now boldly permit the important New York mobsters Joe Odonis and Jake Lanskey to operate exclusively.

Le Tendre was told to split his swag from his gambling place or get out. He refused.

Then he made the mistake of returning to his native Woonsocket, R. I. He was murdered there—and thus the blood of the crime was kept off the record of the Miami area.

The others "play ball," content with the best set-up they've ever found in lives devoted almost exclusively to beating the law. They never had it better. They've found the perfect racket—gambling. And the perfect customers—an American public which refuses to take them very seriously, though these men are daily corrupting thousands of public servants.

The FBI cannot touch them because gambling, chief source of the syndicate leaders' income, is not a Federal offense.

The Treasury Department cannot touch them for, by and large, they pay their taxes almost religiously.

The Federal Communications Commission, which has power enough to put a radio-station owner out of business if he wears the wrong kind of necktie, either will not or cannot close down all the racing wire services which are the main arteries of the bookie business of the Nation.

If a man kidnaps another in this country, or transports a woman across a State line for immoral purposes, or steals a car and drives it out of the State, and is caught, the full weight of the Federal Government descends upon him, thanks to the Lindbergh, Mann and Dyer Acts.

But let him get caught operating a gambling game, which automatically means that he has spread incredible corruption in order to operate, and he pays a comparatively microscopic fine.

He has committed only a misdemeanor. The little jail sentence is usually forgotten.

Nobody in America can get very excited about the spread of gambling. The average American can see little moral difference between placing a legal bet on a horse at a track and betting on the same horse with a bookie, away from the track.

The same average American has been sold a nice bill of goods, too, on the character of the gambler with whom he does business. He thinks of him, at least when he's winning, as a fine home-loving fellow who is often the first to contribute to the bettor's favorite charity.

What he overlooks is that not one gambler of any dimension in the United States today can operate as an individual.

Everyone of any magnitude is a front man for an arm of the national syndicate composed of former and current gangsters with long records of murder, traffic in narcotics, kidnaping, extortion, prostitution, burglary, and what not.

There is absolutely no other way for a successful independent gambler to operate today.

He could set up his "book" in the middle of the Arizona Desert in the dead of night, but if he did a good business he'd shortly be working for the national syndicate, or he wouldn't be working at all.

The Nation-wide combination seems loosely knitted, for like all young empires it has its fraternal feuds, most of them based on territorial claims.

But the over-all picture shows a considerable cohesion, with a system of checks, controls, and counterbalances which makes the bawdy rule of the late Al Capone seem like a crude amateur's farce, performed for peanuts.

Like an octopus, the seemingly unrelated tentacles of the syndicate are in fact connected with a remote head.

The thing feeds voraciously on the venality of corrupt officials, the public's traditional apathy, the spew of respectability some of the top syndicate men emit, and the present inability of the American Government to combat the menace.

But jabbing at that head now are two determined United States Senators, ESTES KEFAUVER, of Tennessee, and JOSEPH MCCARTHY, of Wisconsin, and three public-spirited crime commissions, those of California, Chicago, and Greater Miami. They have demanded support from President Truman.

The counterattack inches slowly through labyrinths of circumstantial evidence. Sometimes the evidence is even flimsier. It is discouraging work, for the syndicate leaders have covered their trails superbly.

But the job goes on, for the men who are attending to it have uncovered enough to confirm their one great and appalling fear: that mob rule one day might supersede that under which 150,000,000 Americans now live.

(Art. 6, February 18)

How much money do Americans bet annually?

A confidential survey made for the Citizens' Committee of Massachusetts, Inc., places the figure at $21,500,000,000, a figure which does not include lotteries, raffles, carnival games, and other gambling facilities.

The survey supported its contention of vast gambling activities with the observation that some $28,000,000,000 in this country is now annually unaccounted for by Government expenditure statistics. Nor does this lost fortune show up in investment or savings-bank statistics.

It is reported that gambling on baseball now has reached the $5,000,000,000 a year mark, and that racing wire services controlled by the remnants of the Capone mob now stress baseball scores, in season, almost as much as racing results.

Most of the baseball betting, the survey showed, is done in New York, Philadelphia, St. Louis, Chicago, and Pittsburgh.

Betting on baseball in New York, it added, is "largely dominated by the Erickson-Costello group and its associates."

Before he died of bullets shot into him by Capone mobsters who wanted his business, "race wire king" James M. Ragen told police officers that Frank Costello's income from slot machines in Louisiana alone was $1,000,000 a year.

Costello denied that he is now associated with the slot-machine racket in that State or anywhere else, though his partner Phil Kastel, who once had White House habitue John Maragon on his pay roll, continues his gambling affiliations in the State.

No one can state with any complete conviction the scope of United States gambling.

But no one can deny that it is a breathtakingly big operation, and that the suckers are harvested by an efficient Nation-wide organization which has hosts of public officials in its pocket.

In some places the organization can operate successfully for reasons other than bribery. The Dade County (Fla.) grand jury last spring complained:

"We have been made keenly aware of the division of responsibility for the enforcement of the criminal laws in our community.

"There are the sheriff's department and the different police departments. There are the county solicitor's office and the State attorney's office.

"Such division of responsibilities leads readily to excuses for avoidance of responsibilities; to a 'hands-off' policy of matters which can be claimed to be within the jurisdiction of another official; to a cynical attitude that 'it is not within the province of my office or department to investigate so and such'; to a rendering impotent of our grand jury system."

In the same area a judge has ruled that citizens cannot come into his court to protest the presence in the community of known mobsters.

They must present their complaint to police authorities * * * which procedure tends to lead into the same blind alley of split authority mentioned by the grand jury.

In such a climate, the mobs make their progress.

In recent years it has become fashionable for top figures in the national syndicate to become associated in many legitimate businesses.

Frank Costello, for instance, is a holder of Wall Street property and other real estate in New York. He numbers among his friends an array of public servants, including judges, far removed from the arena of crime.

No one can tell how much else Costello, Erickson, Adonis, the Lansky brothers, Charles Fischetti, the Rosen mobsters, Mickey Cohen and others mentioned in this series really own.

Testimony taken during a court fight seeking to regain the Wofford Hotel of Miami Beach from the control of, among others, "Little Augie" Pisano, former Brooklyn racketeer, shows the difficulty of establishing who owns what and why.

Here are some of the bewildering questions and answers that came out of an interrogation of one of the defendants, Thomas A. Cassara. It was taken at Los Angeles on January 19, 1948:

"Did they ('Little Augie' and John Angersola, alias John King—a Cleveland gangster) ever tell you that they were the owners or were going to hold themselves out as being owners of the hotel?

"No, sir.

"Did you ever make any deal with them whereby they were to run that hotel?

"Well, if you want me to explain in detail——

"Just tell me if you made a deal with them.

"No, sir."

Then later:

"Who is Mr. King?

"This money I borrowed from him personally. He is a close personal friend of mine. His sole interest in the Wofford Hotel was to get back the return of moneys he had loaned to me.

"How much did you owe Mr. King and Mr. Kelly? (The latter is a reference to the late Jimmy Kelly, relative of "Little Augie" and former Greenwich Village night club proprietor and gambler.)

"I don't recall.

"Do you have the books to show it?

"They have."

And so it goes. Only the Federal Government, when empowered, will ever be able to unravel the mystery of deals, counter deals, links, counter links, half truths, evasions and the like which surround the operations of the syndicate chieftains and those on the outskirts.

Until the Federal Government does act, the several crime commissions will continue hammering away.

Often their accusations can be based on nothing more than the fact that this man of shady reputation is seen with that official of ostensibly good reputation—and curious things sometimes happen relating to that association.

But crime commissions have no police power. All they can do is urge the law-invoking authorities to take action. In this sometimes thankless and fruitless task, the voice of Dan Sullivan, Greater Miami's crime expert and former FBI man, is among the more eloquent.

"My own fear," he told me, "is that unless the trend toward gang government is stopped pretty soon we'll wind up with a secret hoodlum government greater than our Federal Government.

"The smooth leaders of the national syndicate, many of them now indistinguishable from reputable businessmen, are in fact so powerful that—by comparison—Al Capone was a piker * * * a stick-up kid compared to a hardened bank robber.

"They feed on a public failing which the public itself tends to condone—gambling.

"Gambling is like narcotics. The habit comes easy and is hard or impossible to stop. As a result, billions of dollars are being poured each year into a nonproductive operation, the national syndicate, and millions of it are being spent to corrode the officials who might stop the racket.

"We hear a lot to the effect that the boys have reformed; that their criminal records were compiled when they were fun-loving kids.

"That's a lot of bunk. They're still rotten, and if we can't get the Federal Government to clean them out, the very foundations of our society may collapse."

Distribution of Surplus Commodities

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. ROGERS of Florida. Mr. Speaker, the following is the list of State agencies, with addresses, authorized to approve applications for the distribution of surplus commodities held by the Commodity Credit Corporation to needy people within the State named.

It supplements the lists introduced into the RECORD on February 23 by the gentleman from Massachusetts [Mr. HESELTON], the gentleman from California [Mr. PHILLIPS], the gentleman from Oregon [Mr. ANGELL], and the gentleman from Iowa [Mr. HOEVEN]:

Florida: W. F. Catling, Director, Commodity District Welfare Department, 25 West Monroe Street, Jacksonville, Fla.

Alabama: A. R. Meadows, State Department of Education, 501 Dexter Avenue, Montgomery, Ala.

Georgia: J. T. DeFoor, Department of Education, 412 State Office Building, Atlanta, Ga.

North Carolina: J. P. Davis, Marketing Specialist, Department of Agriculture, Raleigh, N. C.

South Carolina: W. H. Garrison, State School Lunch Supervisor; Courtenay Bateman, Supervisor of Commodity District, 1230 Center Street, Room 212, Columbia, S. C.

Tennessee: T. Marshall Jones, Director, Department of Agriculture, 405 State Office Building, Nashville, Tenn.

Virginia: George Blake, Department of Agriculture, 1007½ East Main Street, Richmond, Va.

Tragic Plight of 28,000 Greek Children

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following resolutions adopted by the Greek-American Political Club, of Cambridge, Mass., urging use of the moral prestige of the United States to remedy the abominable crime of forcible abduction of 28,000 Greek children by the Communist forces:

Whereas Americans of Hellenic descent, and particularly those descendants from Greece, are deeply concerned that 28,000 Greek children have been forcibly abducted from their homes by the Communist forces and are presently detained in Yugoslavia, Bulgaria, Albania, Rumania, Poland, Hungary, Czechoslovakia, and the Soviet occupation zone in Germany; and

Whereas the members of the Greek-American Political Club, headquarters at 504 Massachusetts Avenue, Cambridge, Mass., at a meeting held at our headquarters the 2d day of February 1950, on motion duly made and seconded, it was unanimously resolved that—

1. This abominable crime against humanity in violation of the international authority of the United Nations' resolutions should be remedied at the earliest possible moment.

2. That the resolutions adopted by the General Assembly of the United Nations on November 27, 1948, and November 17, 1949, requesting the prompt repatriation of these children should be promptly enforced, in order that confidence in the United Nations shall be maintained.

3. The Secretary General of the United Nations, the International Committee of the Red Cross, and the League of Red Cross Societies are respectfully requested to continue their noble efforts toward implementation of the United Nations resolution pertaining to the return of the Greek children.

4. The President of the United States, the honorable Members of the United States Senate and the House of Representatives, and the United States Department of State, are respectfully petitioned to support through their moral and political prestige the United Nations' resolutions heretofore mentioned and to have their execution and implementation in mind when dealing with the Governments named above.

5. All American organizations and all individuals concerned with the preservation of elementary human rights and freedoms are called upon to demonstrate through their interest in this manner that the public opinion of the world's free countries is a decisive factor in winning battles for humanity.

6. That a copy of this resolution shall be signed by the President, Treasurer, and Secretary of the Organization and sent to His Excellency Harry S. Truman, President of the United States; the Honorable Alben W. Barkley, Vice President of the United States; the Honorable, Gen. Carlos P. Romulo, President of the United Nations; the Honorable Trygve Lie, General Secretary of the United Nations; the Honorable Dean Acheson, Secretary of State of the United States; Mrs. Eleanor Roosevelt, United States Representative to the United Nations; the Honorable Warren Austin, head of the United States Delegation to the United Nations; the Honorable Sam Rayburn, Speaker of the House

at Washington, D. C.; the director of the International Committee of the Red Cross at Geneva, Switzerland; the Honorable Leverett Saltonstall, United States Senator from Massachusetts; the Honorable Henry Cabot Lodge, Jr., United States Senator from Massachusetts; the Honorable A. Kyrou, permanent delegate of Greece to the United Nations; His Eminence Archbishop Michael of the Greek Orthodox Church; the Honorable Francis J. Myers, United States Senator from Pennsylvania; the Honorable John F. Kennedy, Member of Congress; the Honorable Christian Herter, Member of Congress; the Honorable John W. McCormack, the Honorable Philip J. Philbin, Members of Congress; and the Honorable Joseph Martin, Member of Congress and minority floor leader.

Respectfully submitted.

PETER G. PAPPADOPOULOS, *President.*
GREGORY LIACOPOULOS, *Secretary.*
PETER L. NICHOLAS, *Treasurer.*

Nixon to the Right—Douglas to the Left

EXTENSION OF REMARKS
OF
HON. THOMAS H. WERDEL
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. WERDEL. Mr. Speaker, important news articles in California yesterday announced that the Honorable SHERIDAN DOWNEY, Senator from that State, had withdrawn as a candidate for reelection.

It was general knowledge about 10 days ago that our colleague, the gentlewoman, Mrs. HELEN GAHAGAN DOUGLAS, from California, was given an audience at the White House and there was speculation at the time as to whether or not she would be the administration's candidate in the coming senatorial election in that great State.

Since then, Eleanor Roosevelt, the surviving wife of ex-President Franklin D. Roosevelt, has written favorably of Mrs. DOUGLAS in her column and advised us of a dinner that Mrs. Roosevelt held in her honor.

We are also informed through the press that the past Secretary of the Interior, Mr. Ickes, is going to campaign for Mrs. DOUGLAS in California, and that the CIO has endorsed her in the senatorial election.

It, therefore, seems important that the conference between the Honorable SHERIDAN DOWNEY and President Truman on which Senator DOWNEY said he would predicate his final announcement of his candidacy for reelection, was canceled at the White House today.

It will also be important to the people of California who will have a real opportunity to express the attitude of the State in regard to further Government ownership of business operations and control through subsidization of the economic activities of that State.

We in the House will be privileged to see our colleague the gentlewoman from California, Mrs. HELEN GAHAGAN DOUGLAS, standing on the left of that issue with the support of the administration as an opponent to the Honorable RICHARD M. NIXON as the champion of the American free-enterprise system.

For the first time in several years the issues will be clearly drawn for the people of California as to whether or not they want government by understandable laws or through Executive decrees.

H-Bomb—Right Thinking Can Make H-Bomb a Deterrent to Catastrophic War

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. PHILBIN. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include therein an editorial by Fred Burdick in the eighth anniversary edition of the Gist entitled "Right Thinking Can Make H-Bomb a Deterrent to Catastrophic War":

RIGHT THINKING CAN MAKE H-BOMB A DETERRENT TO CATASTROPHIC WAR

"Nothing is right or wrong but thinking makes it so."—Shakespeare.

Right and constructive thinking regarding the H-bomb and all improved methods of destroying millions of innocent children, women, and men in a few minutes can prevent such a catastrophe from happening. The danger is from the wrong thinking—the hatreds, resentments, fears, and suspicions—the thoughts of which wars are made. Right, Christian thinking will bring the peace everybody wants.

We are experimenting, not merely with new weapons, but with forces. And some scientists contend that chain reactions may get out of control with disastrous results. And such an authority on bacteriological warfare as Secretary General Brock Chisholm, of the World Health Organization, maintains that this weapon alone endangers humanity and warns that nations must learn to live together on this planet if they want to live.

When we recall what the black plague did to populations, we can give credence to the claim that man-made epidemics—purposely scattering many billions of germs—indeed menace all people of the civilized world and that the best chance of surviving a scientific war would be amongst the savages in the jungles of Africa, etc. The more realistic we are and the more we visualize the terrible possibilities of modern warfare the more likely we are to succeed in preventing such madness and getting the world on the road to peace, progress, and prosperity.

Top military men say no nation can really win a modern war. All would lose. Said Gen. Dwight Eisenhower in the New York Times of May 28, 1947:

"War is becoming more and more a matter of fire, famine and pestilence. We can make of this earth a flowering garden or a sterile desert."

He added that the stakes in this campaign (for peace) are not only civilization but humanity.

Many thinkers have held to the theory for long that in due time warfare would become so destructive and menacing to civilization and humanity that world leaders would have no alternative than to find and use peaceful means of solving international problems. That time has come. We have the necessary machinery in the United Nations, and all that is needed is for all its members to use its machinery, not just part of the time but all of the time, and to adhere to both the letter and the spirit of the great United Nations Charter. A life preserver is of no value to a drowning man unless he uses it.

What are the immediate, practical steps that can be taken to head off world catastrophe? The answer can be found in a Gist poll taken in recent months showing that 80.2 percent of the people and nearly as large a percentage of Members of Congress favored continuous efforts in the United Nations to reach agreement on control and reduction of all deadly weapons, including atom bombs.

HOTHEADS PROLONG THE COLD WAR—COOL HEADS CAN HASTEN WORLD PEACE

When spokesmen for great countries at United Nations meetings engage in tirades and "hit high C" in vituperative utterances, impugn motives, and make unfounded charges, such tactics intensify resentments, tensions, and fears, thus prolonging the cold war and delaying the day when nations can "beat their swords in plowshares" and devote their energies, resources, and wealth to constructive instead of destructive purposes, to creating instead of blowing up property, homes, and so forth. Although vitriolic ravings may make the headlines, fortunately for humanity and civilization cooler heads are really in control.

As to charges of "war mongering" the Gist can state that not one American Congressman wants to see a catastrophic, scientific, new world war. Top officers of the Army, Navy, and Air Forces have told congressional committees that they desire peace. The main purpose of the State Department is to build peace. And when President Truman says "I am working for peace and shall continue to work for peace" he means every word of it. There are diversities of roads to peace but there is but one goal. But to make progress we must have peace in our own hearts, and be sure we are on the right road.

Spokesmen for all major nations at the United Nations have declared that their governments want peace, which doubtless is true, but the fundamental prerequisite for dissipating the war clouds is eradication of or minimizing of international tensions, fears, suspicions, resentments, and hatreds. And we should add misunderstandings as they frequently are the basis of wrong conclusions, thinking, and emotions.

A black-out of all war talk by radio commentators and newspaper columnists, etc., and a cessation of expressions of ill-will and resentment toward world neighbors is suggested by Representative JAMES V. BUCKLEY, of Illinois, who believes such a thing would help tremendously in insuring world peace.

In concluding a recent NBC broadcast, Senator FRANK P. GRAHAM, of North Carolina, expressed the thought that world peace can be aided by recognition and practicing of the principles of the fatherhood of God and the brotherhood of man.

As we in America profess to be Christians, we should be the first to practice the Golden Rule: "And as ye would that men should do to you, do ye also to them likewise." It well has been said that the best sermon ever preached is setting a good example. Now may be a very propitious time to cut the vicious circle of an eye for an eye and a tooth for a tooth, and to substitute practicing Jesus' teachings.

Above all else just now, we need to have more faith in God and to know that there shall be fulfillment of, "And they shall beat their swords into plowshares and their spears into pruning hooks; nation shall not take up sword against nation, neither shall they learn war any more."

Economic Cooperation Administration

REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. WILLIAMS. Mr. Speaker, it is appalling to me to note the flagrant manner in which public funds are being used by bureaucrats to perpetuate themselves in office.

I hold in my hand a clipping from the Times-Herald under date of Tuesday, February 21, wherein it tells that the ECA is enlarging its publicity staff in the battle for funds. To quote a paragraph from this article, it says that the ECA Information Director, Robert Mullen, revealed that he is looking for additional former newspaper and magazine writers to act as press agents for the Marshall plan.

It goes on to say that we are spending $285,000 to propagandize domestically the Marshall plan and to build support within the United States for the Marshall plan.

I think, Mr. Speaker, that the Committee on Foreign Affairs and the Committee on Appropriations might well look into this domestic-propaganda campaign on the part of these bureaucrats before voting additional funds to that agency.

I include herewith the text of the news item:

ECA ENLARGING PUBLICITY STAFF IN BATTLE FOR FUNDS

(By Philip Warden)

The Economic Cooperation Administration yesterday enlarged its publicity machine in Washington as it girded for a stiff fight for its life in Congress starting today.

On the eve of a march to the Hill by ECA Administrator Hoffman and Secretary Acheson with a request for $2,950,000,000 to finance the Marshall plan another year, ECA put five new writers and a clerk on its information staff at an annual cost of $39,450.

SEEKING MORE WRITERS

In addition, a magazine consultant has been put on call for $50-a-day advice to the information staff when needed.

The ECA information director, Robert Mullen, revealed that he is looking for additional former newspaper and magazine writers to act as press agents for the Marshall plan. Present plans call for adding $61,000 to the $224,075 yearly expenditures of ECA's information section. Mullen has been authorized to spend up to $285,000 in this country on the ECA publicity machine.

Mullen said a big expansion also is under way in the information division of ECA in Europe. Expenditures there to tell Europeans about the Marshall plan are being boosted from $250,000 a year to $8,000,000. Part of the eight million will come from foreign currencies collected from the sale of Marshall plan goods by the European governments.

LIAISON WITH UNITED STATES INFORMATION SERVICE

Mullen listed the new staff members as:

Andrew Berding, former $10,000-a-year man in ECA's information office in Rome, who will serve as Mullen's deputy and function primarily as liaison officer between ECA and the State Department's propaganda machine, United States Information Service.

Hugh Latham, new special assistant at $6,400 a year. Latham formerly worked for the American Telephone & Telegraph Co. and Fortune magazine.

Harry Shinnick, former Washington newspaperman, a writer at $7,600 a year.

Willard Savoy, young Negro author of the book Alien Land. He will serve as a speech and magazine writer at $7,600 a year.

Norton Wood, picture editor of This Week magazine. He will take a leave of absence to work for ECA as an information specialist on pictures at $6,400 a year.

Thomas Mahoney, an employee of Young & Rubicam, New York advertising agency, consultant on the placement of magazine articles by ECA writers.

Mary Louise Parks, secretary to Helen Hamilton Woods, special consultant who directs ECA's propaganda to clubwomen.

The ECA press staff is expecting rough going before Congress for the next several weeks as the Foreign Affairs and Appropriations Committees of the House and Senate debate extension of the Marshall plan and its appropriation.

Tennessee Valley Authority Financial Statement

EXTENSION OF REMARKS
OF
HON. KENNETH McKELLAR
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, March 1 (legislative day of Wednesday, February 22), 1950

Mr. McKELLAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a financial statement of the Tennessee Valley Authority.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

TENNESSEE VALLEY AUTHORITY

Total funds made available to TVA and total investment as of June 30, 1949

1. Appropriations	$766,562,331
2. Transfer of property from other agencies	41,902,121
3. Proceeds from the sale of bonds	65,072,500
4. Net income from power operations	[1] 130,128,901
Total funds provided	1,003,665,853
5. Less following amounts:	
(a) Bond redemptions	13,572,500
(b) Payments to Treasury	33,970,333
(c) Net expense of non-income producing programs	115,299,795
Total	162,842,628
Total investment, June 30, 1949	840,823,225

[1] The net income from power operations figure of $130,128,901 is arrived at in the following manner:

Gross income from power	$366,687,585
Less following amounts:	
Depreciation	81,889,079
Interest (net)	5,180,538
Other expenses	149,489,067
Total	236,558,684
Net income from power	130,123,901

Total funds made available to TVA and total investment as of June 30, 1949—Con.

Funds paid into the Treasury:	
(1) From power proceeds	$26,059,019
(2) From activities other than power	7,911,314
Total	33,970,333
(3) Bonds retired from power proceeds	13,572,500
(4) For interest	6,325,407
Total	53,868,240

INVESTMENT IN POWER PROGRAM OF TVA

EXHIBIT I.—*TVA power program assets,*[1] *June 30, 1949*

The power investment includes the following assets:	
Completed plant in service	$510,433,479
Less reserve for depreciation	79,001,062
Net plant in service	431,432,417
Funds held for future use under sec. 26, in the form of cash and current receivables	5,174,680
Long-term receivables	17,282
Inventories	7,639,544
Total assets employed in power program	444,263,923
Construction in progress	28,483,065
Total	472,746,988
This investment was financed with capital from the following sources:	
U. S. Treasury funds:	
Appropriations and transfers of property:	
Total	317,177,105
Less payments under sec. 26	26,059,019
Net outstanding	291,118,086
Bonds:	
Issued	65,072,500
Retired	13,572,500
Net outstanding	51,500,000
Total U.S. Treasury funds outstanding	342,618,086
Earnings of the power business:	
Gross earnings	136,454,309
Less interest paid	6,325,407
The remainder represents the net earnings invested in power assets, including $39,631,519 paid to the Government for retirement of bonds and as an offset to appropriations and $90,497,383 used directly in the business	130,128,902
Total	472,746,988

[1] Exclusive of general assets not segregated by programs and exclusive of construction in progress relating to multiple-use facilities at projects for which an allocation of costs to programs has not yet been made.

EXHIBIT II.—*TVA power income and expense, by years, summarized from annual financial statements*

Fiscal year	Operating revenue	Operating expenses	Depreciation provisions and amortization	Net operating revenue	Interest income	Gross earnings
1933-1938	$6,732,447	$3,870,994	$3,610,118	($748,665)	$164,946	($583,719)
1939	5,507,077	2,332,604	1,731,593	1,442,880	95,954	1,538,834
1940	15,285,074	7,081,735	3,615,623	4,587,716	143,595	4,731,311
1941	21,137,371	9,264,242	4,546,547	7,326,582	148,798	7,475,380
1942	25,329,954	15,819,351	5,230,350	4,280,253	136,078	4,416,331
1943	31,674,210	11,935,739	[1] 7,937,886	11,800,585	126,559	[1] 11,927,144
1944	35,429,546	13,815,808	[1] 9,876,468	[1] 11,737,270	115,045	[1] 11,852,315
1945	39,383,231	12,891,642	[1] 8,885,757	[1] 17,605,832	102,409	[1] 17,708,241
1946	35,264,545	9,875,814	8,605,731	16,783,000	78,591	16,861,591
1947	44,144,090	13,588,931	8,716,410	21,838,749	25,198	21,863,947
1948	48,769,524	22,328,321	9,264,755	17,176,448	5,299	17,181,747
1949	58,030,516	26,683,886	9,867,841	21,478,789	2,398	21,481,187
Total	366,687,585	149,489,067	[1] 81,889,079	[1] 135,309,439	1,144,870	[1] 136,454,309

[1] Reflects accelerated amortization of electric plant acquisition adjustment by write-off against accumulated earnings: 1943, $2,000,000; 1944, $3,000,000; 1945, $1,000,000.

EXHIBIT III.—*Return on the TVA power investment*

Fiscal year	Average investment [1]	Gross earnings	Annual return on investment
			Percent
1941	$190,000,000	$7,475,380	3.9
1942	220,000,000	4,416,331	2.0
1943	295,000,000	13,927,144	4.7
1944	360,000,000	14,852,315	4.1
1945	390,000,000	18,708,241	4.8
1946	400,000,000	16,861,591	4.2
1947	400,000,000	21,863,947	5.5
1948	405,000,000	17,181,747	4.2
1949	430,000,000	21,481,187	5.0

SUMMARY

Fiscal year	Average investment	Gross earnings	Annual return on investment
			Percent
1934-40, 7 years. (development period)	$60,000,000	$5,686,426	1.4
1941-49, 9 years	345,000,000	[2] 130,767,883	4.2
1934-49, 16 years	220,000,000	[2] 136,454,309	3.9

[1] Average net book cost during the year of plant in service plus long-term receivables and an allowance for inventories and general plant used for the power program.

[2] Reflects accelerated amortization of electric-plant acquisition adjustments by write-off against accumulated earnings: 1943, $2,000,000; 1944, $3,000,000; 1945, $1,000,000.

EXHIBIT IV.—*Disposition of gross TVA power earnings*

Fiscal year	Gross earnings (from exhibit II)	Disposition of gross earnings			
		Interest	Bond retirement	Paid to U. S. Treasury (sec. 26)	Used directly in the power business
1933-39	$955,115	$60,479			$894,636
1940	4,731,311	432,082			4,299,229
1941	7,475,380	484,602			6,990,778
1942	4,416,331	742,978			3,673,353
1943	[1] 11,927,144	778,291			[1] 11,148,853
1944	[1] 11,852,315	736,624	$2,000,000		[1] 9,115,691
1945	[1] 17,708,241	726,207	2,000,000		[1] 14,982,034
1946	16,861,591	647,867	2,300,000	$7,087,741	6,825,983
1947	21,863,947	615,570	2,272,500	7,971,278	11,004,599
1948	17,181,747	563,936	2,500,000	8,000,000	6,117,811
1949	21,481,187	536,771	2,500,000	3,000,000	15,444,416
Total	136,454,309	6,325,407	13,572,500	26,059,019	[2] 90,497,383

[1] Reflects accelerated amortization of electric plant acquisition adjustments by write-off against accumulated earnings: 1943, $2,000,000; 1944, $3,000,000; 1945, $1,000,000.

[2] $5,174,680 is in the form of cash and current receivables, a share of which will be paid to the Government within the current fiscal year.

Salute to Rotary

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1950

Mr. RODINO. Mr. Speaker, may I add my personal salute to Rotary International by including herein the following editorial which appeared in the Nutley Sun, Nutley, N. J., of February 24, 1950:

SALUTE TO ROTARY

Rotary International is 45 years old today. From a simple group of five or six young businessmen in Chicago who formed a habit of lunching together once a week, it has grown into a membership of 334,000 business and professional executives with 6,907 Rotary Clubs in 82 countries of this world.

There is a serious purpose behind Rotary. It sings with its meals, but it is no singing society. Rather, rotary is a world forum for men determined to promote a better understanding of all humans in the interests of world peace. Red Russia, bent on aggression, bans Rotary, and that is understandable and a wonderful tribute.

Rotary has assigned itself two missions. By monthly publications it reports the progress of the United Nations, to strengthen its prestige. Having raised $2,000,000 for an endowment fund it now selects 56 rotary fellows annually to go abroad for advanced study, thus spreading a wider knowledge of world affairs to further peace.

Both motives are excellent. By its application to its mission, Rotary fulfills its purpose to foster the ideal of service.

God, Man, and the Hydrogen Bomb

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 1 (legislative day of Wednesday, February 22), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by me on the subject God, Man, and the Hydrogen Bomb, delivered at the Washington Cathedral, in Washington, D. C., on February 22, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

GOD, MAN, AND THE HYDROGEN BOMB

It is with deep feeling of humility that I address myself to the subject of the day—God, Man, and the Hydrogen Bomb. But man cannot escape coping with the harsh realities of international life. Man today spends more of the earth's resources, his wealth, and his genius on preparation for war and the ultimate destruction of human and religious values than he does on the creation of a living society based on the eternal religious principles of human brotherhood.

What the United States, for example, spends each week for military defense is what the Federal aid to education program proposes to spend for one whole year, and is as much as is being planned to spend for public health for one whole year, or for rural electrification for one whole year.

We meet here today on Ash Wednesday. We, with the millions in Christendom, today enter the lenten season. We begin the search into the recesses of our own souls; we come to grips with the facts of our own human inadequacy; we come to the ultimate realization that unless man prepares himself to commit an act of faith, he and his civilization may disintegrate.

On January 31 the President of the United States ordered the construction of the hydrogen bomb. On February 2 a noble American, Senator BRIEN MCMAHON, of Connecticut, chairman of the Joint Congressional Committee on Atomic Energy, made vivid for the American people the significance of the President's announcement. He challenged the world to turn from a path toward war and build for peace.

On February 4 a group of 12 of the country's leading physicists warned that one hydrogen bomb could wipe out any city in the world and release such enormous masses of lethal radiation as to make the affected area forbidden to habitation of human beings for perhaps centuries to come. They pleaded: "We believe that no nation has the right to use such a bomb no matter how righteous its cause. This bomb is no longer a weapon of war, but a means of extermination of whole populations. Its use would be a betrayal of all standards of morality and of Christian civilization itself."

On February 6, another distinguished American, the chairman of the Senate Armed Forces Committee, Senator MILLARD TYDINGS, declaring that "armies are not the answer to the settlement of international disputes," urged that the United States call an international conference for the specific purpose of achieving complete world disarmament.

On February 12 the world's leading scientist, Dr. Albert Einstein, stated that "the idea of achieving security through national armament is at the present state of military techniques a disastrous illusion * * * radioactive poisoning of the atmosphere

and hence annihilation of any life on earth has been brought within the range of technical possibility."

The threat of physical destruction is obvious to all serious and informed persons. Whatever faith in inevitable progress which those of us reared in the liberal tradition may have had is seriously shaken. Not only is the threat of physical disaster a grave one for the future of mankind, but the chronic threat of war, even without its advent, must inevitably create a state of perpetual crisis and resultant loss of human freedom. Fear can result in placing the control of man's destiny in the hands of just a few. Decisions in such an atmosphere must give special weight to the advice of those who specialize in violence. Under the stress of continuing war tension, the body politic may well transform itself into a garrison-prison state.

In much of the globe this process has gone far already. If the crisis continues, the process can appear in every country. Its success may call for no revolutionary seizure of power by totalitarian forces. The process has more in common with man's struggling in a bottomless bog.

The United States stands in 1950 at a high point of power. American strength is at present supreme from the Stetein-Trieste line and from Greece and Turkey westward to southern Korea and Japan. Command of the seas and the possession of land and carrier-based bombers which extend military might into the interior of continents have created a sphere of power which no nation in the history has ever approached.

The hard truth, however, is that while America stands powerful the idea of democracy which it represents is losing strength in the world.

In 1945 the hopes of the peoples of the world were stirred when the United States put aside its traditional reluctance to play an active role in international organizations and played host to the United Nations Conference in San Francisco. The world looked to us, unscarred by the war, with our resources relatively untouched and our factories in full production, to lead in a harmonious search for lasting peace. In Europe, in Asia, in Africa—wherever men gathered—people recalled the hopes of the four freedoms and the promises of the Atlantic Charter.

What has happened? Today, in the spirit of Lent, Americans seek an explanation and yearn for a solution. The fear and mistrust within nations today is too obvious to need documentation. It is that which produces atomic and hydrogen bombs. Yet, in spite of possessing a stock pile of atomic bombs, and spending more than $15,000,000,000 a year on military preparedness, many Americans are still insecure. Here is further justification for further self-analysis and inquiry into better ways of seeking security and peace.

It is true, as our Secretary of State recently noted, that continuous self-criticism is a quality of all free people. It is an excellent quality. It comes only from freedom, and as he said, were its exercise permitted wherever men gather, the world would be much nearer peace.

How gratifying it would be were the citizens of the Soviet Union free to join with us in this lenten season to explore our consciences, criticize our governments, and join a world of free peoples in seeking a new approach toward our goal—peace, world brotherhood, and security.

Is it not our responsibility continuously and with perseverance to hold forth to the peoples of the world this dream and our hope for its fulfillment? Who can say that our voices would not reach through the barrier and give hope and inspiration where despair and hostility now rest?

Let us not ignore the deep-rooted contradictions between democracy and totalitarianism of any form, whether it be Communist or Fascist. Let us never cease expressing our indignation toward slavery, nor our vigilance in behalf of freedom. So long as there is oppression or injustice or totalitarian power in the world, there is conflict. We must, however, lift conflict out of the realm of war.

Our responsibility is to tell the peoples of the world that we, temporarily the mightiest of nations, are ready to join in an international effort to abolish war. We must resolve to take some of the imaginative daring which we have shown in the physical sciences to start a chain reaction among the peoples and governments of the world against this madness and insanity.

Here lies our strength. With a positive reaffirmation of our democratic faith, with a determination to protect freedom and resist totalitarianism, with an unequivocal declaration in behalf of an international agreement to abolish war and for universal disarmament, America would gain for itself moral supremacy in the world, and recapture, in the eyes of the world, leadership for peace.

The necessity for renewed and continuous negotiation is greater than ever before. Not only peace but our national interest impels us to make new efforts to negotiate. Once America gives up her active search for peace we lose all hope of reaching the peoples behind the iron curtain; we lose our ties with friendly peoples who hope for peace but see our bombs and fear war; and, perhaps most important, we lose the basic moral purpose which is the fabric of our democratic way of life.

History offers many examples of mortal conflicts between great movements which, with the passing of the years and the cooling of passions, have found it possible to resolve their conflicts without war. The conflict between the Moslem and the Christian worlds was finally resolved by the destruction of neither, in spite of the Moslem slogan "Face Islam or die."

Our first concrete proposal to the leaders of the Soviet Union must be to set up a conference on universal disarmament—universal not unilateral—with international guaranties of security. It is the responsibility of our heads of state to make unmistakably clear to the leaders of the Soviet Union our plans for such a positive proposal and issue an invitation that they join with us in submitting such a proposal to the United Nations.

We must also make it perfectly clear to the leaders of the Soviet Union that the alternative to peaceful negotiations and settlement could well mean turning the world into a battlefield which would make it the graveyard for the human race.

Our proposals for disarmament should include the absolute prohibition of the manufacture of weapons for mass destruction, limited not only to atomic and hydrogen bombs but to conventional armaments as well. We should stand ready to consider practical suggestions as to how necessary supervision and control can be exercised. We should stand ready to turn over our own stock piles of destruction to the United Nations as part of such an international agreement and in concert with all other nations of the world.

Significant as was the original Acheson-Lilienthal report from which the Baruch plan was devised, we must stand ready to broaden it by extending its coverage to all weapons. Now is the time to reexamine our original proposals and recognize the need for modifying them in the light of developments since 1946.

Our disarmament proposal must also include with it a plea for universal abolition of peacetime conscription. It is unnecessary to train young men and women for war in a world society dedicated to peace.

Such a program to be effective must be accompanied by provisions for a police force to maintain international security. The United Nations must be transformed into an organization capable of enforcing peace under law.

Carrying the banner of such an international program, the United States will find itself in partnership with the entire non-Soviet world. With such a program we present the leaders of the Soviet Union with a challenge. It is a challenge not only to its military power but to its very purposes, which are the ultimate roots of its power.

We would be affirming our faith that in the conflict of ideologies between democracy and Communist totalitarianism, democracy will prevail and we would be proclaiming to the leaders of the Soviet Union, "Dare you affirm less for your faith in communism?"

To strengthen our faith in democracy it must be an essential part of our international policy to enact a program for civil rights. Such a demonstration is essential if we are to convince the peoples of the world, particularly the millions in Asia and Africa, that we sincerely believe in democracy and human equality. It will be impossible for us to enlist the active support of the overwhelming numbers in the world who are colored and it will be impossible for us to gain their friendship so long as they come to equate American democracy with racial discrimination.

Our international policy must also encompass within it an economic program. President Truman's point 4 program must be the central focus of such an economic proposal. Our President said: "We must embark on a bold new program for making the benefits of our scientific advances and industrial progress available for the improvement and growth of underdeveloped areas." It is essential that such a program be conducted through the United Nations and its specialized agencies. It must also encompass within it the vision of an interrelated world economy in which our Government, as the wealthiest in the world, makes a substantial contribution in a joint international effort against the enemies of men—hunger, misery, and despair.

With such a program we demonstrate to the Russian people, and certainly to the peoples of Asia, Africa, and Europe, our basic striving for peace, for understanding, and for international justice. Let any Government who refuses our offer then face the responsibility in the eyes of the peoples of the world for continuing the race of humanity toward destruction.

At this moment in history the helpless and teeming millions of people, citizens of the world, anxiously look for a declaration of American foreign policy which will provide them with the hope that war is not inevitable and that peace can indeed be a reality for them and their children. Having offered our willingness to join as partners in the struggle for peace and against the real enemies of mankind, hunger, and poverty, we would gain for ourselves the friendship and loyalty of all the peoples of the world.

Here is a moral alternative to world chaos.

The Rise or Sunset of Peace

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, March 1 (legislative day of Wednesday, February 22), 1950

Mr. MORSE. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address

entitled "The Rise or Sunset of Peace," which I delivered before the American Association of School Administrators, National Education Association, at Atlantic City, N. J., on February 26, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE RISE OR SUNSET OF PEACE

Mr. Chairman, members of the American Association of School Administrators, and guests, it is a great honor to be invited to address this convention. In these very critical days of world affairs it is a serious responsibility for a Member of the United States Senate to undertake a public discussion of any phase of American foreign policy.

I undertake that responsibility tonight because I think it is very important that the American people face up to world trends. It is particularly important that our educational institutions and the educators in charge of them marshal their forces of enlightenment behind the cause of winning the peace.

As one who taught for 20 years in various American colleges before entering political life, I know that America's educational system can be a very effective force in enlightening the American public on the facts of any great problem. Once the American people are fully informed about the facts in respect to world trends, I have complete confidence in their judgment on any proposed course of action. Each generation is called upon to face and solve at least one great crisis of its time. It is most likely that our generation will witness the sunrise or sunset of peace. The events of history written on the pages of our generation will determine the destiny of America, and for that matter of the world.

The American people—and not the American Government—will determine in the next few years whether the world will see a new birth of freedom or an autopsy of democracy—a sunrise of peace, or the dusk and darkness of war.

The Voice of America needs to be heard throughout America as well as throughout the rest of the world. Schools and colleges of our country—each and every one of them—need to throw their educational forces behind the cause of winning the peace. This is no time for a hush-hush policy on the part of school administrators when it comes to the use of school facilities for disseminating information about world affairs. The schools must help instruct the American public on the facts of the international situation. They must encourage faculty members, and students, too, to participate in public discussion on the many controversial issues that must be considered and solved in accordance with the facts if we are to win the peace. Some way, somehow, we must lead the American people to an enlightened understanding of the fact that peace does not just happen. Like war, it is the outgrowth of causes. Never was it more important that academic freedom in the sense of searching after and presenting the truth should prevail in America.

We must educate our people to an understanding that peace can result only from forging a chain of human causation. The struggle for peace, which is the major crisis of our generation, is a struggle for men's minds rather than for their emotions. It is a struggle for human decency rather than for human debauchery. It involves an appeal to reason. Peace can be won and maintained only if we can convince the American people and freedom-loving people elsewhere in the world that rules of reason, procedures of international justice, relinquishment of many selfish interests must be substituted in the thinking of people everywhere for the emotional nationalism that still dominates the world in spite of all our laudatory efforts to set up a system of international justice through law by way of the United Nations.

We need to face the fact that we will not see the sunrise of peace this year or next, but unless we see at least some of those early hour rays of a dawn of peace in the near future, mankind may awaken only to die in the pitch blackness of war.

Every institution of enlightenment in America, including the church, lodge, press, radio—every group where free men gather—and particularly the school—should join forces in the struggle for peace. We cannot win the peace by wishing for it, nor by blaming the politicians because we do not have it, nor by adopting the fatalistic attitude that war is inevitable, nor by placing all the blame on our enemies in the cold war now gripping the world.

We Americans need to ask ourselves some very blunt questions and be willing to face the realities of the answers. Are we adopting an escape from reality attitude in America toward the problems of winning the peace? Certainly, the answer is "No" if we are to be judged from the standpoint of our support of the United Nations, our spending of billions of the taxpayer's money, in the defense of Europe militarily and in the economic rehabilitation program for Europe under the Marshall plan. The answer is "No" if we are to be judged by the materialistic contributions we have made to date in many parts of the world to those people who have taken a stand for the freedom of the individual. Yet the fact remains that we have done none too well in holding our own in the cold war.

Seeking to analyze the problems which confront us in this fight to win the peace, we should not disparage or discredit the great contributions and many noble deeds which our Government and our people have performed for the cause of peace since the end of the war. It has been a glorious record—not deserving much of the criticism which has been heaped upon it. However, there is a great danger that because things do not seem to be going very well at the present moment, a feeling of hopelessness and discouragement will overcome the American people and they will acquiesce to the propaganda that is abroad in the land today that what we should do is walk out of Europe, turn our backs on Asia, build up huge armaments and defenses on our own land and try to live unto ourselves alone.

As I go across this country, I find it very reassuring that most Americans recognize that a return to isolationism would surrender most of the rest of the world to Russia and endanger our own survival as a free nation. Still we all know that the sands of public opinion frequently shift. We know that the immediate economic well-being of the American people is bound to have a very important effect on their opinion in respect to any proposal involving American foreign policy. If serious economic restrictions should come to characterize our economy within the next few years, those with an isolationist point of view would be able to exercise a much greater influence on American public opinion than they are able to do at the present moment. That is why I believe that the greatest defense weapon America has is a sound domestic economy.

The greatest answer we have to communism is to demonstrate the superiority of a capitalistic economy over the totalitarianism of a Russian state economy, or for that matter any other form of a state economy. That is why I say that a balanced budget, substantial annual payments on our national debt, a revision of our tax structure aimed at eliminating the gross equities which are now in it, the adoption of legislative policies which will carry out the constitutional intent of promoting the general welfare of our people within the framework of the checks and balances of our Constitution are just as much essential elements of a sound defense program for America as are the necessary military defenses.

As a member of the Armed Services Committee of the Senate, I have no hesitancy in telling you that at this critical hour there can be no let-down in America's defense program, but among the many things we must do in building that program is to take the steps necessary to stabilize our economy and demonstrate to the world that the economic freedom which characterizes our capitalistic economy can be a disciplined freedom of a united people devoted to promoting the common good. It is with kindness, but with frankness, that I say that American schools and colleges can and should do a much better job of educating the American people to a clearer understanding of the direct relationship between their political freedoms and their economic freedoms.

I'm afraid that too many people have forgotten that our economic system and our political system are inseparable. We cannot have individual rights and liberties as set out in our Constitution under any form of state economy. We cannot maintain the political freedoms guaranteed the individuals by our democratic government as we start down the road of a state economy. Political democracy and economic democracy are inseparable. They constitute what we mean by our American system of self-government.

Although the foundation principle of democratic government to which I refer appears to many people to be an abstract one, I would caution you to remember that it is an exceedingly concrete one measured in terms of your rights.

This country of ours was founded primarily upon the basic democratic principle that the spiritual value of the individual citizen is the very core of self-government. One cannot read the Constitution nor the Declaration of Independence nor the great debates out of which was born this Republic without recognizing the fact that our founding fathers believed that a society of free people must rest upon a devotion to the spiritual value of the individual person. They considered that the primary purpose of a democratic form of government was to protect the dignity of the individual. They realized that the individual human being is the creature of the Almighty and that to exploit and debase the individual person is a sacrilegious offense.

It is very difficult to reconcile in the interest of peace the political philosophies of communism and democracy, but we must try to find some basis on which the two philosophies can live in peace in the world. I say that because if we are going to avoid a war which would result in the killing of millions of human beings living under both Communist and democratic governmental systems today we must face the cold, hard fact that some mutually satisfactory understanding for peaceful relationships must be reached.

I am not one of those who believe that the Russian people are being held in complete subjugation or in involuntary servitude by the Russian leaders. The evidence is very much against such a point of view, although there are those in this country who are trying to convince us that the Russian pepole are entirely out of sympathy with the Communist regime.

It would be rather reassuring and hopeful if one could believe that the Russian people are anti-Communist. The facts, however, point to the contrary. The facts indicate that the Russian leaders have succeeded so well with a program of indoctrination and propaganda since the Russian Revolution that the Russian people generally believe the communistic form of government offers the only hope of survival for them.

We Americans need to remember that the Russian people have been convinced that we intend to make war upon them and that they must proceed as rapidly as possible to prepare for that war, no matter what the personal sacrifice and hardship may be. It appears evident that the Russian people are making tremendous sacrifices and undergoing great hardships in carrying out the propaganda dictates of the Russian politburo.

Part of the Russian strategy is a program of infiltration into the free governments of the world so that in case of another war the Communists will be in a position to do internal damage to those free governments including our own. This tactic of infiltration is characteristic of totalitarian techniques as used by Hitler as well as by the Russians. We cannot ignore the fact that a spread of the communistic philosophy in America is itself a threat to the great spiritual values of our form of government.

Although we must recognize this danger we must be careful at the same time not to become alarmists. We must be careful not to become Red-baiters in the negative sense.

But on the other hand we must not close our minds to evidence and proof of Communist infiltration into our American institutions.

Shortly, in the Senate of the United States we will be debating a proposal to appropriate funds for the extension of the Marshall plan another year. Already the ghosts of isolationism are stalking the corridors of the National Capitol—already some Senators are proposing to stop all Marshall plan appropriations and others are proposing to cut them so drastically that the plan will break down. Statesmanship calls for finding the answer to the question, "How much money is needed to complete the job of economic rehabilitation in Europe and how much of it can America make available this next year consistent with maintaining our own economic strength here at home?"

The evidence is clear that the early success of many phases of the Marshall plan will justify considerable reductions in previous estimates of the amount that will be needed this year. It is also clear that the Marshall-plan countries need to demonstrate a greater willingness to develop economic unity among themselves and eliminate the costly trade barriers within Europe which for so many decades has created a European pattern of economic nationalism.

The schools of America have a job of informing the public in regard to the economic problems involved in operating the Marshall plan. Query—Will they do it? It is part of the job of winning the peace because unless the American people develop a better understanding of the direct relationship between the economic rehabilitation of Europe and the peace of the world, those of us in the Congress who are supporting the Marshall plan will have great difficulty in preventing a scuttling of the economic phases of America's foreign policy.

That leads me to comment upon the direct relationship between the maintaining of a nonpartisan or bipartisan foreign policy and winning the peace. We shall see in our generation the sunset of peace if the American people allow themselves to become disunited over foreign policy. If partisanship replaces nonpartisanship in American foreign policy, every Communist in America and the Russian leaders in the Kremlin in Moscow will rejoice. I am satisfied that part of the infiltration tactics of the Communists is to divide us on questions of foreign policy. Here again the schools of America can function in the front lines of the fight for peace by providing the forums and spreading the truth concerning the facts of foreign affairs.

There is considerable talk these days in Washington, and elsewhere, about having the leaders of our Government, and possibly of one or two other governments, make an approach to the Russian leaders for a settlement of the issue of the atomic bomb and now the hydrogen-bomb control by agreement between them. It would appear that there is some attempt to make a partisan issue of such a demand.

I seriously question the advisability of such an approach to the Russians. I regret the partisanship of the attempt to politically embarrass our President in case he does not agree to such an approach. The United States is a member of the United Nations. I believe that the best hope for peace is to be found through strengthening the United Nations—not circumventing it or weakening it. America's participation in the United Nations, in the first instance was the direct result of a unity of action on a bipartisan basis of the leaders of the two major political parties in this country.

It is a sad fact that there have been many instances in which the spirit of bipartisanship, which characterized the great San Francisco Conference at the time the United Nations was born, has not prevailed in some other international conferences. However, mistakes in applying the principle of bipartisanship do not justify repudiating the principle. There is a growing confusion in America as to what our foreign policy is. The American people seem to be developing feelings of fear, doubt, and almost hysteria concerning our foreign policies and the trends of world affairs.

A world full of people worried by fear, nations feverish with war psychology, national economies spending more for armaments than for human welfare, time races in competitive construction of atomic and hydrogen bombs, spell war—not peace. In my judgment, the time has come for the American people, the Russian people, and the mothers and fathers everywhere on the face of this world to recognize that present world trends, unless changed, will lead to war. We will witness a sunset not only of peace but of human happiness for generations to come unless the leaders of our generation succeed in laying the foundation, as Senator VANDENBERG has put it, of a world order based upon international justice through law.

It is my hope that you will give thoughtful consideration to the view that it is of great importance to the people of the world that the American people maintain a united front in support of a bipartisan foreign policy. That policy must seek to strengthen the forces of freedom in the world by establishing a world order capable of substituting international judicial decrees for hydrogen bombs as a means of settling international disputes.

As Nehru of India declared during his trip to this country, "There can be no doubt that a world government must come—for the only alternative is world suicide."

Yet, as we sit here tonight, we should not ignore the fact that there are forces at work in America seeking to prejudice the thinking of our people into an acceptance of a partisan approach to foreign affairs. They are appealing to the selfish motives of those who would place immediate economic gains for themselves and the Nation above the long-time security of peace. Their isolationist program is directed at the present moment at scuttling a bipartisan foreign policy. They have seized upon imperfections and mistakes in that policy as affording them an opportunity to play politics with the security of our Nation.

Recent statements by prominent Members of the Congress, highly critical of the past, present, and supposed future policy of the United States in China and Europe, raise serious questions as to America's future course in international relations.

Is the United States on the verge of another postwar era of narrow nationalism and isolationism? Is the Republican Party about to abandon the principle of a bipartisan foreign policy which Senator VANDENBERG, one of its main architects, has rightly called our best available insurance for peace?

How strong are the forces that would have America embark on an imperialistic course, characterized by dollar diplomacy and the conditioning of further Marshall-plan aid on the recipient countries adopting different policies in the conduct of their own domestic affairs?

At the Philadelphia convention in 1948, the Republican Party solidly backed the principle of bipartisanship. The platform there adopted, in anticipation of a Republican victory, pledged that the minority party would be invited to join in stopping partisan politics at the water's edge.

The Democrats likewise have repeatedly pledged a bipartisan approach to foreign-policy problems. Those who sneer at the bipartisan program need to be reminded that differences over means of implementing a united American position in international relations do not justify scuttling the principle. Rather, the shortcomings which have developed point out the need for perfecting the mechanics of cooperation.

The reasons for a bipartisan foreign policy are plain enough. Our basic objective is to achieve and maintain international peace and security in a world of free nations devoted to the protection of human rights and fundamental freedoms. To fulfill our obligations as a leader among free nations, we must have a foreign policy that is clear and consistent. Moreover, national security demands that our foreign commitments weather changes in the political direction of our Government.

The necessary conditions for a workable bipartisan foreign policy are not obscure, but perhaps it may be well to restate them in view of the charge that bipartisanship means me-tooism and is no more than a Republican rubber-stamp policy.

With agreement on the desirability of a bipartisan foreign policy, its successful operation necessitates that responsible party leaders achieve an understanding of common readiness to work together, that there be full access to and sharing of information, and that there be timely consultation.

Despite the strains of three election campaigns, bipartisanship has survived. At times, its workings have been far from perfect. But now is no time to stick our heads into the sand of isolationism or refuse to put forth our best efforts toward improving the machinery of bipartisanship so that America may present a united front.

A bipartisan foreign policy carries with it the obligation upon the party in the White House, be it Democratic or Republican, to consult with the leaders of the minority party in advance of entering into international understandings which commit the United States to some definite course of action. It is a two-way street between the White House and Capitol Hill.

It is true that under our Constitution the primary responsibility for determining foreign policy rests with the President of the United States, but it is also true that whenever friction develops between the White House and the Congress over foreign policy questions, our country is greatly embarrassed. This is particularly true whenever the President makes an international commitment or agreement which later requires implementation by the Congress.

Many of the strains and stresses which American foreign policy is undergoing at the present time must be attributed to the fact that in recent years Presidents and Secretaries of State have too often entered into understandings with heads of foreign governments as to which both Democratic and Republican leaders of the Congress were kept in ignorance until a misunderstanding of potentially serious proportions had developed.

It is not wise to discard entirely the use of hindsight when charting a future course of

action. The shortcomings of our bipartisan foreign policy as it has developed in recent years can be seen in a much better perspective by a realistic analysis of some of the serious mistakes which have resulted from the failure of Presidents and Secretaries of States to take into their confidence and to consult with congressional leaders of both parties upon whom the administration must lean, in the last analysis, for congressional support of any international commitments.

The Cairo understanding, the agreements reached at Yalta, the commitments made at Potsdam, the administration's policies in China, during and particularly since the war, are all examples of shortcomings in carrying out the basic spirit of a bipartisan foreign policy. Does anyone think for a moment that the understandings reached by the President with the representatives of foreign powers at Cairo and Yalta would have been acceptable, even at the time they were made, to the bipartisan leaders of the Senate Foreign Relations Committee?

The Cairo and Yalta commitments involved not only the prosecution of the war but the building of the peace as well. Historians will undoubtedly record that the international conferences of the Roosevelt administration involved in a very real sense an attempt to write peace treaties by the installment plan.

It is difficult to answer the charge, made in good faith by many critics of bipartisan foreign policy, that in those conferences the treaty-making clause of the Constitution was circumvented by the President of the United States. In any case, the conduct of the executive branch was not in keeping with the spirit and intent of a bipartisan foreign policy. Even the Potsdam agreement cannot escape its fair share of criticism on this score.

The administration's handling of our policy in China, particularly since the war, cannot be fitted into a traffic pattern of two-way cooperation between the White House and the Congress. For many months the State Department failed to discuss with the bipartisan leaders of the Foreign Relations Committee of the Senate its plans and policies in China, if it had any. Warning signals of dissension and criticism were raised in debate in the Senate many times during this period. On one occasion, during the Eightieth Congress, the Republican chairman of the Foreign Relations Committee—and the man who is perhaps more responsible than any other living American for a willing acceptance on the part of Republicans, and for that matter Americans generally, of the need for national unity in support of a bipartisan foreign policy—admitted under questioning on the floor of the Senate that the State Department had not consulted with the Foreign Relations Committee for many months on any phase of the China problem. He admitted in the course of that debate that the contents of the Wedemeyer report had not been made known to the bipartisan leaders of the Foreign Relations Committee.

At that time, which was the fall of 1947, a serious crack developed in the seams of America's bipartisan foreign policy. It should have been cemented very quickly by a mutual exchange of points of view and information between the State Department and the Senate Foreign Relations Committee. Instead, the misunderstandings and criticism in respect to American policy in China became greater throughout 1947, 1948, and 1949. True, the predominant feeling in the Congress was overwhelmingly in support of any administration proposal offered in the name of a bipartisan policy. Nevertheless, those of us in the Senate who strongly supported the idea of maintaining a bipartisan foreign policy were both grieved and handicapped on many occasions over the failure of the State Department to take the bipartisan leaders of the Congress into its confidence and consultation in respect to Asia.

When the second session of the Eighty-first Congress convened on January 3, the administration faced a serious attack upon some aspects of its foreign policy, particularly those relating to China.

It is not too late to stop the trend toward partisanship in the field of American foreign policy. It is not too late to displace the distrust which some Senators have of the administration's foreign policy with a spirit of confidence and cooperation. If the administration will hasten to give not only the Congress but also the people of the United States the assurance that the leaders of both the Democratic and Republican Parties in the Congress will be taken into consultation preceding formulation of policy on any major international issue by the State Department and the White House, the breach can be healed before irreparable damage is done.

That is the test of the existence of a bipartisan foreign policy. No other course of action on the part of the administration will ever satisfy those who are questioning not only the existence but the worth of a bipartisan foreign policy. No other kind of cooperation will give the necessary strength to the hand of the great VANDENBERG by placing him in the strong position he deserves to be within the Republican Party when he is faced with laying an administration foreign policy request before the Republicans in the Senate for approval and support on a bipartisan basis.

A bipartisan foreign policy does not mean that Members of the Congress should hesitate to criticize any proposed course of action contemplated by the administration in the name of a bipartisan foreign policy. Rather it is the duty of a Member of the Congress to express criticisms. If in his honest judgment criticisms are due. However, experience shows that mutual cooperation and mutual exchanges of points of view between the administration and the leaders of Congress in advance of international commitment usually remove any basis for fair and just criticism.

What is more, the greatest assurance the administration has of maintaining a united American people behind the foreign policy of our country is to follow a truly cooperative effort in the formulation of a bipartisan foreign policy. The American people can be counted upon to respond in united support of a foreign policy which is the result of the cooperative effort of the leaders of both the Democratic and the Republican Parties. Whenever a split occurs between those leaders, then division of a serious nature is likely to develop among our people.

Rather than have the head of our Government attempt to negotiate with Stalin outside the framework of the United Nations, I would prefer to have our Government call for an extraordinary meeting of the General Assembly of the United Nations, to be participated in by the representatives of all nations, for the purpose of considering not only the international control of atomic and hydrogen bombs, but the control of all armaments as well.

I would have both parties join forces now—this year—in a world-wide appeal through the United Nations for an end to the armament race. It seems perfectly clear to me that the position taken by the chairman of the Senate Committee on Armed Services, the distinguished Senator from Maryland, Mr. TYDINGS, is unanswerable. He points out that unless the world agrees on some satisfactory machinery for controlling armament, the world will plunge itself into another war.

It is my opinion that the most important step the leaders of our Government could take in the interests of uniting the American people in the cause of winning the peace would be to announce a coalition of Democratic and Republican leaders charged with the responsibility of developing and administering foreign policy at the State Department level. Next, it should assure the American people that it will apply a bipartisan approach to foreign policy at the congressional level by consulting and seeking advice from Democratic and Republican congressional leaders in advance of any major international negotiation. Through such a coalition of Democratic and Republican leaders working together in a spirit of patriotic, nonpartisan statesmanship, we would be able to marshal a united American people behind any program which such a coalition of leaders might present to the United Nations for the international control of atomic and hydrogen bombs and the disarming of the arsenals of the world, whose very existence are bound to be a threat to the peace. Through such a coalition of Democrats and Republicans on the issue of winning the peace, I think our chances in our generation of seeing the sunrise of permanent peace would be greatly improved.

Each of us owes an obligation to our country, as I see it, to support a bipartisan approach to solving the crisis of our generation, which is winning the peace.

It is not going to be won without great national costs and sacrifices. It is not going to be won by making the mistake of ignoring the realities of world facts as they confront us today.

It is well for us to think in terms of the goals and ideals of a world order, based upon a system of international justice through law; but our immediate task is to cooperate with the other freedom-loving people of the world in demonstrating to Russia that we stand united in a determination to defend the peace from any Russian aggression.

However, at the same time, we must demonstrate that we stand ready to join with Russia and the other nations in an effective plan for international control of the manufacture of atomic and hydrogen bombs.

The hour of our generation may be the dusk and sunset of peace. As we close this day, let it be our prayer that through the cooperative efforts of all freedom-loving people throughout the world, our generation will see the dawn and sunrise of permanent peace.

Eisenhower Leads in Poll—Stassen Second in Line

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an interesting poll taken in Oregon recently and published in the Portland Oregonian. This poll is of the "scientific sampling" type, and not, as might be indicated, a newspaper clip-and-mail type. This poll is highly respected in our State for its proven accuracy over a period of years.

EISENHOWER LEADS POLL, STASSEN SECOND IN LINE—THE FRONT DOOR BALLOT BOX

(By Dan E. Clark II)

Although the next Presidential election is still far distant, Front Door Ballot Box editors felt that Oregonian readers would be interested in keeping tabs on the popularity of possible candidates in the 1952 elections.

To do this, interviewers asked a scientifically selected cross section of Oregon residents: Which of these men do you feel would

have the best chance of beating Mr. Truman in the 1952 Presidential election—Robert Taft, Dwight Eisenhower, or Harold Stassen?

The Front Door Ballot Box poll reveals that Oregonians give Eisenhower the best chance of beating President Truman in 1952. He leads his nearest rival, Stassen, by more than a 2-to-1 margin, and Senator TAFT of Ohio, frequently mentioned as a candidate for the Republican nomination, trails Eisenhower by a 9-to-1 margin.

Here is how Oregonians rated the potential candidates on their chances of beating President Truman in 1952:

	Percent
Eisenhower	54
Stassen	22
Taft	6
None of these men	14
Undecided	4
Total	100

As one would expect, more Democrats than Republicans thought none of these men mentioned had a chance of beating President Truman.

This is how the chances of potential candidates stand with Democrats and Republicans at this time:

	Eisenhower	Stassen	Taft	None	Undecided
	Percent	*Percent*	*Percent*	*Percent*	*Percent*
Democrat	50	20	6	20	4
Republican	55	27	7	7	4

Where less than half of Portland residents pick Ike Eisenhower for first place, nearly 6 out of 10 upstaters felt Eisenhower had the best chance of beating Truman. There were also nearly three times as many Portlanders as upstaters who were pessimistic about the present chances of any of the men mentioned in opposition to Truman.

Figures below show the split in opinions between upstaters and Portlanders and veterans and nonveterans:

	Eisenhower	Stassen	Taft	None	Undecided
	Percent	*Percent*	*Percent*	*Percent*	*Percent*
Portland	46	21	6	24	3
Up-State	58	23	6	9	4
Veteran	56	23	5	13	3
Nonveteran	51	21	7	16	5

Abolition of Rent Control

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, March 1 (legislative day of Wednesday, February 22), 1950

Mr. CAIN. Mr. President, on Monday I offered for the RECORD an editorial from the Washington Post of last Sunday. This editorial favored removing the Federal Government from the management and control of rents. I wish now to offer an editorial from the Washington Star of last night which supports the same point of view. Both of these editorials simply state the obvious when they maintain that a national emergency concerning rents is no longer present. Federal rent controls were employed and justified for the single reason that a national emergency did exist. Now that the national emergency foundation has been done away with it will best serve the welfare of the Nation to eliminate Federal rent controls.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NOT A FEDERAL PROBLEM

In moving to end Federal rent control by June 30, the Senate Appropriations Committee was motivated by the sound conclusion that this has ceased to be a Federal problem.

It is true that the President has asked for another year of Federal control. And it is also true that in some localities there is need for continued regulations of rents. But this need can and should be met by local action.

The 1949 rent control law set out procedures under which the States and their political subdivisions could free themselves from Federal control. Many have done so. Some 350 areas, with about 11,000,000 rental units, still are under Federal control. Some of these areas, as in the case of New York State, have stand-by controls of their own which become effective when Federal control ends. In other areas, where comparable local controls are lacking, the ending of Federal controls can be expected to work some hardship.

But this is not an argument for indefinite continuance of Federal regulation. Rent control was a wartime measure, designed to meet an emergency national need. The war has been over for nearly 5 years, and it is time for the Federal Government to step out of this picture. The yearly demand upon Congress for renewal of rent regulation shows, however, that the Federal Government will not let go of this power until Congress compels it to do so.

The True Meaning of Security

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, March 1 (legislative day of Wednesday, February 22), 1950

Mr. WILEY. Mr. President, I have in my hand a very fine article from the January 12, 1950, issue of the Wisconsin Lutheran, which is published in Madison, Wis. The subject of this article is The True Meaning of Security. It was reprinted from the National Lutheran, and it shows that security is more than material aid, such as is provided by governmental, private, and church welfare agencies. Security essentially is a thing of the spirit, and if misinterpreted, security can be a negative factor in life rather than a positive factor.

I believe that all spiritually minded Americans will be interested in this very fair article, and I ask unanimous consent that its text be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LET'S HAVE MORE SECURITY

Slashed across the headline these days are details of the current drive for pensions, medical benefits, and higher wages. The Social Security Act and its many benefits have been an accepted part of the American way of life. Security and more security is the order of the day.

Ever since the Garden of Eden, man has been forced to struggle against the inexorable forces of nature for life itself; the present efforts toward achieving a greater security are only a part of the age-long struggle.

Welfare agencies and institutions of the church work from day to day with the problems of security in the lives of our people. Foster homes for rejected children, that they may have the feeling of being loved and wanted which is so vital to their well-being; adequate facilities for older people, where their physical, emotional, and spiritual needs may be met so that they, too, can feel loved and wanted; help for unmarried mothers; guidance and counseling in problems of marriage and the family—these are the things our welfare workers do to make more secure the lives of our people.

But what is security? What is this thing we are seeking? Webster and others say that security is "freedom from care, anxiety, or apprehension," "a confidence of safety," or "a feeling of certainty." From what cares, anxieties, and apprehensions do we want freedom? What sort of safety do we want? Of what must we be certain in order to be secure?

At the mention of "security" we almost invariably think of material things: Food, clothing, shelter, a good income, freedom from want in old age, and so on. And in an effort to achieve that security we slave and hoard, denying ourselves this and that, buying more insurance, piling up savings accounts, fearful all the time that the tides of fortune will sweep away overnight our tiny resources. Is that security? What did the Master say about such things? As I remember it, He said, "Lay not up your treasures on earth, where moth and rust do corrupt, and thieves break in and steal." Are we afraid to believe in Him?

Shakespeare, that wise student of human nature, had this to say: "As you all know, security is mortals' chiefest enemy." Security man's enemy? Yes, for security can rob life of its purpose, drain away all desire to achieve, stultify ambition and advancement. We were not made to sit back in soft security, growing fat and slothful; rather, we were made in the image of God to face life and its problems, secure in our faith in the Father and the ultimate triumph of good over evil. For security is not freedom from, but the ability to, the ability to face even with fear and trembling, the unknown of today and tomorrow, knowing all the while that our faith will carry us through.

None of us can deny that we have felt fear and anxiety. Fear and anxiety are natural reactions; they are also very corrosive, eating away at peace of mind. How are we to cope with fear and anxiety? How is the cast-off child to find a home and love and affection? How is the older person to find a safe and happy haven as the sands of life run out? Where does the family in trouble find help?

Lutheran welfare agencies and institutions supply the answer. Through them God brings care to those in need; through them we are used, by means of our contributions and volunteer efforts to feed the hungry, clothe the naked, visit the sick. And through the social security system and the other governmental efforts in the welfare field comes help to those in need. Truly we are all instruments in the hands of God for the service of our brothers and for His greater glory.

These things are not the whole answer, however. We must look to the Sermon on the Mount, where the Master laid down one of the most vital of all mental health principles when He said, "Therefore I say unto you, take no thought for your life, what ye shall eat or what ye shall drink; nor yet for

your body, what ye shall put on. Is not the life more than meat, and the body than raiment? * * * But seek ye first the kingdom of God, and His righteousness; and all these things shall be added unto you." (Matt. 6: 25, 33.) No government plan ever contemplated this kind of security.

There are those Christians among us who have tried out this promise of the Master, who daily live by this principle; they have found a true security far beyond anything ever contemplated by legislators or social planners. For security of the spirit transcends infinitely a security of body. Seek, then, if you will, the true security and find eternal life.—(S. Ross Pond, the National Lutheran.)

United World Federalists

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Wednesday, March 1 (legislative day of Wednesday, February 22), 1950

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the RECORD an encouraging letter concerning the hearings we are conducting in the Foreign Relations Committee on the resolutions having to do with amendments to the United Nations Organization and the World Organization.

I ask this, Mr. President, not because I am a sponsor of the World Federalists resolution, since as chairman of the subcommittee it is incumbent upon me that I remain neutral in regard to the various resolutions which are before us, but the educational worth of this letter from Dean Moore will be of interest to all the members of our committee, and that means practically all of them who want to see law under government and government under law extend throughout the whole earth.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNIVERSITY OF NOTRE DAME,
Notre Dame, Ind., February 23, 1950.
Hon. ELBERT D. THOMAS,
Senate Office Building,
Washington, D. C.

DEAR SENATOR THOMAS: All of us are deeply conscious that the most vitally important problem before the American people and the world generally today is the avoidance of another war and the establishing of a permanent, positive peace—a peace which is much more than the absence of a shooting war. We know that there will be no real victor in the next war—as there was not in World War II—but destruction and death everywhere beyond what most of us are able to imagine.

Recognizing this problem, the questions are, Can we solve it and how best can we solve it? In view of Russia's ideology, world foreign policy, etc., as known to us theoretically and as demonstrated by countless actions these past 4 or 5 years, I am convinced that we cannot expect any constructive cooperation from her presently and that we must try to avert disaster by a strong foreign policy and a show of strength in all directions. But I am equally convinced that peace cannot be achieved permanently through military might, power politics, pacts, and agreements, but only through law under government.

In every sphere of our present political organization—local, State, Federal—we preserve peace and order on this principle; law under government in its legislative, judiciary, and executive branches. The time has come when we must extend this principle to the world. Only in this way can we have international or world law in any strict sense of the term and, without such law under a supranational government, peace and order with justice cannot be established and maintained among nations.

I recognize that there are tremendous difficulties in the way of setting up a world federal government, especially since this government must be representative and constituted on democratic principles which recognize the sacred dignity of the human person and the inviolability of human rights. But these difficulties in my opinion do not excuse us from beginning now to work toward world federal government which alone can solve our most important problem, and perhaps save the world of men from their own destruction.

In this conviction I am a member of United World Federalists whose beliefs, purposes, and policies I endorse. I ask you to support these things, and I am sure that in doing so you will not jeopardize the national life of these United States but do the one most important thing possible to preserve this Nation both in these difficult times and for future generations.

Sincerely yours,
Rev. PHILIP S. MOORE, C. S. C.,
Dean.

It's Only Money

EXTENSION OF REMARKS
OF
HON. SCOTT W. LUCAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, March 1 (legislative day of Wednesday, February 22), 1950

Mr. LUCAS. Mr. President, an editorial entitled "It's Only Money" was published in the Washington News of February 28, 1950. The editorial, which is a very interesting one, discussed the absurdity of the Government's potato-buying program. I hope Senators who raise potatoes, especially my Republican friends, will take a look at that editorial.

I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IT'S ONLY MONEY

With the absurdity of the Government's potato-buying program spelled out so clearly in the last few weeks, you'd think Congress would be eager to do something about it at the first opportunity.

It's going to cost the Government between $80,000,000 and $100,000,000 to maintain its price supports on the 1949 potato crop.

Eighty million dollars is the amount that will be taken in from the excise tax on luggage, handbags, and wallets this year. If we didn't spend it on useless potatoes, we could reduce or even eliminate this wartime levy now.

Eighty million dollars is the Government's total take from the income taxes of 394,000 married men with two children, each man earning $4,000 a year.

It's only money, of course, but it's your money the Government puts out to accumulate millions of bushels of throw-away potatoes, which you can't eat because the Government is buying them to keep them off the market and hold potato prices up.

Senator LUCAS (Democrat, Illinois) tried to do something about it for you. He's the administration leader in the Senate, but in this case he was bucking the administration and acting on his own.

Senator LUCAS proposed simply that all potato price props be dropped until strict marketing quotas were imposed to cut down those surpluses. He estimated it would save $60,000,000 to $70,000,000 of the taxpayers' money on the 1950 crop. It was one of the few times anyone in Congress has had the courage to fight on the floor for a move that actually would interrupt a farm-crop support program.

But what happened to Mr. LUCAS' proposal? It was defeated last Friday by a combination of farm-State Senators, including many members of the so-called economy bloc of Republicans. It was the old story of farm-subsidy grabbers banding together to head off a measure which might be a foot in the door against the whole costly structure of price supports.

Yesterday the Senate relented to the extent of passing a House-approved acreage bill which will drop potato price props unless marketing curbs are put into effect.

But the measure won't apply until 1951. And it won't save $60,000,000 to $70,00,0000 on the 1950 potato crop.

Appropriations for the United States Coast Guard Reserve

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, March 1 (legislative day of Wednesday, February 22), 1950

Mr. CAIN. Mr. President, the Committees on Appropriations of both the Senate and the House of Representatives are presently giving consideration to a budget request from the Treasury Department for the United States Coast Guard Reserve. I am one of many in the Congress who hope that a reasonable appropriation will be agreed to because it will be impossible to establish a balanced security system for the Nation for as long as the Coast Guard Reserve remains inactive and without a training program. Because the two articles bear directly on a pressing need for approving a Coast Guard Reserve training program, I ask unanimous consent that an editorial from the Seattle Times and an article by George Fielding Eliot be printed in the Appendix of the RECORD.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Seattle TIMES of December 19, 1949]

NEGLECTING SECURITY OF NATION'S SEAPORTS

As a seaport city, Seattle is genuinely concerned over congressional neglect to provide any adequate training program for reservists of the United States Coast Guard. It is that service which is called on in an emergency to shoulder responsibility for the security of port facilities here and in every coastal city. Yet, funds have been withheld by the Eighty-first Congress to hold and train a reserve force sufficient to perform this vital function in case of trouble.

Efforts to obtain appropriations for this purpose, in fact, have failed for the past 3 years. President Truman has requested the comparatively inconsequential sum of $3,500,000 to provide a Coast Guard Reserve training program. The request has been repeatedly denied, and just before Congress adjourned, an item to supply the needed funds was stricken from the third deficiency appropriation bill.

The result is that Coast Guard reservists by the hundreds have flocked to other reserve organizations, and no program whatever has been set up to train those who remain on the reserve list in their port-security functions.

Seattle well remembers the excellent job the Coast Guard port-security detail did here all during the war. Many of its members still are available to be called to active duty in an emergency. The National Defense Establishment regards it as important to keep the reservists of the Army, Navy, Air Force, and Marine Corps in trim and prepared for emergency service. It is no less important for the coast guardsmen to retain, and improve, their wartime skills.

It makes little difference whether this training is carried out as part of the Navy Reserve program, since the Coast Guard becomes a part of the Navy in war, or by the Coast Guard itself. The point is that an adequate training program should be set up, and the appropriations needed to put it into effect should be reconsidered when Congress reconvenes.

[From the Washington Sunday Star of February 12, 1950 (also in St. Louis Times-Dispatch)]

HARBORS CALLED OPEN TO ALIEN SHIPS WITH SMUGGLED A-BOMBS

(By George Fielding Eliot)

NEW YORK, February 11.—If the Russians wanted to send atom bombs, or H-bombs, into New York Harbor on merchant ships and explode them there, they could do it without much trouble. Atom Scientist Harold C. Urey told the Senate so on Wednesday, and he was right.

This reporter has just completed an exhaustive 2-week survey of port security in New York Harbor. Only one conclusion is possible—we're wide open to a sneak A-bomb attack. So are other United States seaports.

This is by no means the fault of the highly efficient customs, immigration, and Coast Guard men who inspect the ships entering our ports. There are simply not enough of these men to do a thorough job. Moreover, wartime port-security measures have been largely relaxed. Present efforts are directed toward preventing the illegal entry of alien persons and evasions of customs laws. The security set-up does these things quite effectively, but it wouldn't be likely to detect A-bombs before they went off.

CARGO NOT EXAMINED

For example: Let's say a ship comes into the harbor with an A-bomb carried as a deckload. It's boxed and it's entered on the manifest as industrial machinery. At quarantine the customs boarding officer goes aboard. He finds the ship's papers in order. He doesn't examine the cargo then and there—he has neither the time nor the facilities to do so. The ship proceeds to an anchorage in the upper bay. Darkness falls. There is no customs patrol in small launches as there used to be during the war—the economy ax has abolished this patrol. The Coast Guard is supposed to patrol the harbor, but it doesn't have the cutters or the men to do a thorough job. So it's perfectly simple for the crew of the A-ship to hoist their bomb over the side and allow it to slip silently into the waters of New York Harbor with a time fuze attached.

Next day the ship unloads her regular—and innocent—cargo, complying with all usual formalities. The cargo is inspected by customs officers when it is unloaded. It is quite in accordance with the manifest. The ship sails away.

Three days later—boom! A huge column of water rises from the harbor—a deadly radioactive mist envelops the city—hundreds of thousands of people die or are incapacitated.

COULD LEAVE BOMB ABOARD

Or take another approach. The ship has the A-bomb either as a deck load, or in her hold just under a cargo hatch. She proceeds to a pier in the heart of Manhattan and ties up, late in the afternoon, too late to unload that day. The members of the crew have their papers—all correct. They go ashore and, presumably get out of town fast. That night the bomb goes off, and D-blasts a vast gaping wound into the center of New York City.

If it were desired to have bombs sent to inland cities as well, it could be done by the simple device of shipping them in bond, thus avoiding customs examination in the port of New York. The time fuze would have to allow ample margin for the period of transit from the New York pier to a railroad freight station, then to a customs warehouse to await application for entry by the consignee, who would, of course, never show up. In this way such cities as St. Louis or Chicago, Pittsburgh, or Detroit could be reached by a sneak A-bomb attack.

Probably the A-ships wouldn't be flying the Soviet flag. In fact, only one Soviet ship entered New York harbor during the whole of 1949. Arrangements would be made with the comrades of some other country to do the job. That would be a simple matter.

MORE PERSONNEL NEEDED

Guarding our seaports against this form of attack is, however, not so simple. We will need cutter patrols, manned by experienced customs and Coast Guard personnel, in every major harbor. We will need to expand the customs searching squads in 10 times their present strength, using experienced men as squad leaders, training others as fast as possible. We will have to exercise the closest watch over the entry of foreign ships and over all activities aboard them; it may be necessary to station guards on board every such ship during its entire stay in harbor. We will have to seek the close and constant cooperation of friendly governments to detect in advance the approach of a ship whose crew includes persons suspected of Communist affiliations. Ships from ports which are behind the iron curtain may have to be excluded altogether, or permitted to unload only at isolated anchorage far from any worth while atomic target.

One unhappy fact is that the reservoir of trained personnel for port security duties—the United States Coast Guard Reserve, with a wartime strength of 144,000 officers and men—exists today only on paper. The last Congress refused to pass a $3,000,000 appropriation for training this reserve. It's a deficiency which must be corrected, for it's the very foundation of security for our great seaports. But this will only be a start toward real security for the coastal cities of the United States, which today are sitting ducks for an A-bomb.

Abduction of Greek Children

REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1950

Mr. FEIGHAN. Mr. Speaker, the thousands of Greek children who have been abducted from their homes in Greece, spirited away surreptitiously and hidden behind the iron curtain is one of the most tragic, deplorable, and reprehensible crimes chargeable to the Communist regimes. It is unthinkable that such inhumanities could occur in a civilized world, and it is of utmost importance that our Government persist in its efforts, by moral and economic persuasion, to force the return to Greece of the 28,000 children.

Last Sunday afternoon more than a thousand persons attended a meeting in Cleveland sponsored by 35 societies of Americans of Greek descent urging concerted action on the part of our Government and of the United Nations to restore these children to their homes and parents. Homes must be preserved inviolate. Parents have the God-given right and obligation to rear their own children, and the children likewise should be given the opportunity to live and grow up under the guidance and influence of their own parents, rather than to be reared as abject slaves wholly subject to the atheistic philosophy of a state which considers them as chattels instead of children of God.

I urge the President and our Government to act promptly in this matter.

Under unanimous consent I include in my remarks a telegram containing a resolution adopted by the combined societies of Cleveland, which is as follows:

FOR THE REPATRIATION OF 28,000 ABDUCTED GREEK CHILDREN NOW DETAINED IN CERTAIN COUNTRIES

CLEVELAND, OHIO, *February 26, 1950.*

Whereas the general assembly of the United Nations has formally announced that 28,000 children were forcibly abducted from their homes in Greece during the recent guerrilla war and are now detained in the various iron-curtain countries of Europe; and

Whereas two resolutions unanimously passed by the United Nations General Assembly seeking the prompt repatriation of these children have proved of no avail due to lack of cooperation on the part of the iron-curtain countries; and

Whereas we believe that the relationship of mother and child is a divine natural instinct above any human control; and that, the right of mother and child to be together and to cherish the love which is inherent in this relationship has been recognized and respected by all civilized peoples throughout the ages: Now, therefore be it

Resolved, That this assembly of 1,000 citizens of the city of Cleveland and surroundings with Governor Lausche and Mayor Burke, of Cleveland, partaking, raises its voice in protest for the abduction and forcible detention of these innocent children and registers its indignation for such inhuman practices; and be it further

Resolved, That this assembly respectfully urges and petitions the President of the United States, the State Department of the United States, and the Congress of the United States and the general assembly of the United Nations to use their good offices and bear pressure upon the respective governments in whose territory these Greek children are detained to the end that these 28,000 unfortunate victims be speedily returned to their motherland; and be it further

Resolved, That copies of these resolutions be transmitted forthwith by the secretary of this assembly to the President of the United States, to the Presiding Officer of each branch of the United States Congress and to the Members thereof from the State

of Ohio and to the representatives of the United States to the General Assembly of the United Nations and to the general secretary thereof.

Respectfully submitted.

LOUIS B. SELTZER, *Chairman.*

Nebraska's Eighty-third Anniversary

REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. STEFAN. Mr. Speaker, 83 years ago, on March 1, 1867, the one-time Territory of Nebraska was admitted to the Federal Union of States as a full partner in this Republic.

It has become an established custom for Members of Congress to admire and extol the wisdom, the courage, the farsightedness of the founding fathers whose combined experience wrote the Declaration of Independence and the Constitution of the United States. That custom is just and reasonable. Yet, there is a single drawback to that custom. It assumes that, after the creation of the Declaration of Independence and the Constitution, the statesmen of this Nation made no further contribution toward true government by the people.

I do not speak for any other State. I do speak for Nebraska. In 1867, the first legislature of the new State of Nebraska accepted a great seal for my State. The motto on that great seal is: "Equality Before the Law."

This statement, to me, was and is one of the most significant of all time.

Why?

Bitterness was rampant in Nebraska 83 years ago. Civil War guns still echoed in many ears. Spiritual wounds had not healed. Boys in blue settled next to the boys in gray. Old feuds broke out. Grievances soon found their way to the courts. To Nebraska courts these disputes were not between the blue and the gray—rather, they were between citizens of the State of Nebraska. They were decided fairly, justly, according to the evidence. There was "equality before the law."

Other antagonisms could well have made the newly established State a dark and bloody ground. The early settlers of some of our counties were of English ancestry. A great wave of Irish migration swept into these counties in the late sixties and early seventies. This could—and did—make for strife. True to Old World tradition, pioneers of German and French origin carried on their battle which began before recorded history. Swedes and Danes clashed. Yet, to Nebraska courts, there were no English nor Irish, no French nor Germans, no Swedes nor Danes. Nebraska courts recognized no national origins. Contestants before the courts were Nebraska citizens. There was "equality before the law."

Perhaps the most serious conflict of all in early Nebraska was between the old-timer and the johnny-come-lately. Nebraska was a new State in 1367, but it had had white settlers since the time of the Revolutionary War and before. The first to come resented the intrusion of the newcomers, regardless of their national origin or their Civil War sympathies. The newcomers resented the know-it-all and own-it-all attitude of the people whom they found living in their new home. Naturally, these resentments ultimately led to the courts. Nebraska courts made no distinction between the old and the new. The cases involved were decided on their legal merits alone. There was "equality before the law."

What kind of equality was this?

I like to think of it as David's kind of equality—the kind of which he sang in the Fifty-fifth Psalm:

> It was thou, a man mine equal, my guide, and mine acquaintance. We took sweet counsel together, and walked unto the house of God in company.

What kind of law was this?

I like to think of it as James' kind of law, the kind of which he spoke in his general epistle:

> But whoso looketh into the perfect law of liberty, and continueth therein, he being not a forgetful hearer, but a doer of the work, this man shall be blessed in his deed.

Nebraska needed its respected courts to enforce the peace. But, as David said, going to church together was perhaps the greatest single influence of equality our State could afford. German went to the same church with Frenchman. Dane and Swede sang the same hymns. Men who had shot at each other in the Civil War listened to the word of God—together—in Nebraska's new equality.

The wall between old settlers and new settlers was broken down because every Nebraskan had to be, by dire necessity, a "doer of the work." Old-timer gave of his own sparse supplies to newcomer when newcomer's worldly goods were destroyed by a swift prairie fire. Newcomer fought his way through a blinding blizzard to old-timer's sod house, risking his life that old-timer might live. Their women joined together at quiltings. Their men broke barriers at barn raisings. They helped each other bury their dead in common cemeteries after Indian raids. They celebrated together after bumper harvests. They pulled in their belts after the grasshoppers had eaten their land barren.

What began as a reluctant association in "equality before the law" was welded, by living together, into a common bond of one people, one Government, one God.

By unfailing adherence to the "law of liberty," Nebraska has prospered. This—in spite of two world wars which have taken its wealth and its youth. Nebraska has been able to recover from even these crowning catastrophes because it has been conceived in privation and has grown amidst hardship.

Ours is a producing State. Our cement, clay products, and stone are widely used in the American building industry.

In agriculture, Nebraska has made tremendous strides within the past few years. We lead in the production of wild hay over all our 47 competitor States. We are up in the front ranks of the producers of corn, oats, wheat, barley, rye, alfalfa, potatoes, sugar beets, sorghums and soybeans. We are well above other States, greater in size and in population, in producing cattle, swine, and sheep. It is natural that the chief industry of our State is that of food processing. It is natural that Omaha, principal center of the Nebraska food-processing industry, should be first city in the world in butter manufacturing.

Nebraska's progressive people of today—direct heirs of a pioneer past—have exercised a high degree of ingenuity in the development of their inheritance. Of the State's total area of 77,237 square miles, approximately a million acres have been made to produce more and better crops through irrigation. Then, too, Nebraska was one of the first North Central States to put into action a planned program of farm-to-market roads. These well-graded or hard-surfaced roads have enabled Nebraska farmers to get their crops to market, irrespective of the weather, with maximum speed and with minimum spoilage.

Nor has Nebraska's most valuable product—its human product—been neglected. No Nebraska community is without its grammar school and its high school. Many communities have their junior colleges which have been functioning over a considerable span of years. We have a State university and one municipal university. We have two denominational universities. We have 12 denominational colleges and four State teachers colleges. It can truthfully be said that every Nebraskan can receive his complete formal education—from kindergarten to doctor of medicine—without leaving his home State.

Nebraskans are individualists today, as they were 83 years ago. You cannot fence in their thoughts. Our State has seen Populists and Bull Moosers, Democrats and Republicans.

But, individualistic Nebraskans have no peace with pink-tea "liberals" who parrot social and economic phrases and shift their viewpoint with each change in party line—"liberals" who are liberal only in the sense of stealing the savings of others through taxes.

Nebraska individualists have shown themselves to be mid-twentieth century progressives. We have the only unicameral State legislature in the United States. We have an efficient preprimary system of selection of party candidates. All electric power facilities in the State are publicly owned. Yet, never have we flown in the face of the Republic. Never have we flouted the Constitution. Nebraska has the lowest per-capita tax of any State in the Union. We have no bonded indebtedness, and there is a surplus in our State treasury.

On this, the eighty-third anniversary of the admission of Nebraska as a State, I am proud to define the Nebraskan of 1867 and the Nebraskan of 1950—for they both require one and the same definition. A Nebraskan is a forward-looking American, with a long, long memory.

American Foreign Policy and the International Trade Organization (ITO)

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1950

Mr. JAVITS. Mr. Speaker, appended is the address I delivered at the annual dinner of the United States Customs Examiners Association held at the Hotel Statler in New York on February 21, 1950:

The International Trade Organization Charter was adopted at Havana on March 24, 1948, by 54 nations, including the United States, bills to provide United States membership in the Organization have been pending since January 1949, and the President sent the Congress a special message on it in April 1949, yet vigorous action with respect to the approval of the Charter and the acceptance of membership by the United States in the Organization has been singularly lacking. This in spite of the fact that the reestablishment of multilateral trade among the free nations, which is its central purpose, is absolutely essential to world economic recovery and particularly to western Europe if the European recovery program is to have a chance of ending in 1952.

If the administration has been restrained in pushing for United States membership in the ITO out of fear of its opponents, it is time that the issue was faced and that the American people understood that ITO is an essential ingredient for maintaining our own prosperity and for attaining world prosperity.

European production has increased materially over what it was in 1938 and 1939, over 50 percent in an item like cement, yet Europe is still in dire need of American dollar aid, and the spectre of communism is still haunting Europe should such aid end before the dollar gap—still at about $3,000,000,000—is bridged. What is lacking is a system of trade relations among the European nations and between them and the rest of the world to assure the development of regular and continuous international markets making possible the most economical use of Europe's production resources. Europe now has done reasonably well in the battle of production, but she needs markets and it is exactly the purpose of the ITO to facilitate the opening up of markets.

The Communists count heavily on the fear of depression among the free peoples as a means for their infiltration. ITO can do more to answer that fear for the free nations of the world than any other international measure now seriously before us. American efforts to attain economic integration in Europe and elsewhere are negated by the failure of the United States for almost 2 years to acquire membership and thereby to bring into being the ITO which has the greatest capability for establishing the conditions for integration, both in Europe and elsewhere. Charges that the ITO will deprive the United States of tariff bargaining power are baseless, in view of the express provisions in the Charter itself which provide only that members will enter into and carry out negotiations directed toward the substantial reduction of tariffs and the elimination of preferences. This is no more and no less than the United States is already doing under the reciprocal trade agreements program last year extended for an additional period of 3 years, and no more and no less than it is bound to do under the General Agreement on Tariffs and Trade negotiated by the United States with the 22 other signatories at Geneva on October 30, 1947, and declared in effect for the United States, the United Kingdom and Canada, and five other principal commercial nations on January 1, 1948.

Opponents of the ITO are entirely negativist in attacking a constructive world plan developed since 1945 largely at the urging of the United States to facilitate world trade, without offering anything whatever in its place except either chaos, or such trade barriers and trade restrictions as are seriously hampering world trade and world recovery, today. As early as the lend-lease agreements with Great Britain in February 1942 the United States was already insisting that negotiations should be had for the reduction of tariffs, the elimination of tariff preferences, and the removal of other barriers to the expansion of international trade. This policy was continued when the United States came out with practical proposals for this purpose in December 1945 and when these proposals were refined in several international conferences culminating in the conference at Geneva which lasted from April to August 1947 and resulted in the adoption by the 18 principal trading nations of the world, other than the U. S. S. R., of a draft charter for the ITO. This draft became the basis for the charter adopted by 54 nations at the final International Conference on Trade and Employment in Habana, from December 1947 to March 1948.

The establishment and success of ITO is, among all the nations, the most vital to the United States for the United States today is the big exporting nation of the world with much at stake in respect to its own economy in maintaining these exports. Total United States exports for 1949 are estimated at $12,000,000,000, while total imports are estimated at $6,500,000,000, leaving a net export balance of $5,500,000,000. The situation in which the United States found itself before and just after World War I when it feared a flood of cheap imports from European and other countries where lower labor costs prevailed and which resulted in the Smoot-Hawley Tariff Act of 1930, is now completely reversed. Other trading nations of the world now fear that their markets will be flooded by our manufacturers and that their resources will be drained away by our goods as soon as they are not longer the subject of aid from us such as is afforded by the ERP. Without an ITO we may expect that these countries would erect even higher tariff barriers against our trade and engage in more discrimination and preferential arrangements than ever, and in view of the prevalence of state trading, they are in a better position than ever to do so. If we retaliated, as indeed we would have to, and so would other nations, it would defeat the effort of western Europe at recovery, would jeopardize our own domestic economy which to a growing extent is dependent on an export market and would materially improve the chances of communism infiltrating Europe.

Freer world trade must also be recognized as absolutely essential by those who contend that there must be an end to programs of American aid overseas, for this can only be achieved through greater imports into the United States and through triangular trade which are being hampered and thwarted by existing trade barriers and trade restrictions. These dangerous facts are borne out by the slipping off already taking place in United States exports, in 1949 $2,500,000,000 below their 1947 peak and estimated in 1950 to be a billion or more dollars under 1949. This export trade, though only a small percentage of our total production, is of the most critical importance to our general economic prosperity. For example, in agricultural products like wheat, cotton, and tobacco we normally export from 20 to 33 percent of the total crop. This is equally true in other merchandise and industrial fields like drugs and automobiles, where we normally export 20 percent of our production; machine tools, where we normally export 40 percent; and farm machinery, where we normally export 20 to 30 percent of our production. Yet while $12,000,000,000 of exports represents only about 6 percent of our current output and something under 10 percent of goods and commodities produced, in key items it represents the difference between profit and loss and success and failure—and the impact of these key items on our whole economic structure and on employment generally in our country is far more vital than the 6 percent figure or the 10 percent indicates. This was very clearly evidenced during the depression when the state of our economic health went down drastically right along with a drop in our import and export figures which hit a low of $1,600,000,000 and $1,300,000,000, respectively, in 1932 and 1933.

We are failing badly in our imports, too. According to our economic history and taking into consideration the over-all increase of about one-third in prices generally since prewar, we should be importing not $6,500,000,000 of goods a year but $9,500,000,000, or more. Imports from South America, from Canada, and from Central America have held up to this level but imports from Europe are about one-half of what they were prewar, and from Asia but a fraction of what they were prewar. As the greatest market in the world, there are many types of goods we ought to get from the world to improve materially our own standard of living. Linens, laces, china, glass, leather goods, and fine cutlery which enhance and beautify life could be acquired by us more plentifully from overseas. Imports of strategic raw materials which we lack, as well as raw materials in which it is advisable for us to husband our own resources, all of which are in long supply elsewhere in the world, should be of the greatest interest to us; these include oil, copper, manganese, industrial diamonds, rubber, and many other items.

The ITO charter proposes to establish rules of trade exactly such as the greatest trading nation on earth would want, and generally of a kind which only narrow nationalism or an iron-curtain ideology should oppose. The charter makes the first international effort to eliminate quantitative restrictions on imports—that is, limitations on the quantity of a certain type of goods which may be imported into a particular country; to eliminate preferential arrangements on imports between two countries which discriminate against other countries; to eliminate discriminations on imports when they enter the stream of internal commerce with regard to excise taxes or sales restrictions; and to regulate subsidization of exports by Government so that it is not used as a weapon in order to capture markets. These are the very practices which were refined into a science by the Nazis who victimized Europe with coercive barter agreements by which the foisted unneeded goods—like harmonicas and aspirins—on peoples who were breaking their backs to produce food, and the ITO charter for the first time proposes to bring under some control these dangerous foreign trade weapons. The charter also makes universal

for members of the organization the most-favored-nation treatment providing for nondiscriminatory opportunity to all to trade and provides also that customs and trade regulations shall not unduly burden or discriminate against imports—as for example to provide standard procedures for determining value for customs purposes. State trading, cartels, and intergovernmental commodity agreements are brought by the charter under some measure of international review in order to see that they are not used as weapons against world trade for selfish purposes, while for the first time on a world political as well as economic level an effort is made to establish in the charter an international code of fair treatment for investors in foreign countries.

The charter, also for the first time on an international basis, seeks to establish some rules for state monopolies of import or export trade, or state trading operations so widely prevalent in the world today, requiring them to operate in accordance with commercial considerations and customary business practices and to allow adequate opportunity for competition to the enterprises of other member countries.

Admittedly the charter has many exceptions, even some exceptions which weaken the charter materially. For example, those regarding the subsidization of exports which are quite general and weak, but these are attributable to the low state of the world's economy, to the grave difficulties created by the ravages of war and to a multitude of traditional trade relationships having a tendency to hamper trade which have grown up through the centuries, and which until ITO, no major effort was made to dispel. Certain of these exceptions were requested by the United States, notably those to protect our farm price stabilization program and to protect our own essential national security. We also insisted on the fundamental exception which we have written into all our reciprocal trade negotiations that tariff concessions may be suspended or withdrawn if increased imports cause or threaten serious injury to our domestic producers. Finally, we effected a great reform in opportunities for our moving-picture industry, the greatest in the world, and as influential in teaching other peoples how Americans live as in furnishing entertainment. The ITO charter eliminates import quotas for movies and substitutes quotas of screen time making for competition instead of restriction.

The major exceptions of which other countries are likely to take advantage relate to quantitative restrictions by countries that are in balance of payments difficulties, new preferences and exceptions to the most-favored-nation rule incidental to the formation of customs unions or required for economic development, and other restrictions on imports may be utilized for the same purpose. However, for the first time in the history of international trade, each nation may not act freely in these respects as it chooses, but is circumscribed by certain criteria which it must meet to obtain either the approval of the International Monetary Fund, or of the ITO itself before engaging in these practices.

The United States, however, or any other member of ITO may withdraw from the organization on 60 days' notice if dissatisfied with a decision of the organization.

The free nations of the world are by now fairly well agreed that hunger and despair are the breeding ground for communism, yet an analysis of world income shows how far we are from decent living standards and how far we have to go to attain what we ought to consider a civilized world. A study of these figures makes us understand why such vast areas of the world and so many millions of people listen to a Communist ideology which is to us puerile, cynical, and degrading. Three-fifths of the people of the world have incomes of less than $100 a year, and living standards accordingly. Even in more highly developed countries, contrasted with United States per capita average income of $1,400 in 1948, France, the United Kingdom, and Argentina show per capita incomes of around $400 a year, and countries like Colombia, Brazil, Guatemala, and Chile show per capita incomes of about $100 a year.

Great vistas of higher standards of living and general well-being can be opened up by us for the teeming millions of the world, and the challenge of communism decisively defeated and driven back from where it has already taken hold, as in the vast area of China. It seems clear that we are most likely to attain these goals for the peoples of the world if world trade can flow fairly and easily. Our acceptance of membership in the ITO will be the signal for acceptance by the other signatories at Havana. Before then they will not sign, for the success of ITO is dependent upon us, by far the biggest trading nation of them all.

The establishment of ITO will confound the Communists who predict that on the issue of economics, the democracies will cut each other's throats. It will demonstrate the ability of the democratic nations to unite on economic principles which are essential to their success. It will decisively refute the claims of the Soviet propagandists that economic cataclysm is on the horizon for the free nations. We have already delayed much too long in organizing for the counter-offensive against communism which is inherent in the ITO. Timidity plays into Communist hands. ITO has been by now so thoroughly discussed and analyzed on record and indeed third thought that we ought to have our national debate on it and act. It will be for our world leadership a departure as vital as ERP from all previous world leadership.

Less Talk, More Work

EXTENSION OF REMARKS

OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. MITCHELL. Mr. Speaker, in the Bremerton (Wash.) Sun able editor Julius Gius complains mildly of the catch-all nature of the CONGRESSIONAL RECORD Appendix, and asks for consideration of a "less talk" news item from Norway.

We must work for increased efficiency, but that is not always accomplished through the means suggested by the Norwegian Storting.

With a sad memory of the years when all democracy was blacked out in Norway, I recall with joy that wonderful day in 1945 when I stood with a cheering crowd on the dock at Oslo, Norway, to welcome home from England the free Norwegian Government, which had long been exiled by the totalitarian Nazi.

During all those years of German occupation there was no debate because there was no Storting, as Norway's Congress is called. Totalitarians always have feared not only free debate but all other democratic institutions.

Even with the hope engendered by the Government's return, the fact that a democratic government had not functioned for years in Norway created an atmosphere which contrasted noticeably with that in Sweden where the Riksdag, which I visited only a few days before, was democratically active.

Yes, Editor Gius, there must be a more efficient way to do things than that exemplified by our 16-hour day on the fair employment practices bill last week, but remember that the longest speech during this time was 15 minutes and the great majority of them were made under the 5-minute rule. No matter what our attitude as to this legislation, it was fairly and openly debated.

I ask unanimous consent to have the following editorial reprinted in the Appendix of the RECORD so that, as the Sun requests, Members of Congress may read this debate and working-hour limitation:

LESS TALK, MORE WORK

That voluminous Washington publication, known as the CONGRESSIONAL RECORD contains a daily Appendix which is filled with letters, speeches that never were delivered, some few that had been, reprints from hither and yon, very bad poetry, and miscellany of every sort.

We'd like to submit to said periodical one very brief paragraph that we've just run across in a Norwegian publication, with our prayer that it, too, be reprinted. Here goes:

"The Norwegian Storting has been considering how to increase its working efficiency. After 5½ hours' debate last week it was decided to limit speeches by party leaders, cabinet members, and chairmen of committees to a maximum of 1 hour, and to limit speeches by others to 20 minutes. It was also decided that the morning meeting of Parliament shall extend from 10 a. m. to 3 p. m. without the 1 hour's break at noon, which has been customary."

We'd hope that some few, at least, of our Senators and Representatives might read the item. We'd even hope that one or two might think the idea laudable and, maybe, try to do something with it.

A Profile of Hon. Jacob K. Javits, of New York

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1950

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the magazine New Yorker concerning our colleague from New York, Hon. JACOB K. JAVITS:

PROFILES—THE GENTLEMAN FROM NEW YORK

(By E. J. Kahn, Jr.)

As the Member of the House of Representatives from the Twenty-first Congressional District of New York, JACOB KOPPEL JAVITS, an energetic, informed, and ambitious lawyer generally addressed by the people whose backs he slaps as Jack, is the spokesman on the national scene for the slightly more than 300,000 inhabitants of the upper west side of Manhattan. JAVITS, who was born on the lower east side of Manhattan, has been in Congress only 3 years, but he has so rapidly adjusted to his environment that he can

now use a phrase like "warp and woof" in ordinary parlor conversation without blinking. He is a stocky man of 45, 5 feet 9 inches in height, with a gleaming bald head and gleaming white teeth. His appearance suggests an erudite version of Jack Benny, with whom, unlike some of his legislative colleagues, he has nothing occupational in common. JAVITS has always been an exceptionally serious-minded man, and he is a serious-minded legislator. He has a high regard for businesslike efficiency and is himself a sturdy example of it. When he first went to Congress, another legislator asked a mutual friend what kind of political machine the newcomer had behind him. "JAVITS doesn't need one" was the answer. "He is a machine." JAVITS has a strong social conscience, an alert and retentive mind, a fluent tongue, a courtly manner, and an air of indomitable self-assurance. He dresses expensively and carefully but without the flashiness of many politicians. During one of the two congressional campaigns in which he has been a candidate, a coworker suggested to him that he enhance his visual appeal to the voters by adopting some gay sartorial symbol. The friend mentioned Al Smith's brown derby and the success that that had enjoyed. JAVITS forthwith bought himself a black fedora, and scarcely took it off his head until election day. There is no reason to believe that it influenced a single vote.

The Twenty-first District, a politically, socially, and intellectually heterogeneous area with no particular feeling one way or another about haberdashery, hugs the bank of the Hudson River from One Hundred Fourteenth Street north through Inwood and extends as far east, here and there, as St. Nicholas Terrace and the Harlem River. It takes in Washington Heights, Marble Hill, Manhattanville, Morningside Heights, and Hamilton Grange. Its main thoroughfares are Broadway and Riverside Drive, and within its boundaries lie Columbia University, the Columbia Presbyterian Medical Center, Lewisohn Stadium, and the tombs of such antithetical celebrities as General Grant and Saint Frances Xavier Cabrini, the first American to be canonized. It is a middle-income district. Substantial blocs of Catholics and Negroes are to be found in it, but it is predominantly Jewish; since the 1930's so many refugees from Germany have sought it out as a haven that it is now occasionally called the Fourth Reich. It was traditionally regarded as a stronghold of Tammany Hall until 1946, when Javits, running on the Republican and Liberal Party tickets, dethroned the Democratic Party there.

A Congressman is, of course, supposed to espouse the views of his constituents, and JAVITS has tried harder than many of his colleagues to ascertain what those views are. During his 1946 campaign, he established a political precedent by engaging Elmo Roper, at a cost of $2,000, to sound out the residents of the district on how they felt about things, and he ordered a similar poll taken in 1948, when he successfully ran for reelection. On both occasions, Roper's operatives collared a thousand people of voting age, presumably a cross-section of the Twenty-first, and questioned them, for JAVITS' edification, about such issues as housing, the cost of living, atomic energy, China, public works, labor relations, the Soviet Union, and the quality of the performance of the Congress of the United States. JAVITS learned, among other things, that his potential constituents were markedly prolabor, and after being elected he dutifully voted against the Taft-Hartley Act, to the anguish of many of his Republican colleagues, who felt, as his party irregularity since then has caused them to continue to feel, that he was being grievously disloyal to their grand old cause.

Roper's 1946 survey disclosed that only 8.8 percent of the thousand constituents could correctly name their Congressman, JAVITS' predecessor; that 6.9 percent thought they could but came up with the wrong name; and that the remaining 84.3 percent, many of them well informed on atomic energy and China, found the question utterly beyond them. In 1948, when the same question was asked and the right answer was, of course, "JAVITS," 33.1 percent gave that name, and only 5.3 percent somebody else's. This was enormously pleasing to JAVITS. A few weeks ago, guided solely by a hunch, he estimated that well over half of his constituents could now, if challenged, name their representative. If that is so, he is, by big-city political standards remarkably well known in his district. His relative renown stems partly from the diligence with which he has looked out for the interests of his flock, and partly from his having demonstrated a nice flair for getting his name publicized not only within the narrow limits of the twenty-first district but also in the outside world, where he has had to compete for attention with the favorite sons of the four hundred and thirty-four other congressional districts. JAVITS works hard to this end. He almost never makes a speech or issues a statement without embodying in it expressions of sentiment that he regards as quotable and without distributing numerous mimeographed copies thereof. When Drew Pearson, who had once described him as "an effective operator," failed to mention him in an item that JAVITS thought he deserved to be counted in on, JAVITS hastily telephoned the columnist, fearful that he had somehow unwittingly hurt his feelings and eager to make amends. Such enterprise has paid off. JAVITS was, for example, the only Congressman to be honored by Forbes Magazine, a while ago, on a page headed "Thoughts on the business of life," in which one of JAVITS' thoughts (it had to do with the responsibility of the United States to the rest of the world) was quoted alongside thoughts of Abraham Lincoln, George Eliot, Irving Berlin, and an anonymous hotel proprietor in Syracuse who had put up a sign on his premises stating that business has never invented a substitute for customer satisfaction. Many of JAVITS' constituents feel that, by gaining recognition of such a high type, their congressman has brought them gratifying recognition, too. "You've put Washington Heights on the map," a pastor of that neighborhood told him a few weeks ago. JAVITS takes a more modest view of his achievements. "I've done a lot for the district," he says, "but the district has done a lot for me, too."

The mere fact of being elected a Congressman does a lot for any man. It generally means, for instance, that his State bureau of motor vehicles grants him a distinguished-looking license plate; JAVIT's current New York number is an eye-catching and cop-stopping JJ 20. Like his colleagues, he is entitled to, among other prerogatives, free medical care in Federal hospitals, Government-printed calling cards proclaiming his eminence; 68 copies of each daily printing of the CONGRESSIONAL RECORD and two bound sets of the collected issues of that massive and colorful journal; Government-made ice cubes, in the event that he should care to offer a drink to a constituent or a colleague visiting his office; Government-owned office furniture; and Government-supplied paper clips, towels, soap, brooms, and hothouse plants. The plants are lent to Congressmen to brighten their offices by the United States Botanic Garden, a couple of blocks from the Capitol. When the plants begin to wilt, the Garden obligingly sends a man around to pick them up and substitute fresh ones.

Congressmen otherwise decorate their chambers according to individual taste. One of JAVITS' closest legislative cronies is an ardent collector of ancient paintings and statuary; his office resembles an antique shop. In the realm of fine arts, JAVITS himself, like the majority of his colleagues, prefers to make do with what is readily available—calendar art bestowed upon the Nation's legislators by railroads and air lines, and framed, like any similar decoration, at the cost of the Government, provided that the users supply the glass. JAVITS has elected to deck his legislative headquarters with sparkling vistas of MacArthur Park, in Los Angeles; Old North Church, in Boston; and the lower tip of Manhattan, which is part of the Sixteenth Congressional District. An occasional visitor from the twenty-first may grumble that, geographically speaking, this gallery is hardly suitable, but without departing from his make-do policy JAVITS is powerless to remedy the situation; the travel companies have not as yet seen fit to pay pictorial tribute to Marble Hill, Manhattanville, or Hamilton Grange. JAVITS is assigned a two-room air-conditioned suite in the older of the two House Office Buildings, adjacent to the Capitol. His windows afford a view of an interior courtyard. As his seniority increases he will be entitled to better quarters, and someday, perhaps, will enjoy an outside view from the new House Office Building. On the desk in his private chamber, as befits a man in his job, are a Bible, an elephant, and pictures of his mother, his wife, and his two small children; behind the desk is an American flag, and on the floor next to the desk a spittoon, both furnished all Congressmen by a Government sensitive to legislators' needs. There are bookcases whose contents attest to the catholicity of JAVITS' interests—Science and Farming, the Veteran Comes Back, Poland Struggles Forward, and a 1947 Texas Almanac. Framed on the walls are a replica of the United Nations Charter; a Government pay check for 42 cents earned by JAVITS during part of 1941, when he was a dollar-a-year man; a photograph of the Eightieth Congress taken on January 3, 1947, his first day in office; and a copy of H. R. 3762, a piece of legislation known as the National Heart Act, that went into effect on June 16, 1948, and that is, to date, the only bill introduced by JAVITS (except for one affecting a lone constituent of his) to have become the law of the land. In the same frame with H. R. 3762, which provides for Government-sponsored research into causes of and cures for heart and cardio-vascular diseases, is the pen President Truman signed it with. JAVITS had to pay for this fancy job; the House framing service draws the line at three-dimensional objects.

JAVITS has a staff of six assistants, which is about normal for a legislator who takes his work seriously and has, or contrives to have, a good deal of work to do. His aides are evenly divided between the two poles of his political axis. In New York, he has a personal secretary and two part-time political secretaries, one representing the Republican Party and one the Liberal Party, who act as liaison men between him and his constituents. In Washington, sharing the outer office that leads into JAVITS', are another personal secretary, a press-and-legislative secretary, and a stenographer. None of the six is related to JAVITS, by blood or by marriage. All are on the Federal pay roll, and last year they collectively received $20,170. JAVITS' salary came to $12,500, and he also got a tax-free expense allowance of $2,500. Then there was $800 for stationery, $500 for telegrams and long-distance phone calls (local calls are on the House), and—since each Congressman is granted 20 cents a mile, every session, for the round trip between Washington and his home district—$89.20 for carfare.

JAVITS and the members of his staff take in, among them, more than $35,000 a year, but it costs closer to $50,000 a year to run his legislative office. He is able to make ends meet because, like many other Congressmen, he leads a perfectly honorable double life;

he devotes some time to the law firm, of which he is still a partner, that he was associated with in his pre-legislative days, and he continues to draw an income from it, though a considerably smaller one than he did when he was a single-minded man. JAVITS supplements his aides' pay out of his own pocket; he spends nearly $2,000 twice a year for printing and addressing a letter to 90,000 of his constituents, reporting on his activities; his telegrams and long-distance calls come to much more than he is allotted for them; he keeps up residences in both Washington and New York; and he has to foot a personal transportation bill that all by itself more than eats up his expense allowance. Congressmen whose districts are remote from Washington are rarely able to get back where they came from during a legislative session, but men whose districts are nearby find it not only possible but useful to make frequent trips home.

Many legislators from New York, Philadelphia, and other places reasonably close to Washington habitually attend to local affairs a couple of days a week, and are disparagingly known among their envious brethren from far away as members of the Tuesday-Wednesday-Thursday Club, a reference to the prevailing belief that they can be counted on to be present in the House only on those three midweek days, if then. Indeed, in deference to their habits, and to their numbers, the House often waits until the middle of the week to vote on important bills, and its committees hold most of their meetings then. JAVITS is an unusually conscientious legislator and can often be found in Washington on a Monday or a Friday, just as if he hailed from Oregon or Arizona, but in order to be on tap at the Capitol and also to spend what he considers a proper amount of time in New York, he has taken to commuting wildly, and expensively, between the two places. He regularly makes 2 or 3 round trips a week and has been known to make a couple in a day. When he first took office, he often used the Congressional Limited, but he has become more and more pressed for time and now generally flies. Some Thursday afternoons, as Representatives from New York City rush out of the House and wing toward home, JAVITS finds himself on a plane with half a dozen of his colleagues. On one such day last fall, he took a seat next to a stranger, and they got to talking about children. In the course of the conversation, JAVITS, referring to his year-old daughter, said carryingly, "She talks a lot but doesn't make any sense." Two other homebound Congressmen, who had evidently heard all his sentence except the introductory pronoun, turned and glared fiercely at him.

JAVITS talks a lot himself and, operating in an oratorical arena where making sense is not necessarily a qualification for admittance, he is admired by old-timers around the Capitol for the amount of it he makes. Last summer, the House was about to take its final action on a housing measure that after many weeks of wrangling had finally been approved by a joint Senate-House conference committee and was thus, as legislative procedure ordinarily goes, far beyond the stage of protracted debate. Nevertheless, when the conference report came back to the House for formal ratification, a few die-hard Representatives who disapproved of Federal housing rose to urge windily that every hod carrier working on a Government housing project be compelled to file a non-Communist affidavit, and to hint darkly that the House of Representatives itself was infested with Reds, pinks, and other heretics of allied hue. At that point, JAVITS asked for and got the floor. He said, in notably few words, that everyone present who had been against Federal housing all along would probably vote against the conference report and that everyone who had been for it all along would probably vote for it, so why didn't his distinguished colleagues just vote and get it over with? The effect of so rational a suggestion was startling. The debate halted instantly, a vote was taken, and the bill passed, at a saving to the taxpayers of heaven knows how many Congressman-hours.

During the three congressional sessions in which JAVITS has participated—two in the Eightieth Congress and one in the Eighty-first—he has been outstanding for his lack of the reticence that usually characterizes fledgling legislators. It is axiomatic in congressional circles that the best way for a freshman to get along, and to insure his reelection, is to keep his mouth shut. JAVITS was an impressively articulate courtroom lawyer prior to entering politics, and silence is foreign to his nature. He began his first session in Washington by holding himself fairly well in check, remaining officially mute until Congress had been meeting for more than 2 weeks. Then, however, he cut loose with a 20-minute speech. Before the House adjourned that fall, he had recovered so sensationally from his slow start that the index to the CONGRESSIONAL RECORD for the session showed him to have been more active vocally, than any other Manhattan Congressman. The second session of the Eightieth Congress had been under way only 3 days when JAVITS took the floor, and when the Eighty-first Congress convened, a year ago, he gave tongue, with the confidence of an old hand, the very first day. (This current session, he was mute for a week, but possibly only because he was preoccupied by the birth of a son the day before Congress convened.) Up to now he has demonstrated his versatility on the floor of the House by holding forth on something like a hundred and fifty themes, including James G. Blaine, health conditions in Brazil, CARE packages, Indonesia, the death of Jan Masaryk, Pan-American Day, Herbert Hoover, overtime pay, immigration quotas for the British West Indies, rent control for hotels, segregation in Washington schools, the profits of the General Foods Corp., Wendell Willkie, the United States Employment Service, the United States Information Service, air-mail rates, retirement pay for Army officers, the preservation of the dairy industry, American policy toward Spain, the Russian threat to the Dardanelles, Elihu Root, the character of the German people, wheat, children, wool, the Jackson Hole National Monument, and, it goes without saying, New York City. As a fervent champion of this city JAVITS once collaborated eulogistically with Representative ARTHUR G. KLEIN, a Manhattan Democrat from the Nineteenth Congressional District, who had felt impelled to pay tribute to his home town and various of its subdivisions—Wall Street, Greenwich Village, Chinatown, Little Italy, the Bowery, and so on. JAVITS, perhaps motivated partly by the fact that KLEIN had inadvertently neglected to mention the lower East Side, where most of KLEIN'S constituents live, took up the ball and not only rectified that omission but added Park Avenue and "my own Washington Heights" as a couple of other regions he felt the House, at that particular moment of history, should pause to take cognizance of. "We are really a collection of small towns," he said, "not an amorphous mass of people and masonry. There is as much good will, kindness, hospitality, and consideration per square foot in New York as in any other part of America, town or country. New York's millions of friendly citizens, its rapid transit, its restaurants of many nationalities, its magnificent shops, its unmatched theater and music, the sheer tempo of its movement, are the joy of invention, the passion for freedom, and the drive for progress which is America." Sic rapidly transit JAVITS.

The principal business of a legislator is, theoretically, at least, to legislate. While JAVITS has been in the House, around twenty-three thousand bills or resolutions have been introduced there—about 18 per Representative per session. When legislation presented to one Congress fails to get anywhere, its sponsor (if he is still there) frequently presents it to the next Congress; JAVITS has a 3-year total of 90 pieces of legislation—slightly over par for the course—including 13 that he has proffered hopefully to both the Eightieth and the Eighty-first Congresses. Some 20 of his offerings, including 4 repeaters, have been designed to assist individuals. Measures of this sort are known as private bills, and they are traditionally passed without objection once they get to the floor of Congress. The trick is to get them there. Some private bills introduced 10 years ago and reintroduced in each new Congress since then have yet to be reported out of the committees given jurisdiction over them. One of JAVITS' private bills would oblige the Government to pay $500 to a constituent of his who posted a bond in that amount with the Immigration and Naturalization Service in 1931, as a guaranty for his sister, who was allowed that year to enter the United States as an alien in transit, while on her circuitous way from Habana to Nassau. She didn't leave the country when she was supposed to, and the bond was forfeited. Nobody tried especially hard to deport her, and in 1937 the State Department, letting bygones be bygones, decreed that she might stay here indefinitely. Following that the immigration people said that they would gladly return her brother's $500 but that they would first have to be formally authorized to do so by Congress. JAVITS introduced the appropriate enabling legislation in 1948. It died with the Eightieth Congress and he hasn't got around to reintroducing it yet. JAVITS has had one private bill passed. It related to a merchant seaman who, while ashore at Leghorn, Italy, in 1946, was struck and injured by a military vehicle that he took to be a United States Army truck, and who wants damages from the Government. JAVITS' bill has granted the man the right to have his claim adjudicated by a United States District Court, where the matter may conceivably drag on for a couple more years.

The actual drafting of a bill is not the most onerous of a Congressman's chores. For one thing, the House provides a nonpartisan legislative drafting service, which, given the substance of any bill a man may have in mind, proceeds to dress it up in proper technical language. Then there is the Library of Congress, which stands ready to do whatever research a legislator may require in order to decide what he would like to put into a bill. The first public, or nonprivate bill that JAVITS offered to Congress would, if enacted, have permitted the entry into the United States, without regard to immigration quotas, of certain war orphans under 14. Having thus made his debut on the public-bill level, JAVITS went on spiritedly to propose legislation having to do with juvenile delinquency, meat rationing, public housing, multiple sclerosis, pensions for the widows of Federal justices, fair-employment practices, un-American activities, and the awarding of medals to members of the Army and Air Force Reserves. He has not been especially distressed by the lack of enthusiasm that most of these legislative proposals have evoked. A Congressman's contributions to the general welfare are not always measurable by the number of laws passed with his name on them. Carrying on in a forum where obstructive criticism is the natural order of things, JAVITS has tried to establish himself as a constructive critic of other men's bills, and several amendments he has championed have, to his immense satisfaction,

been formally, even if all but anonymously, enacted into law. Once, he got a letter from a constituent complaining about a postwar statute that allowed alien fiancees of American servicemen to enter the United States irrespective of quotas. Under the terms of this law, all such sweethearts whose romances soured after they got here and who didn't get married were liable to deportation, with the exception of German nationals, who, because the German quota had not been filled, owing to the postwar restrictions on general immigration from that country, could remain here in any event. Inevitably, some Germans had been taking advantage of this loophole and, with the connivance of Americans who were willing to let themselves be called sweethearts for immigration purposes, had been crossing the Atlantic ostensibly to get married but actually just to get resettled. JAVITS was impressed by his constituent's account of this uneven state of affairs, and, noting that an immigration bill of some kind seemed on the point of being passed by the House, he tried to tack an amendment onto it requiring that German fiances be treated the same as other fiancees. The general feeling at the time was that the matter could be dealt with administratively, rather than by new legislation, and the amendment was rejected, by the spectacular vote of 100–1, the sole vote for it being cast by Representative JAVITS (Republican-Liberal, New York). A less determined solon might have let the matter rest there, but JAVITS, nettled by the staggering proportions of his defeat, pleaded his cause earnestly to some Senatorial friends, and convinced them that a law was necessary. They inserted JAVITS amendment into the version of the immigration bill that was later approved by the Senate, and presently he had the pleasure, after this and the House version had been spliced in conference, of observing his fellow-Representatives unanimously approve a measure containing precisely the provision they had so overwhelmingly rejected not long before.

In the Senate, any number of Members may jointly sponsor a single piece of legislation. In the House, if more than one Member wants to sponsor a bill, each must present it as a separate, even if identical, legislative proposal. JAVITS, for instance, was 1 of 96 Representatives who introduced similar bills designed to strengthen the United Nations along lines recommended by the United World Federalists. This system of multiple authorship has at least one advantage; it enables whole flocks of Representatives, when reporting to their constituents, to claim credit—by implication, at any rate—for the same statesmanlike achievement. When popular indignation over the shabby treatment of Cardinal Mindszenty was at its highest, JAVITS was 1 of 13 Representatives who, moved by humanitarianism, introduced resolutions sympathizing with the cardinal's plight and berating his oppressors. So eager was JAVITS to have his views on the matter set forth in the CONGRESSIONAL RECORD that even after the House, by demonstrating its readiness to accept a colleague's resolution that was much like his own, had begun to take exactly the legislative action he had advocated, he felt it necessary to make one of those little caudal speeches that help to give the RECORD its bulging girth. "I append hereto House Resolution 65," he said, "which I offered to the same effect as the resolution now being adopted, and I am satisfied that the resolution now being adopted accomplishes the same result."

Much of Congress' legislative give-and-take is of a preliminary sort, occurring informally in restaurants, hallways, and cloakrooms, or formally at meetings of committees and subcommittees, to one or more of which every legislator is assigned. JAVITS, at the start of his first term, was tapped by his Republican colleagues for the House Foreign Affairs Committee, and he has served on it ever since. The committee's influence on the conduct of foreign affairs used to be modest compared with that of the Senate Foreign Relations Committee. Recently, however, the House group has been catching up fast, since the Government's foreign affairs and relations have been largely of a monetary nature—the European recovery program being a striking example—and since all appropriations bills originate in the House. JAVITS' good fortune in being assigned to this committee in the era of its ascendancy has been ERP's good fortune, too; he was one of a handful of global-minded Republican Members who, at a time when there was considerable sentiment within the committee for returning to isolationism and the Congress as a whole was dominated by the Republicans, tipped the balance in favor of distributing American largess abroad.

In 1947, JAVITS and three other Representatives concerned with foreign affairs went to Europe on one of those congressional fact-finding expeditions, and while in Warsaw one day, seeking facts about displaced persons, stopped to watch a crowd of men and women shoveling rubble into trucks. One of the legislators, aware of his position as a roving ambassador of American good will, graciously offered a cigarette to an old woman on the work gang. "Cigarette, pah," she said, and thrust a shovel into his hands. JAVITS and his two other colleagues, though a trifle weary from fact-finding at a pace that had them visiting eight countries in 6 weeks, took the hint, grabbed shovels themselves, and together they valiantly filled a whole truck with rubble, thus giving a demonstration of good will possibly never before or since matched by any itinerant delegation of American Congressmen.

The three Representatives who went abroad with JAVITS contributed, as it happened, not only to expediting American foreign relations but to expediting JAVITS' domestic relations. When the four legislators sailed from Manhattan, one of the well-wishers who came aboard to see them off was a personable young lady to whom the gentleman from New York, then unmarried, had for some time been attracted. The sailing was delayed, and so was preceded by several all-visitors-ashore warnings. Each time the bells clanged, JAVITS gave his visitor a conservative peck, and each time his colleagues, taking advantage of the prevailing atmosphere of camaraderie, gave her a resounding kiss. After the third or fourth round, JAVITS cried anxiously, "How about this, boys?" "Congressional courtesy," they explained. Before the boat cleared the harbor, JAVITS had decided that a young lady who so manifestly appealed to other men of stature was in danger of getting away from him if he didn't act fast, so he proposed to her by ship-to-shore telephone. Two months later, when JAVITS and the lady were married, his fellow-members of the Foreign Affairs Committee gave the couple a handsome silver tray with all their names inscribed on it—one of the rare instances of their taking unanimous action on anything.

When in Washington, JAVITS usually gets to his office around 9:30 in the morning. Committee meetings generally begin at 10 and last until noon, when the House convenes. It remains in session until mid- or late afternoon or, toward the end of a congressional year, when there is much unfinished business on hand, until early the following morning. Few Congressmen spend much time on the floor unless a bill in which they are vitally interested is under consideration; some hardly ever go there. To insure their being present at critical moments, as when a close vote on an important matter is imminent, they are, like firemen or young ladies seeing ships off, alerted by bells, which ring commandingly throughout the House office buildings. JAVITS keeps in fairly good shape by, among other things, spending a couple of hours a week playing paddle ball, a refinement of handball, in the House gymnasium, for the privilege of using which he pays $5 a year; when pressed, he can get from his office desk to the House chamber—roughly a quarter-mile stretch, indoors and out—in 4½ minutes without straining. This affords him a wide margin of safety, because the most important kind of vote is an alphabetical roll call, or two-bell vote, and calling the roster of the House twice (as is regularly done, to give stragglers and slowpokes a chance to record their votes) takes nearly three-quarters of an hour.

JAVITS manages to spend a few hours in his office most days when he is in Washington, but nonetheless he has to work late at night at least twice a week, and he practically never gets to any of the cocktail parties that are commonly thought to be as indispensable to the well-being of some Congressmen as paddle ball is to that of others. While JAVITS is in his office, he devotes a good deal of his time to conferring on the telephone about legislative or political matters with his colleagues (he is on a first-name basis with about a hundred of them, including quite a few Democrats); to reading and answering his mail, which rarely comes to fewer than fifty letters a day and sometimes goes well above a hundred; to greeting constituents who drop in to say hello, to ask for passes to the House or Senate gallery, or to nag at him; to preparing speeches or studying bills that are scheduled to come up (many of these are couched in such cloudy language that he has to get his legislative secretary to find out what they mean before sitting down to ponder their merits); and to editing material that is to appear in the RECORD.

When a Congressman says something on the floor it is transcribed, and if he has asked permission to revise and extend his remarks, it is sent to him so he can make any corrections he cares to before it is inserted in the RECORD, a protective device that leads to the excision of many grammatical bobbles and that once enabled a Representative from a dairy State who had absentmindedly spoken favorably of oleomargarine to change a highly embarrassing "for" to a rocklike "against." A Congressman may alter, add, or delete as much as he chooses, and a sentence like "I feel that we will continue to press for action for the middle-income families, which was also provided for in our bill"—the words JAVITS used one day in commenting on another man's housing bill—may come out something the way that one did: "I feel also that we will continue to press for action on housing for the lower middle-income families, which is not contained in his bill, but which was first provided for in the bill introduced by the 10 House Republicans, later joined in by similar bills introduced by 22 Democratic Members." Congressmen become so accustomed to editing anything they put in the RECORD that in the process of inserting an article from the Saturday Review of Literature last summer JAVITS edited that. Despite this careful preparation insertions in the RECORD are still occasionally liable to misinterpretation. During the last session JAVITS submitted for the RECORD's Appendix, in which Congressmen may insert material not spoken from the floor, an item that began with the statement, "This is an invitation to Members from our 26 most populous States to go to the theater." Some Congressmen, who knew that JAVITS had introduced a bill calling for the establishment of a national theater and who had heard through the legislative grapevine that he had just been in telegraphic communication with Oscar Hammerstein II, one of the producers of "South Pacific," read on with high anticipation, only to find that JAVITS' encouraging preamble was followed simply by a listing of the names of more than 250 summer theaters in 26 States that a theatrical acquaintance had asked him to insert as evidence of the ubiq-

uity of the stage. JAVITS had sent a telegram to Hammerstein, all right, but merely to inquire into the possibility of buying a pair of tickets for a Saturday-night performance of "South Pacific."

JAVITS' less provocative contributions to the Appendix have included a letter from a housewife in his district lamenting her inability to find a decent apartment and a letter to the editor signed by J. K. JAVITS and published in the Herald Tribune last year when it was searching for a definition of liberalism. The Tribune has been a supporter of JAVITS, and said editorially of him, after the 1946 elections: "He promises to be a legislator of a new and different nature, and we look forward to hearing more of him." JAVITS was grateful for so warm a send-off—though probably not surprised, inasmuch as the paper's chief editorial writer was one of the men who had urged him to run in the first place.

Some Congressmen cram the Appendix with lofty words they have declaimed at cornerstone layings, barbecues, and husking bees. JAVITS has been remarkably diffident in this respect, and not for want of material, as since taking office he has made an average of two or three speeches a week at functions he has attended. If he were to accept all the invitations that come his way, he could be even more oratorically occupied, but he has chosen to confine himself, in the main, to audiences with national influence, such as the annual convention of the Grocery Manufacturers of America, and to audiences with influence in his home district, such as the Kip's Boy Scout Troop 472, Manhattan. Being one of nine Jews now in the Eighty-first Congress (he was one of seven in the Eightieth) and an outspoken friend of the State of Israel, he is considered an exceptionally attractive drawing card by most of the Jewish organizations in the country; immediately after his election to Congress he visited Israel, at his own expense, to study conditons there, and this later made him a logical choice to christen the S. S. *Haifa*, the first vessel to fly the colors of the American-Israeli Shipping Co.

During a typical 3-month period, JAVITS was invited to such varied functions as the annual strawberry ball and card party of the Republican Club of the seventh assembly district, north; a meeting of the American Association of Former European Jurists; a supper party of the Sisterhood of Congregation Ramath Orah; a dinner of the American League for an Undivided Ireland; the installation of officers of Upper Manhattan Chapter 42 of the Order of Ahepa; commencement exercises of the Western Union Messenger School of New York; a weekend cruise on an aircraft carrier, to observe naval operations; and a ball given by the Columbia University Chinese Students' Association, at which a special award of merit was to be presented to him. All these bids happened to be among the many that JAVITS was obliged to decline, except the one from the Chinese students, and, as things turned out, he might as well have declined that, too. The ball was canceled at the last minute, and he has not yet received his award.

JAVITS has learned that a politician must be patient about such personal disappointments, especially when they occur within his district. Not long ago, he was asked to an evening festival at a neighborhood synagogue, and replied that he had a terribly full schedule already set up for the evening in question but that he would try to drop in if he possibly could. When the date came around, he did have a full evening, with three or four duty calls to make, but he gamely stopped by the synagogue anyway. It was closed and dark, and after pounding respectfully on a few doors and rattling a few knobs he went away. A busy private citizen might have raised a fuss over being thus inconvenienced, but JAVITS took the whole thing with good grace. "Perhaps you had the festival on another evening and forgot to tell me," he wrote to the man who had issued the invitation, and added his expression of good wishes for the fine work he felt sure his elusive host was doing. JAVITS himself tries hard not to disappoint people who are expecting him, but he makes so many engagements that now and then he can't keep up with them. One man, who had been extremely anxious to talk to him and had had a couple of lunch and cocktail dates with him misfire, thought he had licked the problem by asking JAVITS to his home for breakfast at 9 o'clock on a Sunday morning. JAVITS accepted. That Sunday, the host and his wife arose early, got their children fed and out of the way, and sat around hungrily awaiting their honorable guest. JAVITS arrived at 10:30, panting. He was dreadfully sorry to be so late, he said, but a prebreakfast engagement had lasted longer than he had figured.

Marihuana Makes Youthful Criminals

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1950

Mr. JAVITS. Mr. Speaker, an alarming number of crimes in various sections of the United States have been committed by young people who have been under the influence of marihuana. Many of these crimes have been committed by teen-age youngsters who, while under the influence of this vicious drug, have committed murder, robbery, and other equally shocking crimes.

Newspaper headlines tell the story every day. The recent hitch-hike robbery and murder of an innocent citizen involving a young 18-year-old girl and her 15-year-old companion, who admitted she was under the influence of marihuana, is but one grim example of the current tendency toward drug addiction by young people.

I am truly amazed at the public apathy which greets this shocking wave of cases. Our law-enforcement agencies are fighting this menace and trying to break up the various crime syndicates which operate these illicit narcotic rings. But the time has come for the American people to rouse themselves and to take stock of the situation.

How can a citizen join the fight? First, by learning through intelligent reading what effect marihuana has on the person. Second, by learning through discussion with local law-enforcement authorities just how unscrupulous habitual criminals circulate marihuana through highly developed crime syndicates.

In this way the citizen can become alert to the present danger of crime under the influence of drugs, and assist actively in support of our law-enforcement agencies.

Report anything that arouses your suspicions to your local police department.

Do not wait for the other fellow to do it; do it yourself and do it now.

In conclusion I would like to suggest that the vast, far-reaching medium of radio be utilized more than ever to drive home to the American public the simple truth that crime does not pay, not by simply dramatizing the activities of private detectives and criminals, but by showing the criminal in his true light—as a coward, a menace to decent citizens, a broken wreck of a human being often a marihuana addict or user of other drugs—and documentarily detailing the never ending war waged by our law-enforcement agencies to bring an end to this evil.

The Man Few People Knew

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1950

Mr. STEFAN. Mr. Speaker, the former Governor of Nebraska, the Honorable Samuel R. McKelvie, served as a member of the Federal Farm Board under the administration of President Herbert Hoover. Each year Mr. McKelvie issues a very interesting booklet entitled "By the Way." In this year's issue, Mr. McKelvie has written an inside story about the former President and also a statement regarding surplus farm crops as they existed at that time.

Because we are now perplexed over our farm problems, I feel that the membership should have Mr. McKelvie's story, since the situation in those days regarding farm surpluses was somewhat similar as the conditions appear to be today.

By leave granted me, I include Mr. McKelvie's statement as part of my remarks:

THE MAN FEW PEOPLE KNEW

The most unusual valentine I ever received and the most appreciated was a telephone call February 14, 1929. It was from President-elect Herbert Hoover. I was in Arizona trying to recuperate from a 3-year-old X-ray burn. He was in Miami, Fla., getting in a few spare hours of fishing before taking on the immeasurable responsibilities of the highest office in the land.

He asked me to accept appointment as Secretary of Agriculture in his Cabinet. It is impossible to describe my emotions, not only because it took me so completely by surprise, but that I could not accept. After expressing my deep appreciation of the honor, the most I could say was that on account of my physical condition I could not accept then, but within a day or two would advise with an eminent surgeon from Northwestern University who was then in Phoenix, and report. This I did on February 16.

"MY DEAR SECRETARY HOOVER"—(he was still Secretary of Commerce under President Coolidge). "I have awaited giving you my final answer pending a conference with the best medical authorities. Am able to say to

you now rather definitely that I shall not be able to undertake any responsible work before the 1st of June, or possibly the 1st of July.

"The fine honor you tendered me is one that I could not decline under normal circumstances. I am in sympathy with your program for agriculture, and would welcome the opportunity to take so important a part in developing it.

"I hold myself in readiness to be of service whenever and wherever I can." (Which I did, as will be noted later.)

Fact is I had disavowed any further public office, having just begun to recover financially from my 4-year governorship bout. I was sick of politics.

That was why I wrote Mr. Hoover shortly after his election congratulating him and saying: (He was about to start on a good will voyage to South America.)

"I hasten to express good wishes on the important voyage that you are about to take.

"From copies of letters sent me I am aware that representations are being made to you in my behalf in connection with your official family. I cannot too earnestly assure you that these words of my good friends are wholly unsolicited. I seek nothing politically. My efforts in your behalf were actuated by your fitness for the place, and I would regret very much to have it considered otherwise.

"I am at your command to be helpful in promoting the success of your administration, and my services will be without thought of personal reward." (I tried to help all right, but am not very proud of the results.)

My recuperative stay in Arizona did not yield the desired results. From there I went to Johns Hopkins, had the burn excised, the wound began to heal and Martha hurried me off to our summer retreat in the Black Hills of South Dakota. That was in June. It was not long until I was wandering along the stream snaring an occasional trout, and taking a new lease on life. Then in July came another telephone call. It was from President Hoover in Washington.

The new Congress had enacted the agricultural law that he recommended. It provided for a Federal Farm Board of nine members. Secretary of Agriculture Hyde, who was a member ex officio of the Board, had felt me out from time to time about accepting a place on it. I repeatedly took refuge in my physical inability to serve. But finally the word got to the White House that I was giving them the run-around. That was why Mr. Hoover called.

He asked me to serve as a member in charge of the Grain Division. All of the other members had been appointed, and the Board was functioning. As previously indicated, I declined for reasons other than my health, but that refusal lasted only 1 day. He called again the next day and was so insistent that I accepted for 1 year only, and, on July 24, wired him:

"I will undertake service on Federal Farm Board wtih understanding that I may begin September 1 and retire June 1 next year. If this is agreeable to you I will arrive in Washington next Monday and spend 1 week with the Board. Also, annoucement should include conditions of my acceptance." All of which was carried out, except that when next June rolled around he prevailed upon me to stay another year.

One of these times I will have more to say about the ill-fated Farm Board and its work. Suffice to say that its acts seemed so revolutionary, and it was so stanchly opposed by private interests that it hung like a millstone around the President's neck. The squawk was made to high heaven that it would break the taxpayer and the Government. Believe it or not, the total appropriation was only $500,000,000.

"One-half billion dollars. My gawd. What was going to become of such spendthrift government. And Mr. Hoover was responsible for it all." Such incidents were the major theme of an unscrupulous opposition that set out early in his administration to misrepresent the facts and defeat him.

Small deficits were run during the last year or two of the Hoover administration. They were in fact trifling compared with what has happened since, but because it had been so long since there had been a deficit it was easy to make mountains of it. Finally, when the next campaign came on in '32 the opposition candidate speaking at Pittsburgh, said:

"We all know that our own family credit depends in large part on the stability of the credit of the United States.

"The credit of the family depends chiefly on whether that family is living within its income. And this is so of the Nation. If the Nation is living within its income, its credit is good.

"But if, like a spendthrift, it throws discretion to the winds, is willing to make no sacrifice at all in spending, extends its taxing to the limit of the people's power to pay, and continues to pile up deficits, it is on the road to bankruptcy.

"Taxes are paid in the sweat of every man who labors, because they are a burden on production and can be paid only by production. * * * Our workers may never see a tax bill, but they pay in deductions from wages, in increased cost of what they buy. * * *

"I regard reduction in Federal spending as one of the most important issues. * * * In my opinion, it is the most direct and effective contribution that Government can make to business."

How true. And how clearly stated.

Consider, then, what happened. Expenditures in 1932, the last year of the Hoover administration, were a little less than $5,000,000,000, and the national debt $16,801,000,000. By 1936 expenditures had increased to over $9,000,000,000, and the national debt was $33,779,000,000. More than doubled in 4 years.

Whether Franklin D. Roosevelt ever intend to live up to his promise we will never know. Suffice to say he never did, but it was red-hot campaign stuff at the time.

In my opinion, Mr. Hoover was the greatest economist and statesman of this century, and the poorest politician. One day former Gov. Henry Allen, of Kansas, and I were bemoaning the latter fact when Henry said: "The trouble with the Chief is that he always catches the ball on the second bounce." Meaning that he could not anticipate popular reactions to what he said or did. He sent out no feelers or trial balloons. If he thought a thing should be done he did it; and if he was opposed to a proposal he said so without equivocation.

I retired from the Federal Farm Board in June 1931. At that time the Government owned nearly 200,000,000 bushels of wheat and an equivalent amount of cotton acquired through stabilization purchases of the Federal Farm Board. Little, if any, of it dared be sold because just as soon as that was intimated the speculative trade made capital of it and promptly depressed prices to growers.

What was to be done about it? Well, we tried to peddle it by subterfuge. Some was sold in foreign countries in the form of flour. A few thousand bushels were traded for coffee in Brazil. Some was sold on "tick" to China, and I think never paid for. As I recall much the same was done in Germany, or other foreign countries. But all of those things made not a dent in the tremendous Government holdings.

Before leaving the Board I suggested that by some device, preferably through a charitable agency, it be given away to the needy at home. There were plenty of them. As the months wore on and the unemployed increased it seemed all the more imperative that it be done. So I went to Washington and took it up with several authoritative individuals and agency chiefs, among whom was Mr. Hoover.

The purposes appealed to him, especially on behalf of the needy—there never was a greater humanitarian; but he feared that it would again depress prices to the producer and interfere with the normal sources of distribution. I agreed but still felt that the end justified the means, and added that if he did not recommend and urge it the next Congress would and he would not get the credit. It did not budge him.

As a final clincher I pointed out that we had been giving it away in foreign countries to those far less worthy, and added "the people will appreciate it." With a good deal of vehemence he replied, "Appreciate it! They will not even remember it 6 months hence."

I recommended that 10,000,000 bushels be given away, but I believe nearer 10 times that was distributed through the Red Cross. It went into 85 percent of the counties in the United States. It was appreciated all right; that is, momentarily; but I'll wager there is not 1 in 10,000 who remembers it today. No doubt a good many were influenced by it in the next election, but Mr. Hoover did not get the credit.

Mr. Hoover believed in keeping government close to the people instead of centralizing it in Washington. He urged that the communities and States assume and discharge the responsibilities of taking care of their people. There, again, he was no politician. His successor proved that the easy way is to buy votes out of the National Treasury and let the recipients pay it back in their own money—taxes.

Fact is that in the midst of one of the worst depressions in American history Mr. Hoover could not have been reelected had he been Jesus Christ himself.

As the time for his retirement approached, Mr. Hoover offered his services and cooperation to his successor without prejudice, despite the unfair and in many respects dishonest campaign that had been made against him. His interest was in his Government and his country. To those ends he would make any sacrifice. His offers were ignored completely, and as time went on it was easy to understand why.

According to Raymond Moley, who was a part of the New Deal administration in its early stages, "Roosevelt always had a much more serious opinion of the damage to him of a Hoover come-back than he would publicly admit. I have the evidence that he (Roosevelt) made a bet with me before the 1936 campaign that Hoover would be renominated by his party." He adds, "The real gist of the Democratic appeal in four presidential campaigns has been the wonderful recovery of the country after the defeat of Hoover. The Democratic Party has been running against Hoover for 20 years."

Mr. Hoover's unselfish service to his country is measured in his every act. Never has he taken one penny from the Government in payment for his services, including the years he served as President. In that he stands alone. He never weighed his work in dollars and cents. It was a labor of love and duty. His beliefs were founded upon the Constitution and the Bill of Rights. These he sought to preserve, and his emphasis in matters of Government policy always were founded upon them.

To me it seems he was the man few people knew. The greatest economist and statesman to occupy the White House in our time, he knew and gave the answers to good government policy almost before the questions were asked. But in that time of depression and discontent, the answers were not popular. Immediate relief was the want, regardless of cost or final result.

He was a friendly man, and cordial; but not a back slapper, opportunist, or paternalist. Just a plain, hard-headed, straight-thinking businessman, he tried to get results by the short, honest route without realizing that in public life the leader must not be too far in advance of popular knowledge and thinking.

New Deal Measure, Federal Deposit Insurance Corporation, Proves Worth to United States Economy

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. PRICE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Chicago Herald-American of February 6, 1949:

FDIC ONCE MORE PROVES WORTH TO UNITED STATES ECONOMY—ONE BANK'S TROUBLES TODAY ARE NOT DISTURBING

(By Robert P. Vanderpoel)

Despite a defalcation estimated at $200,000 by its cashier, the First National Bank of Dyer, Ind., is operating as usual.

In the old days, an episode of this sort would have caused an immediate run on the bank and the chances are that very quickly it would have closed its doors. There would have followed other, more moderate runs on nearby banks and the Dyer bank would have gone through the long and costly process of receivership and liquidation.

At best, depositors' money would have been tied up for a long period and business in the whole community would have suffered. At worst, depositors would have received only a gradual and partial return of their funds over a period of years. Stockholders would have been assessed their 100-percent double liability and a substantial amount of the assets would have been eaten up with the fees of receivers, attorneys and what not.

As it was, with deposits insured up to $5,000 by the Federal Deposit Insurance Corporation, there was no fear on the part of small customers of suffering any loss. Consequently, there was no run, no frantic efforts to liquidate under unfavorable circumstances.

LOANS WILL BE GUARANTEED

Instead, plans were made for the bank to be taken over by the Gary National Bank with the Federal Deposit Insurance Corporation guaranteeing loans up to $1,000,000 and agreeing to assume slow-paying loans at the end of a 6-month period.

This episode recalls the manner in which almost every banker in the country opposed Government guaranty of bank deposits prior to the bank crisis of 1933. Today the bankers recognize this insurance as the greatest blessing that has come to their business. They no longer lie awake nights fearful of runs that sometimes started from rumors that had no basis in fact.

The bankers opposed Government insurance because certain of their leaders told them it would bankrupt the Government, make for bad, reckless banking and be a first step toward complete Government control. The propaganda along this line had been so active and persistent that it was almost universally believed.

Today it would be difficult to find a banker in the country who is not wholeheartedly in favor of Government insurance.

There are other propaganda waves, however, that have swept the country which are just as false, just as injurious as the campaign against insurance of deposits prior to 1933.

ASK FOR CUT IN INSURANCE FEE

Further there is another movement now on foot in connection with the insurance of bank deposits that impresses us as completely unjustified. It is to lower the insurance charge from the present level of one-twelfth of 1 percent of deposits. Those who have been advocating this have a plausible case. Distributions as a result of failure have been very small, the FDIC has paid off completely the funds advanced by the Government for setting it up and its capital funds now exceed a billion dollars.

Superficially, certainly, a lower insurance fee would seem to be adequate. There are important factors, however, that make for an opposite conclusion.

First, deposits have soared since the creation of the FDIC. Liabilities have risen proportionately.

Second, the whole life of the FDIC has been in a period of expanding business. There have been almost no bank failures because there have been few failures of any kind and business has been excellent. What the future may hold, however, nobody knows. The test of the FDIC will come when times get tough.

Third, bank earnings have been very satisfactory. As a result, the banks do not need at this time relief from the insurance charge.

The Extra Bushel

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 1 (legislative day of Wednesday, February 22), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address made by the Honorable Charles F. Brannan, Secretary of the United States Department of Agriculture, on February 18, 1950, before the National Farm Institute, at Des Moines, Iowa.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am especially glad to have the opportunity of participating with you in this outstanding institute. The National Farm Institute makes an important contribution to our agricultural thinking. It is a healthy and constructive example of democracy at work, encouraging a better understanding of our Nation's farm problems and what can best be done about them.

We have before us for consideration today some serious problems of farm policy, problems which demand an early solution, not alone in the farmer's interest but for the welfare of the entire Nation.

There are, undoubtedly, a number of approaches that would be helpful to general understanding of just what is involved. But I would like to suggest we examine our subject in this way:

We have here on the table a bushel of corn.

If you will assume it is the first extra bushel beyond our assumed domestic needs, beyond export requirements, and beyond even the safe reserves required to protect the Nation against crop failure or other emergency, then it is a symbol of our major national farm problem.

It is an extra bushel. It is the bushel for which a satisfactory market must be found if the man who produced it is to get a fair price and if it is to do anybody any good. Its counterpart is to be found in many other crops.

Yet it is no different from any other bushel of corn. It requires time and effort and money to produce, and it contains the same essential feed values as all the rest of our corn.

Farmers may accidentally produce it in good faith as part of their effort to earn a living for their families and to help feed our Nation adequately and properly. They can produce many like it through more efficient use of their resources—through new and better farm practices, through better care of the soil, through new varieties developed by long and painstaking research, and through mechanization to cut down the man-hours of farm labor required.

What are we going to do with that extra bushel?

There are just two alternatives:

We must either consume it by transforming it into meat, milk, eggs, and poultry—and by getting that extra food eaten—or we'll have to lock up that extra bushel in storage and reduce the next year's production by that amount.

Of course, there are some potential industrial uses for a very small portion of this extra bushel. But the alcohol manufacturer today could not pay the farmer more than 50 cents a bushel for corn and stay in business.

That's just about all the choice we have. And that, in a way, just about sums up our farm problem today. There it is—that extra bushel.

The future course of our Government farm policies will determine what shall happen to that extra bushel—whether we use its potential nutritional values for a better diet for the American people, or whether we must stop producing it—if, indeed, it is possible to stop producing it.

Making use of it will benefit both farmers and the consumers; abandoning its production will mean a sacrifice for both.

Modern farming is geared to abundance. Our present methods of farming are founded upon the use of modern machinery, motor power, and the newest discoveries of science. Practical, far-sighted conservation practices are also aiding farmers to reach new production records.

I do not believe any of us want to call a halt to this progress.

I do not believe either farmers or the rest of the American people are willing to concede that more efficient use of our resources is a waste just because it results in that extra bushel.

I do not believe any of us would willingly give up the know-how for producing that abundance. We want to learn—and must learn—to live with our abundance. That's why I have advocated farm program measures aimed at making use of that abundance rather than shackling it.

There still appears to be some misconception and lack of understanding about these farm program recommendations, and even about my motives for making them. Some of this is the natural result of insufficient information. More of it has been intentionally manufactured by the leadership of a great farm organization.

But whatever the cause, we are here dedicated to objective study.

So, first let's get straight on some basic concepts.

I am for parity. I am for the original concept of parity—a standard of equality for agriculture, a fair share of the national income for the farmers who contribute so greatly to creating that income. I am thinking in terms of people, rather than just commodities. I want parity of opportunity for

the farmer to earn a fair return from his investment of capital, labor, skill, and management ability; not just parity for that bushel of corn. I want parity of living opportunity for the farm family.

I am against regimentation. I am against any form of controls that can be reasonably avoided and any which do not have the affirmative support of a large majority of the producers affected. I am for the widest possible freedom of choice by the farmer himself in the management of his farming enterprise. I am for farm programs that will make the maximum use of our farm production—so that we can avoid the strict controls that will be inevitable if we fail to provide a profitable and useful outlet for that extra bushel.

I am for efficiency of production and for constantly increasing our efficiency. But I do not agree with those who hold that the only path to efficient production is industrialized mass farming. I want to see no collectives taking over the farms of America—whether those collectives be of the Soviet design or the corporation pattern. I believe the family-sized farm can be efficient, and I believe that we should concentrate our efforts for increased efficiency upon the family-sized-farm unit because of the important human values it contributes to our society. I am for encouraging, strengthening, and preserving the family-sized farm as the backbone of American agriculture, not turning our backs upon it and destroying it in the false name of increased efficiency.

I am for Government economy. I am for economy by eliminating the uneconomic practices of present price-support methods that waste good food and penalize the consumer by making him pay the costs twice—first in his tax bill, and second in his food bill. I am for doing everything in our power now to avoid the tremendous cost to the Government of another disastrous depression and to avoid its cost in human misery to the people of our Nation.

I am against the wasteful accumulation of unmanageable surpluses beyond normal safe reserves at a time when much of the Nation's population is still ill-clothed and underfed. I want to see the Nation use that extra bushel of corn, not just lock it up and try to make farmers quit producing it. And I repeat I'm talking today about that extra bushel which is clearly beyond safe reserves, and beyond domestic and export needs. I am not talking about the reserves that we have sealed up in bins, I am talking about the extra bushel beyond prudent reserves.

Your ideas and mine cannot be far apart on these fundamentals.

But just what is our situation today? Are we making progress toward our objective or are we slipping backward? Are we on the right track?

Unfortunately, both farm prices and farm income are headed in the wrong direction. Farm prices have dropped an average of almost one-fourth in less than 2 years. They are still going down. But farmers still have to pay within 5 percent as much for what they buy as they paid 2 years ago. In 1947, farm operators had a net income of nearly $18,000,000,000. Last year, it was down to around $14,000,000,000. The forecast for 1950 is for a net income of under $12,000,000,000. That is a decline of one-third in net farm income at a time when national income is at or near its all-time peak.

Is this the way to parity?

Is this a desirable trend?

The gap between farm and nonfarm incomes is widening, instead of closing.

Even at the peak of agricultural income, total per capita income of persons on farms was only about 60 percent as high as for persons not on farms. In 1949 this income gap widened, and in 1950 is expected to widen still more.

The people on farms constitute nearly one-fifth of the total population, yet they got from their farms less than 10 percent of the national income year before last, and only 7.8 percent last year.

We are headed away, instead of toward, our real concept of parity—equality of opportunity for agriculture.

Should we not be disturbed about this trend? Should we not seek its causes and offer our best effort to retard and reverse it?

Must those in public office whose duty it is to be particularly sensitive to these trends be attacked as stupid, dishonest, or nuts because they speak out about them and seek a remedy?

One of agriculture's best friends in Congress—Congressman CLARENCE CANNON, of Missouri—frankly faced the facts at a recent Appropriations subcommittee hearing by saying, and I quote:

"Our present support program is not working. It is failing notably in three ways. It is failing to support prices. Hogs are selling today at less than half the price at which they sold at a time when wages, freight rates, and dividends in this country were lower than they are today. The present system is a failure, in the first place, because it fails to bring the farmer a fair wage for his labor and a fair return on the capital he has invested, his fair share of the country's income, or his fair standard of living.

"In the second place, there is a lot of administrative machinery for embracing the system which enrages the consumer and creates sentiment all over the country, in every grocery store and every meat shop, against the farmer and the Government. It is unfair to the farmer, unfair to the Department of Agriculture, and unfair to the Congress.

"In the third place, and not the least important, it denies the American people food they need and ought to have." That is the end of the quotation.

Many people in agriculture and many friends of agriculture would agree with the Congressman. Like him, I am sure, they would defend and maintain our present farm program for the good that is in it against the enemies who would destroy it. But they would also join the realists who see the faults in the program and wish to make improvements. I am sure all of us appreciate the great strides of progress we have made since those dark days of the depression thirties when many Iowa farmers had to burn corn to heat their homes.

We have made progress, even though we are still quite a ways from our goal.

We made that progress by realistically facing our problems and the conditions of our times.

We did it in our struggle upward from the depths of depression before the war, and we did it to meet the challenge of war.

And now we're going to have to do it again, as we squarely face and appraise the great capacity of this Nation to produce food and fiber and adjust ourselves to whatever changes may be necessary to put that extra bushel of corn to use to convert it into food people need and will consume, instead of abandoning its production.

How are we going to do it?

Perhaps one answer can be found in the fact that there is not only room but need for more meat, milk, eggs, and poultry in our Nation's diet. That could mean more consumption of corn, and therefore less need to restrict corn production.

But we aren't likely to get that corn converted into more meat, milk, eggs, and poultry unless the farmer producing those foods has reasonable assurance of fair returns from his finished product. Few of them will find much inducement for converting a commodity with an assured price into one with an uncertain price. We must broaden our support program to provide the incentive the farmer now lacks to produce the foods we need, both to improve our diet and to use up that extra bushel.

But getting that extra bushel converted into protective foods is only the first step. We have to get that extra food eaten. We need adequate consumer purchasing power to encourage increased consumption, and we need to offer the consumers the opportunity to add larger quantities of such protective foods to their diets at reasonable prices.

From our past ups and downs in food consumption we know that the people, given prosperity, will gladly up-grade their diets with meat, milk, eggs, and poultry.

Adequate farm purchasing power contributes to such prosperity, and helps maintain the purchasing power of other consumers. Prosperity in the farm market always means more dollars in real wages in cities and towns.

But if we really intend to serve the Nation's best interest by maintaining the farm purchasing power needed for a full economy, we have learned from experience that we must do more than support the prices of a few commodities. It seems obvious that we must use a realistic farm income objective and extend supports to the products which create a substantial part of that income. It seems equally plain that we must do it by methods that encourage rather than hamper increased consumption.

For example, we must do it by methods that let American potatoes compete for the American market, instead of letting our own potatoes go to costly waste while consumers buy and eat Canadian potatoes because they are cheaper.

I do not think any of us should be satisfied with farm laws that create such a situation as we now have with potatoes. Yet, strangely enough, some of those objecting loudest against the administration's farm proposals appear unconcerned about the costly waste of potatoes. Despite all the fault-finding on other scores by the national leadership of the American Farm Bureau Federation, it appears satisfied with the present potato situation. Unlike the Department of Agriculture, they never objected to the present law regarding potato price supports, although it appeared in the 1948 act in precisely the same form as in the present 1949 act. On the contrary, they embraced the present law and advised the Department how it should be operated. The Farm Bureau leadership advised me as follows: "We recommend a 1949 program for potatoes at 60 percent of parity and without acreage allotments."

Why aren't we working together toward adapting our farm programs to meet the existing conditions of today? Why do some insist upon blocking any constructive action at all?

What is there that we can't agree upon?

Is the scare cry of "subsidy" the stumbling block? Let's be realistic. All aid to agriculture in any form is a subsidy, just as all Government aid to any other group is a subsidy. There is no point in blinking this fact. Rather, let us stand on principle. To the extent that the agricultural subsidy serves the public welfare, it is not only justified but necessary. By the same token, no subsidy is justified which does not serve the public welfare. And if we stand on that principle, we can be open and aboveboard about it; there is no reason for agricultural aid to be concealed or hidden.

Farmers are the trustees of our basic resource, without which this country cannot remain strong. They must be given a fair opportunity to earn sufficient funds to maintain soil fertility, care for their families, and continue to produce an ample supply for the rest of the Nation.

Is it the question of cost that is keeping some of us apart? There's been a lot of loose talk about costs. Some like to estimate the cost of one program without comparing it

with the cost of any other program. They like to forget that price declines cost somebody whether there's a program or not—and, without a program, that somebody who pays the cost is the farmer.

Let us not forget, either, that the potato program has cost the Government $500,000,000 in recent years—more than three hundred of that in the last 2 years. The administration has recommended a program that would combine for potatoes the use of acreage allotments, marketing quotas, marketing agreements, and production payments. This would most certainly reduce the overproduction of potatoes. The cost would be cut to a fraction of what the program is now costing. I have estimated before, and I say again, that the cost the first year would be less than $25,000,000.

And while we are talking about the cost of farm programs, let's not overlook the potential cost of failing to have an adequate farm program—the terrible cost of depression.

The American Farm Bureau Federation had something to say about that back in 1939, when memories of the depression were perhaps fresher in our minds. In the foreword to its resolutions embodying its farm program recommendations that year, the Farm Bureau declared, and I quote: "We believe that failure to raise agriculture's income to parity is the major cause of the unemployment which has cost the Federal Government billions of dollars in relief appropriations.

"The unsettled condition of the world makes it increasingly imperative that the United States should put its domestic affairs in order without further delay. The cost of accomplishing this by restoring agriculture to complete parity is hardly a drop in the bucket compared to the cost of neglecting to do the one thing which will solve our difficulties. We have temporized with this vital question too long. We must not delay action longer." The statement goes on to say: "It is costing the Government billions because it is not doing the one thing which will solve at once the twin problems of low farm prices and widespread unemployment."

That was written a decade ago, but it's certainly something to keep in mind when we hear the national head of the Farm Bureau repeatedly raise the cry of "cost" to prevent objective consideration of proposals to forestall another economic collapse.

But let's go back to seeing if we can find just what it is that some folks can't seem to agree upon today.

Is it the false cry about danger to free enterprise that causes some to hesitate?

How can they complain about the proposals of the administration and still defend the present system, under which the Government has become a bigger and bigger operator in the food business? We want to encourage free enterprise by taking the Government out of the channels of trade just as far as possible—out of warehousing, processing, shipping, and marketing, permitting dealers and consumers alike to have the benefits of free markets on the perishable products of our farms, as long as we can still make all farmers more secure in their right to a decent and fair reward for their toil.

What about the charge of regimentation? In my opinion, we don't have regimentation as long as farmers themselves decide whether or not to use the controls that are provided by law. Some production adjustments are essential in a country with such a production potential as we are fortunate in having in the United States. But the extent to which painful adjustments have to be made will be determined in large measure by the use we find for the extra bushel. Shall we eat it in the form of livestock products? Or try to stop producing it?

I doubt whether any of these charges we hear are the real differences that have developed in our current farm policy debate. For the most part such misleading attacks are merely smoke screens intended to cloud the real issues—hampering instead of helping all of us to arrive at wise, considered decisions so vital to our future.

Actually, behind all the pros and cons over the methods of our future farm program, the underlying conflict is in the very philosophy of our farm policy itself.

You are confronted with two entirely different ways of thinking about what objectives we should seek for the American farmer.

One group, of which the present administration is a part, believes it is in the best interest of the entire Nation to use price support as a means for providing agriculture the opportunity to earn a fair income. It does not propose to guarantee that income to anyone, but it does propose assuring diligent farmers the opportunity of achieving a level of income that would bring them closer to the goal of equality with other groups.

On the other hand, there are those who preach that the only role of price supports is to protect the farmer against bankruptcy. In other words, they see no reason for stopping price and income declines until the farmer's back is against the wall.

The Farm Bureau's present national leadership is among those adopting that attitude. Its spokesmen advocate stop-loss price supports—whatever those are—sometimes using that terminology and sometimes even less exact language. Sometimes they say they are against only what they call unreasonable price declines.

What do they mean by unreasonable price declines? Farm prices have already dropped 23 percent; how much farther must they fall before they become unreasonable?

Must the farmer almost go broke before he can expect the steadying hand of Government to be extended? And where is that fine line between being almost broke and just plain broke?

The present Farm Bureau leadership has turned its back on that great organization's historic position of the past, when it so often declared, and I quote from its own former statements of policy: "The fight of organized agriculture * * * has been and is now for equal opportunity and parity position with the other great groups."

Why aren't those words still true today?

Because the gentleman now heading the American Farm Bureau is here today, I would like to take the opportunity, for just this once, of addressing him directly in the hope of reaching a better understanding of the attitude of the Farm Bureau's present national leadership.

I would like to ask the president of the American Farm Bureau Federation, in all seriousness: Does it aid agriculture in any way to say of the administration's proposals: "People who propose such a program to farmers are very dumb or downright dishonest?"

How will such personal attacks protect the price of hogs?

I would like to ask the gentleman: Do you actually expect to halt the decline in farm prices by calling the administration's recommendations a "statement of politico-economic philosophy, not a farm program," a "supreme delusion," or, as you have also done by saying the idea is "nuts"?

I would like to ask the gentleman: Do you think it fair to your own members to be openly favoring still lower price supports for farmers in the harsh hope of forcing some of them out of business, so that farming can be more profitable for those big-scale farmers with larger cash reserves who are able to survive?

I would also like to ask: Do you feel the Farm Bureau is fulfilling a constructive role in behalf of agriculture by having its spokesmen spend their time tearing down the recommendations of others with such abusive remarks as, and again I quote, "It shines and stinks and stinks and shines like the rotten mackerel in the moonlight"?

Let me play back the record of a few more typical comments of the Farm Bureau's spokesmen about administration efforts to improve the price-support program: "Totalitarian collectivism," "written by the CIO labor people," "ulterior motives," "socializing agriculture," "changing our form of government," and, strangest of all, "it could lead to the passage of the President's civil rights legislation."

I ask the gentleman, again in all seriousness, if he really feels such negative abuse contributes anything at all to a fair attitude and the atmosphere of serious, constructive thinking so necessary to the development of wise and practical solutions to our farm problems.

I might venture to suggest that instead of sitting in the seat of the scornful, adopting a tone of antagonism or condescension, or assuming a cocksure attitude that carries its own condemnation, the gentleman might better serve agriculture by recognizing earnest efforts for a better farm program in the making; and that in a constructive spirit he should make contributions toward wise development of its policy.

And by contributing something constructive I certainly do not mean the penny-wise, pound-foolish kind of economy that would sacrifice even the vital progress of our agricultural conservation program. Just this month the American Farm Bureau leadership has advocated a slash of $35,000,000 in the budget authorization for the agricultural conservation program—a slash not only in conservation payments but in the functioning of the farmer-elected committees so capably administering the program.

The national leadership of the Farm Bureau is apparently not even satisfied with trying to block any improvements in our price programs; it is now trying to tear down the conservation program that many of you have worked so long to build.

What aid to agriculture does the leadership of this organization offer? The press quotes the Farm Bureau president as having a twofold objective: Defeat of the administration's farm program and boosting the organization's membership by not quite 100,000.

I ask in all fairness: Are these the goals of American agriculture for which the gentleman professes to speak? Is the leadership of the Farm Bureau Federation blind to what is happening to farm prices and income in this country today?

Is it no longer of concern whether or not the farmer gets a decent and fair return for his investment and toil?

After all, the American farmer has contributed to the welfare of our Nation, after all we have learned about the interdependence of agriculture, industry, and labor, after all the progress we have made toward economic justice, must we now suddenly revert to the narrow idea of the Government keeping its hands off until after the Nation has plunged once more into the disastrous depths of depression?

I don't think so.

But that is your choice, and that is the only real basis of conflict in the current farm-policy debate.

It is the difference between those wanting to push forward, and those turning backward.

On the one hand, we have those with determination to maintain a full, expanding economy; to live in prosperity with the abundance we can produce by properly utilizing it to raise the living standards of all.

On the other hand, we have the stop-lossers, the temporizers, those who are willing to gamble on getting by themselves regardless of what happens to the other fellow. They are willing to risk the entire

Nation's welfare on their own stubborn lack of vision and foresight.

They are the advocates of sliding scale price supports that usually slide only one way—downward. They are—apparently—not much concerned over the present slide of farm income.

They are bound by the fallacious assumption that downward sliding prices provide an acceptable way to adjust production, they are willing to starve farmers into compliance if necessary to obtain that adjustment, instead of doing it the more humane way—by the incentive of fair rewards. They are willing to sacrifice small farmers under the brutal survival-of-the-fittest concept even if it means large numbers of farms and farmers forced out of business at a heavy loss. That's what they mean by so-called natural adjustments.

But are we satisfied with that harsh kind of a solution to our production adjustment problems, even if it would work?

Somehow we don't believe this is a good way. Most of us have thought we had gone beyond the dog-eat-dog law of the jungle. Yet that's what is hidden behind the concept of a downward sliding scale of prices aimed at forcing some farmers to go broke and out of business.

On which side do you want to be counted?

All that I ask—all that the present national administration asks—is constructive consideration, with open minds, of the recommendations we have made for the welfare of the farmer and the welfare of the Nation.

All that we ask is a reasonable balancing of the administration's proposals against the only alternatives before you.

Which way of thinking offers the better hope for using constructively that extra bushel of corn—that extra bushel beyond even safe reserves—instead of just locking it up and trying to quit producing it?

Which way offers the better hope of drawing nearer to the real goal of parity, nearer to a fair share of our national income for the farmer? Which offers a way to reduce our surpluses instead of piling up more? Which offers the better chance of encouraging increased consumption of the abundant food our American farms can produce? Which offers real Government economy, by doing more to avoid the costly and tragic toll of another depression?

Those are the real measuring rods for judging our farm program—weighing it in the balance of public necessity and public good against the only alternatives remaining.

Keep that bushel of corn in mind and I shall have no fear of your ultimate judgment.

Justice for Poland

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include the text of an address delivered by Prof. S. Harrison Thomson, of the University of Colorado, on the Justice for Poland radio program conducted by the western Massachusetts branch of the Polish American Congress.

These weekly programs were inaugurated some time ago by Dr. Karol Smolczynski, president of the branch with headquarters in Chicopee, and have attracted a widening circle of listeners in the central Massachusetts area.

The address of Professor Thomson, who is editor of the Journal of Central European Affairs, follows:

One of the oldest areas of international friction in our modern world is that between the German and the Polish states. And because recent developments have brought the problem into more clear focus, it may be profitable to look into the background of this complex and persistent antagonism.

The primary significant fact is geography. The Poles now inhabit the broad valley of the Vistula from the Carpathian Mountains northward to the Baltic. A thousand years ago and even since then, they reached west of the Oder River and occupied a good 200 miles of the southern Baltic coast. But German so-called crusaders, merchants, and missionaries took most of this coast away from them, and German arms and the will to conquer moved eastward. It's a long and sanguinary story, and doesn't make pleasant reading. One single example will indicate the nature of the story. On a dismal November morning in the year of grace 1308, German knights and men at arms fell on the Polish population of the fishing village of Gdańsk (more commonly known as Danzig) and murdered about 10,000 of them, men, women, and babes in arms. One would be wrong to think the Poles of today do not remember the simple facts of this bit of German missionary activity. A few centuries later, when the Polish state was having some internal difficulties, the German ruler who was looked upon as the most enlightened monarch of his day, Frederick the Great, showed his greatness and his enlightenment by joining with the rulers of Russia and the Hapsburg Empire to slice off parts of the Polish Commonwealth and adding them to their own domains. The Germans took the most prosperous parts.

This partitioning of Poland was planned long ahead, and carried out in order to forestall internal reforms then in progress which would have made Poland the most democratic state in all Europe. Once the territory was in his possession Frederick and his successors proceeded to Germanize it as ruthlessly as they could, bringing in German farmers, townsmen, teachers, soldiers, pastors and priests. One has only to put oneself in the place of the Polish inhabitants of this land to realize the emotions they would experience at seeing foreigners, their sworn enemies, in all positions of power and influence over them, at being forced to use the language of their conqueror in all public places, and in sensing conscious economic and social discrimination at every turn. The term "German" came to mean a perpetual oppressor. But the Poles were then as now a vigorous people, proud and tough. The process of Germanization, carried out by all the typical Prussian efficiency and ruthlessness, wasn't quite the success it was supposed to be. Late in the last century the great Bismarck, himself a native of an area where many people still talked Polish, realized that the Poles were regaining ground and that German influence was waning in the parts of Germany that were formerly a part of the Polish Commonwealth. He raised additional vast sums to buy land and colonize Germans in the eastern parts of the Reich. But this failed too—and election and school statistics showed the Polish population of the German Reich growing and the German population and influence decreasing. By the outbreak of the First World War the handwriting on the wall was clear. In 1918 Poland was reconstituted as a free state, and her boundaries with Germany were fixed approximately according to language frontiers. East Prussia, a coastal area blocking Poland's access to the sea for a part of the Baltic, was left to Germany. Prussia was an economic liability to Germany, as it hadn't been self-supporting for well over a century. Every Pole knew how the Germans regarded East Prussia—as a military outpost which could be used against Poland or as a springboard for further German expansion eastward.

During the subsequent 20 years of uncertain peace, 1918–39, every Pole sensed that the western frontier of the country was in danger. He knew the German well enough to know that Germany would not willingly give up control of so fertile a land as western Poland and so hard-working a people as the Poles. But France and Great Britain, and to a lesser degree perhaps, America, made concessions to Germany, forgave her war debts, and loaned her vast sums of money with which she rebuilt her heavy industry, and by the Locarno Pact of 1925 left the way open for Germany to revise her frontiers with Poland. Every Pole knew that to the Germans revision meant simply taking over Polish territory. Who is now in a position to blame Poland for being cynical about the bland work of western statesmen who proclaimed that they had achieved peace by agreement and proper concessions? On at least two known occasions Polish Marshal Pilsudski told the diplomatic representatives of the western powers that Poland was willing to fight to force Germany to live up to the conditions of the Versailles Treaty. The western powers were unwilling. Germany had promised to be good. The Poles again can hardly be blamed for judging the western powers bankrupt. They were that a good 15 years before the outbreak of hostilities in 1939. The Poles knew it. The records are clear in this matter.

Came the war in 1939 and Germany and Soviet Russia again partitioned Poland. The Polish Nation underwent cold-blooded butchery by Germans which no nation of comparable size has ever undergone in recorded history. She lost from bombing, concentration camps, and before German firing squads about 6,000,000 of her people. This would correspond in the case of America to a loss of 30,000,000. Her cities were burned into rubble, her treasure stolen, her forests and national resources ravished by the Germans. The Germans were defeated finally and pushed back beyond the Oder. The territory given to Poland in the west, labeled "compensation," by the Tehran and Yalta agreements in which the United States participated, for Polish land in the east taken by Russia with American consent, had been inhabited largely by Germans for many centuries. Yet, though this new land and its industries look to be worth more than the territory they lost, the Poles know that the Germans, whether in west Germany or eastern and Soviet-controlled Germany, will never rest content until it is again in German hands. They have worked heroically to resettle this land, without regard to their feeling about the present puppet government in Warsaw, but every Pole, peasant, factory worker, or intellectual, deep in his heart dreads the day when Germany is again strong and armed and will reach out and grasp in traditional German fashion for someone else's property. At this moment the Poles are making the best they can out of their present situation. So long as it suits Soviet purposes Poland may be assured that she can keep this western land. But when Russia wants or thinks she needs German support, she will promise these former German lands to Germany as a bribe, and Poland will be partitioned again. This is an eventuality every Pole sees as almost certain. So long as territory of somebody else can be swapped around to satisfy a greedy ally, this condition of fear and hatred between neighboring peoples in Europe will persist. It is certainly nothing that an American can blandly put aside as none of his business. We are as responsible, by our dealing at Tehran and Yalta, as anybody for the grim future the people in this part of Europe face. We will

do well to pay close attention to present and future relations between Poland and Germany, and remember that 10 centuries of German aggression against a weaker neighbor cannot and will not be forgotten in one or two generations. We will also have to be sure that we do not contribute to worsening these relations by heedless ignorance of deeplying political realities.

Pass the Potatoes

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an excellent editorial by Robert Ingalls of the Corvallis (Oreg.) Gazette-Times on the Brannan plan:

PASS THE POTATOES

In his speech the other evening at the $100-a-plate banquet Comrade Truman endorsed the Brannan farm plan and justified the huge potato surplus. Apparently he had not read the records of the National Grange convention held recently in Sacramento, Calif. The National Grange, one of the two biggest farm organizations in the country, came out unqualifiedly against the Brannan plan, which would seek to play both ends against the middle at the expense of the taxpayer. That denunciation of the Brannan plan was most scathing and it came after a general discussion participated in by delegates from 37 States and after Secretary Brannan had appeared in person before the convention urging endorsement of his silly method of throwing away the taxpayers' money.

The resolutions adopted assail the plan as an effort of the Government at Washington to solve farm price difficulties by subsidy and characterized it as "an internal cancer that eventually would destroy our free-enterprise system," and "at best a temporary device which will serve only to postpone the time when a sound solution of the farm problem must be reached. The resolution stated that the Brannan proposal would "make farmers beggars for a fair income." Clearly under such a system that party which would promise to voters the largest bonus out of the Treasury would garner many votes not obtainable on the basis of an honest, sound platform. It would then become a race to see which party would promise most."

In addition to the Grange the officials of the American Farm Bureau, one of the two largest organized farm groups, have come out against the Brannan plan. Only the National Farmers Union, which one editor has characterized a sort of agricultural CIO has come out for the plan. This does not mean, however, that the Brannan plan will not be an important issue in the campaign next year. Some local farmer groups which have not yet been able to see beneath the surface favor the plan and in some few States even the organizations of the conservative Grange have come out in favor of the Brannan plan.

However, what assures the Brannan plan a prominent place in the campaign next year is that it is the brain child of the CIO and its Political Action Committee. And the Democratic Party and the national administration as now constituted are captives of these two organizations. The administration, of course, wants all the farm votes it can get and hopes to garner many through the Brannan plan. But it realizes, too, that if it lost the support of the CIO and the left-wing organizations in the cities and industrial districts, all the farm votes it would be able to gather would do it little good. The left-wingers have now taken over in the Democratic organization and despite all camouflage, they will continue to be in charge. Make no mistake about that. So we can expect the Brannan plan to be prominently featured next year by the New Dealers, the Fair Dealers and the Fabian Socialists of various hues.

The reason why the CIO and its PAC are pushing the Brannan plan designed to "help the farmers" is easy to understand. Workers in the city are beginning to tire of high prices, even if their wages have risen accordingly. What they naturally want is cheap meat, cheap bread, and high wages. The present system of Government loans keeps prices high. So the CIO'ers have designed a plan where prices will be allowed to reach the market level and the farmers will be paid subsidies by the Government to make up for the loss of crop loans. The workers—so the Brannan planners believe—will get cheap food and the farmers will get high prices. Only the taxpayers will suffer. At least that is what they think. Here is why the radical labor leaders favor the Brannan plan to help the farmers. They want to get off their necks the irate consumers who don't like high food prices.

Chinese Reds Seek Yanks To Fly Gift Air Line

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Clyde Farnsworth and also an editorial from the Washington Daily News:

[From the Pittsburgh Press]

CHINESE REDS SEEK YANKS TO FLY GIFT AIR LINE—CHENNAULT FILES APPEAL FROM HONG KONG COURT AWARD OF PLANES TO COMMUNISTS

(By Clyde Farnsworth)

HONG KONG, February 27.—Having acquired a ready-made air transport system, largely founded on the wartime bounty of American taxpayers, Red China now is shopping around for American know-how to help handle its $100,000,000 prize.

That is what it would have cost the Chinese Communists, by authoritative estimate, to amass the aviation assets to which they have now fallen heir—through bashfulness of the United States State Department and the good offices of the British in reallocating other people's property.

A reliable official source, who disapproves of last week's decision of the Hong Kong Supreme Court conferring two former Nationalist air lines on the Chinese Reds, said he believed Communist talent scouts were trying here, in Bangkok, Rangoon, and possibly the United States to hire American air technicians.

He also supposed that British concerns in Hong Kong were preparing to handle Communist requirements for spare parts and fuel; and he wondered how this would fit into the proposed $35,000,000 American aid appropriation to Britain for aircraft parts.

So far as he knew, Red agents thus far failed to sign any American pilots for the 71 planes Peiping won in the Hong Kong court. But he knew of three American technicians, and possibly three besides, who had agreed to work for the Reds.

HAD WANTED RECEIVER

Maj. Gen. Claire Chennault and Whitting Willauer, interim purchasers of the air-lines assets, wanted a receiver appointed pending a full-dress court trial for determination of title.

But the Hong Kong court ruled that as of January 6, when Britain recognized the Peiping regime, agents of that government (actually the turncoat employees of the air lines) were in physical possession of the assets and the Red government and the air-lines assets therefore enjoyed "sovereign immunity."

APPEAL FILED

Chennault has initiated an appeal to the same court and intends to go next to the British Privy Council. Lodgment of the appeal in Hong Kong requires 14 days. Meanwhile, under heavy police guard and with antiaircraft batteries ready for action at Kaitak airfield, just in case some Chinese Nationalist air fighters should take active issue with the British decision, equipment and spare parts already are being moved out by ship.

How soon the Communists will be ready to try flying the 71 planes into Red China no one could say. Flight crews are a particular problem—the Communists may need foreign pilots to ferry their loot out.

[From the Washington Daily News of February 24, 1950]

HOW CAN WE WIN?

Now that the United States and Britain have recognized the French-sponsored Bao Dai regime in Indochina, French military circles are asking for a common western policy in the Far East, as well as immediate military aid.

A list of the equipment wanted, including light tanks, jeeps, reconnaissance cars, and small-arms ammunition, has been given to our Government, with an additional request for a $100,000,000 economic rehabilitation loan.

Since we are here being asked to buy into a war, it will be well to get all the facts on the table. We ought to know what we're getting into, and just what chance, if any, we have to win. From this distance, the chance looks dim.

The French, having had an army of 160,000 men in the field for 3 years, have inflicted no serious injury on Ho Chi-minh's Communist forces. Now, according to a Paris report to the New York Times, an effective blockade of Communist China is regarded as one of the essentials if victory is to be achieved.

The idea of a blockade of Communist China can be discarded, now that the British court in Hong Kong has awarded the Red Government at Peiping 70 transport and passenger planes which Major General Chennault had purchased from the Chinese Nationalists. That decision probably spells the doom of Formosa, as well as killing any prospect of saving Indochina from the Reds.

Some heads should be examined in the State Department and the British foreign office. Britain recognized the Chinese Reds and now has given them the planes they need to continue their campaign of aggression. The United States has recognized the Bao Dai forces in Indochina, and now is asked to put up the money and the arms to defeat the forces of Ho Chi-minh, which are said to have the active support of the Chinese Reds. Russia, of course, is backing both Red forces.

How can the west hope to win under this kind of leadership?

Capitol Stuff

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. STEFAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John O'Donnell, from the New York News of yesterday:

CAPITOL STUFF
(By John O'Donnell)

WASHINGTON, D. C., February 27.—Ohio's Representative CLIFF CLEVENGER—who used to run a dry-goods store before he came to Congress in 1939 and so knows the headaches of keeping a business out of the red—felt like a lot of other American taxpayers the other day when the State Department asked for $76,000,000 just to pay the salaries of the distinguished Dean Acheson and his brother diplomats for the next fiscal year.

It was one of those behind-closed-doors sessions of the House Appropriations Committee and one after another of the State Department's bigwigs had asked for additional millions. For hours Department spokesmen had droned on on the same familiar theme: We need more cash to carry on our great work in global diplomacy.

At the end of the session (this was on February 2) CLEVENGER leaned back in his chair and let fly with these off-the-cuff remarks, which we have a hunch many fellow-taxpayers have been making to themselves about the Truman-Acheson diplomatic regime:

"I've been feeling that certain numbness which also runs through the American people regarding this spending and our tax situation. I've kept quiet but I did a little arithmetic—tried to break this thing down for the people who were losing sleep because of the pressure of food and housing, taxes, etc.

"I worked it out this way: With 151,000,000 people in the United States, the cost of Government had become $8 per week per head. It was broken down in round figures to about $6 National and $2 a week State and local. This is a lot of money when it gets to $32 a week out of every average family.

"The debt that we are talking about, $258,000,000,000, simply leaves any intellect numb."

But the spenders in the State Department had not felt that numbness of the average American taxpayer shared his worries. They were now asking for $76,000,000, just for salaries for 1 year.

CLEVENGER continued:

"This amount of money, gentlemen, is just for personnel in this one Department, which has now grown so that every month you in the State Department spend more than you did in a year when I came to Congress. This is for personnel alone. It is twice the cost of the legislative operation of the United States Government. Counting the operation of the Capitol; the Printing Office—half of that at least is charged to it—the Library of Congress, which is only in a small part an agent of the Congress; and the operation of both of the office buildings and all of our staffs, that is only about half as much as these personnel sheets for the State Department's operation."

IN EVERYBODY'S BUSINESS

With the Treasury showing a deficit of $40,000,000 a day, CLEVENGER roughly observed that the point had been reached where we had to drop something, and he was for dropping the State Department's "day-dreaming; these gigantic operations of pamphlets and books and moving pictures which (reveal) that there is no place in the world where we are not busy taking care of everybody's business. * * * We have the greatest facility for getting our nose into everybody's business that was created since time began."

He then turned his attention to the heavy tab we have to pick up to run the United Nations set-up in New York. CLEVENGER wound up with this final salvo:

"I am hoping they will provide some way to peace, but it does not seem that we are finding it. But we are finding ourselves involved in almost every domestic spat everywhere in the world. Our people are simply bombarded with endless propaganda for foreign interference.

"We have developed millions of psychopathic people in the United States, from pressure of the economic cost of living, everyday living, that is driving people out of their minds. And, so far as I am concerned, I just want to serve notice that I hope some of you will sharpen up your pencils and stand along with me to try to reduce this thing to some sensible size.

"Now, with that, I am done on the State Department, so far as I know. It is one of the greatest offenders in our Government for scattering our money, for involving us in all the difficulties of the world, and for one I am ready to try to cut it down to size and try to restore some sanity to our people and to our Government."

World War III: Is It Closer Than We Think?

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Castle (Ind.) Courier-Times of Thursday, February 23, 1950:

WORLD WAR III: IS IT CLOSER THAN WE THINK?

One September not so long ago we turned in our sleep and then decided it was the telephone ringing.

"The Associated Press calling," said the operator, and then the message, "Hitler's armies have marched into Poland."

What did it mean?

War! War in Europe. With all the sword rattling that had gone on, it still didn't seem possible.

Not many months later the news of Pearl Harbor came upon us like a bolt of lightning. War! Not just for Europe but us.

Today, people who are extremely well informed believe that we may any day experience the Pearl Harbor of world war III. It is not denied that a special meeting of the Cabinet was called recently to consider the very danger of a sudden and catastrophic attack by Russia upon this country.

Certain it is that Russia has taken a new and bolder turn. She has pushed us out of Bulgaria. Her pressure upon Tito indicates that Yugoslavia may any day face actual invasion by the Russian armies. Her demands upon Finland assume unreasonable character and impossible proportions. Her swallowing of China goes unchallenged.

Let us not indulge the wishful thought that there may be an insurrection by the people of Russia. True, the Voice of America, our own short-wave radio, is being heard inside Russia and has some influence upon the people. But the Russians have never lived under a decent government; the czars were about as bad as the present dictatorship, and people don't usually rebel unless they have known something better.

Our best hope is in the practicality of the Russian mind. It is possible that they intend to go as far as they can without facing a full-scale war with the United States, but in that event it still takes complete war preparations for us to stop them.

We are obviously not prepared for a war that may come to us overnight. One thing is sure, it will come with a suddenness and devastation that will outdo Pearl Harbor.

After that impact in 1941 we were driven from the Pacific and we depended upon England to hold out for us in Europe and the Atlantic. It took us 2 years to retool our industry for war production, raise armies and train them, and get ready to fight our enemy.

This time there isn't going to be 2 years, there may not be 2 months or 2 weeks to get ready. The devastation of the atomic and hydrogen bombs, guided missiles and germ warfare, to say nothing of new devices for mass killing that are still locked up, mean that the country that has to get ready after the fighting starts is going to lose.

At the present time our railroads and industries are almost out of coal, leaving us in a weakened and vulnerable position as the result of a strike. For our national safety, that ought never to happen again.

Perhaps it is our sense of what is important that has led us to our unpreparedness, for we are unprepared both militarily and spiritually.

The nations of history who have fallen to a conqueror were almost invariably wealthy and bent on their own comfort. Rome with all its culture fell before the invading hordes of vandals and other tribes. France was serving pastries from the kitchens of the Maginot line almost up to the time the German fifth column took over.

We are now the wealthy of the world—all of us in America—for by world standards, any person who drives a car is among the wealthy. Further and worse, we have put an importance upon our comfort and well being that may be our undoing. We speak of a standard of living as though that were the goal of life. We are all the time talking about shorter hours and more pay; getting more and giving less, and it won't do; it softens and weakens us and leads to our destruction as a people. Nor need anybody get the idea that we are throwing stones at labor, all of us are guilty.

The fact is that while we meditate upon our standard of living, coyly preserve our sovereignty, and notify other countries that Marshall plan aid will soon stop and they'll be on their own, Russia overruns the world. She already has gone farther and taken more territory and more people than Germany had done when we were drawn into the war.

Czechoslovakia, China, Poland, Bulgaria, and half of Germany already have been swallowed. Yugoslavia, Malaya, Finland, and Formosa are almost within the bear's paws. How far does it go until we are next?

Our world situation overshadows every other consideration in our lives today in importance, and yet our actions are weak and inadequate. We need a bold program of action, equal to the task and up with the times:

1. We need to purge the country of Communists, not just from key positions in Government offices. The plea of freedom of speech for Communists is nonsense; they intend the overthrow of the Government, and that is treason. We might as well permit murder because the Constitution guarantees the right of people to be secure in their persons.

2. We need to double our world propaganda activities, such as Voice of America, to carry the story of freedom to all peoples. That would not approach the propaganda activities of Russia on behalf of communism.

3. We need to retool industry for war production as we would if we knew war were only a few months away.

4. We need to integrate our economy and our very lives with the other free peoples of the world. This alone can really make us and the world of free peoples strong against the world of Communist dictatorship and enslavement. There are those who smugly will say our interests are affected. Perhaps. Would it be better to preserve these interests and lose our necks?

5. We need to find other solutions to our economic problems than bickering and loss of production. It not only reduces the standard of living, but weakens us as a nation and makes us vulnerable to attack. We have got to find a way to work together.

We need a rebirth of the spirit of our fathers who founded this country: their courage, their common sense, and their concern for the common good of decent peoples.

Let us go forward together, with the conviction of free people, the courage of our fathers, and the spirit of humanity, to meet the challenge that Communist dictatorship now makes against our religion, our freedom, and our very lives.

Hog Price Supports for Next Year

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Des Moines Register of February 27, 1950. In this editorial Secretary of Agriculture Brannan is quoted as having said that he would continue to support the price of hogs after March 31.

HOG PRICE SUPPORTS FOR NEXT YEAR

Secretary of Agriculture Brannan departed from his prepared text at the National Farm Institute to announce: "I'll let you in on a secret," that he would continue to support the price of hogs after March 31.

Hog prices are now guaranteed at 90 percent of parity. Under the new farm price law the Secretary can support hogs at any level up to 90 percent of parity. Farmers have not been in much doubt that hog prices would be supported at some level next year. What they are eager to learn is, how high?

It is getting pretty late to alter production plans for sows which have been bred for early spring farrow. However, farmers who have sows due to farrow in late April or May could still change their plans. And hog men still have the question of summer pigs to decide. It would be enormously helpful if the Secretary would announce what level of price support could be counted upon during the next 12 months—better still, for the period up to June 1951.

The new parity calculation raises the parity price of hogs. For example, in January the old parity placed hogs at $17.50. The new parity for that month would have been $18.70. So a continuation of 90 percent supports actually would mean a substantial rise in the dollar level.

Price support in the last year was not too high to cause trouble, since the Government never had to buy pork and lard to make it effective. The margin got fairly close at a time or two last fall, however, and in January the Department of Agriculture went so far as to call for bids on sales of pork.

In a time of booming general business conditions, strong demand for meat and high farm income, it would be ridiculous for the Government to interfere in the market for hogs—no matter what the parity formula happened to show. Besides, the present law does not permit the use of direct payments as a means of implementing price support. So the Government would have to buy and store pork and lard, which would be a nuisance and run the grave danger of an unmanageable surplus, as with potatoes.

Therefore, it would seem wise for the Secretary of Agriculture to announce a new hog support level safe enough to prevent Government buying next year. Such a level would provide farmers with a minimum yardstick to shoot at—without guaranteeing them a sure profit. But it's not as simple as that.

The Secretary cannot afford to put the hog support figure so low as to discourage feeding corn to hogs next year. That would intensify the corn surplus problem. Since corn supports are mandatory at 90 percent of parity, this partly ties the Secretary's hands. And it provides an illustration of the difficulties in individual commodity price support as a means of protecting farm income.

No matter what Mr. Brannan decides, we hope he does it soon so Iowa farmers can make their plans with assurance.

Tax on Theater Admissions

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. HELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement I made before the Ways and Means Committee, House of Representatives, urging repeal of excise tax on theater admissions:

I am grateful to the members of the Ways and Means Committee for the opportunity to express my views on the question of exempting admissions to moving-picture theaters from the Federal tax on admissions. On February 8, 1950, I introduced a bill for this purpose, and I strongly urge that this and other wartime excise taxes be repealed at once.

The original Admissions Tax Act was passed as a war revenue measure in 1917. It was never repealed but during the interwar period some measure of relief was granted by the setting of certain minima under which the tax did not apply. During the 1920's when admission costs were somewhat lower than they are now, the minimum rate to which the tax was applicable was frankly aimed at the luxury class, for it was for some time $3. Subsequent revenue acts, particularly during the 1930's gradually lowered the minimum, until, just before the war, by an amendment of 1940, effective in 1941, it was down to 21 cents. The Revenue Act of 1943 put the effective rate at 20 percent, reaching down, with a few exceptions in favor of certain classes of persons, to levy a tax of 1 cent for each 5 cents or fraction thereof of the admission price. And, despite an express clause, covering their automatic repeal 6 months after the conclusion of the war, we have kept them at full effective war-tax rate.

It is interesting to know how they got that high in the first place. When World War II came along, we lumped all these admission tickets in with such items as luggage and jewelry. The tax on luggage was devised to prevent too great a demand for leather that was needed for war purposes; jewelry, too, was made of hard-to-get materials. But what is our excuse for admissions? Luxury taxes? Well, maybe the first-run movie houses, or the big-time legitimate theaters are a luxury, but we certainly overreached ourselves when we went beyond them. We struck at the ordinary recreation of the low-income factory worker, and deprive thousands of our lowest- and middle-income earners of this vital and often only means of relaxation and recreation.

If any luxury taxes are to be repealed, wartime excise taxes on admissions, I feel, should be given the first consideration. For so far as movies are concerned this so-called luxury tax reaches down, not only to the ordinary recreation of the lower-income class, but it also adversely affects hundreds of small businesses, in an industry that is not only competitive within itself but is just entering upon a difficult period of readjustment to the competition of tax-free television.

Insofar as the motion picture industry is concerned, let's take a look at these forms of entertainment, and the industries which produce them, and see if, after viewing the record, we are justified in continuing these admission taxes. The motion picture industry during the war, the stars, the big studios, the theaters across the Nation, small and large, the hundreds of employees who work in them, built up an enviable record of assistance in the selling of war bonds. Their efforts in this task resulted in the sale of over a billion dollars worth of E bonds. Their generosity to the Government in aiding in this work cannot be questioned. No one can accuse the motion picture industry of failing in its responsibility to the American public in our hours of greatest need. Nor have they ever shirked an effort to aid the public. We know how helpful they have been in the "march of dimes" campaign, the heart fund, community chest advertising, Damon Runyon cancer fund and others.

Let's look at the industry itself. The admissions tax brings in the fourth largest amount of revenue of all the excise taxes, surpassed only by the taxes on alcohol, tobacco, and gasoline. Last year the movie box-office take was $1,400,000,000 of which $234,000,000 represented the tax. This last constitutes 60 percent of the total admissions tax revenue of $385,000,000 for the year 1949.

A billion dollar business sounds like a lot of money, and it is difficult to be against a good revenue producer, but a break-down shows that the larger part of this money stays right in the home town for local services, and so instead of taxing a large-scale concentrated industry which can balance off deficits of one unit against profits of another, we are levying this tax on a conglomeration of units which can ill-afford to bear it.

The distribution of these receipts is as follows:

Sixty-eight percent are for local payments which cover the following items:

	Percent
(a) Salaries of theater employees	16
(b) Rent or equivalent	15
(c) Operating expenses	20
(d) Taxes	6
(e) Net profit	11

Thirty-two percent goes for film rental which covers both (a) distribution costs, 12 percent; (b) studio production costs, 20 percent.

This 32 percent which is given to the major studios is broken down in an average budget as follows:

	Percent
1. Story costs	5
2. Production and direction costs	5
3. Sets and other physical property	35
4. Stars and cast	20
5. Studio overhead	20
6. Income taxes	5
7. Net profit after taxes	10

Thus the money Hollywood takes in goes not just to the big-name stars and the stockholders of the company, but to the thousands of working people who compose the industry. If the industry fails, an important segment of low-income working people will be affected.

A survey of the motion-picture industry since the end of the war shows the same factors affecting it, as affect many another business. It no longer is in a seller's market. In its peak year in 1946, attendance rose to approximately 98,000,000 a week; in 1947, it was 90,000,000; in 1948, it was 88,000,000; and in 1949, it was approximately 85,000,000.

For years the movies have been admitted to be the greatest exponent of American culture abroad. This foreign market is dwindling alarmingly, not because of lack of desire on the part of foreign nations for the pictures, but because of international exchange difficulties. Back in 1940, not more than 4 or 5 out of 10 pictures recouped their production costs at home. The others turned to the foreign market to obtain sufficient revenues to save them from a loss on that production. Now the dwindling domestic market prevents more than 1 out of 10 from recovering production costs at home, and the movie industry is faced with a serious problem.

For despite economies, production costs as such have not decreased; it is only through the use of fewer extras, and tightening on other items of the production budget that the economies have been effected. The relief from the amortization charges will soon run out, and consumer resistance continues, and will continue if prices continue to rise, for the drop in attendance is attributed to tightened family purse strings. If increased attendance is not brought about, this great industry will be hampered if not destroyed. Domestic demand must be kept elastic, or we shall be destroying at the same time low priced American recreation, and the best voice of American life and living that foreigners ever heard.

Hardest hit, even worse than the studios which are concerned about where to get the money to produce the pictures, are the low-priced theaters that show them, the neighborhood theaters that are compelled to charge 50 cents for a show these days. It is from these little fellows that the real push for repeal is coming. They operate over 20,000 theaters with 12,000,000 seats in all the towns, and hamlets across the land. They state plainly that the 20 percent tax is hurting their business. The Theater Owners of America which has joined forces with the Council of Motion Picture Organizations points out that nearly 60 percent of the land's theaters gross an average of less than $600 per week, and that for small scale businesses such as these, the tax is an oppressive burden. The small time operators, united in the Council of Motion Picture Organizations, announced through the chairman of their tax committee, Abraham F. Myers, an all-out campaign to convince the American public that this Congress which represents the American public of the inequity of the tax.

"Our first job," Mr. Myers said, "is to secure repeal of the existing taxes on admissions. Then we—that is, our successors—will have to remain ever alert to see that such taxes are never again imposed. We have got to sell the Congress * * * the legislators of several States, and local authorities everywhere that it is wrong to impose special taxes on the motion picture business which are not imposed on other enterprises. * * *

"It is imperative that the public in general and public officials in particular, be made to understand that the admission tax is not a tax on Hollywood—that it does not reach to those fabulous salaries which until recently were blazoned in the headlines. Those salaries, I have been told are being readjusted to conform to changed economic conditions; but however that may be, the Government lays violent hands on Hollywood salaries by means of the income tax, just as it reaches into our meager purses at stated intervals. The admission tax has nothing whatever to do with those salaries."

Beyond the economic effects of the tax, there is one other major consideration to be borne in mind. The Hutchins Committee on Freedom of the Press in its study in 1948 classed the motion picture with newspapers, radio, and magazines in its obligation to live up to its responsibilities as a conduit of mass communication. Mr. Myers, speaking on behalf of the Council of Motion Picture Organizations, stated it this way:

"We cannot conceive of your advocating a special tax on newspapers, magazines, and books. As a lawyer you might ponder whether such a tax would abridge the freedom of the press; and as a statesman you would certainly say that such a tax was contrary to public policy.

"We feel, on reason and authority, that motion pictures are an important part of the communications industry and as such are entitled to the same consideration accorded by the Federal Government and the States to the press."

I believe there should be sweeping action by the Congress aimed at all excise taxes, and especially the 20-percent tax on motion-picture-theater admissions. As I have already pointed out, this popular type of recreation affects practically every family: When this movie tax was imposed as a wartime measure, it was accepted in good spirit. There were sound reasons for it and the other excise taxes. But I am convinced there is no longer any justification for continuing it, and I strongly urge the immediate repeal of the excise tax on movie admissions. Thank you very much.

Rayburn's Big Chance

EXTENSION OF REMARKS
OF
HON. BOYD TACKETT
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. TACKETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Banner News, of Magnolia, Ark., for July 21, 1949:

RAYBURN'S BIG CHANCE

The Senate Appropriations Committee has recommended that the Southwestern Power Administration dovetail its power-delivery operations with those of the private utilities in the area. The committee also recommended that the appropriation as approved by the House be reduced. This appears to us to be sound recommendation which has as its objective the saving of millions of dollars which otherwise will be spent by the SPA in building power lines which duplicate those of the private utilities.

The Senate committee apparently took its cue from the recent agreement worked out between the SPA and the Texas Power & Light Co. It is no secret that Speaker SAM RAYBURN was in large measure responsible for bringing the private utility and the SPA together on this compromise agreement which will enable the Government to do what it seeks to do in the power field without driving the private companies out of business.

It is almost certain that the recommendations of the Appropriations Committee will be followed by the Senate as a whole when the matter comes up for consideration, probably this week. The issue will then go to a House-Senate conference committee. Surely the House committee and the House will see the wisdom of concurring with the Senate action.

It is our hope that Speaker RAYBURN will use his influence to promote the SPA-Texas Power & Light agreement as a national policy. If he does, he will have rendered a great service to his Government and to the cause of private enterprise.

It's a Long Time From Mr. Abbitt to Mr. Zablocki

EXTENSION OF REMARKS
OF
HON. JAMES E. NOLAND
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. NOLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Collier's for March 4, 1950:

IT'S A LONG TIME FROM MR. ABBITT TO MR. ZABLOCKI

(By James C. Derieux)

CONGRESS WASTES A MONTH EACH SESSION TAKING ROLL CALLS, THOUGH A MACHINE WOULD TALLY ALL 435 VOTES IN SECONDS

During its last, long session, the Eighty-first Congress spent approximately 1 month of its time calling the roll, and that's about par for the chore. In the Senate there were 413 quorum calls and 226 calls for the yeas and nays, requiring from 10 to 15 minutes each. The House droned through 115 quorum calls of perhaps 20 to 25 minutes each, and 121 yeas and nays that used up about 40 minutes each.

Do a little multiplying and dividing, figure 5 days a week and 5 hours a day as normal time spent on legislative floors, and you will come up with the surprising fact that Congress could cut its sessions by 3, 4, or even 5 weeks if it did not have to go through with those slow-motion roll calls by clerks.

And it doesn't have to go through with them. It could use electric roll-call machines that would reduce minutes to seconds. It could do this without the loss of a single filibuster, without eliminating or shortening a single speech, without damage to the Constitution or to any other bulwark of freedom, without peril to this great Nation established by our fathers, and without impairment of the right of any Member to view with alarm or point with pride.

The cost of installing electric roll callers in both Houses probably would be between $300,000 and $400,000, which is not even piggy-bank change in these days of billions.

Directly, the saving of money by use of electric roll calls would not be great, because Members of Congress and their clerks are paid by the year, not by legislative piecework. But saving money is not the main point in favor of electric voting. The impression Congress makes on the public is the big consideration.

Liberty resides in representative lawmaking assemblies. Any serious disrespect for Congress is a threat to our system of liberty. The fact, therefore, imposes on the public the obligation to be intelligent in its appraisal of Congress, and on Congress the obligation to transact its business—which is your business—in the most effective and impressive manner compatible with freedom of deliberation.

A legislature cannot be efficient in the narrow sense. It should not make instantane-

ous decisions. It needs all the time it can get for its deliberations. There must be study and debate and consultation and, often, compromises. One way to do this is to speed the roll calls.

Tens of thousands of American citizens, including school children, visit the legislative galleries in Washington every year, and too many of them go home disappointed. To them the Congress seems a casual, dull body that drones along in nasal tones. This impression is due partly to the fact that legislative procedures are not thrilling. Even when there is political intrigue, it usually is obvious and seedy. Adventure stories are not written around the behind-the-scenes work of committees. But visible and instantaneous results in roll calls, instead of the drugging effect of oral calls, would do something to create the impression that Congress moves alertly, and lives and has its being in the twentieth century, not in the nineteenth.

Seventeen State legislatures use the electric roll call in one or in both houses. They are Alabama, Arkansas, California, Florida, Indiana, Iowa, Louisiana, Michigan, Minnesota, Mississippi, Missouri, Nebraska, New Jersey, North Dakota, Texas, Virginia, West Virginia, and Wisconsin. The earliest of these installations was made in 1916, others were made in the 1920's and onward. The machines have been progressively improved. No State that has tried this modern technique has thrown it out, nd in none of the using States have the people, so far as is known, lost any liberty because of the device.

Here is how the device works: Each member would have a regular seat, which is true in the United States Senate now, but not in the House. At each seat there would be an electric switch box, to which the Member would have a key. When voting time came, he would insert his key—no other key would work his switch—and throw the lever to record his vote. On an illuminated roll board up front, which would display the number of the bill being voted on, a light beside his name would show how he voted—if he voted.

The result would be totaled and shown immediately on the board, and a perforated card would come out giving the printed record of who voted, and how. Corrections would be easy if errors should be made. The Presiding Officer, who faces the legislators, would have a miniature of the big board in front of him on his desk, so that he could see what happened without turning around.

In addition to this main service of taking and recording a roll call in from 10 to 20 seconds, the big board could be used to call pages. Of course, it would still be necessary, before a vote to give Members perhaps 10 minutes to get to the floor. Warning bells, as now, could do this. There are some political disadvantages to simultaneous and instantaneous voting, but they are not wholly respectable. The Member who waits to learn how the vote is going before throwing in his yea or nay would be discomfited. Also, the Member who likes to avoid putting his vote on record except on selected bills would suffer political pains for, if the machine is used on all calls, he could not count on the anonymity of the unrecorded voice vote.

Under present procedure, many bills are passed without recording the actual votes. If the machine reduced this practice, representative government would be the winner. The more recorded roll calls, the better we can judge our Representatives.

Some object to mechanical voting on the ground that it would displace worthy employees. That is not a valid argument. Everybody who knows anything about Washington knows that a public employee who loses one job generally shows up somewhere else in Government in another and perhaps better one. That is the history of Washington reforms and consolidations.

In his book, A Twentieth Century Congress, Senator ESTES KEFAUVER, of Tennessee, speaking of the oral roll call now in use, says: "Of all the antiquated procedures on Capitol Hill, this one undoubtedly pulls down the efficiency of Congress more than any other single practice."

Senator KEFAUVER, Representatives JAMES E. NOLAND, Democrat, Indiana, CHARLES E. BENNETT, Democrat, Florida, and GLENN R. DAVIS, Republican, Wisconsin, teamed up to do something about this at the last session, but without sensational results so far. However, sentiment for electric voting in the House seems to be overcoming some of the inevitable resistance to change, often strongly developed in senior public figures.

The electric voting machines would not be revolutionary in their results. In public affairs nothing is ever so beneficial as its friends claim it will be, or so damaging as its opponents predict. Even so, electric voting would help raise congressional efficiency a desirable notch or two.

The last session actually was one of tremendous actions. The North Atlantic military alliance was ratified, and more than $1,000,000,000 was appropriated to arm foreign countries. The Marshall plan and reciprocal trade agreements were extended, the military establishment was reorganized, a public housing program was started, the minimum-wage level was lifted, and there were numerous other legislative acts significantly affecting life in the United States and elsewhere. The Senate, in session 928 hours, passed 926 bills, resolutions, etc. The House passed things at an even swifter rate in the course of the 1949 session that lasted from January 3 to October 19.

Yet the session had a poor press, especially as it dragged cut through the hot and humid summer; and remarks in the galleries and elsewhere suggested that the public was not satisfied. Quick, visible voting instead of the slow call from Mr. ABBITT to Mr. ZABLOCKI (first and final House names) would have done at least a little to dispel the impression that the session fumbled and stumbled and wasted time.

A Substitute for the Lodge-Gossett Plan

EXTENSION OF REMARKS

OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include an article by Arthur Krock entitled "A Substitute for the Lodge-Gossett Plan," which appeared in the New York Times of February 9, 1950. Mr. Krock, with his customary felicity summarizes House Joint Resolution 414, introduced by me as an alternative to the Lodge-Gossett Resolution. The alternative resolution provides for election of members of the electoral college in precisely the same manner as are elected Members of Congress, to wit, one to be elected from each congressional district and two to be elected at large from each State.

Mr. Lucius Wilmerding, Jr., a Princeton scholar advocating the district system, concluded that—

This, I repeat, is the mode which was mostly, if not exclusively, in view when the Constitution was framed and adopted. It is also the mode which was advocated after some experience with the Constitution by Hamilton, Jefferson, Madison, Gallatin, James A. Bayard, J. Q. Adams, Van Buren, Benton, Webster, Story, and many others.

Mr. Krock's article is as follows:

IN THE NATION—A SUBSTITUTE FOR THE LODGE-GOSSETT PLAN

(By Arthur Krock)

WASHINGTON, February 8.—The strength of the bipartisan support in the Senate for the Lodge-Gossett amendment to the Constitution—it prescribes dividing Presidential electors hereafter in proportion to the popular vote in each State—has been taken as assurance that the House will also yield the two-thirds majority, which the proposal requires for submission to the State legislatures. Nevertheless, Representative COUDERT, of New York City, intends to press a substitute that has much to commend it.

Mr. COUDERT's joint resolution, introduced this week, provides for reversion to the original method of choosing electors to select the President and the Vice President. This was done by districts within the States, a majority or plurality of the voters in each district being sufficient to designate one presidential elector. Each State chose two others at large.

DESCRIBED BY MADISON

This method, according to Lucius Wilmerding, Jr., of Princeton, who has surveyed the whole subject, in a very able and informing article, was described by Madison as the one "mostly, if not exclusively, in view when the Constitution was framed and adopted." But it was exchanged for the system of submitting State-wide tickets of electors to the people. This became general in Jackson's time and now prevails. On the way to this present arrangement the choosing of presidential electors by legislatures was practiced and then abandoned.

Most of Mr. Wilmerding's solutions are incorporated in the Coudert proposal. It provides that each State shall have the same number of electors as the total of its Representatives in Congress plus its two Senators. The voters in each Congressional district are to choose an elector from that district and all the voters in the State are to choose the two others. If no candidate for President or Vice President shall have a majority of the whole number of electors chosen throughout the Nation, then from the three leading candidates Congress, voting as one body, with each Senator and Representative entitled to a single vote, shall make the choice. Three-fourths of Congress must be present on such an occasion, and the office will go to the candidate receiving "the greatest number of votes."

FUNDAMENTAL DIFFERENCES

This proposed amendment to the Constitution departs from the plan sponsored by Senator LODGE and Representative GOSSETT in three important respects. It does not provide for proportional allotment of electors on a State-wide voting basis. It requires as at present an electoral majority—not a minimum plurality of 40 percent—for popular choice of a President or Vice President. And it provides for congressional selection if a majority is not forthcoming. These differences, together with the reversion to the district voting plan, make Mr. COUDERT's resolution a very different measure.

In his memorandum Mr. Wilmerding makes these points:

1. "The intention of the Constitution was to give to each mass of persons, entitled to one elector, the power of giving that electoral vote to any candidate they preferred" (a quotation from Senator Benton, of Missouri, in 1824).

2. "The late assembly (of Virginia, which in 1800 changed from the district method to the State-wide—has separated us from our fellow-citizens of the Union and compels us

to speak the voice of Virginia only". (A quotation from the Federalist legislative minority of that year).

THE DISTRICT SYSTEM

3. The district system is preferable to proportional voting because it maintains the geographical constituencies and gives an equal voice to equal units of population rather than to equal aggregations of actual voters. This is because each district contributes an elector, no matter how many in it go to the polls. Under the proportional-representation-voting system the weight of the equal district groups would vary with the local turnout. Bad weather would retain for urban communities the same advantage over the rural they have at present. Or some acute local issue would enable one district to exercise disproportionate voting weight.

THE EXAMPLE OF 1892

4. The two extra electoral votes to which each State is entitled, and are reflected in the two Senators granted to each, might either go to the candidate who carried the State as a whole, or the State might be divided into two superdistricts for the purpose. This was done as late as 1892 in Michigan, where each congressional district also chose a presidential elector.

5. But a preferable method (to Mr. COUDERT's proposal that present congressional districts, or as legislatures may rearrange them in the future, be the voting units) is to add a provision to the suggested amendment. This would require Congress to create, for national election uses only, "compact and contiguous districts containing, as nearly as practicable, an equal number of inhabitants."

With these slight deviations, Mr. Wilmerding is on Mr. COUDERT's team, and his pioneer labors in this field of electoral reform plainly influenced the New York City Representative in working out his substitute for the Lodge-Gossett amendment. Few forecasters of Capitol action would give it much of a chance when the House, in a week or so, takes up the resolution passed by the Senate. But then everyone was surprised when the Senate approved any electoral change at all.

No Partisan Matter

EXTENSION OF REMARKS
OF
HON. LOUIS E. GRAHAM
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. GRAHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of February 26, 1950:

NO PARTISAN MATTER

The Lodge-Gossett amendment to the Constitution, under which the electoral vote in Presidential elections would proportionately reflect the popular vote by States, has passed the Senate and is now awaiting action by the House.

It is interesting that the amendment has aroused opposition both from the Taft school of Republicans and from some liberal Democrats on grounds of its practical political effect. Mr. TAFT seems to fear that the Republicans would be unable to make sufficient inroads, in the foreseeable future, on the popular vote of the Democratic South to offset the loss of electoral votes in the industrial States of the North (Ohio, for example) which under the present system have often swung en bloc into the Republican column. On the other hand, those liberal Democrats who are fighting the amendment fear that industrial Northern States would tend to lose their present political influence just because their popular (and therefore electoral) vote is so evenly divided. They fear that the South shedding its one-party character only by slow degrees, would meanwhile regain its former prestige in Democratic councils precisely because of the large blocs of electoral votes it, alone, would be able to produce. Furthermore, they fear that the Republicans, hoping to make inroads on the South, would tend to move more to the right, thus lessening still further the influence of labor and minority groups in the North.

We believe that the Lodge amendment can and should stand on its own merits as a genuine and democratic improvement in our method of electing the President and Vice President. Whether it would benefit the Republicans in the South or the Democrats in the North, whether it would give an advantage to this or that political group, is basically immaterial. It ought to be locked at not as a weapon for partisan advantage but as a proposal to bring our constitutional structure more in line with modern conditions and as a means for eventually breaking the one-party system where it exists.

Gleam of Sanity

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. KEATING. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Olean (N. Y.) Times-Herald:

GLEAM OF SANITY

Emerging from the fog of the Government's potato-price-support mess comes a ray of light that should be noted.

As the result of considerable pressure exerted by Representative KENNETH B. KEATING, of Rochester, the Department of Agriculture has decided to make surplus potatoes, eggs, and milk available to needy Rochester and vicinity families through the Monroe County public-welfare department.

Representative KEATING has been one of the foremost critics of the Government's price-support program, with its inevitable surpluses; and it is no secret that a storm of protest against the proposed dumping of from 25 to 50 million bushels of surplus potatoes on the farms on which they were grown, after the grower had been paid for them with the taxpayer's money, of course—had arisen in many sections of the country.

As a result, increasing pressure has been brought to bear on Secretary Brannan's Department of Agriculture to find some way by which at least a portion of the surplus foods could be utilized.

As Representative KEATING declared, "with people hungry and in need of such supplies it seems little short of criminal to follow a policy of destroying perfectly good food."

That, undoubtedly, is the sentiment of the vast majority of our people; but they are also becoming sick and tired of being stuck for the money with which the Government buys up these surplus products, only to see that Government turn around and dump them.

Potatoes, Representative KEATING announces, will be made available directly to both private and public welfare agencies in Monroe County, but dried milk and dried eggs will be handled only by the county welfare department. Private welfare organizations will be able to obtain such commodities for needy cases from this source.

Jesse B. Hannan, director of Monroe County Public Welfare Department, has been empowered to act as clearing agent for certification that particular families in Rochester and other Monroe County communities need potatoes, dried milk and dried eggs.

Transportation charges for the surplus food will be paid by the recipient welfare agency.

Presumably, if these foods can be made available for Monroe County, they can be furnished to welfare agencies in other counties; and the result may be that valuable help will be provided to families that need it, and a considerable portion of the surplus foods now on the Government's hands will be disposed of to advantage rather than destroyed.

Administration of ECA

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from C. T. Zinsmeister:

UNITED ENGINEERING & FOUNDRY CO.,
Pittsburgh, Pa., February 22, 1950.

Hon. JAMES G. FULTON,
Member of Congress,
Federal Building, Pittsburgh, Pa.

DEAR JIM: From time to time I read of the confusion among our representatives in Congress regarding the economic and political need of ECA and, of course, I am in no position to judge the existence of ECA from this standpoint.

However, for your guidance, it gives me a great deal of pleasure to report that in regard to the administration of the affairs of ECA, we have had a large amount of dealing with the various heads of departments within ECA, and I must admit that of all the tremendous volume of dealings we have had with various agencies of our Government, our dealings with the ECA have been by far the most prompt and intelligent. We realize all Government agencies are controlled by rules and regulations, which, of course, makes it a little more complicated at times than our transactions in private industry; however, the control and administration of ECA is as close to perfect as is possible.

Our particular dealings and those with others that I know of in the Pittsburgh district have been particularly with Mr. George Knutson, chairman of the Projects Committee, and Mr. F. B. Appelbee, attached to the controller's office. We have never dealt with any persons in Washington who have performed their assigned functions and duties, and yet had some sympathy for the problems of industry, as the above-mentioned men.

In your consideration of whether or not we should have an ECA and as to the amount of ECA assistance to be given, I trust you will advise some of your friends in Congress as to my humble opinion of the above particular phase of ECA.

With kindest personal regards, I remain,

Yours sincerely,

C. T. ZINSMEISTER,
Secretary.

Representative Abraham A. Ribicoff

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. KENNEDY. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include an article by Stewart Alsop that appeared in the New York Herald Tribune on Sunday, February 26, 1950, concerning my colleague and friend, ABRAHAM RIBICOFF, of Connecticut:

CONNECTICUT'S ASTONISHING RIBICOFF—STEWART ALSOP APPLAUDS CANDID REPRESENTATIVE

(By Stewart Alsop)

WASHINGTON.—It is a rare experience these days—and, therefore, a rather moving one—to come upon honesty, intelligence, and real courage anywhere in Washington. It is perhaps particularly rare to come upon these qualities in the United States House of Representatives, on the whole not the most inspiring branch of American Government. Yet all three of these qualities are to be found in the person of a certain obscure freshman Representative, ABRAHAM A. RIBICOFF.

There is no special distinction in RIBICOFF'S appearance or manner. He looks like what he is—a rising young lawyer-politician, intelligent, ambitious, personable, complete with neatly tailored double-breasted blue suit and a city-bred pallor. His manner reflects the rather automatic affability which most politicians instinctively adopt early in their careers as a kind of protective coloration.

Yet, RIBICOFF has written three communications for the edification of his constituents which a well-qualified observer has called "the ablest, the most courageous, and the most literate public statements I have seen from any Member of Congress in 10 years."

RIBICOFF'S personal history is a first-generation American success story in a minor key. The Jewish-Polish immigrants who settled in a small Connecticut manufacturing town; the ambitious son working his way through law school; the successful law practice in Hartford; the wife, the neat house in the suburbs, the regulation two children; a peculiarly American story so familiar it hardly needs repeating. Nor is there anything unusual about the RIBICOFF political career—a 4-year term in the Connecticut State Legislature, followed by 4 years as a police court judge, and finally by his election to the Eighty-first Congress on the Democratic ticket in a close race.

Dozens of RIBICOFF'S colleagues could duplicate all this. Yet the fact remains that ABRAHAM RIBICOFF is full of surprises. For one thing, this freshman Congressman has embarked on a quite astonishing political experiment. The nature of this experiment, which began after he toured Europe this summer as a member of the House Foreign Affairs Committee, is very simple. It is to tell the voters in his district the unpalatable truth.

On his return RIBICOFF made speeches throughout his district, and wrote numerous articles for Connecticut papers about the real position of the United States in the world. He has now written a summing-up article called Europe and Illusion, which, unlike almost anything else to emerge from Congress, deserves to be read in full. For one thing, RIBICOFF is found to write (and he employs no ghosts) a simple but remarkably effective English prose.

"There are no breathing spaces ahead," he writes, "for this country to enjoy while the balance of power serves as a buffer between us and the world's problems." He spells out the meaning of this conclusion: It is a dangerous illusion to suppose that we can withdraw from our world responsibilities in 1952, or soon thereafter, sharply reduce taxes and live happily ever after.

On the contrary, he writes, "It looks to me more like a task of 10 more years calling for an additional outlay of $25,000,000,000. * * * The present planning of foreign aid is premising a scope that is too little and an ending that is too soon. * * * We must look upon the cost of keeping Europe free as a cost of keeping ourselves in business. If we pull out at any time in the unforeseeable future, we leave a vacuum which can only be filled by the Soviet Union."

This is strong stuff in an election year. But in two other communications to the voters of his district RIBICOFF really drives the point home—that American responsibilities are neither cheap nor painless. Virtually the entire farm vote of his district consists of shade tobacco growers. At their request he has introduced an amendment to the farm bill including shade tobacco under the farm parity program. At the same time he has bluntly served notice on his farmer constituents that he will vote against the whole program, including his own amendment, simply because he considers it extravagant nonsense in these times.

He has also, astonishingly, opposed the building of a federally financed $132,000,000 dam in his own district. "We have fixed charges which must be met before we can even begin to discuss appropriations for such projects," he briskly informs the voters. "The security of our Nation, as represented in military and foreign aid commitments, is now primary."

By all the accepted rules, putting national security before the pork barrel should spell curtains for RIBICOFF. Yet there is a final surprise in his strange tale. He is now so unchallengeably strong in his district that the Republicans are talking of nominating him on their ticket.

Despite all the evidence to the contrary, the RIBICOFF story seems to suggest that to treat the voters in this democracy like adults is actually good politics. At least a good many people more powerful and conspicuous than the freshman Congressman might do well to ponder the meaning of ABRAHAM RIBICOFF'S experiment.

Letter to the Secretary of State

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert copy of a letter which I have sent to Secretary of State Acheson. The letter follows:

FEBRUARY 28, 1950.

Hon. DEAN ACHESON,
Secretary of State,
Washington, D. C.

DEAR SECRETARY ACHESON: I should appreciate it very much if you would find it possible to make me conversant with the Government's views relative to the rearmament of the Arab States by Great Britain.

My attention has been called by interested citizens of Massachusetts, whose views I respect, that the peace of the Near East is being threatened and that the war against Israel by the neighboring Arab states may be renewed as a result of the acquisition by the Arab States, particularly Egypt, of large quantities of modern arms of all kinds, including jet planes, Spitfire planes, Sherman tanks, submarines, and battleships. These arms are being supplied, as you know, by the Government of Great Britain. It is asserted that the destruction of the balance of armament, as between the State of Israel and its Arab neighbors, constitutes a source of encouragement to the Arab governments. They have, by reason thereof, assumed an intransigent attitude toward Israel's efforts to negotiate treaties of peace.

Moreover, the responsible Arab leaders, as well as the Arab press and radio, so it is said, make no secret of their intentions to renew the war against Israel. They speak constantly and publicly of a "second round." The inflammable utterances of the Arab official spokesmen, no doubt, give weight to Israel's apprehension and it may well endanger the peace in the Middle East area—"a region the security of which is of great importance to the West," as you well state in your letter of January 12, 1950, to Representative JAVITS. As a direct result of the unprecedented delivery of arms by Great Britain to Egypt, Iraq, Syria, Transjordan, and Lebanon, an armament race between Israel and its Arab neighbors is now in full swing which, in itself, is bound to create an explosive situation—the very thing which our Government is endeavoring to avoid.

Indeed, no one is in a position to guarantee that the warlike statements by the Arab leadership and the provocative pronouncements on the radio and in the press calling for a war of revenge against Israel are merely intended for domestic consumption. Should the Arabs carry out their threats and the war be resumed against Israel, then it would be too late for anyone to extinguish the conflagration, which is capable of spreading into other sections of the world. Hence Israel has reason to be jittery. Therefore it is compelled, as a matter of self-defense, to strengthen itself militarily and thus consume its financial resources for the protection of its security. These resources would otherwise have been employed for sound economic and constructive objectives for the purpose of rehabilitating the hundreds of thousands of the DP's who came to Israel in search for peace and security.

In the aforesaid letter to Representative JAVITS you state:

"Arms shipments to the Arab states and Israel should be limited to those necessary for the purpose of maintaining internal law and order by the government concerned in the legitimate exercse of constituted authority, and for the purpose of providing for reasonable requirements of self-defense."

Both the amount of arms as well as the kind of arms that are being shipped to the Arab states cannot be said to be limited to the maintenance of law and order internally. If the policy of your Department with reference to the rearmament of the Arabs is to be dictated by the security of the Middle East area, which might be attacked by a third power, then Israel, say many interested citizens of Massachusetts, is entitled to be the beneficiary of that policy and receive similar arms. By the delivery of arms to Israel in similar quantity and kind, the balance of armament between it and the neighboring Arab states would be maintained.

I am persuaded that, in the event of any aggressive act by a third power in the Middle East, Israel may well be counted as a faithful ally, and it is, therefore, worthy of no less consideration than the Arab peoples.

As you well know, American citizens of Jewish faith are contributing vast sums of money to Israel for the immigration, settlement, and rehabilitation of hundreds of thousands of the Jewish DP's of Europe and other parts of the world. They are deeply concerned about the security of Israel.

I would appreciate your reply to the contentions of my constituents.

Sincerely yours,

JOSEPH W. MARTIN, Jr.

A Blow at the Two-Party System

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1950

Mr. REED of New York. Mr. Speaker, the feeling in opposition to the Lodge formula for dividing each State's electoral votes in exact proportion to the popular vote is causing great apprehension among the citizens of New York State. It is a proposal, of course, to surrender the affairs of the Nation to a one-party system. It will make a few of the large States the tax-paying slaves of a party which is now dominated by a group of reckless spenders and wastrels.

I am taking the liberty of inserting in the Appendix of the RECORD, under unanimous consent heretofore granted, two editorials from the Buffalo Evening News, one dated February 20, 1950, and the other February 25, 1950:

[From the Buffalo Evening News of February 25, 1950]

WHY NOT A DIRECT POPULAR VOTE?

When applied to past presidential elections, the so-called Lodge formula for dividing up each State's electoral votes in exact proportion to the popular vote produces some mighty queer arithmetic.

For example, the 16 States carried by Governor Dewey in 1948 gave him a total of 189 electoral votes under the present system. But under the proposed Lodge amendment—already approved by the Senate and now pending before the House—Mr. Dewey's total margin over President Truman in all these 16 States combined would have amounted to 6.9 electoral votes. Yet the Truman margin over Dewey in Texas alone would have amounted to 9.4 electoral votes. The one-party State of Texas, in other words, was more than enough to offset the combined Dewey margin in all the States he carried.

Yet in the face of such incongruities as this, the Lodge amendment is put forth on the contention that it would practically give us a direct popular vote for President—wholly ignoring the fact that every New York vote would have about one-sixth the weight of a Nevada vote.

We agree with many of the Lodge amendment's supporters that the President of the United States, being a national officer responsible to all the people, should be elected directly by the people. But we cannot agree that the devious Lodge formula would give us such a system, or even move in that direction. The Ohio Congressman who dubbed it "a fine racket for southern Democrats" is much too close to the truth for comfort.

If a popular vote is wanted, why not provide it in a straightforward way? The only possible justification for this clumsy alternative is expediency: since the small States already have a disproportionate weight of electoral votes, it is not thought likely that they would ratify an amendment which deprived them of it.

What this overlooks, however, is that this supposed advantage of the small States is in reality a disadvantage. So long as elections depend on carrying the "key" States, the small States can be sure their favorite sons and favorite issues will get little play by either party. A direct popular vote, far from disadvantaging them, would extend Presidential "availability" in every part of the country and make one State's voters just as important as any other.

Electoral reform is long overdue. But if Congress is at last on the verge of proposing one, why not make it a real reform—a direct Nation-wide popular vote for President and Vice President? That kind of proposition could stand on its merits before every legislature, and its ratification would give us in fact the "people's choice" for President—which is much more than can be said for the Lodge amendment.

[From Buffalo Evening News of February 20, 1950]

QUIRKS IN THE LODGE FORMULA

In seeking to improve our constitutional system of electing Presidents, Congress is trying to meet at least three distinct objections to the present method. First, the electoral college is an anachronism and ought to be abolished. Second, the present system of throwing any election to the House of Representatives when no candidate has a majority of electoral votes presents the constant danger of a serious constitutional crisis. Third, the electoral vote system is not a true measure of national sentiment and ought to be modified in the direction of an out-and-out popular vote.

The so-called Lodge amendment, which recently passed the Senate and now is pending before the House, tries to meet all three objections in a single cure-all formula. We heartily concur in its objectives, but confess to serious misgivings about the formula chosen for attaining them.

As to abolishing the electoral college, the easiest way to do that is simply to abolish it, by letting everyone vote directly for President instead of indirectly for a presidential elector. Each State could still cast all its electoral votes for the successful candidates, but the Lodge plan would change this to have the electoral votes split in proportion to the popular vote.

As to the danger of a constitutional crisis under the present system, this is real and serious. If no candidate gets an electoral majority, the House (with each State delegation having a single vote) must choose from among the top three. Unless a majority of the State delegations can agree by January 20 (when the presidential term begins), the Vice President-elect (chosen by the Senate) would fill the vacancy. The whole system is an invitation to chicanery, corruption, or worse.

But that, too, could be corrected easily enough, through an afterthought clause in the Lodge amendment. It provides for congressional interference only when the leading candidate has less than 40 percent of the total electoral vote. In that case, the whole membership of Congress (House and Senate) would choose between the two highest candidates. In this respect, the Lodge amendment is a distinct improvement over the present system.

As for moving in the direction of a straight-out popular vote, however, it is hard to see how the Lodge plan offers much improvement at all. It purports to do this by splitting each State's electoral votes instead of giving them all to the candidate who carries that particular State. The reason for this cumbersome alternative to a direct popular vote is obvious, an amendment needs to be ratified by 36 States, and this one is frankly a compromise to lure the small States.

But if so, why are the big ones supporting it? That is something a number of Senators, including TAFT, of Ohio, simply couldn't understand. For the Lodge plan not only would deprive the large States of their special prominence in presidential elections, but it would greatly amplify the voice of the one-party States. New York would have no importance at all, since the two parties' normal vote here would very nearly cancel out. But a single one-party State like Georgia or Vermont might yield an electoral margin bigger than either party could hope to offset in New York, Pennsylvania, and Ohio combined. And since most one-party States are in the Democratic South, the Lodge system would put the Republicans at a substantial disadvantage right off the bat.

The proposed plan, in short, would not give us a direct popular vote, but would simply shift the emphasis from one extreme to the other—from the key States where the parties are in close balance, to the one-party States, mainly in the solid South. The United States News and World Report has calculated that four Republican Presidents—Hayes, Garfield, Harrison, and McKinley—would have lost out under the Lodge plan because of this factor.

Before submitting any such amendment to the States, therefore, it would seem particularly incumbent on the Congressmen from the big States—especially the Republicans—to be very sure they know what they're doing to themselves. Senator TAFT has flashed a warning that should put them on guard: "I cannot understand Republicans voting for a system which is unsound in theory and fatal to the hopes of Republican success in any close election."

Educating Poland's Youth for Russian Expansion

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1950

Mr. KENNEDY. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include a speech by Prof. Donald E. Super, of Columbia University, on the subject of educating Poland's youth for Russian expansion:

INTRODUCTORY REMARKS OF ATTORNEY STEPHEN S. SOJA

Ladies and gentlemen, our speaker has chosen for his topic Educating Poland's Youth for Russian Expansion. He presents a detailed description of what is happening to Polish youth under Communist indoctrination and what it means to the future not only of Poland, but the rest of Europe and the west.

Our speaker was born in Honolulu, Hawaii, in 1910. He received his elementary education in New York, attended secondary schools in Poland and Switzerland, and was graduated from Oxford University with bachelor's and master's degrees. Columbia University bestowed upon him the degree of doctor of philosophy. During the last war he served as an aviation psychologist, leaving the Air Corps with the rank of major. He taught for 4 years at Clark University and in summer schools throughout the country includ-

ing Harvard. At present he is professor of educational psychology at Columbia University. As a psychologist he is regarded as among the leaders in this country.

I consider it an honor to present to you a recorded address by Prof. Donald E. Super, of Columbia University.

EDUCATING POLAND'S YOUTH FOR RUSSIAN EXPANSION

To graduate from high school in Poland today a boy or girl must pass an examination in which his social and political views are appraised by representatives of the Government-controlled political parties and trade-unions. This means that unless he has, or skillfully makes believe that he has, accepted the Communist doctrines prescribed by the Soviet-controlled Government, he cannot graduate from high school. And it goes without saying that, if he cannot graduate from high school, most training and positions which might lead to executive or professional employment are closed to him. In one district, that of Katowice, 2 years ago 30 percent of the candidates for the matura or high school diploma were failed because of "social unpreparedness," high-sounding name for lack of sympathy with communism and Soviet Russia.

How can such things happen in Poland, with her traditions of intellectual freedom? The answer is clear, for in May 1947 Minister of Education Skrzeszewski (a Russian-trained Communist), said: "Reforms are needed to allot Marxism a more worthy place among the sciences." Accordingly a great many different steps are being taken to insure "a more worthy place," that is a monopoly, for Marxism.

For example: in the ancient Jagiellonian University of Cracow three new chairs have been established, one in Marxian economics, one in Poland and the modern world from the Marxian viewpoint, and one in the history of social movements and revolutions. While the shortage of safely indoctrinated and docile professors has made it necessary to appoint one man, a Professor Sieradzki, to two of these chairs, their creation is an indication of the Communist Party's determination to indoctrinate at every level. There is evidence, too, that the shortage of Communist and fellow-traveling professors may not last too long, as there has been an influx of academically unprepared and intellectually unqualified, but Communist-led young men and women into the universities. They have been sent there by the party in response to demands for more students willing to learn what the party feels they should learn. One bit of evidence: university enrollment in the 28 institutions of prewar Poland equalled 48,000 students per year, whereas today, with fewer students in the academic and technical secondary schools, there are twice as many students (102,000) in twice as many universities (60).

Another bit of evidence: according to the official newspaper last summer, the examinations for admission to the universities are not difficult, but it is necessary that candidates supply certificates from local authorities concerning their social background and work in Communist organizations in order that they be eligible to take the exams. To pass the examinations, one must show further evidence of "class-consciousness and economic maturity, and of understanding of the role of the Soviet Union in the fight for the liberation of nations from the capitalist yoke." This is another way of saying that in order to get into the universities one need only be a pro-Russian Communist. Thus the Soviet-controlled government insures instruction of the proper doctrines, by properly indoctrinated professors, to properly receptive students.

But these are by no means the only steps being taken to bring Polish education in line with Russian. A great variety of special events are planned and staged with great fanfare. Last November included a Pavlov Week, in which a delegation of Soviet biologists toured Poland to lecture at the universities and educational centers on the currently approved biological concepts. So-called festivals of Soviet film, plays, and the like are staged, featuring Russian productions in theaters, schools, and even in the streets, in order to carry indoctrination to the school child and to the man in the street. World Student Week provided an occasion when university and technical institute students had publicly to demonstrate their unity with the Communist students of the world, or risk dismissal from the universities because of "social unpreparedness."

The campaign for thought control has, as case of Hitlerite Germany, reached the textbooks used at all educational levels. Although 3 years ago a member of Parliament dared to protest that the textbook revision then going on was handicapping the schools by forcing them to operate without books, they underwent still another revision last year in order to bring them in line with further changes in doctrine and interpretation—this has been true especially of history and biology. Thus the 6 year plan for communizing Polish thought moves ahead.

With the universities training Communists to be future teachers, with textbooks rewritten to conform to current ideology, there are still the presently employed teachers to consider: they, too, must be Communists or, failing a sufficient supply of these, fellow travelers. Last summer several thousand school teachers, compelled to take special vacation courses in Marxian ideology, were told that they must prove their allegiance to it during the current year in order to be reappointed next year. With children trained to think that spying on elders is a praiseworthy activity, checking up on the teachers is easy.

But sole reliance is not being placed on an older generation of basically non-Communist teachers in the public schools while waiting for a new generation of teachers to be trained, the so-called Society of Children's Friends has at its disposal large sums of money which are being spent on atheistic schools and on summer camps, staffed by trusted teachers, in the apparent hope that they will produce a less-adulterated crop of young Communists than the regular schools.

This does not mean that the public schools have less pressure on them to indoctrinate. Quite the contrary. On Stalin's birthday, for example, surprisingly similar messages from Polish children were read in chorus in the public schools and at meetings, hailing Stalin as "the culture and joy of youth * * * the leader and teacher and friend of all the suffering and oppressed," like the crocodile in Kipling's Jungle Book who was flatteringly called the protector of the poor by all the weaker animals who feared he would eat them. School children were forced to write letters to Stalin, uniformly beginning with "I, a child of democratic Poland, on the day of your seventieth birthday, want to express, in my humble letter, my gratitude to you." But then the so-called spontaneous demonstration organized from Moscow is an old story in the history of communism.

The number of nursery schools and kindergartens, for example, has increased threefold, their enrollments have quadrupled, since prewar days. That figure, taken at face value, sounds splendid—until one examines what is back of it. We should remember that it is the early years which are the most formative, and that there has been a steady drive for the employment of young women in construction work: if the children are in kindergarten they can be indoctrinated and the mothers can work. Declines in enrollment in elementary schools and in high schools confirm the interpretation by showing that the Communist government is not interested in a truly educated populace. The fact that enrollment in so-called vocational schools, which are now in effect mere apprentice-training institutions, is five times the prewar level, shows that what the party wants is not thinkers but producers: modern cannon-fodder.

But education, the Communists well know, is not something that takes place solely in schools. Accordingly all youth organizations have been taken over, some primarily for indoctrination purposes, and some primarily as a means of recruiting free labor, but all partly with both of these objectives in mind. The Scouts, the YMCA, and such organizations have been taken over and merged with the so-called Association of Polish Youth (the equivalent of the Russian Komsomol) and the Service for Poland (a semimilitary organization). Political and atheistic training, anti-American indoctrination, spying on elders, and construction work are their principal activities.

The Soviet-controlled government recognizes too that education is not all formal or organized. Therefore, the Christmas toys of a year ago were criticized as reactionary and capitalistic, and this Christmas was one of toys in which dwarfs worked for the 6-year plan, games came with pictures of Stalin and Bierut, and picture books dealt with subjects such as world revolution.

The rapid rate of change, and the many fronts on which it is being pushed by a country with limited resources, make it clear that Soviet Russia and her satellites consider youth the principal objective of communization; if they are adequately indoctrinated, their countries will soon be safe tools for Soviet Russia. It is in the indoctrination of youth that Russia is consolidating her territorial gains in World War II. It is only obvious, then, that if we in America do not want to stand by and see Russia turn a substantial part of the world against us, we must show an active concern for what is happening to youth in the satellite countries, and in particular to the youth of a country such as Poland, which was the first and last to resist Soviet-Russian aggression. That young Poland still reaches out to us for help despite the disillusionment of Yalta and of the wars and uprising is made amply clear by the fact that courses in English are much more popular in Poland today than are the all-but-compulsory courses in Russian; at the University of Warsaw last fall, for instance, 114 enrolled for the study of English while only 11 signed up for Russian. What a straw to grasp at, courses in English, when what is desired is normal intellectual and social intercourse with the free western world; grammar, when what is needed is a way of life; words, when their very meaning is being changed and "democracy" has become a synonym for totalitarianism.

Address of Hon. Carl T. Durham, of North Carolina

EXTENSION OF REMARKS

OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1950

Mr. COOLEY. Mr. Speaker, on the evening of February 21, our colleague, the Honorable CARL T. DURHAM, of North Carolina, delivered a very able and timely address to the North Carolina Democratic Club, of Washington, and I take great pleasure in presenting this well-prepared speech, and I hope very much

that it will be read and appreciated fully.

From the vantage point of the vice chairmanship of the Joint Congressional Committee on Atomic Energy, our colleague has discussed with gravity and wise understanding the perils we face in this atomic age. He has pointed out the inevitability of an atomic warfare race in view of the adamant attitude of the Kremlin in not being willing to assume the obligations which UN control, ownership, and inspection of world atomic installations would require. Our colleague has indicated the tragedy of the possible deprivation to our people of the marvelous possibilities of peacetime utilization of our rapidly growing atomic knowledge, if we are forced to concentrate wholly on atomic weapons of war. The honorable Member frankly concludes that the only way out of the atomic dilemma is to induce the Kremlin to agree to international control, and until such agreement is reached, he realistically admits that in planning our atomic energy program we must look first to our military defenses, at the same time continuing our untiring efforts to persuade Russia to see the light. Our colleague insists that we cannot permit a lag in development of atomic energy for peacetime applications. The program, he states, must go forward on this twofold basis.

There is no note of hysteria in our colleague's discussion, nor is there manifest any spirit of defeatism. He says, and I quote, "We must calmly but resolutely guard our ramparts and keep our powder dry."

The honorable Member warns against erecting barriers of secrecy between our people and the atomic-energy program. Rather, he believes, we should concentrate on positive achievement. We must not stifle the spirit of investigation and scientific inquiry and erect an iron curtain of our own. Our colleague is a trained scientist, and he knows the dangers of stifling scientific investigation and the free spirit of scientific research.

Throughout his calm and judicious statement runs a thread of approval of the steps taken by our President, Harry S. Truman, upon whom has devolved the stupendous task of the atomic decisions from Hiroshima to the H-bomb. Our colleague believes our President has made wise and inevitable decisions in the face of circumstances, and he describes the President's most recent responsibility in arriving at the decision to proceed with the hydrogen bomb.

In my opinion, our colleague has made an excellent and inspirational statement on a matter of the gravest import to the American people, and I know that every Member will profit by its perusal.

Mr. Chairman, speaking to you tonight as Democrats, being members of a political party that has set our policy continuously since 1933, I desire to point out to you during the first half of this twentieth century, the Democratic Party has been charged with the responsibility for more than 24 years—8 years under Woodrow Wilson, 12 years under Franklin Roosevelt, and more than 4 years under President Harry Truman. This period has produced surprise upon surprise, and now presently the atomic age. We as a party have received dose after dose of tension with monotonous repetition. So it is necessary that we guard ourselves of not becoming overexcitable. The Democratic Party has had to take over every crisis in the first half of this century. Now it becomes necessary that we make the people of the world aware of our genuineness of what we are doing. The duration of the Democratic Party has been long and honorable, but the duration is not so important as the donations that we make as a political party. We are seeking today a peaceful world, but we are not seeking peace without honor and we never will. There is no doubt that Russia is building a formidable military machine in the hands of an absolute small group of men who would destroy us if opportunity offered, and for that reason our present leader, President Truman, has deemed it imperative to build a strong defense.

The pressure which is building up for a conference of some sort with the Soviet Union, in my opinion, is dangerous. It would immediately place us in a position of despair and defeatism.

When, in mid-1945, atomic bombs fell upon Hiroshima and Nagasaki, and brought the Pacific war to an abrupt close, most Americans thought the ultimate in instruments of destruction had arrived. Men talked of the absolute weapon; it seemed that nothing could surpass the power of the atomic bomb.

Now matters appear different, and still more startling.

Four weeks ago the President gave the go-ahead signal on the hydrogen bomb. There is good reason to think that a single such bomb could destroy any city in the world. The scientists are confident that it can be built. And if we can make one, we must assume the Soviet Union can, too. The Russians broke our atomic monopoly only 4 short years after Hiroshima.

I can assure you that the President said "Yes" to the hydrogen bomb only with the greatest reluctance, and because he could not afford to say "No." Picture, if you will, the dilemma that confronted him. To say "Yes" to the super bomb was to authorize development of a weapon which, if uncontrolled, may ultimately destroy civilization. But to say "No" was to invite the possible destruction of both America and all those nations now joined with us in seeking a world of freedom and abundance. Nothing in the record of the Kremlin suggests either inability to make the hydrogen bomb, or reluctance to use it if a tempting opportunity were offered.

Therefore, the President's decision was correct—and, under today's circumstances, it was inevitable.

But why was the President faced with such a cruel choice? We must turn to Moscow for the answer. Mr. Acheson, speaking for the President, is right, in my opinion, in his theory that he must keep himself in a strong situation for future negotiations, and I point out to you press conferences where President Truman and our State Department plainly made it known that we have not closed the door as many columnists and other people would have you believe.

Over 3½ years ago, the United States offered the world a plan that would harness the atom for man's good. Bernard Baruch, as representative for our President, stood before the United Nations and announced that we were willing to give up our atomic monopoly, to share our secrets, to admit UN inspectors to our installations, to put our plants under UN ownership and control. In return, we asked only freedom from the fear of atomic attack—we asked only that the Soviet Union and every other country undertake similar obligations. All the free world agreed to our offer being generous and sound. Only Russia and her satellites opposed it—as they still do today.

President Truman, at his weekly press conference on February 16, said, with great emphasis, that this country is wide open to any peaceful overtures, including the international control of atomic energy, through all its embassies and the machinery of the United Nations. On February 13, Mr. John D. Hickerson, Assistant Secretary of State, also said the United States is willing at any time to sit down and talk with Russia in the United Nations on international control of atomic energy, and you recall that Russia has offered no control proposal since June 1947. Mr. Hickerson said in his press conference that the Soviet Government alone is blocking plans for world control of atomic energy. Mr. Jacob H. Malik, Soviet delegate to the United Nations, issued a statement on February 12, after his walk out of the six-power consultative body of the UNAEC, and gave as his excuse the unwillingness of the West to oust National China. Our State Department at that time made it known that regardless of the Chinese matter, we were prepared to continue negotiations and talks on internaitonal control of atomic energy. Mr. Hickerson said what this country wanted is an agreement on atomic energy but Russia has continued to use every excuse to block negotiations on some type of control of this dreadful weapon.

Now we find ourselves facing the prospect of an atomic armaments race.

But such a prospect represents only half of the tragedy. The other half lies in this: Moscow's refusal to accept a just control scheme deprives mankind of the untold benefits that might follow if all the genius and treasure now being expended on atomic weapons for self-defense were turned instead to harnessing the atom for man's well-being.

As you know, our Atomic Energy Commission is constantly developing the peacetime applications of atomic energy. Of course, we should not be Utopian in our hopes. The day when an "atomic pill" will heat your house for a year, or send your auto across the country is not in sight.

But much progress has been recorded, and even more is to be anticipated. In medicine, for instance, the use of radioactive "tracers" brings closer the date when cancer will be conquered. In agriculture, atomic research offers the prospect of greatly increased crop yields and resistance to plant diseases. In industry, experiments now being conducted with new types of power-generating plants hold out the possibility of driving turbines and dynamos through atomic energy. Furthermore, the time is not too far distant when the split atom will propel ocean-going ships.

Now suppose that instead of being forced, in self-defense, to build atomic and hydrogen bombs we could go all-out in developing the medical, agricultural, and industrial uses of atomic energy. Such a program might change and immeasurably improve the patterns of our existence.

That we cannot now go all-out in exploiting the atom for peace represents not only America's tragedy but the world's. The impoverished Russian people, the starving and disease-ridden millions of Asia and Africa—their loss is at least as great as ours.

What is the way out of this atomic dilemma? If we are to be frank and realistic, we must conclude that there is only one way out—inducing the men of the Kremlin to agree to an effective international control plan. Until such an agreement is reached, our very existence as a nation demands that in planning our atomic energy program we look first of all to our military defenses.

I confess that I see no easy method of persuading the Kremlin to accept a plan which it has consistently rejected for almost 4 years. Yet we must keep trying. We must continue to explore every avenue that may lead to a dependable and worth-while agreement.

It also disturbs me to read newspaper statements—some of them issued by scientists—suggesting that we retreat from realism and pin our hopes to some scheme or other that could succeed only if all men, and particularly the Communists, were completely enlightened and unselfish. The scientists have been instrumental in creating the difficult situation in which we find ourselves today. I think they should call upon the same realism and objectivity that guides them in the laboratory to help us find a workable solution to our political problems—rather than confusing the issue, as a few of them do, with impractical ideas and proposals that lead, not to a better world, but to greater danger for the free countries of the world.

While we are striving for atomic peace, along the path that our President has rightly taken ever since Hiroshima, we must calmly but resolutely guard our ramparts and keep our powder dry. We must keep our defenses in such a state of readiness that no aggressor will be offered the prospect of a quick and easy victory. We must work to maintain our lead in both the peacetime and military application of atomic energy.

This lead, of course, is not assured us merely by allotting a given number of dollars to our atomic program. We must choose between alternatives, and allocate our resources of brain power, money, and materials, so as to secure the greatest return on our investment. This often involves real problems of choice. How, for example, should we ration our scientific economy—our supply of available scientific experts—so as to press ahead not only with improved atomic bombs, not only with hydrogen bombs, but also with atom-powered ships and atom-powered industry? Can we pursue all these programs at full speed with the technical talent at hand? If not, which programs should take priority?

We must also be sure that in our understandable eagerness to reap immediate benefits we do not neglect pure research. We must not, that is, allow the well of fundamental knowledge to run dry. Here I think especially of our university students—our young biologists, chemists, and physicists. Let us remember that our real security and prosperity derive not so much from our natural resources—although for these we may be thankful—as from the skills and knowledge and imagination of free Americans.

We are in a race to develop brains as well as the race to develop bombs and reactors.

Your representatives, and all those working on atomic energy, are very much aware of these problems. They are also aware that no small group of men—no matter how diligent or how dedicated to our national welfare—can determine by itself how atomic energy can best be used to promote our twin objectives of security and prosperity. They are further aware of the imperative need for the criticism and cooperation of an informed citizenry.

That is why we must exercise the greatest caution in erecting barriers of secrecy between the people and their atomic energy program.

Of course, we cannot afford to forget about Klaus Fuchs, the British scientist now on trial for divulging atomic secrets to the Soviet Union. Of course, we want to guard against future leaks, and we want to improve our security measures if impartial examination finds them wanting. But let us not be stampeded by the Fuchs revelations into a disastrous effort to achieve security more through secrecy than through positive achievement. Not only would this imperil our democratic institutions: it would gravely jeopardize our atomic program for military purposes. The continuing success of that program depends on the greatest possible interchange of ideas and information between our scientists.

Science does not take congenially to compartments or boundaries. The iron curtain hinders Russian scientists from participating in that intellectual cross-fertilization on which the growth of scentific knowledge depends. The Soviet iron curtain is a tragedy both for the Russian people and for the world. We must not compound this tragedy by needlessly erecting curtains of our own.

Let us always keep first things first in our minds. Let us realize that the liberation of the latent power of the scientific mind awaits the end of bombs and the beginning of world cooperation through an effective control plan. Keeping our atomic defenses in order can only buy us time. We must use that time to work and struggle for the day when international control enables us to realize the true promise of the atom.

Is There Room in the Poorhouse for 149,000,000 People?

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSF OF REPRESENTATIVES

Wednesday, March 1, 1950

Mr. KEATING. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pittsford (N. Y.) Post of February 2, 1950:

IS THERE ROOM IN THE POORHOUSE FOR 149,000,000 PEOPLE?

In 1932, Franklin D. Roosevelt, then a presidential candidate, had this to say about Government spending:

"Any Government, like any family, can for a year spend a little more than it earns. But you and I know that a continuance of that habit means the poorhouse."

Those words, important 17 years ago, have even greater significance today. Why? Because in every year since 1932 (with the exception of the two fiscal years immediately following the war) our Federal Government has spent more than it has collected.

In 1932, our Federal Government spent $4,500,000,000. For the fiscal year of 1950, it is estimated that our Federal Government will spend ten times that amount—$45,000,000,000.

To give you an idea of just how much money this is, consider these facts:

1. If everyone in the United States cashed in all his life-insurance policies, the total would amount to $44,000,000,000. This would not be enough money to run the Government for 1 year.

2. If every urban home owner in this country sold his home, the total would amount to $30,000,000,000. That's just enough to run the Government for 8 months.

3. If every farmer in this country sold his farm, farm equipment, and livestock, the total would amount to $25,000,000,000. The Government could not run for 7 months on that amount of money.

These facts put a new light on the staggering size of our Federal Government's planned $45,000,000,000 expenditure for the fiscal year of 1950. And remember, this excessive spending is in the face of a national debt of more than $250,000,000,000.

Isn't it as true today as it was in 1932 that "a continuance of that habit means the poorhouse"?

Just what are you doing to end excessive spending by our Federal Government? Have you written your Congressman? Have you discussed the problem with your business associates, your friends, your employees?

Let's make sure our Representatives in Government know how we at home feel about the continuance of a habit that means the poorhouse.

The time for action is now.

When Good Intentions Are Bad

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1950

Mr. HILL. Mr. Speaker, under leave granted to extend my remarks, I wish to include the following editorial from the Longmont (Colo.) Times-Call of Wednesday, January 11, 1950:

WHEN GOOD INTENTIONS ARE BAD

All of us have heard that the road to hell is paved with good intentions, but who ever wrote it failed to say where those go who paved it.

It would be interesting to know whether the well-meaning perverter of truth, the betrayer of those whom he loves, and the destroyer of that which he seeks to build are judged by their intentions or by the results of their actions—when the Great Judge renders his final verdict.

We need not answer that question here, but it is important to know that motives, no matter how good, cannot prevent operation of the law of cause and effect.

The doctor who mistakenly prescribes arsenic to cure heart trouble does not thereby prevent the poison from killing his patient, no matter how earnest his hopes that the patient get well.

The architect does not prevent destruction of the house he builds if he ignores the laws of physics in trying to save money for his client.

The teacher who loves his students does not thereby change the laws of psychology which wreck the boy who is mistakenly taught to rely entirely upon others.

So with the political and economic policies of a nation. We know that the Communist wants to destroy capitalism and thereby tear down the prosperous economic structure which we have built in the United States. He wants to set up government control over our lives and subjugate the individual to the state. He sees Jesus of Nazareth with his gospel of love as the mortal enemy of Karl Marx with his doctrine of class hate.

But the Communist is too wise to attack in the open with clear avowal of his real purpose. He makes the attack in the name of democracy and humanitarianism, seeking to enlist for his fell purposes the aid of the very elements he seeks to destroy.

And so, many a devout church member, or worker for good, accepts the extravagant spending and accumulation of public debt as means to foster the welfare of individuals less fortunate than himself, and to provide easy help for the projects he would serve. He does this out of love for his fellow men, to establish the reign of plenty for all men on earth.

But, whether the purpose behind the extravagant spending, subsidies, Government control and piling up of debts be to wreck the capitalistic system quickly, as is the aim of the Communist and his Socialistic pals—or whether it be in the name of democracy

to promote humanitarian purposes, as is the hope of the devout and the good—the end result is the same in either case. It brings destruction to our traditional American freedom and self-reliance, the setting up of bureaucratic controls which ultimately enslave the individual, lower his standard of living, and ultimately destroy the church itself.

So the devout church member can become fellow traveler to the Communist without realizing it, and neither the purity nor the nobility of his motives prevents him from serving as ally to the destroyers of his country and its basic freedoms. His methods defeat his purpose.

Sheer love for humanity does not save humanity when those who love it use the methods that ultimately destroy the objects of their love. It then becomes loving betrayal.

Sir Harry Lauder

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Christian Science Monitor, Monday, February 28, 1950:

THE SCOTTISH MINSTREL

Sir Harry Lauder made the world hum. He led it to sing. "Singing makes you cheery," he said, and he taught the world a score of lilting songs that made it deliciously gay. The dialect was no obstacle. It came home to the dense population of Chinese as readily as to the scattered settlers of Australia. He was the first Scots comedian to capture London. The demand was so great for his appearance that he was billed in three theaters at one time.

Gifted with a rich baritone voce, Sir Harry was as happy in a sentimental song as he was in a comic number. This quality the public little knew. It was overshadowed by his irresistible humor. He was not an imitator of the Scots. He was a caricaturist. He exaggerated types he knew, had seen on street corners, had rubbed elbows with on the Clyde. He strengthened his characterizations, and gave them dramatic values of which the originals were bereft. His catchy verses—many written by himself—caught all the romance of the Clyde in the gloaming.

Where Burns and Scott left off in literature, Sir Harry carried the torch in song. An artist to the fingertips, he gaged his audience by its response, his devoted wife always helping in the early days by relaying comments made by departing listeners when the show was over.

Sir Harry knew how to get his songs across the footlights. He was meticulous in makeup, artful in dance steps, lilting in style. He worked hard, lived when possible close to the theater, and rehearsed an hour before the show. He left nothing to chance. The step that missed a beat was as carefully engineered as the wag of the kilt when he turned a corner. He had a keen sense of stage art, and capitalized on the value of taking the audience into his confidence.

Once in a while he would prompt his listeners to tell him what song they would like him to sing. When a dozen voices shouted a dozen different favorites, he would silence his hearers bluntly: "You don't know what you want, so I'll sing Keep Right On to the End of the Road." This was the favorite song of the "Scottish minstrel." It was his philosophy, too.

Hong Kong Court Gives Reds Planes

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Burton Crane, from the New York Times:

HONG KONG COURT GIVES REDS PLANES—DENIES RECEIVERSHIP PLEA OF UNITED STATES CONCERN FOR 93 FORMER CHINESE NATIONALIST CRAFT—INJUNCTIONS ARE LIFTED—SOVEREIGN IMMUNITY CITED BY BENCH—ONLY REGISTRY BARS SHIPS' FLIGHT TO PEIPING

(By Burton Crane)

HONG KONG, February 23.—Under Hong Kong Supreme Court decision today, 93 planes, paid for largely by United States taxpayers, are being turned over to the Chinese Communist Government.

Despite the decision, which denied a receivership application and vacated two injunctions granted last autumn, the Chinese Communists are unable at present to fly the planes to their territory. They are not registered under Hong Kong law. Thus, some time remains for possible action from Washington or elsewhere.

[According to the Associated Press, a spokesman for one of the air lines involved, said the planes would be flown to Peiping, seat of the Chinese Communist Government, probably within a week.]

The case concerned three corporations. The largest was the China National Aviation Corp., a prewar subsidiary of Pan American Airways. It was reincorporated in 1946, with the Chinese Nationalist Government taking 80 percent of the stock by virtue of its contribution of planes and equipment it received from the United Nations Relief and Rehabilitation Administration, the Economic Cooperation Administration, lend lease, and other forms of United States aid.

The second concern, the Central Air Transport Corp., was owned 100 percent by the Nationalist Government's Communications Ministry.

When the Communists began to overrun China both companies removed their planes to the Kaitak airport in Hong Kong. Eighty percent of the Chinese employees of both air lines defected to the Communists last November 9 and flew away several planes.

The two corporations asked the protection of the British Government, which then still recognized the Chinese Nationalist regime. The corporations were told they would get protection if they first applied for an injunction, according to Richard Heppner, one of the lawyers representing Nationalist and United States interests in the case. Mr. Heppner was wartime head of the Office of Strategic Services in China and a law partner of Maj. Gen. William J. Donovan, retired, overall head of the OSS.

The two Nationalist Government air lines asked and got an injunction forbidding the defecting employees to touch the planes, which include four Skymasters and six Convairs. Shortly thereafter the Communists got an injunction preventing Nationalists sympathizers from going near the equipment.

Mr. Heppner declared tonight that the Americans and the Chinese Nationalists involved in the case had objected strongly because only the second injunction was ever enforced. Communists were permitted to work on the planes and service them, he said, and the British refused to withdraw the airfield passes issued to the Communists as employees even though they had announced they were no longer connected with the two concerns.

Early last November, the Nationalist Government attempted to extricate itself from this dilemma by selling all planes of both airlines to Civil Air Transport, Inc., a Delaware concern formed for that purpose by Maj. Gen. Claire L. Chennault and his associate, Whiting Willauer, Civil Air Transport declared in court that it had paid $3,900,000 for the planes of the first two companies.

On January 6 Britain recognized the Chinese Communist Government shortly after inspectors from the United States Civil Aeronautics Authority appeared with an announcement that the former Central Air Transport and China National Aviation planes had been registered by Civil Air Transport with the United States Government. They said they wished to inspect the planes and place United States markings on them. British authorities refused to allow them to tamper with the planes.

Civil Air Transport then filed applications with the Hong Kong courts for the appointment of receivers for both companies.

Today, Sir Leslie Gibson, Hong Kong's Chief Justice, handed down a decision declaring that the "doctrine of sovereign immunity operates to prevent the court from entertaining an application to appoint a receiver." He also declared that all proper parties were not before the court and that the plaintiff corporation had not established a sufficiently strong case.

"I have held that the assets are in possession of the Central People's Government (Communists)," he said. "If I am wrong in this then, in my opinion, they are clearly in possession of the corporation—China National Aviation. Neither the Central People's Government nor the corporation is a party to these proceedings or has consented to the appointment of a receiver."

The chief justice dismissed the American contention that the Communist Government had got possession only through infringing the November injunction and declined to admit the validity of the minutes of China National Aviation of December 31, approving the sale to Civil Air Transport. The court ordered the plaintiffs to pay $8,000 as costs.

According to the Nationalists' intelligence, possession of the planes will triple the Communist air force.

The Viewpoint of News

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Chelsea Record, Chelsea, Mass., Monday, February 27, 1950:

SIN IS NEWS

There are many folks who charge that newspapers print too much about crime.

From the viewpoint of the news editor's desk, anything that is unusual, out of the ordinary run of things, is news.

Good living is expected. It takes place with unexciting regularity.

Crime is news. A wrongdoing clergyman is news, just as railway accident or a plane mishap is news.

No editor would give even a paragraph to a railway journey that ended without accident.

Suppose it were not so. Suppose that sin were the usual thing and goodness the exception. Then if anybody did a good deed the reporters would rush to the scene to write up the story. We should have such headlines as these in huge type:

"Great sensation. Wild excitement. The honesty of a Chicago bank cashier found out by accident. Facts incredible. Whole city shocked."

"Startling revelations in New York City. An affectionate, faithful mother discovered. Astonishing. Report unfortunately confirmed."

"Strange reports from Philadelphia. A well-known business firm actually meets all its obligations. An investigation demanded."

"Amazing happenings in Columbus, Ohio. A married couple living happily together. No reason given. Most extraordinary. Unheard of in this region."

"A patriotic politician unmasked in St. Louis. No graft found, no chiseling; all records straight. A tough case for the FBI."

"Washington City baffled. A church full of people listening to a gospel sermon right under the nose of the Government. Entire city stirred."

Yet if we actually read such headlines, we should think that the editor had gone off his head. Love, fidelity, honesty are the rule, and the daily paper proves it. Sin is news.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

STATE OF NEW YORK,
BOARD OF SUPERVISORS OF ERIE COUNTY,
Buffalo, N. Y., February 24, 1950.

To Whom It May Concern:

I hereby certify that at a session of the Board of Supervisors of Erie County, held in the County Hall, in the city of Buffalo, on the 14th day of February A. D., 1950, a resolution was adopted, of which the following is a true copy:

"Whereas on May 23, 1947, January 20, 1948, and on various occasions over a period of years prior thereto, this board of supervisors has recorded itself in opposition to the proposed St. Lawrence seaway; and

"Whereas the Public Works Committee of the United States Congress is preparing for a hearing on the St. Lawrence project, to be held during the month of February 1950; and

"Whereas it is still self-evident that the proposed seaway, if completed, would threaten the economy of the entire State of New York, and particularly the Niagara frontier; and

"Whereas the people of this State have invested large sums of money to provide water transportation from Lake Erie to the port of New York; and

"Whereas the construction of the St. Lawrence seaway would cause a serious diversion of transportation from the Erie Canal, and particularly the port of Buffalo, such diversion resulting in direct loss of revenues to this locality, and further resulting in the eventual loss of employment to many of our citizens; and

"Whereas the people of Erie County would be called upon through additional Federal taxation to meet the staggering cost of the contemplated project; and

"Whereas such a project is unsound, unwarranted, and unnecessary: Now, therefore, be it

"Resolved, That this board of supervisors again voice its opposition to the St. Lawrence seaway; and be it further

"Resolved, That copies of this resolution be forwarded to our Representatives in Congress and to the Public Works Committee of Congress."

Attest:

ALFORD J. FARLEY,
Deputy Clerk of the Board of Supervisors of Erie County.

Fortieth Anniversary of the Boy Scouts of America

EXTENSION OF REMARKS

OF

HON. HARRY L. TOWE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1950

Mr. TOWE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Rev. Rowland F. Nye, rector of St. Thomas's Episcopal Church, Lyndhurst, N. J., on the occasion of the fortieth anniversary of the Boy Scouts of America, February 12, 1950:

A man named George Orwell wrote a book last year about the strange world of 1984. It was a frightening picture of the cruel fate of man in a regimented left-wing police state which controls his mind and soul.

In the world of 1984 the true meaning of words had become so utterly distorted that they had come to mean their opposite. Every citizen had it continually dinned into him that war is peace; freedom is slavery; ignorance is strength." The appalling fact is that our world seems to be tending in that lamentable direction.

Mr. Orwell's book is available at our free public library, and I commend it to adults. It is not enjoyable reading, but we live in a world of increasing tensions between democracy and despotism, and we gain nothing by shutting out unpleasant truths which will eventually find us and force the choice of freedom or slavery.

Possibly you boys wonder what all this has to do with you in 1950, as you celebrate the fortieth anniversary of Scouting in America and the birthday anniversaries of George Washington and Abraham Lincoln. It has a great deal to do with you, because your elders are making day-to-day decisions which determine the kind of world you shall inherit as adults; whether the dismal preview of Mr. Orwell will become actuality or whether the American dream of democracy with its basic and fundamental belief in the worth, dignity, and significance of each individual shall be the shape of your future.

There is a familiar word which I shall examine this morning, a word which is already so abused that it may well be added to the absurd affirmation that war is peace; freedom is slavery; ignorance is strength. I refer to the word "tolerance." If we do not understand its true meaning we may come to believe the falsity that tolerance is acceptance.

Before we recall Washington's and Lincoln's decisions to reject evils which many urged be tolerated, let us examine what tolerance truly means and how it is becoming distorted to mean something very different.

Tolerance implies both a freedom from bigotry and a liberal attitude to opinions other than one's own. It applies especially to religious and political doctrines. It forbids severity in judging others who hold such opinions or doctrines or the imposition of any restrictions upon their freedom to think as they will.

This is the 36-inch measure of tolerance and the one and only one which must measure every individual or group in society. It is the basic test for any who demand tolerance: that they grant to others what they demand for themselves. But we know that it doesn't always work like that. For the past 36 years particularly, slight-of-hand propaganda has purposely confused tolerance with acceptance, and this confusion has subtly permeated the public mind of western civilization to the extent that the good 36-inch measure of tolerance has been shortened to something less than 12.

Every totalitarian group which challenges the democratic belief in the worth, dignity, and significance of each individual demands that its program for restrictions upon freedom must be permitted in the name of tolerance. Those who challenge this travesty of tolerance are branded intolerant. Tolerance, it is told us, is the acceptance of absolute truth, the one and only system of social justice, the millennium of heaven on earth—each and all masking their plan to destroy democracy. Any society which falls for this double talk is ripe for the loss of its worth, its dignity, and its freedom.

Tolerance has also come to connote failure to resist through indifference or sometimes through a desire for peace and harmony. Tolerance thus becomes appeasement on the installment plan, whose final payment is loss of freedom.

No man in colonial America more devoutly desired peace and harmony than Col. George Washington; he possessed wealth, a magnificent estate; but he risked the hangman's noose by his intolerance of the imposition of unjust restrictions upon the colonists. He knew that ties of acquaintance and bonds of friendship would strain or break in the struggle, yet he pledged his life, his fortune and his sacred honor.

Abraham Lincoln, a man of charity and compassion, grew in political stature as he sharpened the national debate between feudalistic slavery and a Federal Union of men equal in worth, dignity and significance. Lincoln said in 1858: "As I would not be a slave, so I would not be a master. This expresses my idea of democracy. Whatever differs from this, to the extent of the difference, is no democracy."

And so Lincoln quietly, but firmly, resisted those who urged that the erring sister States be allowed to secede in peace, "the tolerance of acceptance," and when Sumter's flag was fired upon he issued a call to arms to preserve the Union. True, Lincoln was intolerant of the southern pretension of sovereignty, but the Union was saved, and we honor him today.

That Union is now in a state of cold war with a vast and ambitious totalitarian despotism whose language is double talk, a language which has misled many. It debases the word democracy until it is turned inside out and means nothing of the worth, dignity, and significance of each individual. Soviet democracy is the 1950 preview of 1984, in which war is peace; freedom is slavery; ignorance is strength, and tolerance is acceptance. The forces of subversion play upon our devotion to the Constitution and the Bill of Rights and try persuasively to make them strands of the rope with which they would hang us. Pleading the protection of civil rights they seek under that same protection to engineer the destruction of all civil rights.

Can it be that we shall allow such a distorted and false tolerance to become the means of our destruction? It is time that we clarified our thinking and made it unmistakable that we shall be intolerant of any group or program which seeks to subvert the Constitution and the Bill of Rights, which would make democracy the instrument of its own death.

In conclusion: let us practice true tolerance, keeping ourselves free from the bigotry which claims exclusive copyright on all truth and grant to others the same worth, dignity, and freedom we demand for ourselves; let us beware of that false tolerance which permits freedom to destroy freedom; let us guard against the tolerance, misnamed broadmindedness, which is the refusal to face the deep and challenging conflicts of life.

It is my hope that this generation of adults will so meet the physical dangers threatening our Nation, and so successfully debunk the insidious propaganda which would make white black and black white, that the Boy Scouts of America may inherit in their manhood free and democratic institutions; enjoying the blessings of a Constitution unbreached and triumphant, and established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes.

It is your duty and mine to love our country; to support its Constitution; to obey its laws; to respect its flag; and to defend it against all enemies.

Name of Veterans' Hospital in Erie County, N. Y.

EXTENSION OF REMARKS

OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

STATE OF NEW YORK,
BOARD OF SUPERVISORS OF ERIE COUNTY,
Buffalo, N. Y., February 24, 1950.

To Whom It May Concern:

I hereby certify that at a session of the Board of Supervisors of Erie County, held in the County Hall, in the city of Buffalo, on the 14th day of February A. D., 1950, a resolution was adopted, of which the following is a true copy:

"Whereas this committee realizes that the veterans' hospital in Buffalo is under the jurisdiction of the Federal Government, and that the naming of this hospital is subject to the decision of the Veterans' Administration: Now, therefore, be it

"*Resolved*, That it is the recommendation of the Erie County Board of Supervisors that the name suggested by the Joint Veterans Council of Erie County, namely, Veterans Memorial Hospital, be adopted and that wings or sections of said hospitals be named in honor of individual distinguished servicemen of this area; further

"*Resolved*, That certified copies of the above resolution be forwarded to the three United States Representatives from this area, the two United States Senators from New York State, and the chairman of the House Veterans' Affairs Committee."

Attest:

[SEAL] ALFORD J. FARLEY,
Deputy Clerk of the Board of Supervisors of Erie County.

Commercial Air Transportation

REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1950

Mr. SHEPPARD. Mr. Speaker, as many of my colleagues know, ever since I became a Member of Congress I have had a real interest in our commercial air transportation system. I have had that interest because of its very real value to our foreign and domestic commerce and because I believed it to be—and it has proved itself to be—an essential element of our national defense. But like many of you, I have been concerned at the mounting cost in the form of mail pay which annually is paid out to the certificated scheduled air carriers. Particularly is this true when there are so many demands on each taxpayer dollar.

Commercial air transportation is no longer in the experimental or developmental stage. It has now reached a point, except perhaps in the foreign field, where it should think about becoming self-sustaining. I subscribe to the proposition set forth in the President's budget message that the subsidy element of payment for the transportation of mail should be separated from the compensation paid the air carriers for the service they perform in carrying the mail.

Last week I was pleased to note in the American Aviation Daily for February 15, 1950, that the Chairman of the Civil Aeronautics Board appeared before the Transportation Subcommittee of the House Interstate and Foreign Commerce Committee in support of legislation providing for separation of air-mail pay and subsidy. I also was impressed by the Board's statement of its economic program for 1949, wherein it recognized the cost of uneconomic competition on various air routes and undertook corrective action, at the same time committing itself to encourage the development of air transportation along efficient and economical lines.

Such action by the Board is constructive. It can and should stimulate and encourage those who believe in free enterprise, who believe that initiative and hard work will pay higher dividends than Government subsidy.

There is a striking example in my own district of the results of adherence to this belief. Pacific Overseas Airlines Corp. is a small company based at the International Airport in Ontario, Calif. Its employees are its stockholders. It has never received one penny of Government subsidy and it has never engaged in the subterfuge of the so-called charter operations to operate scheduled services. Nevertheless, in the 4 years since the war, when some of the certificated carriers were in the shadow of bankruptcy courts and payments for the carriage of mail were higher than ever before, Pacific Overseas, by contrast, in industriously seeking out contract business and winning the confidence of its customers, has increased its net worth 500 percent, and at the same time given a respectable living to its stockholder employees.

During the war the men who own this company flew over 30,000,000 statute miles between the west coast and points in the Pacific—the Hawaiian Islands, Australasia, and the Philippines—under contract to the Air Force. Their record for efficiency, economy, and safety was not excelled by any of the air carriers working for the Air Transport Command. Since the war this small company has flown over 15,000,000 miles in the performance of contracts to Hawaii, Japan, and China, without injury to a single passenger or crew member. They have proved their ability to operate a successful air line service.

Ever since 1940, Pan American Airways has had authority to operate between Los Angeles and Honolulu; it also has authority to fly between San Francisco and Honolulu. In 1946, United Air Lines was also authorized to operate between San Francisco and Honolulu, and by making a stop at San Francisco, it can render service between Los Angeles and Honolulu. Recently the Civil Aeronautics Board authorized two carriers to operate between Seattle-Tacoma and Portland and Hawaii. Los Angeles, the largest city in the West, a city that has a greater population than San Francisco, Oakland, Portland, Tacoma, and Seattle combined, and one of the greatest air travel centers of the world is the only city which has only one carrier offering direct service to the islands. It ought to have two carriers flying this direct service and the economy of the Hawaiian Islands demands it as a means of increasing its tourist market, so vital to the Territorial economy.

Early last summer the matter of additional air service between Los Angeles and Honolulu was heard by one of the examiners of the Board. Only two applicants sought the route, United and Pacific Overseas, opposed by Pan American which seeks to preserve its monopolistic position. United's case was predicated on the operation of a service which was an exact duplication of the luxury service now provided by Pan American; the same aircraft, the same speed, the same fares, and catering to the same deluxe market—everything the same except the name on the outside of the airplanes. And the cost to the Government of this duplicating service would be mail payments of $3,000,000 annually. Pacific Overseas, on the other hand, proposed to provide a coach or tourist type service with an emphasis on air transportation, operating at slower speeds in less comfortable seats, without multiple course hot meals and cocktails, at a fare reduction of $50; $110 instead of $160 one-way, and directed toward an entirely new travel market. But most significant, Pacific Overseas proposed to provide this service without authority to carry mail, without a dime of Government subsidy. The men who own and work for this company have said:

We do not demand $3,000,000 a year from the taxpayer to provide a duplicating serv-

ice such as that proposed by United. We believe competition means more than that. It is supposed to bring some public benefit. We will provide that benefit by making air transportation available to thousands who cannot now afford it. We will do it at the risk of the dollars we have put into this company and we will show that air transportation can be made self-sustaining. All we ask is that Pacific Overseas be given an 8 by 11 sheet of paper which authorizes us to fly.

This case is now before the Board for its decision. It is an important case because in deciding it the Board must determine whether the additional service between Los Angeles and Honolulu will continue to be available only to those who can afford a 6-cents-a-mile fare with an additional charge of $3,000,000 per year from the Public Treasury, or whether the travel market will be broadened by the introduction of a 4-cents-a-mile fare without cost to the taxpayer. The Department of the Interior, charged with the responsibility for the welfare and development of our Territories, is strongly on record in favor of the tourist-class service. It knows the economic situation in Hawaii, that defense spending is down, that the sugar and pineapple markets cannot be expanded, that surface transportation has been disrupted and for prolonged periods, and it recognizes that the development of an expanded tourist market is the only means of assuring the islands' economy. The Department has made it clear that carriers who are engaged in the operation of deluxe services over extensive foreign or domestic systems cannot be expected to offer a tourist service designed primarily for the islands. Because travel between the mainland and Hawaii is largely of a local or regional character, the Department of the Interior has also said the operation should be conducted by a carrier whose primary interests are directed to this market and who can take advantage of its knowledge of local conditions.

Pacific Overseas and its partner, Trans-Pacific Airlines, which is owned by citizens of Hawaii and operates a local service between the islands, meets these standards as no other applicant can, and it has but one objective—serving the local need for transportation between Honolulu and Los Angeles. It can make a real contribution to the development of our air transportation system by penetrating the mass transportation market lying below the level of luxury air transportation.

The certification of this new carrier is also important from the standpoint of national defense. Award to United of the right to fly directly between Los Angeles and Honolulu adds nothing to our defense potential—no new ground facilities, no more trained personnel, no additional airplanes. This country receives nothing except an annual bill of $3,000,000. I have already referred to the unexcelled job which the men who own and operate Pacific Overseas did during the war. Perhaps it is not very important, but it is illustrative to tell you that they checked out United's pilots in order that they could qualify for trans-Pacific operations, and they provided the maintenance in Australia for the aircraft which United operated for the Air Transport Command. The men who constitute Pacific Overseas have stuck together for almost 8 years; they have invested their savings, and theirs only, in this enterprise; they have assembled a virile, efficient, trained organization with splendid ground facilities, located at Ontario, Calif., about 30 miles east of Los Angeles, for the maintenance and overhaul of four-engine aircraft, and they have made money. They have done all this in anticipation that some day they should be authorized to conduct regular commercial operations in the Pacific. If they are not certificated, this highly trained and qualified group of pilots and mechanics will be lost, their organization ultimately will devote itself to other activities or be dissolved, and their usefulness as a potential resource in the event of national emergency will be totally dissipated.

Authorizing them to operate this route will have a further value to the national defense. It will provide additional and new facilities in the Hawaiian Islands for the maintenance of large four-engine air craft which could quickly be converted to military projects in an hour of need. It would provide additional qualified crews and transport-type aircraft. These very real advantages to our national defense cannot and should not be overlooked.

It is my view that the development of this new-type service proposed by Pacific Overseas Airlines is within the policy directive given the Board by this Congress when we adopted the Civil Aeronautics Act. It will contribute to our air transportation system and be a valuable adjunct to our national defense. I believe it is within the purview of the Board's own pronouncement of its economic policy for 1949—which we can hope will also be its policy for 1950. We should await its decision in this case with interest, for from it we may find signposts to guide us in matters of legislative policy with respect to commercial air transportation.

A Practical Policy

EXTENSION OF REMARKS
OF
HON. BOYD TACKETT
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. TACKETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Banner-News of Magnolia, Ark., for July 25, 1949:

A PRACTICAL POLICY

In recommending that an appropriation for the Southwestern Power Administration (SPA) be reduced to about $1,000,000 (the House had voted it $9,000,000) a Senate committee urged last week that the SPA accept an offer of electric companies that would eliminate needless waste of tax funds on duplicating power lines.

This appears to be a practical policy for Congress to adopt. In the Senate, Arkansas' JOHN MCCLELLAN has won much praise for his attempts to economize on Government spending.

If the Senate as a whole will adopt the committee report, it would be doing just what Senator MCCLELLAN is urging—economizing.

It seems utterly ridiculous for a Government bureau—whether it be SPA or any other—to waste tax money on duplicating power lines. What the electric companies offered to do was transmit power from Government dams over their lines for the SPA. When they do this there is no need for the SPA to build transmission lines.

Taxes are heavy enough now without keeping them higher with expenditures on such needless projects as unnecessary power lines.

Hydrogen Bomb Should Stir Peace Drive

EXTENSION OF REMARKS
OF
HON. ROBERT CROSSER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mr. CROSSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland News:

HYDROGEN BOMB SHOULD STIR PEACE DRIVE

As President Truman says, his will be the final responsibility for decision on whether the United States shall take the fateful step of attempting to build a hydrogen bomb.

The President is getting, and will get, all sorts of advice. But when the day of decision comes he must stand alone. It is a heavier responsibility, even, than President Roosevelt met with his approval of atomic bomb research.

The potentialities of the hydrogen bomb are frightening almost beyond conception. Prof. Harold C. Urey, one of the Nation's top atomic scientists, says that it has been reported that, if such bombs were dropped off the Pacific coast, the prevailing winds would carry the radioactivity over this country and would result in the extinction of all forms of life.

Professor Urey does not vouch for the accuracy of the statement, but the fact that he quotes it is a measure of the terms in which scientists are thinking of the hydrogen bomb.

Yet Professor Urey is for development of the bomb on the single ground that if this country does not beat the Russians to it, the United States will have lost the armaments race with all the consequences that implies.

To lose the race, says Professor Urey, will be to lose our liberties, and "it is more important that this spirit of liberty continue to exist than that I or any group should continue this mortal existence for a few years more."

Surely there is no question but what the United States is in an armaments race, and that it cannot afford to fall behind. If a hydrogen bomb can be built, this is the country which ought to have it first.

But while the decision is being debated there is all the more impelling reason for a vitalizing of the hunt for new paths to insure world peace. We are thinking in terms of support for such organizations as the United World Federalists and others aiming at the same fundamental objective.

It is not necessary that one agree completely with the precise program suggested by the Federalists to give their project backing.

It is enough to know that here is a group of private citizens striving most earnestly and devotedly to promote a world order which has the strength and authority to preserve peace and prevent aggression.

We are not sure at the moment that theirs is the most practical approach, since it involves a hope that it will be possible to draw Russia back into the orbit of cooperation in good faith.

But with the hydrogen bomb looming in the future no chance to bring that about should be left untried.

A Real Chance to Economize

EXTENSION OF REMARKS
OF
HON. BOYD TACKETT
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. TACKETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Phillips County (Ark.) Herald:

A REAL CHANCE TO ECONOMIZE

News items of recent weeks—items that have attracted considerable attention—have followed the headlines in reporting that Congress seems to be giving a lot of thought these days to economies in government.

That sounds almost too good to be true. Let us hope that Congress does more about it than just talk, thereby preventing a duplication of effort that is bound to cause repercussions which would throw additional burdens on an already heavily taxed taxpayer.

Arkansas' senior Senator, JOHN MCCLELLAN, is making a great fight to cut Government spending and he is getting some Senate support. Of course all economies are reflected in how much taxes we pay.

Only a few days ago a Senate committee voted to reduce an appropriation for the Southwestern Power Administration (SPA) to about one and one-half million dollars.

The House had previously voted to give the bureau (SPA) about nine million.

However, the practical Senate committee, thinking of the unnecessary payment of taxes on duplicate endeavor—in preventing the utilization of two carts for a single horse—went even further in ordering the SPA to abandon its ambitious program of duplicating power lines and to accept the offer of power companies to carry SPA power over their lines.

It is expected and hoped that the full Senate will carry out the recommendations of its committee. Here is a real opportunity for economizing. If the SPA's purpose is—as it is purported to be—to furnish the most power for the least possible cost, both to the user and the taxpayer, then it will, of its own volition, see fit to use prevailing power lines to transport its power.

It stands to reason that money not spent on needless duplicating power lines could be spent on greatly needed development of our rivers and our harbors.

Since most of the people in Arkansas, and the residents of Phillips, Lee, and Monroe Counties in their entirety are definitely interested in additional funds for rivers and harbors, it behooves them to contact their Senators and Congressmen and air their views on the matter.

The people of Arkansas, will be watching with a great deal of interest how Senator FULBRIGHT votes on this plan of practical economy.

H. R. 87

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. DOYLE. Mr. Speaker, as a Member of Congress, I have always been greatly helped by the active cooperative assistance of members of all of the clerks' groups in the various post offices of the Eighteenth Congressional District of California.

Whenever I have asked them to give me facts and concrete evidence proving their claims that they were either under or not adequately paid; that they were justified in their request for increase in salary, and so forth, they have uniformly come up with prompt, helpful, and clear evidence that their representations made to me were well founded in fact.

So, in connection with my consideration of the merits of H. R. 87, I asked the Post Office Clerks Union, in my home city of Long Beach, Los Angeles County, Calif., to make and to send to me a brief analysis, based upon actual cases, of the earnings of the average veteran in the group, who was married and had a family. Under recent date I received this data, and I feel that it is so informative that every Member of Congress would be helped in understanding the worthy objectives of H. R. 87 by observing the facts as set forth in the communication to me herewith presented, to wit:

LONG BEACH POST OFFICE
CLERKS UNION,
Long Beach, Calif., January 30, 1950.

Subject: Questionnaire, H. R. 87, Veterans.

Hon. CLYDE DOYLE,
House Office Building,
Washington, D. C.

DEAR MR. DOYLE: In an endeavor to furnish your office with some authentic concrete facts concerning the economic status of the World War II clerks in this office who would benefit by enactment of the veterans credit bill, a questionnaire was circulated and compiled.

It is believed that the facts presented below will show that the average veteran here is a mature, married man with a family and earning $2,870 per year postal salary. He is forced to seek other part-time employment to augment his salary. This is his third year in the postal service and he served 3 years in the military during the war. He is working alongside clerks who came into the post office at the same time he went to war and who are drawing $700 per year more in salary.

Permission is granted to use these facts and figures as you see fit.

Out of a total of 295 clerks in the office there are 120, or 40 percent, who would come under H. R. 87 and who received questionnaires.

Number of returns received, 100 out of 120, or 83 percent.

Average age, 32.

Average salary, $2,870 (includes recent raise of $120 under H. R. 4495).

Eighty-four are married with an average of three in the family.

There are 19 whose wives are working.

Thirty-one clerks have other part-time jobs.

Five hundred and ten dollars is average debt of 94 clerks who answered this one.

Seventy-seven have cars whose average model year is 1940 and 21 have no cars.

Average rent being paid, before decontrol, $44.50 per month.

Average length of military service during the war, slightly over 3 years.

The 120 veterans here are looking to Congress with hope for enactment of this meritorious legislation. It was good news to hear that the powerful House Rules Committee granted a special rule on January 27. Please press for adoption of the special rule and passage of H. R. 87 as reported by the House Post Office Committee in July 1949 which includes four additional grades upon being promoted to regular clerk.

Your efforts on behalf of the veteran are greatly appreciated.

Sincerely,

ADAM JASO, *President.*

The Case for ECA

EXTENSION OF REMARKS
OF
HON. J. VAUGHAN GARY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the New York Times on February 22, 1950, entiled "The Case for ECA":

THE CASE FOR ECA

In presenting its case yesterday for continued Marshall plan aid the administration gave Congress a grim picture of the present world situation. Appearing before a joint session of the Senate and House foreign-policy committees, Secretary Acheson accused Soviet Russia not merely of blocking agreements, or even of aggressive expansion, as heretofore, but bluntly charged Moscow with pursuing, amid "signs of increasing boldness," a deliberate "design for world dominion." Economic Cooperation Administrator Hoffman was equally plain-spoken when he described the Marshall plan as an indispensable weapon for the preservation of peace and freedom.

This estimate of the present situation was submitted to Congress in support of the administration's request for new appropriations of $2,950,000,000 for the third Marshall plan year, and as an answer to those Congressmen who would use the technique of the meat ax to slash this sum by $1,000,000,000 or even $2,000,000,000. The testimony of Mr. Acheson and Mr. Hoffman is supported by the whole record of Soviet policy since the war. In fact, recent Soviet successes, which Mr. Acheson acknowledges, not only permit of no relaxation of our counter efforts but raise the question whether our present counter efforts are adequate.

As Mr. Acheson says, there are now two antithetical concepts of foreign relations. One is the concept of the Soviet world, which demands of all Communist states complete subservience to the Kremlin and denounces any act of peaceful cooperation among non-Communist states to defend their own interests and to solve their own problems as a plot of war mongers. The other concept is that of a free world, in which nations, in return for respect of their own rights, respect the rights of other states and ask only that conflicts of interest be resolved by peaceful means. Between these two concepts the best present hope is the possibility of some modus vivendi. This is a far cry from the one-world concept which we

cherished during the war, but as long as the Soviet concept prevails and is backed by Russian might, there is no other alternative.

However, as Mr. Acheson likewise points out, to attain even this limited goal the free world must first meet a threat to its existence, and that threat must be met both defensively and constructively. "The first test of any society is its ability to defend itself," he said, and we are now reorganizing both our defenses and those of our allies within the framework of the North Atlantic Pact. But defense alone is not enough. It must be matched by the creation of a successfully functioning political and economic society of free nations, which is the purpose of the Marshall plan. To cripple that plan, or even destroy it, before its goal has been attained would be not only poor economy but a direct threat to both our own security and to the whole free world.

It is from such considerations, primarily, that the administration urges approval of the third-year funds which it now seeks as the absolute minimum necessary to keep the Marshall plan going. Mr. Acheson acknowledges, of course, that Europe would have grave economic problems even without the threat of Soviet aggression, as it did after the First World War. And he puts the American Government squarely behind Mr. Hoffman's demands for both European integration (for which purpose ECA is earmarking a special fund of $600,000,000 for the European payments union) and for a readjustment of our own economy, to permit larger imports as one means of closing the remaining dollar gap. But above all economic and practical considerations or difficulties stand the primary necessities of survival of both ourselves and a sufficiently large free world to enable us to live and breathe. We are confident that after weighing the administration's arguments the American people and Congress will rally to its support.

Status of Calendar

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. TABER. Mr. Speaker, the other day I made some remarks about the status of the calendar and the progress that the Democratic majority had been making this year. Today I am inserting this statement with reference to it.

I hold in my hand the current calendar. The back page indicates that only one bill has been passed up to date, and that an urgent deficiency bill. So that there may be no confusion about it, I checked the record of the Eightieth Congress, which the President continues to belabor. At that time they had already passed the independent offices appropriation bill, a large bill; the civil functions bill; an urgent deficiency bill; and a major bill, the income-tax reduction bill. By March 15 we had passed eight of the major appropriation bills. Now the House Appropriations Committee has not completed hearings on the one bill which we are told will be taken up by March 15. Think of it. The Congress has been in session almost 2 months and the Senate has not passed a single bill worthy of mention on the calendar. The House has only passed a deficiency appropriation bill in addition to the bill passed today. It is a disgraceful record, and proves the complete inability of the Democratic leadership to operate the Government effectively.

Jefferson-Jackson Day Dinner Address by Hon. Clinton P. Anderson, of New Mexico

EXTENSION OF REMARKS
OF
HON. SCOTT W. LUCAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, March 2 (legislative day of Wednesday, February 22), 1950

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the Jefferson-Jackson Day dinner address delivered by the Senator from New Mexico [Mr. ANDERSON] at Boise, Idaho, on February 25, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, my fellow Democrats, ladies and gentlemen, I appreciate the compliment implied in your invitation for me to address this fine gathering in Idaho and I am happy that my schedule in the West permitted me to accept it.

We rejoice that the Democrats have an annual opportunity of meeting and expressing their admiration for two great Americans who have contributed not only to the welfare of their country but have given life, purpose, and vitality to the Democratic Party—Thomas Jefferson and Andrew Jackson.

Only a few nights ago I attended the great outpouring of Democrats from all over the United States gathered in Washington to pay honor to these outstanding men. It was a glamorous occasion—5,300 people assembled in the greatest dinner in the history of the world. They poured nearly a half million dollars into the treasury of the Democratic Party, which is of some importance to all of us as we look forward to the elections next November. Particularly is it important in such a State as this where two Senate seats are at stake this fall.

I don't know which annoyed the Republicans more—the mass of people there to express their loyalty and devotion to the Party and its leaders, or the dollars they dropped into the till. The Republicans saw all that money rolling in at a hundred dollars a plate and all they called us was "Socialists."

I want to talk briefly tonight about Thomas Jefferson, Andrew Jackson, Woodrow Wilson, Franklin D. Roosevelt, and Harry S. Truman. But before I do that I want to talk to you as a Westerner interested in reclamation, anxious to see the West continue its great onward sweep, determined to help you as you seek to achieve your great destiny. There may not be much politics in a great deal of what I say tonight. It may sound like a chamber of commerce speech in spots, but that may be because when I first entered the Congress of the United States I went in as a Member of the House of Representatives. There were only a handful of us from all the Rocky Mountain States and even when we added together all those from the reclamation States, we still had only a few. We found we had to bind ourselves together, both Republicans and Democrats, to achieve the development of the West. From the standpoint of politics all I need say now is that I know how alert the present administration is to the needs of the West, how anxious it is that our soil shall not be washed away, that the waters that pour down from the mountains may be held in place by great dams and mighty lakes, that multiple-purpose projects may enrich our communities, that our mines shall be encouraged to produce and our forests may be conserved. In a word, this administration by its works shows its faith in the expanding economy of the Nation and tries to guarantee that future generations may enjoy the blessings which a kind providence has showered throughout this area.

Early in February the Senate Committee on Interior and Insular Affairs of which I am privileged to be a member began consideration of certain phases of the Columbia Valley program of the Department of the Interior. This arose out of the omnibus rivers and harbors bill which carried authorizations of $250,000,000 for the Columbia River Basin to be utilized by the Army Corps of Engineers. The Senate Interior Committee amendment would add another $200,000,000 for reclamation works. The matter has been tied up for weeks to permit the Interior Committee to study and express its opinion on the reclamation features of the omnibus bill. We must move cautiously on any item of a quarter billion dollars, but I could not help but think what this great program for the development of the Columbia Basin means to your State of Idaho and to all your neighboring States.

Here you will have the world's greatest single power and irrigation development. You people of Idaho remember that irrigation in this area probably started at Lapwai, near Lewiston, Idaho, in 1837. A missionary came out into these lands and while he was trying to serve his mission to the Nez Perce Indians his group constructed a ditch to irrigate fields in the river bottom to supply grain and vegetables. You know far better than I the long hard work that has followed in building the Boise, Twin Falls, Minidoka, and other projects in southern Idaho—your own Boise project just now coming into final completion by the construction of Anderson Dam at a cost over $30,000,000 of Federal funds, and how in the early days of the administration of President Franklin Delano Roosevelt he agreed to a low power dam at Grand Coulee constructed so that it might be raised at a later date but also supported the Bonneville Dam on the lower Columbia River which was actually constructed first.

In the testimony now being given before the Senate committee, engineers point to the McNary and the Hungry Horse Dams. One of the Senators casually read into the record the names of a dozen projects soon to be built all over this part of your inland empire.

I have tried to visualize what the citizens out here feel. I live in an area where we are struggling for water. Every acre of my farm has to be irrigated, but the narrow valley of the middle Rio Grande, pinched between high mesa lands, can never hope to irrigate much more than 100,000 acres. Where I farm the valley is a couple of miles in width and the supply of water which comes from the headwaters of the Rio Grande in Colorado is uncertain and sometimes rather disappointing.

I have tried to think how you must feel as you see the great Grand Coulee Dam, the Anderson, Arrowrock, Lucky Peak, and American Falls Dams pouring out their power and visualize that when all the dams and reclamation enterprises in 240,000 square miles have been authorized, engineered, and constructed, you will have 12 multiple-purpose dams, 86 major power dams which are now functioning, and hundreds more which will

come into being when all the vast resources of your area are fully utilized.

My State sought recently to acquire a project of the Army Air Corps for the construction of a giant wind tunnel. Many of us thought that geographically we presented an almost perfect location, and many technical advisers to the Air Force agreed, but we lacked water and we lacked power. I wonder what it must feel like to live here in a basin where 2,715,000 kilowatts are now being delivered by existing power plants and where new plants now under construction or authorized will add 3,307,000 kilowatts to that tremendous figure.

It is hard for me, living in a narrow valley, to broaden my horizon and think that in the whole Columbia Basin area when fully developed you will have 5,000,000 acres under irrigation.

You can protest that many of these acres and the great proportion of these dams will be in other States, but I remind you that when the Creator was laying out the Northwest, mapping the paths for its rivers and smoothing the lands for its valleys, He had very little knowledge of later-day geography and a very imperfect idea of where State lines would fall. He built you an inland empire and you people of Idaho are a part of it, a rich and potentially richer part of it as the years roll by. That is why you people are interested in the hearing which our committee has been conducting. You are interested in the discussions of a Columbia Valley authority and the proposals for the complete utilization of the water developed in the great Northwest.

Although you are producing huge quantities of potatoes, sugar beets, seeds, and dairy products, you do not depend on irrigation for all your agriculture. I was reading a short time ago the 1950 Progress edition of the Spokesman-Review, published at Spokane, and in its part 6 I saw a story of the forests of the inland empire. It caught my eye because as Secretary of Agriculture I had flown over a great deal of the forested area in the States of Washington, Oregon, and California. I had driven through great stretches of the forests of Idaho, and I know intimately thousands of acres in the forest lands of my own State. Probably the greatest cause of contention during the period that I was a member of the President's Cabinet was my admiration for and continued support of officials in the United States Forest Service. There are few people in the Congress of the United States who have a greater interest in forests or will have for them than I have. That's why I was so pleased by what I read about your forests.

I was happy to read that the period when we stripped the land and passed it by had ended, that lumbering had come of age in this part of the world, and that you had learned the value of timber cropping, both on public and private lands. I read with interest the announcement of a $12,500,000 pulp and paper mill to be built at Lewiston by people who already operate there the largest white-pine lumber mill in the world. You are proud of your white-pine belt. You are pleased, I know, in the great production of Ponderosa pine, for each year your State turns out 350,000,000 board feet of lumber. But you can be equally proud of your determination to handle this crop in such a fashion that there will not be ghost towns where once you have had active lumber camps but that you will harvest this crop on a sustained-yield basis that guarantees the long life and perpetual prosperity of these communities in your State.

As if irrigated farm lands and forests were not enough, Providence has been kind to you in the deposit of minerals within your mountains. We have been struggling in Washington with the problem of assisting the mining industry in this Nation. I don't know what will come of its final working, but we want the Couer d'Alenes to continue to have dozens of successful small mining companies and as many large ones as you can keep going. Senator O'MAHONEY, with his bill, S. 2105, as well as Senator MURRAY and Congressman ENGLE, with their bill, H. R. 976, have been trying to insure the long life of the mining industry in the United States.

Few States have more interest in the perpetuation and gradual development of that industry than has Idaho. Frankly, I don't know what the new smelter at Stibnite, Idaho, is designed to do. I hear it is going to produce antimony metal, and if the demand for that product fails, it can turn to straight gold or silver ores. Antimony sounds so much like the principal product of Nevada that most married men would leave it alone, but if it brings you money we're happy to find you prosperous because of it. Idaho has the largest phosphate reserves in the world. You already have a large fertilizer plant at Pocatello, an extremely important new basic phosphorous plant. I find it easier to understand the production of alumina from the aluminum clays of the inland empire, and I commend your State University for the work it is doing in an effort to guarantee the future of the Northwest in the production of light metals.

Recently there has been an announcement of a new atomic-energy activity in your State at Arco. When there is any announcement of atomic-energy activity it runs into huge sums, and so $20,000,000 will be the starter on your project. We, in New Mexico, have been greatly benefited from the work done in our State and we welcome you into that happy family.

I am reviewing some of these things because I am glad to find Idaho so prosperous under this Democratic administration. I mention that because I hope that all the people of Idaho when they enjoy the prosperity that will come from this great Northwest, as they see their cities grow and their businesses grow, will not turn their backs on the party that has tried to keep this an expanding economy, a progressive and prosperous Nation.

In my private life, I own an insurance business and am president of a small insurance company. On the back page of part 3 of the newspaper to which I referred a moment ago, its issue of January 22, 1950, there is a page ad dealing with an Idaho compensation insurance company. It started in 1939 with premiums of $37,000 and assets of $157,000. In 10 years it has grown to where its premiums exceed $2,000,000 and its assets exceed $2,500,000. If I have time I would like to learn if the officials of that company worry about the financial competence of the Democratic Party. That's the way business grows when the Democrats are in.

I would like to have time to visit individually with the farmers of your State. I would like to ask them how they've been coming out under Democratic administrations. I know what the story is over the country. I have made up a table that doesn't just deal with the total gross income of the American farmer. That is quite a story in itself—how the net income to persons on farms from farming rose from $2,285,000,000 in 1932 to $19,529,000,000 in 1948. I have noticed how the gross farm income went from $6,406,000,000 in 1932 to $35,299,000,000 in 1948.

But there is another yardstick which I insist should be used. Farmers have been wanting parity. They want equality in income with other parts of the population and it isn't enough just to measure how much they have because other costs may have gone up in proportion and their actual relative income be no better and so I have been interested in what they have done. I have had calculated what parity income should have been in every year from the very beginning of the period we use in calculating parity, starting with the year 1910, through and including 1948, and as figures become available, I can shortly carry my calculations through 1949. I find that in the 15 years that the Republicans were in power, namely, 1910 through 1912 and 1921 through 1932, the actual income to persons from farming was $76,619,000,000 whereas if the farmer had had parity it would have been $89,102,000,000. In other words, the net amount by which the farmer failed to attain parity in the years the Republicans were in power was $12,483,000,000.

But what is the Democratic story? In the 24 years since 1910 that the Democratic Party has been in power, namely, 1913 through 1920 and 1933 through 1948, the income has been $208,748,000,000 against an estimated parity which should have been only $160,538,000,000. In other words, under the Democrats, farmers have received $48,000,000,000 more than parity. Thank heaven the Democrats get in power once in a while to make up for the deficits that the farmer sustains when the Republicans are in power.

What is the source of this great drive within a party to bring prosperity to a land and all the people who live upon it? Why is it that the Democratic Party has fought so hard for the rights of the workingman and of the farmer and has incessantly struggled to make sure that the banks and the small businesses all over the Nation thrive and prosper?

I can sketch but briefly a few moments in the history of our party. We need to go back to that period in American life in the early nineteenth century when the United States was just a small group of States clustered along the Atlantic seaboard. We had only a tiny Republic, sneered at by much of the world, expected to collapse like a home built of cards with the first gust of wind. But there was in the White House Thomas Jefferson, a strong advocate of the Constitution, but a President who realized that the Constitution without a Bill of Rights could become a Sword of Damocles hanging over all of our people and threatening their very liberties. He proposed that we should have a government which recognized the right of the people to rule, where there was equality in the courts, where there was a free press, where there was the right of petition for redress of grievances, of religious freedom and all those fundamental rights which are guaranteed by the first 10 amendments to the Constitution. We are greatly indebted to Jefferson for the part he played in securing those rights.

But he expanded not only the spirit but the substance of the Nation. He completed the Louisiana Purchase by which the Nation acquired a huge tract stretching from the Mississippi to the Rockies and the Gulf to Canada. He laid the foundations of the Democratic Party.

After Jefferson we had Andrew Jackson to whom we owe the strengthening of our belief in human equality. With him no man was king and none was servant. He is known to history as the first people's President.

When he came into power he found a strong enemy against him—the Bank of the United States. He took on that enemy in one of the great conflicts that has characterized the Presidency of these United States. The bank fought him with every resource at its command. Jackson fought back with every weapon he could find and the result was that

the people, sensing that he was truly a people's President, swarmed from the farms and the fields and the factories and made their presence known at the polls. It was, I assume, like the outpouring of 1948 which confounded even the greatest of the political experts.

I cast my first vote for Woodrow Wilson as President of the United States. He was and has remained through the years almost an idol to me—that scholarly, gentleman who suffered as President the agony of a people whom he loved but must lead through a world war.

How suddenly political conditions can change. It was Woodrow Wilson who said to us, "The great tides in human affairs do not give notice of their intention to rise and run. They rise in their own power and irresistible might and those who stand in the way are overwhelmed."

Yes, we had been seeing great tides running in human affairs, seeing the tides that swept in Jefferson, Jackson, and Cleveland. Now we saw it in the victory of Woodrow Wilson where after these elections the progressive tide really began to flow in earnest. Let me list some of the accomplishments of his administration:

The Federal Reserve System was organized.

Labor was specifically and legally declared not a commodity.

Farm loan banks were organized to meet the need of farmers for loans at reasonable rates of interest.

Women were given the vote, Nation-wide.

The income-tax amendment was adopted.

For the first time, Members of the Senate of the United States were elected by popular vote.

Do you know anyone who today would urge repeal of any of these progressive programs? Think for a moment how large these reforms bulk in your lives—you women who vote—you men and women who can elect your Senators—you farmers who can obtain credit—you workers whose rights as human beings are safeguarded—you business and professional people who benefit from a sound banking system. Would you give these up without a fight?

And now we come to another period, an era when the tide of progressivism came in with a roar and literally swept aside all who stood in its way, just as Wilson had said it would.

The first hundred days of that era were among the most dynamic hundred days in American history. I believe historians of the future will agree that in that short period we traveled as with seven-league boots farther along the road of social progress than in all the Republican administrations since the time of Abraham Lincoln.

May I refresh your minds about those days?

Think back with me. It is March 3, 1933. In Wall Street and the Loop of Chicago howling mobs surge around the pillars of closed banks while the police struggle to hold them back.

There is a sickening sensation in everyone's heart as we watch the financial life of the country come to a dead stop.

And then suddenly a day later there is hope again—hope surging through the vitals of this Nation as a great leader—though he was a man who could not even walk unaided—comes to the microphone and tells you and me that the only thing we have to fear is fear itself.

Never will the Nation forget that day. Never will it forget those first 100 days that followed.

On Sunday, the day after inauguration, the President uses a lingering power from World War I to declare a 4-day bank holiday.

On Monday a conference of governors meets at the White House.

On Thursday Congress convenes, an emergency banking bill passes both Houses, and is signed by the President.

Six days later the economy bill becomes law.

The day after this farm-relief legislation is sent to Congress.

In the next 3 months—what a stream of legislation. Sound banking act, agricultural adjustment, the Tennessee Valley Authority, the Home Owners Loan Act, the Federal deposit insurance program, the Securities Act, the Wagner Employment Exchange Act—all rolled into 100 days of the most rapid legislative progress the country has ever known, 100 days in which the progressive spirit of a people rises triumphant over their fear or despair.

You have heard Republicans curse the New Deal. Well, in the Eightieth Congress they had control of both Senate and House of Representatives. Did they repeal any of the acts I have mentioned? They didn't dare. I'm not going to compete with President Truman in the job he does of lambasting the "do nothing" Eightieth Congress. He'll be at it again this fall and the people of the country will welcome him at every whistle stop. So I'll leave the record of the Eightieth Congress to him.

I hope you all heard the President in his Jefferson-Jackson Day address. He was in rare form and the great crowd roared its approval. To those of us in that immense throng, watching him and listening to his every word, it was apparent that he enjoyed picking up the old statements from the Republicans in 1933, 1934, 1936, 1940, 1944, and even in the last campaign because he could thereby remind the people of this Nation that the Republicans have tried to scare us again and again. He reminded us that their 1936 platform cried out, "America is in peril," that the New Deal has bred fear in commerce and industry, thus discouraging new enterprises. President Truman could bat that down because he knew that, instead of discouraging new enterprises, the Democratic administration had lifted us up until our national output was over $250,000,000,000 a year and until our people were enjoying the highest standard of living the world has ever known.

All over this land there are Republicans who hope that the Democrats will adopt a more cautious approach. They plead with us to join with them in some sort of bipartisan move to avoid what they think is a drive toward socialism.

The Republicans have been viewing with alarm in five straight Presidential elections and they have lost every one of them. Surely they do not expect the Democrats now to adopt the route that they have found so ruinous.

All over this land people rose up in the last days of the last campaign and turned to the support of President Truman because you still can't beat something with nothing. If the Republicans believe that the people of this country want housing, and social security, and reclamation in the West, and things for which President Truman has been contending, then they'd better tell the people of this country that they do, that they, too, have a program and that their program will give America its abundance, its comforts, its opportunities, for poor and rich alike in greater measure than the Truman program.

If, on the other hand, they believe that the people of this country are more concerned about potential threats to our economy and just where every dollar is coming from and just how high a tax burden can get before it becomes oppressive, and, therefore, if they believe that all of the good things in the Truman program must be set aside for a more propitious moment, then let them take a position of flat-footed opposition and carry that issue honestly to the people.

I say to you that there is not much hope for a Republican Party that is divided, one which stands in a sort of twilight zone, unable to determine whether it wants to face the dawn or the dusk. As a great newspaper said recently, the Republican Party "can offer something better than the President offers or it can meet him in head-on opposition. But as long as it hovers in between, Mr. Truman will continue to hold the political aces."

And so, my fellow Democrats, I bring you glad tidings from the battlefield. We Democrats in Washington are neither in doubt or in dismay. We know where we are going. We are fighting for a program which Harry Truman carried to the people of this country and which we, in our respective States, proclaimed from a hundred platforms prior to the 1948 elections. That program measures up to the great traditions of Thomas Jefferson, Andrew Jackson, Grover Cleveland, Woodrow Wilson, Franklin D. Roosevelt, and Harry S. Truman, and we will not fail while we fight for it.

Address of Hon. George D. Aiken, of Vermont, Before Eastern States Farmers' Exchange Annual Meeting

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, March 2 (legislative day of Wednesday, February 22), 1950

Mr. TOBEY. Mr. President, during the past few days, debate in the Senate has shown what a complete contradictory and fallacious set of policies the Democratic administration has been following in its farm program. Certainly, the staggering surpluses in potatoes, eggs, and butter are a clear indication that the vote-getting, rigid parity scheme is well on its way toward ruining the Nation's farm economy.

The administration now contends it has an answer. I refer to the so-called Brannan plan, which has been put forth as an ultimate panacea of Government planning and control.

Mr. President, I am equally opposed to the rigid set of high 90 percent parities which prevail in the country today and to the political promises implicit in the Brannan plan. On the affirmative side, I have always favored a reasonable and moderate flexible program of price supports, which has an intelligent relation to the law of supply and demand and yet protects the American farmer against depression prices.

My good friend, the Senator from Vermont [Mr. AIKEN], was the author of a flexible price support farm program in the Eightieth Congress. Unfortunately, the 1948 election intervened and this flexible program was supplanted by the law of 1949, which continued rigid high supports.

On February 28, the Senator from Vermont made as fine a speech on the general subject of American agriculture as I have ever seen. In speaking to the Eastern States Farmers' Exchange in Springfield, Mass., he said, among other things:

What rouses me and what rouses others is the promises of the Administration, which never could keep those promises, to pay farmers a satisfactory income in return for the surrender to the Government of the right to run their own farms and to improve their condition under their own initiative.

In other words, farmers are to stop thinking for themselves, stop planning their own farm work, stop raising above a certain amount per farm and in return they get what—a promise of 100 percent "income support standard," which is one way of saying parity in three words.

He further summarized the economic fallacies of the Brannan plan by saying:

But there you have the three main points of the Brannan plan—first, promises of a satisfactory income to farmers which can never be fulfilled; second, limitation of production per farm, taking away production from the efficient farmer and giving more to the submarginal or uneconomic producer; and third, compliance with soil conservation practices as approved by the Secretary.

Those are the main points of the Brannan plan which are never mentioned by administration spokesmen today.

Then he went on with his own affirmative program of moderate and flexible price supports, which would take into consideration the supply of a commodity which is being supported. On this side of the ledger, he spoke in part as follows:

We should put the support level for various commodities on an equitable basis which we cannot do so long as grain is supported at 90 percent of parity and poultry and dairy products at 75 percent, thus throwing our agricultural economy out of balance.

This should be done in the interest of the grain producers themselves, inasmuch as the greatest opportunity they have to broaden their own market is by marketing grain in the form of animal products.

Support levels should be high enough to protect the farmer and the country against economic collapse, but not so high as to destroy either the market for farm commodities or the initiative of the farmer himself in seeking new markets and new uses. Our first aim should be good prices on a free market, cushioned by Government supports only when needed.

I point out that this latter point raised by Senator AIKEN is of vital concern to New England poultry and dairy men.

Mr. President, I ask unanimous consent to incorporate in the Appendix of the RECORD the speech of the Senator from Vermont which he delivered at Springfield, Mass., on February 28. I further point out that the flexible price support program which he advocates, and of which I am a sincere supporter, is strongly endorsed by the American Farm Bureau Federation and the National Grange.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a welcome relief to get away from Washington, where it seems as if everybody is trying to do something for or to the farmer, and meet with you members of the Eastern States Farmers' Exchange who still believe in the ability of the farmer to do something for himself and run his own business.

If I really thought that the American farmer is the destitute and decrepit being that some of his self-appointed spokesmen make him out to be, or if I thought that he is the greedy ogre depicted by the metropolitan press, then I would abandon all hope for the future of American agriculture.

It so happens that I know from first-hand experience that the farmer is not a slender reed leaning on the arm of the professional politician for support, nor does he desire to exact the last ounce of blood from the consumer upon whom he knows full well he depends for his income.

Farmers built our Nation. They defended it in several wars. They have sent their sons and daughters to our cities to develop the greatest economic and industrial era the world has ever known.

They have not descended from this proud position to one of dependency and subservience overnight.

For the most part, their spirit is unchanged—yet day after day all over this country the public is being conditioned, through the most elaborate propaganda system we have ever seen, to believe that the farmer should now become a ward of the Government.

Why has this all come about? Why is the American taxpayer being mulcted for an elaborate and extravagant propaganda program of this nature?

I will tell you why right now. I don't like to talk rough—but time is running out. I have done all I can to help the administration give good government but my patience has played out. We have this propaganda program because we have in Government today men who are so determined to retain and expand their powers over the United States that they would humble what George Washington called the noblest profession on earth in order to realize their ambitions.

If they control the food supply of the Nation they know full well that they will gain control over all segments of our economy.

I have confidence in the greatness of my country, but I would not minimize any danger to it from within or without.

I know that our Nation will not meet the crisis which confronts it now—an emergency greater than it was only a few years ago—as it has met crisis after crisis since it was founded.

The thing that challenges us now is nothing new.

Since history began, ambitious men have sought to control nations and people and the pattern which has been used all through the centuries is the same.

They seek to gain control through promises and then to maintain it by force if necessary.

If I were not so everlastingly proud of the record which American farmers have made I might be more apathetic to what is going on today, but having been a farmer all my life, I do not intend that we shall now lose our independence or the pride that goes with being the greatest agricultural nation in the world, without a last-ditch stand.

Let us now consider in more detail just what these things are that have aroused so many American farmers to a fighting pitch.

It is not the proposal to maintain a farm-price-support program. It certainly is not the work of the extension service, soil-improvement agencies, or any endeavor on the part of government now, or in the past, to make farming an even more secure and profitable occupation.

What rouses me and what rouses others is the promises of the administration, which never could keep those promises, to pay farmers a satisfactory income in return for the surrender to the Government of the right to run their own farms and to improve their condition under their own initiative.

In other words, farmers are to stop thinking for themselves, stop planning their own farm work, stop raising above a certain amount per farm, and in return they get what—a promise of 100-percent income-support standard, which is one way of saying parity in three words.

What would a deal like that mean to our farmers?

Last year the average per capita farm income in America was something less than $800, while the average price received for farm commodities was a little over 100 percent of parity.

Are the farmers of America going to be fooled by a promise of an $800 annual income?

It is claimed that such a program will benefit the small farmer, the so-called family farm.

I maintain that the promise of an $800-a-year average income is not going to incite a great deal of enthusiasm when the farmers find out what it means.

A 100-percent support guaranty definitely will not assure farm prosperity, and definitely will result in lower farm incomes in the long run.

But, the administration says, "We will limit the production of the big farmers so that the small farmers can produce more."

"We will restrict production to a base of $20,000 a year per farm and adjust that figure from year to year according to the purchasing value of the farmer's dollar."

Well, that amounts to about $25,000 at the present time.

So let's go on the premise that production per farm will be restricted to a maximum of $25,000.

Where does that leave the New England dairyman who spends half his income for grain and other supplies? He gets support, not on $2,000, but only on that part produced by his own effort.

Where does it leave our orchardists and our potato growers who have to have such a huge investment in facilities and equipment before they can consider any production at all and, lastly, but not least, where does it leave our consumers?

Certainly breaking up the large farms, and I admit that many of them are too large today, could only result in higher production costs and definitely higher prices to the consuming public.

The fact is that out of 6,000,000 families living on farms today only about half of them are commercial producers and even their numbers are being reduced.

The efficient use of machinery and equipment has resulted in fewer but larger sized farms.

Most of them cannot be broken up into smaller units and operated as efficiently as they are today.

They could be taken over by Government, operated by Government, worked on by men compelled to work by Government and perhaps be handled efficiently.

I don't think the people of America want their farms run that way.

Right now there are complaints that the high cost of the potato-support program is due to the fact that farmers raised so many potatoes to the acre. There is no question but what the increased yield per acre added to the cost of a poorly handled potato program.

Potatoes were not alone in this respect, however.

Last year the peanut acreage was cut and the peanut growers increased their yield per acre approximately 6 percent in a single year.

Tobacco growers have increased their yield as enforcement of quota laws reduced their acreage.

I see no crime in a farmer raising the best crop possible on his land, or getting the highest possible milk production from his cows. If we accept the proposal of those who would redistribute the right to produce and limit the amount which can be produced by a single farmer, however, we will destroy that initiative which enabled the American farmer to increase his production 35 percent during the war years in spite of shortages of labor, new machinery, and other supplies.

When any nation succeeds in stifling the initiative of its people, it cannot long endure.

The next proposal of the administration is that each farmer shall be required to comply with minimum and sound soil conservation practices—not as prescribed by his State department of agriculture; not as prescribed by the soil conservation services; not as prescribed by his State PMA, but as prescribed by the Secretary of Agriculture.

That means concentration of power over American farms in the hands of one man who can tell farmers where to plant, when to plant, how much to plant, and what part of their income must be spent on improving their farms.

My guess is that there isn't a farmer in this meeting but what knows better how to run his own farm than the Secretary of Agriculture does.

But there you have the three main points of the Brannan plan—first, promises of a satisfactory income to farmers which can never be fulfilled; second, limitation of production per farm, taking away production from the efficient farmer and giving more to the submarginal or uneconomic producer; and third, compliance with soil conservation practices as approved by the Secretary.

These are the main points of the Brannan plan which are never mentioned by administration spokesmen today.

All they talk about is the great benefits resulting to the consumer and the high prices which will be received by the farmers if they can only get a law permitting compensatory payments on the statutes.

In the mildest language which I can think of right now, I term this proposal the acme of political hypocrisy.

The terrible Eightieth Republican Congress, after 7 months of intensive study, enacted a long-range agricultural law which, if it had been permitted to take effect unamended, would have kept American agriculture out of the complete mess it is in today.

One provision of that law gave the Department of Agriculture the right to make compensatory payments in a price-support program.

This meant that in the case of certain commodities the crop could be permitted to find its own level in the market, and the farmer then reimbursed for the difference between the average selling price and the support level.

If this provision of the law were used wisely, it is possible that at times both farmer and consumer could benefit. I emphasize "if it were used wisely."

A year ago, however, we saw indications that the Secretary of Agriculture might use this provision of the law to promote a general consumer-subsidy program, costing billions of dollars annually, and charge the cost of that subsidy up to the farmers.

As an example, it is estimated by the best agricultural economists that if the Brannan plan were in effect now, the cost of the potato program would not be a possible $30,000,000 but somewhere between $250,000,000 and $400,000,000 with only a minimum of compensatory benefits to the consumer. However, we don't have that provision for compensatory payments in the law now.

The Eighty-first Congress enacted a new agricultural law and one of its provisions was the repeal of that part of the 1948 law which permitted compensatory payments.

The Secretary of Agriculture never at any time protested the repeal of this provision.

The President never protested its repeal, and on October 31, 1949, the President signed the bill which repealed the compensatory payments provision which otherwise would have taken effect on January 1, 1950.

On January 4, 1950, President Truman came before the joint session of Congress and pleaded for the compensatory payment plan which was repealed by his signature October 31 as if the life of the Nation depended on it.

Are the farmers of America pinning their faith on this type of political operating or are they going to pin some faith on themselves and those people in our State and Federal departments of agriculture and the farm organizations that have done everything that has been done during the past century to put American agriculture in such an enviable position?

I mention farm organizations particularly because at the time the 1948 law was enacted it was supported not only by the United States Department of Agriculture, but by every major farm organization in the United States. Even the Farmers Union, which has since changed its position, at that time vigorously endorsed the flexible support provisions and the revised parity formula of the so-called Aiken bill.

What is the situation today? Any farm leader, and particularly the leaders of the American Farm Bureau Federation and the National Grange, are subject to attack by the propaganda service of the United States Government if they dare to venture an opinion contrary to that voiced by the administration.

Of all major farm organizations, only the Farmers Union supports the administration farm plan today. The others are constantly under attack through a most extensive and expensive propaganda program.

I say expensive—expensive to the taxpayers of this country because much of the material used is furnished and distributed through Department of Agriculture channels.

Every time material is sent to the 95,000 PMA directors scattered over this Nation, it is sent at public expense.

Ninety-eight percent of the material sent to these directors is factually correct, but running through it is a vein of innuendo and promotion which is either incorrect or misleading.

Fortunately throughout New England and a good share of the country our local committeemen are able to see through this.

I hope the time will come when the United States Department of Agriculture can again devote its entire services to the purpose for which it was created.

Having now expressed my opinion of the manner in which the administration and the Secretary of Agriculture are operating, I want to make some suggestions myself as to what should constitute a well-rounded program for agriculture.

There is no easy way out of our difficulties now.

We are already in some trouble and will be in worse trouble within a year or two unless steps are taken to correct existing conditions.

The continuation of the high wartime incentive prices for the crop year 1949 has resulted in the accumulation of unwanted surpluses which are depressing the market for some commodities. An example of this is eggs.

When the 90-percent support for eggs was continued through 1949, it was the signal for an increase in laying flocks all over this country, particularly through the Midwest.

Production ran far ahead of demand.

Government invested some $75,000,000 last year in supporting the price of unwanted eggs. The weight of the surplus production eventually broke the market resulting in heavy losses to thousands of poultry producers who were unable to get even the support price.

Fortunately, some of the men in the Department of Agriculture have had the foresight to reduce the support price for eggs this year to 75 percent of parity as permitted by the provisions of the 1948 law which were continued in the Anderson Act of 1949.

The egg market will probably right itself in a few months, but, in the meantime, many people are going to be hurt.

We should profit from this experience with eggs and put into effect promptly a flexible support-price program which will take into consideration the supply of the commodity which is being supported.

We should put the support level for various commodities on an equitable basis which we cannot do so long as grain is supported at 90 percent of parity and poultry and dairy products at 75 percent, thus throwing our agricultural economy out of balance.

This should be done in the interest of the grain producers themselves, inasmuch as the greatest opportunity they have to broaden their own market is by marketing grain in the form of animal products.

Support levels should be high enough to protect the farmer and the country against economic collapse, but not so high as to destroy either the market for farm commodities or the initiative of the farmer himself in seeking new markets and new uses. Our first aim should be good prices on a free market, cushioned by Government supports only when needed.

We should continue to emphasize our research work in production and marketing methods with a view to increasing efficiency and decreasing costs in both these fields.

Improvement of our soil resources which has made such remarkable progress during recent years should be continued mainly under the direction of the local soil conservation districts and local and State farmer committees.

Public participation in soil conservation programs is a good investment and entirely proper.

The welfare of all people and the security of the Nation depends upon maintenance and improvement of our soil resources.

The public participated in despoiling these resources. A moderate participation in their restoration is only fair.

I said at the beginning of this talk that the farmer realizes that he is dependent upon the American consumer for his income.

Unless the consumer has the means to purchase food and clothing, however, he cannot contribute to farm prosperity.

Therefore, let us always remember that full employment with adequate income for city people is a proper farm objective.

There are, however, many million people, possibly as many as 40,000,000, in this country who do not and cannot have an income adequate to enable them to buy the kind of food they need.

For many years I have urged a complete study of this field with a view to enacting legislation which will make it possible for our low-income people to have enough to eat.

Call it a consumer subsidy if you like, but if the result is a higher standard of living for all people and the elimination of the farm surplus problem, it will be a subsidy well spent and result in a stronger nation.

I would handle this subject more carefully, even experimentally at first, broadening it as experience proves such broadening to be advisable.

Next, we should pay more attention to the development of foreign markets for our agricultural commodities.

There is a wide opportunity in this field.

We must not approach this matter of international trade in the light of how much we can give away, but with the purpose of developing a permanent trade with every nation in the world which produces commodities that we can use in exchange.

International trade is at low ebb now and will continue to be so long as it functions on a give-away basis.

World trade between nations must be restored and failure to do so will inevitably result in war.

Finally, if our farmers are to successfully fight off economic monopolies on the one hand and political domination on the other, they must keep themselves strong—strong, not only as individuals, but strong as organizations representing the best interests of agriculture.

Our farm cooperatives must be protected and strengthened at all costs.

They stand between us and Government controls.

They stand between us and economic and business monopoly.

They stand for the right of the farmer to enjoy a standard of living comparable to that enjoyed by other groups.

Farm cooperatives are under continual attack by short-sighted business and industrial interests.

These attacks must and will be beaten back but not if we relax our guard.

Would-be monopolists don't want to just double tax cooperatives. They want to kill them.

The Eastern States Farmers' Exchange is a living and shining example of what farmers can do for themselves.

It is up to us to defend this example and show the world that self-reliance and cooperation can do for agriculture what Government controls and dependency can never hope to do.

The Crusade Against Gambling in the United States

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, March 2 (legislative day of Wednesday, February 22), 1950

Mr. WILEY. Mr. President, I send to the desk a statement which I have prepared on the subject of combating the influence of interstate gambling and racketeering in our country. This statement has particular reference to the notorious racketeer, Frank Costello. In it, I urge the Department of Justice to report promptly on a request which has been made for a review of Costello's status as a citizen, in view of certain charges the truth of which he has admitted.

In the event that Costello's citizenship is revoked, I personally will urge that he be deported as a harmful influence in this country which gave him the privilege of citizenship, which he apparently proceeded to abuse.

I ask unanimous consent that the text of this statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SENATOR ALEXANDER WILEY, REPUBLICAN, OF WISCONSIN, REQUESTS DEPARTMENT OF JUSTICE TO REPORT PROMPTLY ON PROPOSED REVOCATION OF CITIZENSHIP OF GAMBLER FRANK COSTELLO; URGES PROMPT APPROVAL OF JUDICIARY COMMITTEE INVESTIGATION RESOLUTION

Mr. President, every citizen of the United States is aware that gambling and racketeering existing throughout our country is making a mockery of Federal and State laws. On the tax angle, alone, we are all aware that literally billions of dollars in taxes are lost every year because there is illicit income from gambling, racketeering, and related activities which is never reported to the States and to Uncle Sam.

TAX EVASION

Last year, a report was submitted to the Federation of Tax Administrators in Chicago, which showed that, according to Business Week magazine, in an article of May 14, 1949:

"Commercial gambling is the only billion-dollar business in the United States that does not take a licking from the tax collector. Except for legalized parimutuel betting at race tracks, only a small part of the shill game's annual take (estimated as high as $15,000,000,000 last year) ever winds up in Government treasuries. Gambling has generally stayed immune to the rash of post-war excise taxes, in spite of its obvious luxury label and features that make it easy prey for the tax man."

GAMBLING INVESTIGATION ESSENTIAL

My colleagues on the Senate Judiciary Committee have clearly recognized the necessity for a thorough investigation of the interstate implications of crime, racketeering and gambling, and have taken prompt action on the legislation introduced by our able associate, the junior Senator from Tennessee [Mr. KEFAUVER]. I earnestly trust, therefore that Senate Resolution 202 will be promptly enacted by the Senate. May I point out a quotation from an article in Collier's magazine of April 19, 1947:

"It is likely that only a full-scale congressional investigation could trace the ramifications of America's underworld empire and its relations with politicians and elected officials, or arrive at a correct estimate of the enormous sums of money involved."

THE ALLEGED KINGPIN OF RACKETEERING

Literally dozens of newspaper and magazine articles and radio statements have been read and heard by all of us to the effect that the kingpin or at least one of the kingpins of a multi-billion-dollar gambling syndicate in America is apparently Frank Costello. This notorious individual who has been publicly denounced as a racketeer and with practically every adverse adjective and noun in the books (and who has apparently not dared to file suit against anyone making such charges) is a citizen of the United States by virtue of a privilege granted to him as a former alien.

However, we have evidence by Costello's own words that for the 5-year period prior to his being granted citizenship, he was engaged in activities which by all normal standards would have rendered him unfit for citizenship rights.

Now, this whole citizenship question is being raised by Mr. Robert Montgomery in a formal request for review that he has raised with the United States Department of Justice and with an affidavit for investigation served upon the Federal district attorney for the southern district of New York. I congratulate Mr. Montgomery for his activities in bringing this whole question again before the American people. His request to the United States attorney is incidentally, I believe, the first such initiation of legal activities for revocation of Costello's citizenship.

I personally will insist that the Department of Justice respond quickly on this matter because the facts are comparatively well known and were brought to light many years ago. The only thing that is not well known is why the Justice Department has been so shy and quiet on this whole situation for so long. It is only natural that many citizens suspect political influences of Tammany Hall at work on behalf of Costello.

PREVIOUS CHARACTERIZATIONS OF COSTELLO

Let me cite the words of Mayor de Lesseps Morrison, of New Orleans, president of the American Municipal Association (which represents the governments of 9,500 cities and towns in the United States). He stated that at the head of the multi-billion-dollar crime syndicate is Frank Costello, "one of the most pernicious and dangerous influences in America today and probably one of the 10 most powerful men in the country."

According to News Week magazine of the November 21, 1949, issue, the late Mayor LaGuardia, of New York, is said to have called Frank Costello the world's biggest and most corrupt gambler.

Thomas E. Dewey says "He is a gangster."

Virgil W. Peterson, operating director of the Chicago Crime Commission, has described him as "the lord of the underworld of the entire United States."

News Week went on to say that the California commission on organized crime reported to Gov. Earl Warren that Costello was the present head of the great underworld organization with headquarters in New York which is called by its own members "the combination." The so-called "Murder, Inc.," the commission said, is the enforcement branch of this organization.

WHERE THERE IS SMOKE THERE IS FIRE

Mr. President, we are familiar with the old expression, "where there is smoke there must be fire." It is no mere accident that for many years now, newspaper columnists, editorial writers, magazine writers, and other folks have thus written up Frank Costello, calling him such names as "prime minister of the underworld," and so on. Costello's only answer has been to proclaim piously that he is being persecuted and is merely an honest, upstanding businessman.

I should like to point out, however, Mr. President, that Frank Costello, within a period of 3 months, was charged with influencing politics in New York, Kansas City, Los Angeles, and New Orleans. Official crime commissions have speculated about his connections with gambling houses, night clubs, race wires, narcotics smuggling, jewelry theft, and other assorted crimes. Undoubtedly there is some exaggeration in this guesswork.

In spite of all these charges, in spite of all the magazine write-ups, Costello has thus far had but a single accusation stick against him, and that is the charge of illegal possession of a pistol way back in 1915.

The various magazine articles to which I have referred have pointed out the fact that rackets in America today are a big business, and that the old-time trigger-happy hoodlums had largely become a thing of the past, giving way to supersharpsters developing immense cartels of interrelated rackets. Shall America's youngsters grow up with awe and admiration of these crooked big shots who escape the law?

MR. MONTGOMERY'S DOCUMENTATION

I have in my hand several of the scripts which Robert Montgomery has broadcast over the American Broadcasting Co. network in the last 3 months on Frank Costello. Mr.

Montgomery cited chapter and verse of Costello's testimony in the Supreme Court of the State of New York, appellate division, first department, on October 25, 1943. At that time Costello admitted that between 1919 and 1932 he made no tax payments to the Federal Government or the State government, and that during those years he was engaged in the bootlegging business. Yet Costello was granted citizenship on September 10, 1925, and in order to obtain such citizenship, he had to state under oath and by signature that he was attached to the principles of the Constitution. The Naturalization Code of the United States states explicitly that those persons applying for citizenship must be of good moral character, attached to the principles of the Constitution of the United States, and well disposed to the good order and happiness of the United States. How could Costello, who petitioned for citizenship on May 11, 1925, and who later admitted smuggling whisky during that entire period, be of good moral character, attached to the principles of our Constitution, and well disposed to the good order and happiness of our country?

These are questions which must be answered, and the person to answer them is primarily our former colleague, the able Senator from Rhode Island, the Honorable J. Howard McGrath.

WE RECOGNIZE CITIZENSHIP AS PRICELESS PRIVILEGE

Mr. President, citizenship is a priceless privilege both to our native born and to those who were formally citizens of other countries and who now receive its blessings. If the United States Government law enforcement authorities lightly allow any single individual who does not deserve the privilege of citizenship to continue to enjoy that privilege—such action or inaction makes American law a travesty.

I have no doubt that high-priced lawyers retained by Mr. Costello will fight any action which civic-minded citizens take against this racketeer. However, we in the Congress appropriate enough millions of dollars to the Department of Justice to get expert legal services, and there is no reason for dilly-dallying on this issue.

IF COSTELLO'S CITIZENSHIP IS REVOKED, I WILL SEEK DEPORTATION OF HIM

If Costello's citizenship is revoked—and that naturally could only happen after due process of law in a true American fashion—then I, for one, will insist that he be promptly deported in order that every American will note that the people of the United States are on guard to protect the morality of our citizens, particularly our young people. The proposed deportation of Frank Costello would not, of course, of itself solve or begin to solve the crime and gambling problem; however, it would make unmistakably clear to every hoodlum, every mobster, as well as to millionaire crooks living in their penthouses and sitting smugly behind the barrier of legal experts—it would make unmistakably clear to them that crime does not pay.

Mr. President, the crusade against crime must be a continuous affair. When one hoodlum is disposed of, others try to take his place. The answer to the underworld must come, as I have previously indicated in the Senate on February 20, from an aroused citizenry cooperating with local, State, and Federal enforcement officers, with our great FBI, and with all those who believe in decency and honesty in human affairs.

CONCLUSION

Too many big shots are living in the lap of luxury, because they have plucked pennies from the poor, nabbed nickels with the numbers racket, slot machines, etc.—pennies and nickels that should have gone for food, shelter, clothing, care of youngsters. We must eradicate this cancer of crime. We must put the thugs in the jug.

Excerpts From Address by Hon. Edward Martin, of Pennsylvania, Before Senior Class of Confluence High School

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, March 2 (legislative day of Wednesday, February 22), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from an address I delivered before the senior class of the Confluence High School, Confluence, Pa., on Monday afternoon, February 27, 1950.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

It is always a pleasure to address a high-school class. I consider it a real honor to be invited to visit with you and to discuss briefly the part you can plan in shaping the future of your community, your State and the Nation.

First let me tell you that I appreciate so much the interest you are taking in the American system of government and how it operates.

It is an important part of good citizenship to have an understanding of the three levels of government—local, State, and Federal.

Your interest is most encouraging because the kind of country we are to have in the years ahead will depend upon the kind of citizenship that is developed among the boys and girls now in high school.

Therefore I want to discuss with you the importance of the work you will soon be called upon to undertake in your communities and in your Government.

It will not be long before you young men and young women will be in the driver's seat. You will control and operate the farms, the factories, the mills, the mines and all the business establishments.

You will have the responsibility for our churches, our schools, and our Government.

That's a big job. It will be your job.

To handle it successfully will take honest, courageous and vigorous leadership. It will take intelligent cooperation and willingness to work for the common good.

It will take sincere appreciation of the American way of life and the American plan of freedom of the individual.

Above all it will take loyalty and devotion to the principles of American patriotism, placing love of country above selfish interest or personal advantage.

The Government of the United States was founded upon the proposition that freedom of the individual is the greatest blessing bestowed by God upon mankind.

The founding fathers found inspiration in the Ten Commandments, the Golden Rule, and the Sermon on the Mount. Since the world began there has never been a better guide to human conduct.

Patriotism, religion, and high moral standards are fundamental qualities without which no nation can go forward. Regardless of its form of government, regardless of the laws placed upon its books, no nation can rise above the moral and spiritual standards of its people.

In the growth and development of our country there have been many changes. But the principles upon which it was founded are fixed and unchanging. They must live forever in the hearts and minds of our people.

The real meaning of America must be taught in every classroom from the one-room country school to the greatest university.

We must tell over and over again the story of America's rise to greatness unparalleled among the nations of the earth.

Other nations had greater land area, greater population, and even richer natural resources.

What quality does America possess that enabled our country, in the short span of less than 200 years, to create more wealth, greater spiritual and cultural progress, and a higher standard of living than the world has ever known?

It is the God-given freedom of the individual. It is the right of every citizen to carve out his own destiny to work, to save, to invest, to prosper, according to his own ability, energy, and initiative.

Freedom is our most precious possession. It holds out a golden promise of opportunity for every boy and girl in America to reach a high place in business, in industry, the learned professions, the church, and in Government.

No matter what calling you may choose, I hope that everyone of you will adopt as one of your real objectives the preservation of the God-given rights that have come down to us through generations of toil, blood, and sacrifice.

In my political career and in my public life, covering more than 40 years, I have been guided by certain principles in reaching decisions on questions involving the welfare of our country.

I have always sought the answers to four questions:

First. Is it right? Nothing can be politically right if it is morally wrong.

Second. Will it work? Sometimes proposals that seem very attractive turn out to be impractical and unworkable.

Third. Is it for the good of all the people? Too often projects are advanced for selfish reasons that would benefit only a special section or group to the disadvantage of the country as a whole.

Fourth. Can we afford it? All government is paid for by taxes taken from the earnings of the people. There is grave danger in government grown too big or too expensive.

If these four questions can be answered in the affirmative with respect to legislation, I will support it. Otherwise, I will fight against the proposal.

As a United States Senator representing Pennsylvania, I have a duty to all the people of our Commonwealth. But also, I am entrusted with a part in legislating for the whole United States. I proceed on the theory that what is good for the whole country is good for Pennsylvania.

In closing, I would like to make some suggestions for your guidance growing out of my long and varied experience as a soldier and as a public official.

1. Cherish within your own heart and mind loyal and devout adherence to American ideals and principles. These ideals and principles should be your constant goal.

2. Respect and support your church. A republic cannot live without the spiritual strength of the church. There should be tolerance in religion—but everyone should strongly support his church.

3. We should all support and respect the law. If everyone would obey our laws, what a wonderful country we would have.

4. In order to become better citizens and to make better communities you should assist in public-spirited movements.

5. Let us all take an active interest in the government of our local communities, our counties, our State, and the Nation. A free republic cannot exist where there is indifference and neglect by the electorate.

6. Let us keep uppermost in our minds that America has no more precious assets than

freedom and opportunity. So long as these blessings are preserved and maintained, the youth of our land will go forward to new heights of achievement for America and the world.

7. Let us all practice the fundamentals of good citizenship, work, thrift, self-reliance, fair play, tolerance, respect for the rights of others, and the love of God.

Remember always it is your country and your government. It will be what you make it.

The share you take in community betterment, the interest you take in local, State, and national affairs, is the measure of your citizenship.

To help build a better America of the future you must always be ready to face the problems of the day, confident and unafraid, sustained by faith in American freedom and faith in God.

Lincoln Day Address by Hon. Charles W. Tobey, of New Hampshire, Before Women's Republican Club, Claremont, N. H.

EXTENSION OF REMARKS
OF
HON. CHARLES W. TOBEY
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Thursday, March 2 (legislative day of Wednesday, February 22), 1950

Mr. TOBEY. Mr. President, I ask to have inserted in the Appendix an address I made in commemoration of Lincoln's Birthday, at Claremont, N. H., on Monday, February 13, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

For many years it has been the custom for Republican groups all over the Nation to gather together in observance of the anniversary of the birth of the immortal Abraham Lincoln, our first Republican President and our greatest. The purpose of these gatherings is not only to do honor to Lincoln's memory but, even more fundamental, to consider on his life and his example. It is well, therefore, for us tonight to apply introspection, to see whether our party policies today are consistent with his precepts, and then to appraise our position for the voters of our country in a heart-searching effort to determine whether we are worthy and well qualified.

So, all over the country during this week our party members are gathering together to observe the anniversary of the birth of him whom many regard as the strongest character the Nation has produced, Abraham Lincoln. The very name has become a symbol for justice and humanity.

No writer of fiction, however able, could produce a figure of more humble origin, of more remarkable growth, whose influence on his generation and those yet unborn, would be more profound, or whose death could be more tragic than that of Lincoln.

What were the attributes of this man that have so endeared him to every American born since his passing?

His great size, his ungainliness, his rugged simplicity, these were obvious, but deeper than such external charasteristics was the great heart that actuated him in his passion for justice, his devotion to principle, his love for his fellow men, and his profound faith in the common people.

Many of you have visited the impressive memorial to him in Washington. To me, it is always an inspiration to look upon that heroic figure and read again the quotations from his words which are carved on the walls. As I have stood there I have looked upon the faces of those who, like myself, came to pay their tribute to him. People of all types, especially plain people, those whom some refer to as the common men, many of foreign birth, but each holding Lincoln's memory in loving regard.

Today his name is revered and loved even to the uttermost parts of the world, and so long as this Nation of ours shall endure his life will be our inspiration and his name will be written on our hearts. In his love for humanity, his forebearance, his charity he followed the teachings of the Master of Men.

Of his passing, Lowell said, "Multitudes shed tears for the death of one they had never seen, as if a friendly presence had been taken from their lives. Our common manhood had lost a kinsman."

While we cannot bring him back to again lead our Nation in these days of great national crises, yet he can and will live again, if you and I and our fellow men reflect in our lives his great attributes of common sense, rugged honesty, his passion for humanity and his faith in the divine power.

We turn then to you tonight, Mr. Lincoln, for we are troubled on many sides. No generation of men ever had more complex problems to solve. In the years you led the Nation you, too, had to meet grave problems. You met these courageously, without compromise, often standing alone.

So talk with us tonight, Mr. Lincoln, on principles and problems which you faced in your days and which confront our Nation in these our days.

Since you were President, Mr. Lincoln, labor has made great progress in improving its working conditions, in wages and in a recognition of labor's dignity and worth. You expressed yourself on labor several times. How did you feel in this important matter?

"Labor is prior to and independent of capital. Capital is only the fruit of labor and could never have existed if labor had not first existed. Labor is the superior of capital and deserves much the higher consideration.

"Property is the fruit of labor; property is desirable; is a positive good in the world. That some should be rich shows that others may become rich, and hence is just encouragement to industry and enterprise.

"Inasmuch as most good things are produced by labor, it follows that all such things of right belong to those whose labor has produced them. But it has so happened, in all ages of the world, that some have labored, and others have without labor enjoyed a large proportion of the fruits. This is wrong, and should not continue. To secure to each laborer the whole product of his labor, or as nearly as possible, is a worthy subject of any good government."

Mr. Lincoln, those views of yours square with those of many men today, and our party has done much for labor's advancement and progress since you were here.

No problem we face today is more pregnant with possibilities for good or ill than the foreign problem. It constitutes a crisis of first magnitude. Certain aspects of it justify fears of the extinction of our human society, if not wisely met. Can you help our thought in this, Mr. Lincoln?

"In our intercourse with other nations, it behooves us to be at once compromising and stern. If international understanding can be perpetuated by giving a little more and taking a little less, why, then, let us give a little more and take a little less. But never must we do all the giving. Rather in the case of a long and threatening misunderstanding let us prepare for the worst and work for the best."

That is sound advice today, Mr. Lincoln, and in recent years we have joined with other nations in setting up an organization called the United Nations. It is a league of sovereign states, not a world government, and, therefore, cannot by law prevent armed conflict between nations and establish justice and security. Nevertheless, it is the greatest step yet taken by mankind toward world peace. Since the charter provides for amendments, every effort should be made to transform the United Nations into an organization with larger powers.

Science has given to the world some instruments of terror and destruction that in your day the world never dreamed of. We have used one of these, namely, the atom bomb, with terrible deadly effects on civilian people, and now this atom bomb has been superseded by a so-called hydrogen bomb, many times more powerful than the most powerful atom bomb. We are told that it could annihilate a large part of any country by explosion, and used in quantities could annihilate civilization.

We have decided to produce this dreadful weapon for self-defense.

In the aftermath of this tremendous decision, we have to think anew and act anew, as you said so truly years ago.

This United Nations, which we had a large part in bringing into being as presently constituted, is too weak to cope with the great crisis and many believe the Charter must be amended to implement the United Nations in a larger degree.

It is a trite thing to say that civilization is at the crossroads. The fate of the world is at a crossroads unprecedented in human history because the mind of man has produced weapons which stagger the imagination and could wipe out great portions of the human race, almost instantly. As the New York Times said, "The atomic bomb is here to stay." The question is, "Are we?"

Today we often hear the term "welfare state" referred to. Some men quote the constitutional phrase, "To provide for the general welfare," in attempting to justify the Government's taking over more and more of the care and sustenance of the people.

Here is an observation from Lincoln's life, which is told by a recent writer in the following words:

"The teaching of Lincoln's life which this generation needs most to take to heart is that a sheltered, easy life is not an unmixed blessing; that toil and privation are better masters than luxury and ease; that life is a drama not staged merely for our pleasure but in which we are cast for parts we must play ill or well. The doctrine seems to be very generally preached and accepted today that labor, sacrifice, and self-denial are evils to be shunned as pestilential rather than necessary means of developing capacity and character. For one to gain a livelihood or a fortune without working to pay for it more than is absolutely necessary is a desire increasingly prevalent among rich and poor. The things which made Lincoln great—toiling until it hurts, dependence for mental and spiritual growth upon self, amid commonplace surroundings and associations—these are in little favor in an age craving to be amused, to be excited, to be supported, even by the state or by society.

"The unused hand withers. The unused brain ceases to function. The unused heart hardens. Where there are no calls for courage, for sacrifice, for stoicism, the nobler qualities of human kind—these do not come forth. The chief thought even of those sincerely seeking a better social order today seems to be that of putting props under people. Altruism is good, humanitarianism is good, charity is good; but a state which becomes the universal provider, policeman, and employer necessarily becomes also the breeding ground of weaklings and of slaves. Individualism produces the sanity and strength of a Lincoln; the paternal state breeds exotic dreamers, who think humanity is dead clay for the potter rather than a

spiritual creation which 'makes and unmakes systems and system makers'."

I personally have seen no conclusive definition of the oft-heard phrase, the "welfare state," and it doubtless has varied connotations with different people.

If, however, its implications mean a state in which the citizenship looks to the state to meet all human needs, then all thoughful people should oppose it, as I do.

We should stop the centralization of all power in Washington, return the administration of much legislation enacted in Congress, to the States. That is one reason why I strongly oppose the so-called compulsory socialized medicine plan.

The Government can wisely help people to help themselves, but for the Government to direct all the movements of its citizens, and to undertake to supply all their needs is far removed from the spirit of America, as I understand it, and is a subtle threat to the real happiness and well-being of our Nation.

Therefore, I lift up my voice to warn against the dangers of a state where every possible contingency is to be cared for by the Federal Government. It would completely destroy the self-reliance of the people, and in so doing it would destroy their character.

Freedom to work, to carry out individual initiative, beyond the mere providing of sufficient food and clothing for the day is the incentive which should be the desire and the objective and the heritage of all citizens, and will maintain the ideals and standards under which our country has grown from an infant to its position of commanding leadership in the world today.

Give us your thoughts on Government aid to people, Mr. Lincoln.

"The legitimate object of government is to do for a community of people whatever they need to have done but cannot do at all or cannot so well do for themselves, in their separate or individual capacities. In all that the people can individually do as well for themselves, Government ought not to interfere."

Since you trod this earth, Mr. Lincoln, life has become more complex, and our population has grown tremendously. While these problems we are naming tonight are not on all fours with those you faced, yet they are very similar.

Today men call for free enterprise, as against too much centralized controls and regimentation. You touched upon this when you said, and I quote you, Mr. Lincoln:

"Our greatest strength lies in our ability to give a vigorous demonstration that our private property competitive incentive system of free workmen can continue to provide more benefits for more people than any system in the world."

And Mr. Lincoln, many years after you had left the earth, a great author here wrote a play called Valley Forge. It told of the campaign of Washington on the Delaware, and referring to Washington, the author said:

"There are some men, who lift the level of the age they inhabit, until all men stand on higher ground, in that lifetime."

That was true of Washington, and fully as true of your life and sacrifice for us. May we so live in these our days, that after we have passed on, men may truly say that of us.

Mr. Lincoln, in these our days, there is a lessened respect for law on many sides. We suffer from a moral let-down, manifest in disregard of law and order, even in widespread outbreak of juvenile delinquency. Give counsel to a troubled Nation on this weakness, Mr. Lincoln:

"Let reverence for the laws be breathed by every American mother to the lisping babe that prattles on her lap, let it be taught in the schools, in the seminaries, and in the colleges; let it be written in primers, spelling books, and in almanacs; let it be preached from the pulpit, proclaimed in legislative halls, and enforced in the courts of justice.

* * * * * *

"Reason—cold, calculating, unimpassioned reason—must furnish all the materials for our future support and defense. Let those materials be molded into general intelligence, sound morality, and in particular, a reverence for the Constitution and laws."

In harmony with that statement, Mr. Lincoln, we have an epigram carved over the portals of one of our great temples of justice, which reads, "Obedience to the laws is liberty."

You, Mr. Lincoln, have expressed a similar profound truth.

Fellow Republicans, one cannot make an inventory or survey of our national strength today without becoming depressed at the lack of common honesty and integrity which exist in Government.

So many of the rank and file of our citizens have lost faith in men in Government, and have come to the conclusion that many in Government care little for the people except to get their votes at election time. There is justification for that conclusion.

A disillusioned electorate is a very serious thing. It takes a long time to reestablish confidence. If some special infrared ray could be used by the people to apply to halls of government and to some of the offices of those supposed to be the people's representatives, the Nation would stand aghast at the deceit, and the chicanery that exists today.

This feeling may have been one of the main reasons why only half the registered voters across the Nation exercised their privilege of voting in the 1948 national election. It is a shocking thing when men elected to high office sell their influence for money, and when in a lust for money, men surrender their independence. Such faithless public servants should be ostracized and barred from future public service.

In the face of such faithlessness, I ask you, Mr. Lincoln, what have you to say?

"If you once forfeit the confidence of your fellow citizens, you can never regain their respect and esteem. It is true that you may fool all the people some of the time, you can even fool some of the people all the time, but you can't fool all of the people all the time."

Truly said, Mr. Lincoln, and the people are aroused over this danger and the increasing degree of discernment of the American people is something to be reckoned with.

Finally, Mr. Lincoln, when you walked amongst us, and came to the high office of President, you were reviled and smeared, you suffered misrepresentations as your high purposes and aims were attacked, yet, like the Christ, when you were reviled, you reviled not again. (Some of us, Mr. Lincoln, know the tragedy of bearing such crosses.) What did you say to such?

"Neither let us be slandered from our duty by false accusations against us, nor frightened from it by menaces of destruction to the Government, nor of dangers to ourselves. Let us have faith that right makes might, and in that faith let us to the end dare to do our duty as we understand it."

And then I treasure your conclusive answer to all those who falsely attacked you, when you said:

"If I were to try to read, much less answer, all the attacks made on me, this shop might as well be closed for any other business. I do the very best I know how—the very best I can; and I mean to keep doing so until the end. If the end brings me out alright, what is said against me won't amount to anything. If the end brings me out wrong, 10 angels swearing I was right would make no difference."

In truth then, fellow Republicans, Lincoln being dead, yet speaks to us, and tonight, as we have met together to consider on the life and principles of our martyred President and apply them to our days, think we cannot do better than to close our remarks by joining together in a remarkable and beautiful prayer by the late Reverend Peter Marshall, Chaplain of the Senate of the United States, made in the Senate on the anniversary of Lincoln's birth. Our Chaplain led us in this prayer, and that night he died. And Dr. Marshall prayed:

"We do pray that something of the spirit that was in Lincoln may indwell in our leaders now that they may see, as he saw clearly, that only right makes might, that only as we are on the side of God can we hope that our cause will prosper. We pray that Thou wilt raise up among us now, other men to walk as he walked, to talk as he talked, to rise above the undercurrents of politics, so that they may see the country as a whole, and not be governed by pressure from this group or that, but may seek the common good and the will of God."

Statement by Robert M. Searls in Opposition to Extension of Social Security Insurance To Cover Mine Block Leasers

EXTENSION OF REMARKS

OF

HON. PAT McCARRAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Thursday, March 2 (legislative day of Wednesday, February 22), 1950

Mr. McCARRAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most interesting and illuminating statement by Mr. Robert M. Searls, in opposition to certain sections of House bill 6000. Mr. Searls is one of the outstanding lawyers, particularly one of the outstanding mining lawyers, in America, and his observations on this subject will be most informative and worth while for consideration by the Senate.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF ROBERT M. SEARLS IN OPPOSITION TO CERTAIN SECTIONS OF H. R. 6000

My name is Robert M. Searls. I am an attorney at law, practicing in San Francisco, Calif., where I reside. I am appearing in behalf of the American Mining Congress, and particularly the California chapter of the American Mining Congress, in support of the position taken by these organizations in opposition to the extension of social-security insurance cover mine-block leasers. The opposition of the American Mining Congress was evidenced by resolution unanimously adopted at the convention held in Spokane, Wash., last September, copies of which have been furnished to each Member of Congress.

PROVISIONS OF THE BILL TO WHICH EXCEPTION IS TAKEN

The mining industry, expressing its views through its industrial association, the American Mining Congress, takes specific exception to the proposals in H. R. 6000, which provide for the reclassification as employees of self-employed mine leasers, who hold independent-contract relationships with the mine owners. For reasons which will appear in this statement the industry is opposed to the imposition of social-security taxes on the mine owners covering these independent leasers as newly defined employees of mine

owners in whose properties their leases are held. By the terms of the bill mine-block leasers would be included in the latter category under the specific definition contained in sections 210 (K) (3) (F) and 206 (d) (3) (F) of the bill, pages 50, lines 4 to 7, and 151, lines 6 to 9, and they would probably be included in the category of employees under the vague and shadowy standard prescribed for the determination of employment in sections 210 (K) (4) on page 51, lines 4 to 16, and 206 (4) (2) on page 152 of the bill. This latter section classifies as employee "(4) any individual who is not an employee under paragraph (1), (2), or (3) of this subsection but who, in the performance of service for any person for remuneration, has, with respect to such service, the status of an employee, as determined by the combined effect of (A) control over the individual, (B) permanency of the relationship, (C) regularity and frequency of performance of the service, (D) integration of the individual's work in the business to which he renders service, (E) lack of skill required of the individual, (F) lack of investment by the individual in facilities for work, and (G) lack of opportunities of the individual for profit or loss."

I am aware that the language just quoted is a codification of certain language used by courts in classifying workers in individual cases involving application of social-security laws, and that one main purpose of the Gearhart resolution passed by the 1948 Congress was to clarify these definitions. I am not here to either attack or defend the Gearhart resolution. The mining industry does object, however, to the legislative enactment of vague and indefinite language such as that above quoted might have the effect of reversing previous adjudications that mine leasers are independent workers and are not employees. Our objection goes both to the specific and to the general inclusion of mine-block leasers, as employees under the language of the bill above referred to, and I will submit to the committee with this statement a suggestion of the specific amendments to the bill which would overcome our objections.

It seems very significant to us that the Advisory Council to the Senate Finance Committee appointed to study needed Social Security Act revision did not recommend enactment of any of the sections of the bill to which our objections are made. (Hearings report, p. 6, item M.) The Advisory Council would have left the present law unchanged.

REASONS FOR OBJECTIONS

The reasons for the objections which the mining industry has to the bill in question are as follows:

1. Mine block leasing has been judicially determined not to be employment within the meaning of the Social Security Act by both the Circuit Court of Appeals for the Ninth Circuit, and by the Supreme Court of the State of California. The former determination was in the case of *Anglim* v. *Empire Star Mines Company, Limited,* (129 Fed. (2) 914) involving directly the application of social security taxes to leasers; and the determination with respect to the State unemployment tax on these same leasers; was made by the Supreme Court of California in *Empire Star Mines Company, Limited* v. *California Employment Commission* (28 Cal. (2d) 33; 168 Pac. (2d) 686). Both of these cases held that block leasers at the Empire Star Mine were independent contractors not subject to social security or unemployment taxes. This determination was made some time prior to the adoption of the Gearhart resolution and has been accepted up to the present time by the Social Security Administrator as an adjudication of the leasers' independent status. His office is now seeking by congressional legislation to again saddle the mine owners and mine leasers with this tax burden.

2. Mine leasers are in fact independent contractors: I believe it will be helpful to the committee if I briefly outline the basis of this contention. Mine leasing in western United States had its origin in the customs of the old Cornish miners who came over as emigrants in the early days of California gold mines. They had been accustomed to work in the tin mines of Cornwall under a system known as "pitch and tribute" under which they mined ore and received a portion of the ore which they took out as their share of the operation, the balance going to the owner of the property. Leasing became a common method of mine operation in California, in the Cripple Creek District in Colorado, and in the Utah mines. It was also carried on in lead mines and barite mines in the tristate districts of Kansas, Missouri, and Oklahoma. I am most familiar with the system as worked in California, and roughly summarize the sworn testimony of the witnesses in the tax cases above referred to (in which I represented the company as counsel) in order to illustrate how the system works.

3. Practice in the Empire Star properties in California: In 1929 the Empire Star Mines Co., Ltd., took over and consolidated the Empire, Pennsylvania, and North Star gold mines at Grass Valley, Calif. These three mines occupied a block of ground, approximately three miles long, two miles wide and a mile deep. They have been operated for almost a century, and there are over 300 miles of underground workings extending throughout the territory. There were large areas in the old North Star Mine, accessible only from the incline shaft, that were reputed to have good ore in them. They were at some distance from the shaft—from a half mile to a mile—and the veins, although usually quite rich, were very small. These areas were so far away from the portions of the mine where the company was conducting its mine operations that it saw no way by which its own company bosses could look after and supervise work there. It would not have been, and is not now, commercially practicable or profitable for the company to work these areas with is own crews. This is due partly to the fact that the use of its own crews involves greatly increased overhead expense for bosses, foremen, superintendents, etc., together with the burden of social security taxes which goes with employment, and partly to the fact that miners do not work with the same care or incentive when they are working for wages as they do when they are working for themselves and do not take as great pains to separate ore from waste, limit the size of working places, and, in other words, keep down cost. The company believed that there were various skilled miners in the district and in California who from long experience in prospecting and underground work in the Grass Valley District knew how to mine these narrow high-grade veins, keep the ore clean, and follow the vein with a skilled miner's nose for ore, for their own profit.

A number of these miners were glad to have the opportunity to work cubical blocks of ground, using the company's shafts and means of access, but driving their own development drifts and mining and stoping their own ore, with the privilege of keeping 50 percent of what they took out. This was the essence of the deal. Written leases were made, usually for a 6-months' period under which specifically described blocks of ground were allotted to each head leaser for his group. He selected his own partners and they made their own arrangements for division of the proceeds. The company received a royalty of 50 percent of the value of the bullion and concentrates extracted, furnishing as part of the consideration for this 50 percent the use of its shaft and workings, hoisting services, fresh-air supply, and keeping the underground workings unwatered with the mine pumps. It also furnished the service of skilled mill operators to handle the leaser's ore; when it was reduced to bullion shipped it to the mint for the leaser's account; and delivered to the head leaser of each leaser group its share of the proceeds. The leasers were authorized, but not required, to buy their powder, fuze, electric exploders, and personal equipment from the company at the company's actual cost, and a further charge was made, at cost, for sharpening drill steel and milling the ore and reducing it to bullion. Milling of leaser's ore in lessor's mill was at leaser's option, and not a lease requirement, but it was to his financial advantage to have it milled there because of lower costs than he could obtain elsewhere. Each lease group's ore production was kept separate, handled separately through the chutes, hoisting cars, mill machinery, and emerged finally in the form of a bullion bar bearing the leaser group's separate number, or, as in the case of concentrates, was paid for on the basis of continuous sampling of the particular leaser's batch of concentrates being run through the mill. The company had no bosses, foremen, or superintendent supervising the leaser's operations. Each leaser worked in his own leased territory and conducted his operations in such manner as he saw fit. It was solely the leaser's profit incentive that induced him to use careful, accurate mining methods, thus obtaining the highest grade of ore for milling and avoiding the uneconomical cost of unnecessary handling of waste rock. These written leases were renewed from time to time and the practice became so popular with miners that there are now 28 leaser groups operating on the Empire property. In more recent years the Idaho Maryland Mine followed suit with its own leasing arrangements with workers, quite similar to those of the Empire. Some nine groups hold leases in Idaho Maryland properties. It is my understanding that the leasing practices in Utah and Colorado are not greatly dissimilar except that the production of nonferrous metals necessarily requires different milling and sampling practices than in the case of the California gold mines. All of these practices were commenced long prior to enactment of the social-security-tax laws.

4. The leasers' average annual income: In view of the fact that the company does not supervise the accounting of the leasers as between each other for their share of the value of concentrates or gold recovered, it does not know accurately what the leasers average. We do know, however, from occasional information that many of them have made as much as $5,000 a year. Eleven thousand is the maximum individual leaser's annual income of which the company has any information. In general they average more than a miner's day's pay would have yielded had they been employed on a wage basis; otherwise the incentive for taking leases would of course be lost.

5. Reduction of these independent workers to employee status is impracticable. In the first place, unless the method of operation is entirely changed the company would have no means of telling what the inncome of individual leasers was as a basis for social-security taxation. The company simply delivers each leaser group's share of mint returns from bullion produced from gold shipped to the mint for them, or the value of concentrates assayed and purchased from them, to the head leaser of the group and division is made by each group according to its own rules. Sometimes the groups themselves hire men on a day's pay basis to get certain development work done. They impose penalties on each other for failure to join in the operation or for certain classes of absences or for violation of the safety laws. There is therefore no basis on which the company could compute and return social-security taxes on the individual leasers. For all practical purposes it would have to

reduce the leasers to employee status to meet the requirements of this bill.

6. Conversion of leases to employment arrangements would wreck many companies' operations: It is undoubtedly not news to this committee that the gold mines of the United States have not been prospering under present labor costs and gold price conditions. Labor cost is a very large percentage of the total cost of underground mine operation. This is also true in nonferrous metal mines. If the leasers are made employees by the definition of this act, the companies believe that the mutual advantages of the leaser relationship, for all effective purposes, will be lost to both parties. If Congress makes the leasers employees for social security taxes, the Wage and Hour Administrator will want to call them employees. The National Labor Relations Board will want to call them employees. The companies will be faced with supervisory obligations, with labor relations problems, and worst of all, with operating problems in mining clean ore which it does not now have under the leasing system. The managements believe that the increased expenses would so far destroy the margin of profit as to render the operations in question nonremunerative. This in turn would necessitate closing down large sections of several mines and allowing them to cave or fill with water. Several hundred leasers would be deprived of their means of livelihood and the disaster to the already slender economy of these mining communities is not hard to predict.

THE CONSEQUENCES OF OUR SUGGESTED AMENDMENTS

I believe the committee will be interested in considering the other side of the picture. What will be the effect on the leasers' welfare if the amendments to the bill requested here are adopted? They will remain as they have been, independent operators. Familiar as most of them are with the traditions and practices of the prospectors and early miners who found, prospected, and developed in the initial stages the great gold mines and oil fields of California—these leasers will continue to use their skill, initiative, and ability to follow the veins in accumulating a modest competence for their retiring years. The groups carry their own compensation insurance with the State of California so that injuries are taken care of. It is obviously a matter of little concern to the owners whether or not the leasers are taxed as self-employed. Their earnings should enable them to make provision for their later years out of their savings. However, the leasers will speak for themselves on this subject. I only wish to make it clear to the committee that the position which the mine owners are taking through the American Mining Congress in this matter conforms with the position of their lessees, and that if the amendments which we ask are made, Congress will not be deciding in favor of one side or against the other. The effect on the social-security funds in the National Treasury from the loss of contributions from the few hundred leasers now engaged in mining in the United States would certainly be negligible. The situation is one which does not require the intervention of the Federal Government in the interest of security or protection for groups of individual citizens who are perfectly able to take care of themselves and their wants. On the other hand, the insertion and retention of the amendments which the industry requests will conform with present judicial decisions as to the independent status of the leasers, and it will greatly help in enabling the mining industry to meet, without expense to the Government, some of the major financial and economic problems with which it is confronted.

In behalf of the gold-mining industry and of the nonferrous metal mining industry of the United States I most respectfully urge your committee to adopt the amendments we propose which would strike out the specific classification of leasers as employees and would eliminate the generalized uncertain language from sections 206 (d) (4) and 210 (K) (4) of the act under which no operator or person holding contractual relations with him could know for certain whether that person occupied an employee's status or not.

I thank your committee for your time and attention.

EXHIBIT

SPECIFIC AMENDMENTS TO H. R. 6000 SUGGESTED TO THE SENATE FINANCE COMMITTEE BY REPRESENTATIVES OF THE AMERICAN MINING CONGRESS AND REASONS THEREFOR

I. On page 151 amend section 206 (d) (3) by striking out clause (3) (F), page 151, lines 6 to 9, of the bill, reading as follows: "(F) as a lessee or licensee of space within a mine when substantially all of the product of such services is required to be sold or turned over to the lessor or licensor;"

II. On page 50, lines 4 to 7, strike out clause (K) (3) (F) of the bill.

The effect of these two amendments will be to automatically eliminate block leasers in mines from the definition of the term "employee" as used in the bill.

III. Strike out the parenthetical statements in lines 17 and 18, page 50, and in lines 19 and 20, page 151, reading as follows: "(other than the services described in subparagraph (F))." This language becomes unnecessary if paragraph (F) is stricken.

IV. Strike out sections 210 (K) (4) on page 51, and section 206 (d) (4) on page 152 of the bill, both sections reading as follows:

"(4) any individual who is not an employee under paragraph (1), (2), or (3) of this subsection but who, in the performance of service for any person for remuneration, has, with respect to such service, the status of an employee, as determined by the combined effect of (A) control over the individual, (B) permanency of the relationship, (C) regularity and frequency of performance of the service, (D) integration of the individual's work in the business to which he renders service, (E) lack of skill required of the individual, (F) lack of investment by the individual, (F) lack of investment by the individual in facilities for work, and (G) lack of opportunities of the individual for profit or loss."

The reason for this exclusion is to prevent the classification as "employees" under the act of persons who are not and have not been considered as employees under accepted common law definitions so that mine leasers and similar classes of independent workers could not be classified as "employees" under the act merely because their leases may continue for a long period of time or they may perform the work under the leases with regularity and frequency or because the production of ore under the leases is usually an identical type of business to that in which the leaser is engaged, and because a mine block lessee does not normally have a large investment in facilities for work, most of which are owned by the lessor and furnished to the leaser either as a part of the fixtures covered by his lease or as facilities necessary to his use in operating under the same.

V. Insert in the list of exceptions from the definition of employment on page 35 of the bill, following section 210 (a) (1), and on page 137 of the bill, following section 205 (b) (1), the following:

"(2) A lessee or licensee of space within a mine where such space is held under a written lease or license for a period of not less than 6 months and where no control over lessee's operations is exercised by the mine owner; provided, that furnishing access, supplies, transportation, and ore storage and milling facilities by the lessor, as well as standard lease requirements for operation in a minerlike manner and observance of law and safety regulations, shall not be considered as an exercise of control over lessee's operations sufficient to constitute him an employee."

The purpose of this amendment is to specifically exclude mine leasers, along with agricultural labor, certain types of domestic servants and other services excluded from classification as employment under sections 205 and 210.

VI. Renumber the subsections of sections 210 (a) and 205 (b) following subsection (1) to conform with the above insertions.

Eyewitness Report on Communist-Occupied Germany

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 2 (legislative day of Wednesday, February 22), 1950

Mr. MUNDT. Mr. President, I believe many readers of the CONGRESSIONAL RECORD will be interested and impressed by an eyewitness report which I have received from a young South Dakota GI who has recently returned to his home in Mound City, S. Dak., after spending several post-war years in Germany. I take this means of calling to the attention of Congress and the country the following report and recommendations.

At the conclusion of the letter I received from Mr. Kundert will be found an English translation of the program referred to in the letter and which was held as part of the cleverly staged Stalin birthday celebration.

I hope other Senators will share with me the conviction that the moral we Americans should draw from all of this is that we should sharply expand, step up, and make more realistic and forceful our Voice of America publicity program in Germany and in eastern Europe generally.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FEBRUARY 10, 1950.

Senator KARL E. MUNDT,
Senate Office Building,
Washington, D. C.

DEAR SENATOR MUNDT: Thank you for your very kind letter of February 1, 1950.

I am sending along the program of the Stalin birthday celebration, plus a photo of Stalin. The photos and programs and copies of the Freie Deutsche Jugent (Free German Youth—a newspaper printed in the Soviet zone of Germany) were sold at the ceremony. This is only one of the many methods employed by the Communist Party to raise funds for their activities in western Germany.

As you know, the currency reform of 1948 struck the German Communist Party in the western zones a vital blow, and they have been desperately trying to devise other methods of raising revenue in the western Deutsche mark.

For example, the Communists have set up printing firms (who, by the way, gain a lot of innocent, unsuspecting western business) which are run by agents from the Soviet zone, and which do their work with printing presses smuggled across the zonal borders.

When the zonal borders were reopened (after our counterblockade had been in effect for some time) the Soviets had built up large stores of textiles and other Soviet-zone goods which they promptly rushed across the borders to merchants in the western zones. In this manner they were able again to raise western Deutsche marks to carry on their nefarious activities in our zones of Germany. The textiles were sold to otherwise non-Communist German dealers in the west who leaped at the chance to buy their goods at prices lower than those in the western zones. Thus, by underselling western textile manufacturers, the Communists were again able to raise funds in western marks.

I shall leave further comment on this subject for another time. I do want to give you my comments (as you requested them) on the effect of Russian propaganda and activities on the German people.

I must say quite frankly that I was shocked at the reaction of the German public at the Stalin birthday celebration. To begin with, the auditorium was jammed to the rafters. I do not know how many people were there out of curiosity as I was, but I doubt that many were because their terrific enthusiasm at the unveiling of the Stalin portrait and their wild singing of the Internationale (the text of which appears at the back of the program) were sufficient indication to me that most of the audience were carried away by the greatness of the moment.

I had with me a cousin who was born and raised in the city of Odessa, in Russia. He knows the Red paradise from the inside, and he and my Russian teacher (a lady who was a professor at the University of Leningrad for many years and who worked in the anti-Cominform (can give you more details on this later if you like), gave me many ugly pictures of life in Utopia. The speech by Max Reimann (as you know, he is the leading German Communist in western Germany) was violent, clever, and caustic. He quoted Harry Truman by name and then proceeded to rip him to shreds. He made much of the fact that Truman once stated (during the war and while he was Vice President—believe it was a New York paper he quoted) that Germany and Russia should be permitted to bleed themselves to death and then the United States and other nations should step in and direct matters from that point on. Reimann pointed out to a cheering audience that this was the same Truman with whom they were still dealing and that the leopard hasn't changed his spots.

After Reimann's speech, the red curtains parted and a huge portrait of Stalin was revealed, whereupon the audience went stark, staring mad, leaped to its feet, and began yelling (and I do mean "yelling") the Internationale. Such a commotion you have never heard. I must confess that the man who had painted the portrait was a genius. He had combined the loving father with the stern man of destiny and the kindly elder brother so well that I was confounded. The portrait artist could have made Gargantua look like St. Cecelia.

My cousin and I did not rise—we wanted to see what would happen if we didn't (and the day has not yet come when I am forced to rise in tribute to Stalin). Aside from a few cold—or should I say hot—stares, nothing happened. But as we drove out of the auditorium grounds, the Communist youth chorus blocked our way by forming a chain across the road (my American car was easily recognizable—in fact, it was the only American car there). I simply stepped on the gas and charged them and they scattered like South Dakota pheasants by the roadside. It would have given me great pleasure to maim a Communist, particularly since this group came from the University of Frankfurt (a university which we have helped to rebuild—obviously merely in order to furnish a breeding place for vermin).

From my conversation with hundreds of Germans from the Soviet zone and certainly thousands from the United States zone, (I have spent 4 years in Germany), I feel that that are two classes of Germans who are fertile territory for the Russian propaganda. These are:

1. Those Germans who had the Communist tendencies in them (many prior to the war), and

2. Those young Germans (and oddly enough, very old people) who are caught up by the Communist ideal (brotherhood of man, and so forth) without realizing that the present realization of communization in Russia, and the satellites, is a far cry from the Utopian one originally preached by Marx.

I personally am not worried about the effectiveness of the Russian propaganda which tries to influence Germans by promising them Utopia. I am very much worried about that section of Russian propaganda which threatens the Germans with retribution for not supporting the Communists and which tells them they had better get on the Communist bandwagon to avoid punishment when the Russians finally take over Germany and western Europe.

I know personally of many Germans who have joined the Communist party, not because they are Communists or believe in Communist ideals, but because they are insulating themselves against things to come. They feel that joining the party and giving lip service to communism will protect them when the Communists gain the upper hand. Note that I said when, because there are not too many Germans who are firmly convinced that the United States and other democracies are willing to stage a desperate, last ditch, armed fight against communism in Europe. Too many of them believe we will give up the fight in the final analysis. True, they have seen the miraculous airlift, but they consider that only the initial stage of a really bitter fight.

I do not personally know the temper of the people in Berlin, but I do know that when a 2-pfennig levy was put on each 20 pfennig of German postage, there were howls of protest from Germans in the rest of Germany. "Why should we help the Berliners—the Allies are holding Berlin, let them foot the bill"; "The Berlin situation does not concern us, and so forth."

I frankly do not think the German nation dependable enough in character to be trusted very far. As individuals they seem to me very shifty and treacherous, and I see little reason to hope that they will be a strong front against the onslaught of communism from the East. The moral degradation left by the Hitler regime is painfully in evidence in every phase of German private and political life. So, as I said, I am more concerned with the effects of Russian threats to the Germans—causing the Germans to knuckle under out of fear.

For example, while I was stationed in Augsburg, Germany, rumors began circulating about that the Germans need not, or should not, accept their new food ration cards for a period early in 1947 because the Russians would be issuing the food ration cards for Bavaria for that period (ergo, the Russians would already be established in Bavaria). True, these were only rumors, but they were so prevalent that many Germans took them almost at face value, and were certainly afraid and convinced of the possibility of such a turn of affairs.

I think, insofar as the Germans are concerned, we have the duty of letting them see our firm intent to stay in Berlin (this is the place where the whole European issue will be fought out with the Russians, and Lord knows we are in an unhappy position there) and in the rest of Germany. If we lose Berlin, we have lost Germany and Europe.

It is encouraging to note how much news of the outside world seeps into the Soviet zone of Germany, and into the satellite countries. Even the U. S. S. R. is not immune. I want to mention our propaganda to the U. S. S. R., satellite countries, and Soviet zone, though.

From many conversations with deserters from the Russian Army in the Soviet zone, and Russian civilian employees of the Soviet Army, I note that our Voice of America is eagerly heard by those Russians themselves who can hear it. But all of these sources urge that our propaganda coverage (our radio coverage—which is our only coverage) is so pitifully inadequate that it is merely a drop in the ocean.

Many of these sources told us that they believe that a really strong and vigorous and wide coverage of these areas by our Voice of America broadcasts would be our best guaranty of preventing the present cold war from becoming a hot war.

I call to mind, for example, merely our statements on Voice of America that we grant political asylum to persons fleeing the Soviet zone and satellites. The Russians tell us that if we would redouble our efforts on this one point alone, and be direct and vigorous we could prepare the ground for our psychological conquest of the Russian people (a fact which the Germans overlooked much to their painful surprise). I saw the report of the chief of German intelligence for the Russian front, and he recognized that the Germans failed in their physical conquest of the Russians because they had failed in their psychological conquest first.

I think that we had darned well better give a lot of advance thought to our psychological handling of the Russian people, because, should we ever have to fight them (and I for one am firmly convinced that we shall) we will be a lot closer to success if we have properly prepared the ground.

I know, too, that when the Germans marched into Russia, many Russians greeted them as liberators, but when the Germans committed atrocities, and treated the Russians as inferiors and animals, the battle was already lost. The Germans recognized this, and made belated efforts to organize eastern divisions (ost divisionen) but had already lost their golden opportunity by that time. I can go into much more detail on this point if you like.

Sorry, but I really went to seed on this letter. But it will give you an indication of my capacity for going on for hours on the subject. At present I am speaking to high schools, church groups, Rotary clubs, and commercial clubs and am hoping to do my bit to inform our people in the U. S. A. what kind of an enemy they are facing.

Hope the program I am sending will be of interest and help to you. I should like it returned when you are finished with it.

I am coming east sometime in March and may be able to stop and see you in Washington (have never been in that fair city).

Thanks, again, for your letter, and please let me know if I can clear up any points.

Sincerely,

OTTO KUNDERT.

MOUND CITY, S. DAK.

FRIENDSHIP WITH THE SOVIET UNION

(P. 1)

J. W. Stalin, the guardian of peace, the friend of the German people, will be 70 years old on December 21.

Friendship demonstration in the Franz-Althoff-Building in the zoo on Monday, December 19, at 20 o'clock. Max Reimann will speak.

Admission 1-DM.

This program entitles to admission.

PROGRAM

(Inside page)

1. Coriolan Overture (Beethoven)_ Orchestra
2. Recitation_____ Mathilde Danegger
3. From the Soviet Union: Report in picture and sound.
4. Choir_____ Youth Choir
5. Speaking Choir_____
6. Recitation_____ Mathilde Danegger
7. Egmont Overture (Beethoven)_ Orchestra
8. Speech_____ Max Reimann
9. The Internationale__ Community singing

Performers

Hessian Philharmonic Orchestra.
A youth choir.
Mathilde Danegger (formerly at the Zurich playhouse).

(P. 3)

THE INTERNATIONALE

Wake up, condemned of this earth,
Whom one still steadily forces to hunger.
Justice, like the glow in the top of a crater,
Forces with might to an eruption.
Settle accounts with the oppressors.
Army of slaves, wake up!
Being nothing is no longer to be borne,
Stream together to become everything.

People, hear the signals!
Up for the last fight!
The Internationale
Wins human right by battle.

No higher being rescues us,
No god, no emperor or court,
Saves us from misery.
Only we ourselves can do it.
Empty word: the rights of the poor!
Empty word: the duty of the rich!
We are called children and knaves.
Endure the shame no longer.

(Same chorus.)

In city and country, you working people,
We are the strongest of the parties.
Shove aside the idlers,
This world must be ours.
Our blood shall no longer be food for the ravens
And the powerful vultures.
When we have driven them away
Then for the first time the sun will shine without ceasing.

(Same chorus.)

Company, Seven Unions at Peace for 15 Years

EXTENSION OF REMARKS
OF
HON. CHARLES W. TOBEY
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, March 2 (legislative day of Wednesday, February 22), 1950

Mr. TOBEY. Mr. President, in these days when there is so much unrest and misunderstanding between management and organized labor, it is good to know that up in New Hampshire, the Granite State, there is a long-established, successful concern, the Nashua Gummed & Coated Paper Co., which has enjoyed peaceful labor relations for 15 years. This industrial concern has recently received recognition of its wonderful labor relationships made possible by those who work for it and the employers themselves, through a statement put out by an authority, the National Planning Association, entitled "Causes of Industrial Peace Under Collective Bargaining." I sincerely congratulate both workers and management who have made this splendid New England enterprise one of the most successful companies in the Nation. I ask to have inserted in the Appendix of the RECORD an article from the New York Times of February 17, 1950, entitled "Company, Seven Unions at Peace 15 Years."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COMPANY, SEVEN UNIONS AT PEACE 15 YEARS—NASHUA PAPER, A. F. OF L. GROUPS WEIGH GRIEVANCES TOGETHER—BOTH SIDES APPROACHABLE

WASHINGTON, February 16.—A management that encourages the expression of grievances and unions that believe the boss wants to be fair are described in a new case study released today by the National Planning Association.

This is the record of the Nashua Gummed & Coated Paper Co., of Nashua, N. H., and seven unions affiliated with the American Federation of Labor. The study is one of a series on the causes of industrial peace under collective bargaining.

An illustration of present top management attitude was this:

"We try to encourage the expression of grievances. You always have them, and if they aren't coming out, you know there must be something wrong. The union people come into my office and raise hell, I encourage this, to get it off their chests, and see what the problem is."

Management characteristics mentioned consistently in interviews with labor leaders were these:

"NO STALLING," UNIONS REPORT

"You can always get to them without any trouble. There is no stalling. They are willing to discuss any problem. They don't just say 'No' without any reason."

The unions are the paper workers, bookbinders, pressmen, stereotypers, photoengravers, operating engineers, and firemen and oilers.

The on-the-spot investigation was made by Dr. Charles A. Myers and Dr. George P. Schultz, professor and assistant professor of industrial relations of Masachusetts Institute of Technology. Dr. Myers also is executive director of MIT's industrial relations section.

Conclusions of the authors are highlighted in a statement with the report signed by all 29 of the experts on labor relations who make up the NPA committee on the causes of industrial peace. The committee's chairman is Clinton S. Golden, who inspired the study series. The work is financed by John Hay Whitney.

RELATIONSHIP COVERS 15 YEARS

The major conclusion of the study is that this 15-year, no-strike, no-lockout relationship is based on patience rather than pressure; on hard work and good will, day in and day out, not just during annual negotiations.

The seven unions and the company look upon force as a last resort, because each party to the bargaining understands and accepts the needs of the other for security and growth, for economic gains and profits.

Neither party has argued for the inflexible application of broad principles such as management's prerogatives or union's rights.

There is no sharp distinction between making and administering contracts. When need arises, issues are negotiated and changes in the contracts are frequent. Only two arbitration cases have occurred during this history of collective bargaining.

The company produces a diversified line in a highly competitive industry. Profits, operations, and the number of employees have shown a steady growth since the company's incorporation in 1904. The expansion has continued since the first union was recognized in 1935, and employee productivity has been high.

There have been no costly interruptions of production in this company where profits depend heavily on ability to maintain a high volume of production and sales.

Ann Pamela Cunningham

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1950

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I present within an address prepared for delivery over the radio in my home city of Greenville, S. C., in the observance of the two hundred and seventeenth birthday of our First President, Gen. George Washington. The program was sponsored by the Nathaniel Green Chapter of the South Carolina Daughters of the American Revolution and Mrs. Jessie Reed Burnett as chairman. Since Congress was considering one of the most controversial issues on February 22, I could not leave Washington. My son, William J. Bryson, Esq., read the message for me, the text of which is as follows:

As Mrs. Burnett has so well stated, we cannot properly understand or appreciate our priceless heritage, without some knowledge of the lives and sacrifices of those who have established and maintained it for us. Hence, the members of the Nathaniel Greene Chapter of the Daughters of the American Revolution and of other chapters are to be commended for their ceasless efforts toward bringing about such understanding and appreciation. They are to be especially commended for their efforts on this day to inform or remind us of the tremendous debt of gratitude which we owe to George Washington and to those persons who in some way are connected with his memory.

I have been asked to present briefly a biographical sketch of a South Carolinian, who, though she did not live during the times of our War for Independence or ever met George Washington, made of her life a challenging example for us to follow, and who is as much a benefactor of our democratic way of life as are her kinsmen and contemporaries who fought on the battlefields or in the legislative halls during the early years of our Nation's history.

That patriot and benefactor is Ann Pamela Cunningham.

On the banks of the muddy Saluda River near the community of Waterloo in Laurens County may be seen today the faint lines of what was once a skillfully cultivated ornamental garden and park. Here and there may be seen various types of roses, evergreens, and boxwoods growing wildly and intermingled with weeds. At the end of what appears to have once been an avenue of roses stands a crumbling chimney. This scene of abandonment is what remains of one of the most famous of South Carolina's upcountry plantations known as Rosemont. This was the home of Ann Pamela Cunningham.

Today on the banks of the Potomac River in the State of Virginia, not far from our Nation's Capital, may be seen in full glory

gardens and parks similar to those which once existed at Rosemont. In the center of these gardens and parks, on the river bank, there stands a mansion in all its majestic simplicity similar to that which once stood on the banks of the Saluda. That building and those gardens and parks are known to us as Mount Vernon, the home of our first President, George Washington. It stands today just as it stood during his lifetime.

Authorities estimate that today, George Washington's Birthday, some 25,000 persons will visit Mount Vernon. During the past century millions of people have visited there. Every President of this country has visited Mount Vernon at some time or another, and it may safely be assumed that none who visits Mount Vernon comes away without a keener sense of our heritage and the responsibility which rests upon us to preserve it. That historic spot is indeed a place of reverence and inspiration.

You may wonder why I have linked the desolate, decayed homestead of Ann Pamela Cunningham with the well-kept and often visited homestead of George Washington, Mount Vernon. The reason why I have done so is also the reason why the life of Ann Pamela Cunningham is important to us if we are to properly appreciate our rich heritage as American citizens. In fact, the reason is the life of Ann Pamela Cunnningham.

Miss Cunningham was born on April 15, 1816, the daughter of Robert and Louisa Bird Cunningham. She was born at her father's plantation, Rosemont, which was located in what was then known as Laurens District, S. C. Her grandfather, Patrick Cunningham, migrated to that district from Virginia and her maternal forebears came from Pennsylvania.

Miss Cunningham received her formal education through a governess and at a select school for girls near Columbia. Upon the completion of her studies she returned to Rosemont and entered into the social life of the community. The clearest picture of her at that time is found in the diary of one of Greenville's most prominent citizens, who in 1835 was a promising young bachelor lawyer, Benjamin F. Perry. Mr. Perry states that Miss Cunningham was "pretty, very intelligent, and exceeding graceful and dignified in her manner."

Shortly after Miss Cunningham returned from school she suffered an accident which changed the course of her life. She was thrown from her horse and sustained injuries from which she never recovered. This misfortune, however, is mainly responsible for the present existence of Mount Vernon, for it was upon returning from a trip to doctors in Philadelphia that Miss Cunningham's mother brought to her attention the fact that the home of our first President was lacking proper maintenance and in need of repair.

Struck by the neglect of Mount Vernon, Miss Cunningham had published in the Charleston Mercury, on December 2, 1853, a letter addressed to the women of the South calling upon them to raise funds to save Washington's homestead. As it was improper for a lady's name to appear in the press at that time, she signed her name as "a southern matron," which name followed her throughout her life.

This first appeal, which was also published by other newspapers of that day, brought little result except in her local community. There the ladies of the Liberty Springs Presbyterian Church met and established the first chapter of the Mount Vernon Ladies' Association. This was on Washington's Birthday, February 22, 1854. A small amount of money was subscribed on that occasion for the purpose of preserving Mount Vernon and plans were formulated for a campaign to raise additional funds. From there support of the movement spread to Camden, Spartanburg, Hamburg, and other parts of this State.

By July 1854 the movement gained popular support throughout five Southern States and the goal of $200,000 with which to purchase Mount Vernon from John Augustine Washington was in sight. During this period, although an invalid, Miss Cunningham worked tirelessly, writing additional letters and carrying her campaign to the northern States.

Two years later in 1856 due to an increasing amount of disapproval on the part of men citizens and to the unwillingness of the owner to sell Mount Vernon, the efforts of Miss Cunningham and her associates seemed doomed to failure.

In June of that year, at the point of death, Miss Cunningham made a final attempt by visiting Mount Vernon and Mr. Washington. During that visit she secured Mr. Washington's consent to the purchase and the contract was signed on April 6, 1858. It was not, however, until 1860 that the Mount Vernon Ladies Association took possession of Mount Vernon.

The ladies of the association began at once to repair Washington's homestead and to return it to its former splendor. Since that time Miss Cunningham and her successors have maintained this national shrine for us without cost to the public. While their efforts have often faced disaster, as they did during the Civil War, Mount Vernon stands today as it did when George Washington was President.

In June 1874 Miss Cunningham resigned from her position as regent of the association and returned to her home, Rosemont, where she died on May 1, 1875.

On a headstone in the churchyard of the First Presbyterian Church in Columbia is the name of Ann Pamela Cunningham.

On the walls of the senate chamber of the State capitol in Columbia hangs a portrait of Miss Cunningham, the only woman to be so honored.

On the banks of the muddy Saluda River, as it flows through Laurens County, are the deserted, wild remains of a once well-cultivated ornamental garden and the crumbling chimney of a once lively home.

On the banks of the Potomac River are the magnificent gardens and buildings of Mount Vernon, a national shrine.

Thus, it is that a frail, invalid women from the clay slopes of Laurens County sacrificed her life and health to preserve for us the historic home of George Washington. She did so in order that we, the generations that have come after her, might be reminded by its existence of the life of the Father of our Country and thereby gain strength in our attempt to maintain and improve our heritage.

I am sure that Ann Pamela Cunningham never thought that we would also gain such strength by remembering her life and sacrifice.

Hoover Commission Report

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to enclose a copy of the resolutions adopted by the delegates of District 8, Essex County, Department of Massachusetts, the American Legion, at a regular monthly meeting convened at Beever-Wilmot Post, No. 309, Salisbury, Mass., on Sunday, February 19, 1950:

Whereas while we are in favor of efficiency and economy in services rendered to veterans by governmental agencies: Be it

Resolved, That we feel that the dismemberment of the Veterans' Administration Agency into several different agencies as outlined by the Hoover Commission Report recommendations will cause increased expense, great confusion, and delay in rendering service to the veterans; and

Whereas we believe that the veteran who gave of his time, at the risk of life and limb, and who in many cases has paid with the same, we feel that he is entitled to favorable consideration by a grateful Nation: Therefore be it

Resolved, That District 8 (Essex County), Department of Massachusetts, the American Legion, be opposed to any legislation in the future that will result in the dismemberment, or that will take away, deny, or limit the preferences, that are now received by veterans in any manner whatsoever; be it further

Resolved, That copies of this resolution be forwarded to the Senators and Congressmen of the respective districts, and that a copy be forwarded to the Massachusetts Department, the American Legion.

Address of Dr. Dirk Uipko Stikker, Minister of Foreign Affairs of the Netherlands

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1950

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include an address by His Excellency Dr. Dirk Uipko Stikker, Minister of Foreign Affairs of the Netherlands and special representative of the Organization for European Economic Cooperation.

Dr. Stikker's address was a dinner speech at the Mayflower Hotel on Wednesday evening, March 1, 1950. The dinner was given by the Honorable Paul Hoffman, ECA Administrator, honoring Dr. Stikker.

This address is an excellent report on the progress of European integration and is historic in the fact that a representative of one European country is speaking for the 18 countries, which are members of the OEEC.

I hope my colleagues in Congress and the American people will carefully read this friendly, sincere, and sound report.

The address follows:

After this excellent dinner I have no intention of boring you with a lot of figures, statistics and details of the operation of the Marshall plan in western Europe. This, I feel, is neither the time nor the place to go into technicalities. Instead, I should like to give you a broad, general outline of the establishment of western European unity and of the main difficulties and obstacles we find on our way.

But before I embark on this subject, I should like to raise a question. How is it that right at this moment a single man can

speak in your midst on behalf of western Europe? I have not been endowed with supranational powers. In fact, I much preferred my task and powers to remain vague, because the question of supranational authority would inevitably have raised the issue of sovereignty. Still, the fact remains that, for the first time in history, all the different countries of western Europe have asked the representative of one to be spokesman for all of them. The conclusion is obvious: here is political progress of the first importance.

This brings me to my main theme, Western European Unity. The problem of Europe is neither new nor of local importance. It is the familiar question of how an advanced, very thickly populated and highly developed part of the world, having suffered the ravages of two world wars in 30 years, can regain its balance and prosperity, and thereby safeguard its all-important democratic traditions and institutions, before the evil forces of disruption, destruction, and dictatorship which thrive on postwar turbulence can get a firm grip on the situation. Nor is it a local problem, because what happens in one major part of the free world must of needs have the most far-reaching effect in another. The problem of Europe is not only Europe's problem, it is also America's.

That this was, and is, persistently realized in this country was illustrated in the first place by the approval of the lend-lease principles without which the war would have been lost, and in the second place by the acceptance of the plan voiced by a great American when he was Secretary of State, General Marshall.

Now the American people have been told on many occasions how grateful the peoples of western Europe are to them for their extensive and generous assistance on the road to recovery. I can only testify to their gratitude once more. Recently the American people have also heard that the first object of the Marshall plan has been achieved, and that from the point of view of recovery and staving off economic collapse it can already be qualified as a great success. It seems natural, therefore, that they should wonder sometimes why it proves so difficult to attain the second important objective: the integration of the western European economies and the removal of the various obstacles to free trading.

I should like to emphasize here that also in this field progress is being made all the time. There is, however, one additional difficulty here. Whereas the first objective of the Marshall plan could be reached by economic means chiefly on a national basis, the participating countries have, comparatively recently, found—not without some prodding on your side—that the more progress they make toward the economic integration of western Europe, the more likely they were to run into complications of a political nature. To the Governments of Belgium, Luxemburg and the Netherlands this did not come unexpectedly. They had had the same experience while concentrating their efforts on the establishment of the Benelux Economic Union. I should like to recall that this relatively small-scale development took fully 6 years of truly hard work to mature.

Small wonder therefore that a similar project for the whole of western Europe should run into much more formidable difficulties.

In the first place we should always bear in mind that we are dealing with an age-old historically grown system of independent states. To persuade all of them to abolish protective economic measures is not an easy job. But I feel sure that it can be done and that it will be done, just like the Benelux Union has become a living reality through the perseverance of the participants.

The second difficulty we should not underestimate is the special position of Great Britain. On the one hand Britain has strong historical, cultural, economic, and geographical ties with the continent of western Europe which makes her anxious to occupy her rightful place in the European community, but on the other hand she has equally strong affinities outside Europe which render new commitments, especially when these may have far-reaching consequences, a matter for very serious consideration. It should be remembered that Britain's currency serves approximately 40 percent of world trade. There is, however—and I should like to stress this point—no question of a deadlock here either. Certain recent statements in the press tried to convince us that western European integration had reached an impasse because of the duality I just described, but I would remind anyone who has serious fears in this respect that the absence of spectacular and rapid success by no means implies failure. I, for one, have good reason to be optimistic; a few weeks in my present capacity have shown me progress, sometimes slow progress but at the same time—and this makes it encouraging—willingness to cooperate toward an acceptable solution. I feel particularly gratified at this development, because I have a strong feeling that an overall agreement would be the only satisfactory solution. An integration of European economies without including the United Kingdom can, in my mind, not constitute our final aim.

The third difficulty we have to contend with is the problem of the German balance of payments. I realize that here I touch upon a technical aspect of our problems and that this is hardly the place to go into technicalities. But I may be permitted to draw the attention to the general importance of the position of Germany in western Europe. In my opinion it would be impossible to establish a sound European economic system if Germany were not part of it. German economy has historically played an important role in Europe. It seems unsound to me to ignore this in trying to build up an economically healthy Europe.

The fourth difficulty we encountered is the existence of various trade and payment barriers in Europe. These barriers are being maintained, not because these governments are so fond of protective measures, but simply because economic recovery in individual countries has not yet reached such a stage as to enable them to remove all these barriers without serious repercussions. I need not cite to you as legislators the extent of political pressures which come from vested interests which are opposed to the removal of protective barriers in any country, including the United States. I am sure that you experience them in the American Congress in any effort to lower your own tariffs despite the fact that from the over-all economic standpoint a more liberal policy on imports would surely appear to be in the interest of America, as a great creditor Nation, as well as in the interest of Europe.

Having pointed out four of the main factors which have recently proved to stand in the way of immediate and spectacular successes in our efforts to achieve western European unity, I should now like to turn to the other side of the question. There is in western Europe a most gratifying and promising tendency to foster European cooperation and to attain the integration we are looking forward to. Last year this tendency was crystallized in the establishment of the Council of Europe at Strasbourg. The importance of this organization and the effect it will undoubtedly have on the course of European events should not be underestimated. In the Council of Europe we see both the legislatures and the executive branches of most of the western European nations getting together to (and I quote from the Council's statute) "achieve a greater unity between its members for the purpose of safeguarding and realizing the ideals and principles which are their common heritage and facilitating their economic and social progress."

Through one of its organs the Council has already taken up contact with the OEEC. This contact is likely to become more intensive, whether it is formal or informal. What the effect of any future exchange of ideas will be I shall not venture to guess. But I feel certain that the obvious desire of both governmental and parliamentary representatives to bring about a feasible and sound form of unity cannot fail to yield beneficial results. A strong, unprecedented movement for unity as arisen in Europe—and Marshall aid has given it considerable impetus—which it would be impossible to stem.

Compared with America, Europe is an old continent, but old as it may be, Europe has not lost its vigor. Western Europe will use all its resources to achieve our common end, but in spite of the proverb which says: "Where there is a will there's a way," the will on the part of western Europe will not be enough. We need material assistance to tide us over the difficulties lying ahead in the next 2 years.

Four years ago, the present Netherlands Ambassador in Washington, Mr. van Kleffens, discussed in a speech in New York the commanding position occupied by the United States after the war and the consequences deriving from that position in the economic field. He then said that the outside world often looks with a certain apprehension toward your gigantic country, hoping and trusting that no measure will be taken there which, with the best of intentions and without any desire to harm other countries, might nevertheless result in damage to them by a certain lack of awareness of their economic position and legitimate interests.

Today, after the Marshall plan has been in operation for almost 2 years, we in western Europe know how seriously the people, the Congress and the Government of the United States have taken this responsibility. Under the inspired guidance of President Truman, former Secretary of State Marshall, eminent members of the executive branch of the Government, leaders of Congress such as Senator CONNALLY and Senator VANDENBERG, Representative KEE and Representative EATON, and many others—too many to mention—the United States, by the bold and timely action of its Congress, has shown unsurpassed generosity to those who for a number of years lacked the physical means to help themselves. We have already done much, and, with confidence in the future, we want to give expression to our gratitude and to pledge ourselves to spare no efforts to reach our goal. But I am certain that one day—and I hope it won't be long from now—we shall be able to show our American friends that their vast contributions have not been in vain.

Then Europe will show the United States and the rest of the world that investment in liberty and in democracy, liberally but judiciously made, does neither mean political subjugation, as has been contended so often in eastern Europe, nor a waste of valuable taxpayers' money, as has been feared by some here. This investment will prove to serve the cause of prosperity, of economic well-being, consequently of peace.

The part which the United States Congress is playing in this historical undertaking is a difficult one: every year during the operation of the Marshall plan the Congress has to consider and harmonize its two responsibilities, the one toward the American people as a guardian over their financial and other interests and the other toward the

democratic world as a whole from the point of view of safeguarding world peace and prosperity.

This year the United States Congress will once more be asked to appropriate a large sum of money for foreign aid. We in western Europe feel convinced that it will not be denied us, because we cannot believe that an American would help build a bridge only halfway across a stream.

We, on our part, are contributing our share toward the same goal. Western Europe realizes fully that the unity envisaged by the Marshall plan will be beneficial to all of us. We feel that America and Europe, linked together by that highway of traffic, the Atlantic Ocean, have more in common with each other than either of them with any other part of the world. The various parts they play in the Atlantic civilization demonstrate how inseparably they are united in the world of today. We gladly acknowledge the generous contribution you have made in recent years but we want to assure you that western Europe is doing and will continue to do all within its power to be a worthy partner of America in the Atlantic community of nations.

We are conscious that your aid would be wasted, if we did not create unity between democratic countries, and a free, good, and just society. These are the stakes, worthy of the supreme effort of free men.

Modern Trends

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1950

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial by Dr. J. C. Roper, pastor of the First Methodist Church, Clover, S. C., entitled "Modern Trends," including trend in state. The editorial is from the Clover Herald of February 23, 1950:

MODERN TRENDS

(By Dr. J. C. Roper)

Some days ago the writer was in a business office and saw a calendar on the wall with a picture of a man standing on a ship looking through his glasses taking his reckoning. Underneath were these words: "It is not where you are but where you are going."

TREND IN STATE

From the unimpressive Government over which George Washington presided to the one over which President Truman holds sway is a chasm as great as an ocean. This Nation is the last bulkwark of civilization; it is crumbling now with the weight of bureaus, lobbyists, appeasing politicians, whose chief thought in every act would seem to be with a view to reelection. Not all, to be sure, are for sale. Too many find the road of least resistance. The sequel: The new bonds to redeem some coming due will net the lender around 1 percent. Who is paying off the multibillion debt? Those who have stored up savings against old age. Taxed, on capital, on income derived interest, when will wealth give out?

Did not the Socialist Government of Britain declare only 250 taxpayers received more than 14,000—as against several times that number when it took over? When one gets more than $14,000—who will pay that remaining mortgage on that island that once ruled the world?

Yielding to every pressure group, the dollar has been losing its value, its purchasing power. This writer bought 2,000,000 German marks for $2.80. They are not worth a nickel. Yet, 30 minutes ago the man who used a bad word about a South Carolina statesman, according to Edward R. Murrell, is appealing for a moral battle against gambling and crime.

The moral, the educational, the religious, the national are intertwined. If these trends are not upward, where do they take us? What will the end be? England is a spot from which our planes can depart, if we are able to hold her. The treaty with China means, this once potential friend is committed to an enemy that can neither be appeased nor trusted with any promise, pledge, or treaty.

A citizen of Clover stated to this writer that his history teacher in college told his class that "taxes were the downfall of nations." Undoubtedly the debts of France aided the coming of the great French Revolution. Some have said the loss of coin by attrition, or otherwise, brought on the Dark Ages.

Gone With the Wind was the title of a fast-moving book. Going with the wind might express what is taking place under our noses and we are too blind to see it.

A horse trough for a foot-tub, a blue-back speller for a curriculum, a family altar for devotion, an intelligent minister with sense (not too much learning) but full of the Holy Ghost, and sanction from on high, enough to eat and not too much spare time, helped a lot. Punch buttons, fine soap, smelling powders, silk underclothes, lascivious literature, soft living, may add to earthly joy—at a heavenly discount.

Gravity, trends, gravity, going with the wind.

Men must be governed by God or they will be ruled by tyrants.

Oil and Gas Depletion Allowance

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1950

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement I made before the Ways and Means Committee on February 28, 1950:

The Ways and Means Committee has heard a wide range of testimony from State officials, Members of Congress, and representatives of the oil-producing industry on the proposal to reduce the oil and gas depletion allowance. I think the case for rejection of the Tresaury Department's proposal was ably and honestly presented. The witnesses spoke out of earnest conviction which was based on long experience.

Over a considerable number of years I have lived in close association with a class of oil producers of whom you have heard a great deal. That is the operators of the stripper wells.

The oil industry began in my district a little more than 90 years ago. There are wells still producing in the area which are nearly that old. Yet, it is probable, according to laboratory examinations of theoretically depleted oil sands, that underlying such wells there is 75 percent or more of the original volume of oil which was there when the wells were drilled.

In that far-off time little was known about oil. Producers were dealing with a substance which they did not understand. Such fundamentals as the conservation of pressure and protection of the oil sand from water were unknowns then. Consequently, the amount of oil produced from one of the fields in Venango and other counties which were the original oil country, has been large in number of barrels but small in percentage of the total content of the sand.

The stripper well reserves of the United States are estimated to be about 8,000,000,000 barrels, recoverable by ordinary pumping and by what are known as secondary recovery methods.

These methods include the restoration of pressure to an oil sand by means of water, compressed air, and compressed gas. Others are in the experimental stage. Some form of mining may be not far off. Experiments have been made in my district and in other parts of the United States in which shafts were dug to the oil sand and tunnels extended laterally through the sand, greatly enlarging the area drained. Oil producers are constantly at work to overcome the damage done when the industry was new and technical guidance was lacking, as well as to operate newly found fields in a way that will recover through primary methods a far greater percentage of the oil in the reservoir.

How does this relate to the depletion allowance? Simply that secondary recovery work will come to an end without the allowance in at least the present percentage, according to oil producers in whom I have full confidence. Because a portion of their income is exempt from taxation some of the income is available for the improvement of producing methods. When the operator finances the large investment necessary for the application of secondary recovery methods, he counts on the depletion allowance heavily to insure his return of capital. That is so basic in the financing that without it, secondary recovery work would not be possible.

There are about 300,000 stripper wells in the United States. Without the stimulus of secondary recovery, they continue to decline in production. Their owners expect wherever the methods of restoring reservoir pressure are feasible, and when market and credit conditions warrant, to apply such methods. This work proceeds at a rate consistent with the conditions named. If such a vital factor as the depletion allowance should be reduced, it would mean the abandonment of a large portion of our known reserves within a short time.

The effects of stripper-well maintenance and secondary recovery methods on the national oil supply have been great. In the Pennsylvania oil-producing region owners of small wells have gone ahead steadily for many years learning more and more about methods of increasing the recovery of oil. To this end they have financed research work in various ways, jointly and individually. The results have been most encouraging to all who look to the United States as the primary source of petroleum supply for peaceful pursuits, as well as for national defense. The Bradford field of Pennsylvania, for example, has produced as much oil since 1920 as it had in the preceding 45 years, although in 1920 it was chiefly a stripper-well field. Operators there used the profits from secondary recovery to go into other parts of the United States—some to acquire stripper-well properties and apply the methods which had been so successful in Pennsylvania and New York fields; others to explore in untested territory and find new fields which added materially to the Nation's reserves.

I feel certain, based upon my observation of the oil industry in Pennsylvania, that none of these results would have been possible without the depletion allowance which has enabled the industry to retain sufficient income to find the new supply of oil to replace that which is consumed.

The application of secondary recovery methods is as truly a finding of new supply as is the discovery of a hitherto-unknown field by the drilling of a wildcat well.

There are several thousand stripper wells in my district. They are a part of the other thousands which account for the daily production of 50,000 to 60,000 barrels per day of the superior lubricating-base crude oil known as Pennsylvania grade. In my district there are a number of refineries which rely entirely on the production of the stripper wells and the properties which have become secondary recovery projects. The depletion allowance is of vital importance to the region, to the substantial industry located there, and to the consumers of the Nation who use the products which are made from Pennsylvania grade oil.

The term "risk capital" is used in connection with the oil industry's discovery and development operations. It must not be assumed that there is no risk in the stripper well phase of the industry. A substantial amount of drilling is carried on to keep production at the point where operations return a profit and many of the holes are dry. The Oil and Gas Journal reported that in 1949 there were 67 wildcat wells drilled in Pennsylvania, West Virginia, and Ohio—three States which are wholly stripper well and secondary recovery oil regions. Of the total wildcats, only 7 found oil. In total drilling in these 3 States and in New York, of the 4,400 wells drilled last year, 526 were dry. The number includes all drilling, wildcat, development, and the 1,173 which are classed as service wells. The latter are the kind which produce no oil or gas but are used solely for the injection of water, gas, or compressed air into the sand to increase production.

This committee has much testimony before it as to the role of the depletion allowance in stimulating the discovery of new oil and gas fields. I respectfully ask that consideration be given also to the effect on approximately 300,000 stripper wells and the 2,500,000 acres which they occupy. This is, incidentally, about half the total oil-producing acreage in the United States. About 15 percent of the national daily production came from this class of wells in the year 1947, the latest figures available.

An increase in the producer's tax, as proposed by the Treasury Department in its recommendation for a reduction in the depletion allowance, will destroy a substantial part of the Nations' oil reserves. To leave the depletion allowance unchanged will be an important contribution toward the maintenance of these reserves and the continued operation of the stripper fields.

In conclusion I might say that to penalize all small independent marginal producers in the stripper fields at this time would be the most devastating blow that has ever been struck at the owners and producers in the stripper fields such as exist in Pennsylvania, New York, West Virginia, and Ohio and other parts of the country. The depletion allowance permits him to carry on research and make this effort. To take away this incentive to keep these fields alive means their abandonment and loss to the economy of the Nation.

[From the Oil City (Pa.) Derrick of February 23, 1950]

DEPLETION LAW MUST REMAIN

Should anyone seek to hatch a plot to strangle the oil industry and render it impotent in any program for the Nation's future security, no quicker or surer method could be found than the proposal by the Treasury Department, backed by President Truman, to cut the present depletion allowance.

For depletion allowance is the very heart from which pulses the lifeblood of the industry, keeps it alive and virile, and provides it with the stimulus necessary to replenish the reserves so vitally needed for the health and stability of the Nation's economy and safety.

Depletion allowance is as old as the income tax law itself. When the income levy first was enacted it was recognized that special provision should be made for oil and other minerals where production income, unlike any other business, is derived solely from liquidation of capital.

The oil producer's invested capital in any particular property is represented by the amount of oil in place in that property. Every barrel of oil taken from the ground and converted into cash is a liquidation of that capital. When the supply of crude is exhausted from a particular property, the producer has nothing left and to remain in business he must constantly acquire and develop additional prospective oil acreage.

This continuing search for new reserves is an extremely costly nad hazardous venture and has stamped the oil industry as the greatest gamble of them all. Last year the industry completed 7,250 wildcat or test wells drilled in new or unproved regions and of this number 82 percent were dry. Only 15 percent found oil and 3 percent were gas wells. The industry's investment in drilling these wildcats was in excess of $350,000,000. Since only one out of five were producers, the average cost of each productive wildcat well was appoximately $250,000.

Even in territory where oil already has been found, drilling remains a big and costly gamble. In these areas last year, 25 percent of all wells drilled were dry, 66 percent produced oil, and 9 percent were gas wells.

Congress, in enacting the first income-tax law, recognized these peculiar and vital problems of the oil industry: First, that the income tax is just what the name indicates, a levy on earnings or gain, and that it would be improper to tax capital assets which would be the case if the entire proceeds from a barrel of oil, less the operating expenses in producing that oil, were subject to tax; and, secondly, the necessity of returning to the producer, tax free, the capital expended in the search for new sources of oil.

Depletion allowance was Congress' answer to the problem. At first the provision provided a 5-percent allowance on the gross value of the oil at the well. It soon was realized that this allowance, in many cases, was inadequate and inequitable and it was supplanted in 1918 by the unit per barrel allowance. This method of figuring depletion gave a much higher rate to the producer but it was found too involved and indefinite and in many instances did not fulfill the purpose for which depletion was allowed.

Finally, in order to set up a fair and simple depletion law, the Government authorized a survey of oil-production operations during the years from 1918 to 1925. This survey showed that the annual average depletion of capital invested by producers in finding and producing oil was between 32 and 33 percent of the gross income from production. Using this survey as a basis, the House in 1926 passed a bill providing a percentage depletion allowance on gross income from a producing property of 30 percent in figuring taxes. A Senate measure set the figure at 25 percent, then in conference the present depletion allowance of 27½ percent on gross income (but in no event more than 50 percent of the net income from a property) was decided upon and enacted into law.

The fairness and the necessity of the present depletion allowance has been consistently recognized by Congress since that time and that enlightened body has repulsed repeated attempts by the Treasury Department to trim that percentage. Any reduction now would undoubtedly prove a death blow to the large independent segment of the industry which already is struggling for survival against enormous cost increases and lower crude prices. Ten to fifteen years ago wells of 3,000 to 4,000 feet were considered deep wells. Now drilling at 6, 10, and 12 thousand feet are the main sources of new production. And the cost of these wells is tremendous.

Producers themselves are only part of the great number of persons who would be affected by elimination of the depletion law. The oil industry, always progressive, gives employment to a very large number of persons who would be thrown out of jobs should producers be forced out of business. Farmers and merchants in all lines would suffer as the oil industry pays annually millions of dollars in oil royalties, lease rentals, and bonuses.

The Government, too, would be forced to absorb a tax loss that undoubtedly would be far greater than any revenue gain which it might hope to acquire through ending the depletion allowance. For the oil industry, in its various ramifications with other industries, shoulders a large part of Federal and State taxes.

A glance back at the performance of the oil industry in the last two great wars should provide a final clinching argument against any Government action that would imperil an industry so vital to the welfare and security of the Nation. It was largely through the herculean efforts of the oil men of America in meeting the demands of the Nation's mechanized armies that these wars were won. And this great effort was actuated by patriotic motives without the incentive of profit. For the increase in the price per barrel of crude received by producers caused by the war demand was very small in comparison with the increased price of other materials.

The depletion law has provided the incentive for the continuing search for new reserves without which the oil industry could not have attained its present vital role in the life of America. The proposal to eliminate that incentive holds a dire threat to the entire oil industry.

Congress should heed no pleas for action that would destroy, but rather should do everything within its power to foster this industry which stands as a bulwark for the future progress and security of the Nation.

That Unofficial Federation

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1950

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the February 9, 1950, edition of the Christian Advocate entitled "That Unofficial Federation." This is in reply to an article in a recent issue of the Reader's Digest by Stanley High.

The editorial follows:

THAT UNOFFICIAL FEDERATION

In the current issue of Reader's Digest, Stanley High, who was once a probationer for a Methodist Annual Conference but was never admitted into membership, and who

ran, unsuccessfully, for the editorship of the Epworth Herald, official youth publication of the Methodist Episcopal Church, has written an article titled, "Methodism's Pink Fringe." It is clever and half-convincing—only half-convincing to careful readers because the facts are fractional facts.

Throughout the article Dr. High descends to the level of the kind of reporting we have done in the first sentence of this editorial. There we have set down two unpleasant and uncomplimentary facts about Dr. High's relationships with the Methodists, among whom his father was a distinguished minister We might have enumerated many complimentary facts, and we hereby apologize to Dr. High for following, for the moment, the bad example he has set throughout Methodism's Pink Fringe. We would do this personally but Dr. High has just left for Australia.

That piece of writing, in which he has been so scrupulously selective in his choice of facts to support his thesis, concerns the sinning and sinned-against Methodist Federation for Social Action. The article is only the most recent of a series of attacks that began in 1907, when the organization started as the Methodist Federation for Social Service, then as now an unofficial critic of political, economic, and social ideas and actions. Because its leaders have never cared much for safety and security, it has been an embarrassment to many Methodists, and it has been attacked as persistently inside as outside the church.

"Communist" is only the last of the bad names that have been hurled against the federation. It has been called "modernist" and "pacifist" and "socialist" and much else that cannot be printed in the Christian Advocate. But name-calling, cheapest trick in the propagandist's bag, has never cowed the federation. Rightly or wrongly—and the reader ought not to judge without examining the federation's principles in their entirety, and not Dr. High's excerpt—this group has gone on, championing the rights of the workers when Stalin was still the Czar's exile in Siberia, opposing the oriental exclusion act when Chiang Kai-shek's party was still in league with the Russian Communists, calling for an embargo on scrap-iron shipments to Japan before Pearl Harbor, demanding a like embargo on Russia for its attack on Finland while the men of Berlin and Moscow were still allies. The federation even opposed certain New Deal policies when Dr. High was still on the White House staff, writing publicity for the Roosevelt administration.

Understandably, Dr. High has made no effort to compile a history of the federation, which the Methodist General Conference of 1944 called a history of achievement. He has made no attempt to describe the federation's work. He has taken a few fractional facts and, after the manner of the astute debater he is, has based his argument on them. On several occasions the Christian Advocate has been at variance with the policies and programs of the federation, but we think that Dr. High is a long way from proving his case.

For instance, there is the much-debated Kansas City meeting of 1947 on the topic, "The Christian Church and Present-Day Tensions." General Feng Yu-hsiang spoke there, as he had spoken a few days previously before the Methodist board of missions and as he spoke before other groups, inside and outside the churches. Jerome Davis, author of Behind Soviet Power, also spoke; and his book was sent to all Methodist ministers, but not by the federation. Carl Marzani, whom Dr. High singles out of a score of resource persons, was also present.

These are facts, but they are not the definitive facts about the meeting. The keynote address was not that of General Feng or Dr. Davis, but of Bishop Lewis O. Hartman, past president of the federation, who warned against the totalitarians—both Fascists and Communists. The opening worship message was given by a staff member of the board of evangelism. The list of invited speakers included President Louie D. Newton of the Southern Baptist Convention; Rev. Edgar Wahlberg, whose community work was highly praised in Reader's Digest, and who served with the United Nations Relief and Rehabilitation Administration in China and Greece; Dr. L. N. Palar, chief of the Indonesian delegation to the United Nations; and many others.

Only a small portion of time was given to the speakers. Most of the schedule was devoted to the delegates themselves—and the list included several lawyers, an editor, a shoe manufacturer, a clothing manufacturer, and others from the commercial and industrial world—who discussed the relationship of the church to American-Soviet affairs, colonization and the Far East, Europe, labor, agriculture, community, and civil liberties. Mr. Marzani was a resource person in this last-named group, but so was Arthur Garfield Hays, counsel for the American Civil Liberties Union.

Except for Dr. Davis' statement, no speaker actually dealt with the Soviet Union, and there was no praise for its policies. Nor was there any praise of Russia in any resolution adopted, including that on Soviet-American relations. Rev. Jack McMichael, federation secretary, who receives a considerable budget of space in Dr. High's article, said at Kansas City: "The Soviet Union has not only made mistakes in its history but has committed sins. The Soviet Union is by no means a Utopia. And the United States has certainly made many and great contributions to the peoples of the world. But both of these great nations are human and sinful; both have potentialities for evil, but also for good. Neither has a monopoly of virtue and neither a monopoly of sin."

Of course, this Kansas City meeting was about as badly reported as any in recent years. The New York World-Telegram headlined: "Minority Sings Red Hymns." All were from the Methodist Hymnal and included "Faith of Our Fathers" and "In Christ There Is No East or West." But Dr. High is a responsible journalist, who ought not to be willing to take newspaper accounts of a conference which one newspaperman condemned in advance, before a speech was made or a discussion held or a report heard, as a national sounding board for Communists and fellow travelers to expound the gospel of the Communist line.

Furthermore, Dr. High ought to know Methodists well enough to realize that they have the maturity to consider other points of view besides their own. When Board of Missions officials sent out Dr. Davis' book, Behind Soviet Power, they did urge that it be read. They also sent with it opposing statements from the Federal Council of Churches of Christ in America and the suggestion that these be read, too. If Methodists are to be missionaries against secularism, materialism, and militarism in communism and other false religions, they need to know what they are fighting. Dr. Davis' book is a clear, if easily challenged statement. The Christian Advocate would be interested in having Dr. High, or anyone else, cite the name of one Methodist who was converted to communism by the study mentioned.

Despite all that has been written here, and much more that might be written on the weaknesses in Dr. High's case, the Christian Advocate maintains that there should be an end to the anomalous situation in which any group, no matter what its principles or purposes, can make unofficial pronouncements and take unofficial actions that are regarded as official. Only the general conference has the right to speak for Methodism; but non-Methodists, and many Methodists, do not know that. Because many of us do not agree with the positions taken by the Methodist Federation for Social Action, that group ought, voluntarily, to drop the word "Methodist" from its name.

Furthermore, we believe that the general conference of 1952 should set up a board of social action that would be responsible for studies and activities in this area of interest that has always been close to the heart of a reforming church. We made this suggestion before the general conference of 1948. Bishop G. Bromley Oxnam made it 20 years before that, in 1928. We believe that it is an idea whose time has come.

But, whether or not Methodists have an official social-action body, with duties outlined in the discipline and officers responsible to the general conference, we hope that there will always be room in the fellowship of the church for persons and groups who disagree with most of us on political and economic, as well as ecclesiastical doctrine. No church has a more complete plan for bringing both ministers and laymen to trial, if they are guilty of conduct that is un-Methodistic. But we Methodists have never taken the position that disagreement means disunion, or dissent signifies disloyalty.

Dr. High has not proved that any Methodist is a Communist; he has not even said it. Furthermore, we doubt that he will or can.

Oil and Gas Depletion Allowances

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1950

Mr. VURSELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following transcript of the testimony given by me in opposition to the reduction of the oil and gas depletion allowance before the Ways and Means Committee of the House of Representatives, February 14, 1950:

Mr. Chairman, for the benefit of the record my name is CHARLES W. VURSELL, from Salem, Ill.

My State ranks sixth in the production of oil, out of the 22 in the Nation.

Our situation is a little different from what we would find in the great producing oil wells of the Southwest, that is, in the fact that most of our wells, while some of them come in as very good producers, are small oil wells. This depletion allowance, if it is tampered with, would strike a terrific blow at the present production and at the possibilities of future exploration.

I might say that the Texas Co., only a few miles out of my town of Salem, brought in the heaviest production in southern Illinois, beginning in 1937, and has found that those wells have gone down in production to the point where they have decided to do a major-scale repressuring to bring out more oil.

One of the high men in the Texas Co. for the past 2 years has been giving all of his time in organizing that field and getting ready for this repressuring.

Mr. REED. That is a secondary operation?

Mr. VURSELL. That is what you call a secondary operation. Now, this big company is interested in this work. I bring out this point, which you men probably are not familiar with. They say that notwithstanding the great production that has come out of that field, that has enriched our country, that has contributed millions to the Treasury, that with this secondary recovery process at an expense of millions of dollars, they expect to

bring more oil out of this field than has heretofore been brought out of it. I raise this point because the officials of this great company who well understand financial set-ups, would not undertake nor would they go through with such an expensive repressuring effort were it not for this 27½ percent depletion allowance.

All of this valuable power-giving product would be left in the ground. The Treasury would not get the extra revenue that it will get.

That is just one phase of the effect the 27½-percent depletion allowance, if seriously reduced, will have on the economy of the oil business and on the economy of the Nation.

Repressuring is going on in different States, and it will continue to expand; and in addition, the small stripper wells, if they are left without this 27½-percent depletion, will leave billions of dollars' worth of oil in the ground that will never be brought out, and the Treasury will not get the revenue therefrom.

There are over 3,000 wells in my county. There are over 20,000 wells in Illinois. They have made a great contribution to the economy of the country, to southern Illinois, and to the Government. And the oil men tell me, 90 percent of them independents—the little wildcatter that is still going out and discovering oil in these small fields—that they will be driven out of business if this depletion allowance is reduced from 27½ percent to 15 percent. And so it will go throughout the Nation. And they will be compelled to sell to the only purchasers, the gigantic corporations that may come into being, or to the great major oil companies that already are operating in the United States. Removal of this 27½-percent depletion is a gigantic move toward monopoly in the oil business.

I want to display to this committee a map of less than one small county in my district, and show you something of the financial hazards of going out and exploring for and producing oil.

This first map represents a small part of Gallatin County and the red dots indicate the dry holes. There are a few black dots. These dry holes are 94 in number, and cost over $1,316,000 of venture capital-and-loss capital, by the little independents and wildcatters that seek to develop the resources of southern Illinois.

I have another map representing a part of Edwards County in my district, which had 78 dry holes at a cost of over $1,092,000. This is a tribute to the pioneer spirit. Yes, and it is a tribute to a people who live in a government of freedom under the free-enterprise system, that are willing to risk in order to better the welfare of themselves and their families, and in order to help make this contribution to our State and to our Nation.

Now, Mr. Chairman, the question, as you members of the committee well know, this question of depletion has been before the Congress and this committee time and again in the past. After a thorough research of trial and experience, it was agreed by the Treasury Department and by this committee and the Congress, that the 27½-percent depletion allowance policy is the nearest equitable solution possible to arrive at, as between the Government and those engaged in the great oil industry.

This depletion allowance has been the constant main spring incentive for the past 25 years in the exploration and development of our great oil industry and its contribution to the entire economy of our Nation.

This depletion incentive made possible the accumulation of power that has helped us win two world wars on land, sea, and in the air. In the last World War it was absolutely vital to national defense. With the chaotic condition of the world at the present time, it is more imperative than ever that this depletion allowance be not reduced to any degree. The reduction of this depletion allowance by this Congress would be a risk and gamble against national defense that we dare not take.

The economic structure of the oil industry is built around this depletion provision. If it is seriously reduced, or if completely repealed, it will drive practically all of the little independents of the Nation out of business, because under such a condition they cannot raise the risk capita necessary to continue exploration.

Mr. Chairman, this depletion allowance is particularly necessary if we are to keep hundreds of thousands of small wells producing. Without it, they would be closed down with possibly billions of dollars worth of oil that never would be brought to the surface. It would be lost forever. The Federal Government would lose the tax revenue it would bring into the Treasury.

We have over 20,000 oil wells in Illinois—several thousand of them located in the congressional district I have the responsibility to represent. From my close contact with the operators in Illinois, and from my knowledge of the Illinois fields, I know the destruction it would bring to my section of the State, because most of the wells are small producers.

To seriously tamper with the depletion provision would largely stop further exploration and development and would close down thousands of wells that are now profitably producing and would deprive the people of my section of the State and the Federal Government of a great amount of much-needed revenue.

Mr. Chairman, the Treasury Department has testified that to reduce depletion from 27½ percent to 15 percent would gain the Government in taxes $200,000,000 a year.

A successful tax structure must be one that will encourage the expansion of business and the increase of the national income against which taxes are levied. This proposed tax legislation does not follow such a policy. It is just the reverse.

It tends to contract and reduce business. It makes the goal sought impossible. It will come nearer reducing by a half billion to a billion dollars the amount of tax money finding its way into the Federal Treasury than it will increasing the amount by $200,000,000. It is a gamble that this committee and this Congress, in my judgment, cannot afford to take.

When you consider the thousands of oil rigs that will be stacked in the yards and no longer used if this legislation is passed, with a million or more men formerly employed in the oil fields and in the oil business no longer employed, from which the Government, when employed, was checking off a high income tax, with billions of former oil income lost and no longer taxable; it is no rash statement when I say—

That the Treasury has asked this Congress to pass a bill that, on the one hand, may bring in $200,000,000 additional income in the coming fiscal year; but, on the other hand, the result of this legislation will most likely lower the national income to the point where the Treasury thereby will lose and fail to be able to collect from $500,000,000 to a billion dollars for the same fiscal year.

Worse than that, this terrific loss in tax revenue will continue in the future each year if the present depletion exemption is repealed.

Mr. Chairman, I think we all realize that the Congress and the Chief Executive has laid the heavy hand of taxation on all business almost to the limit of its endurance. We must not tax to the point of diminishing returns. We are at the point on this legislation where, in my judgment, if we pass it, we will demonstrate to the people of this Nation what Thomas Jefferson meant when he said, "The power to tax is the power to destroy."

Mr. Chairman, I know the great Jeffersonian Democrats on this committee and the great Republican Members of Congress on this committee—all of whom believe in the truth of that statement—will not want to demonstrate to the American people the logic of Jefferson's wisdom expressed over 150 years ago by becoming a party to destroying the great independent oil interests of this country through taxation.

Mr. Chairman, I shall not go further in my defense of the thousands of little oil operators in southern Illinois and throughout the Nation. I believe we have proved our case.

I understand I am to be followed by Mr. Alan K. Swann, who has followed the oil trail for a lifetime from the Texas Panhandle to southern Illinois, and who is now located in Evansville, Ind., specializing for a lifetime as an oil lawyer and in oil development.

Among the independent producers I know of no man who can bring to this committee more definite facts in discussing this prospective legislation. He will speak for the Tri-State oil group, representing Illinois, Indiana, and Kentucky. I know you will hear him with interest and with profit.

Again, Mr. Chairman, I want to thank you for the courtesy extended to me, your colleague.

Mr. REED. I just want to congratulate the gentleman on the very logical and convincing way in which he has presented this case for his constituents out in Illinois.

Mr. WOODRUFF. I heartily concur in the remarks made by my colleague.

Mr. VURSELL. Thank you very kindly, gentlemen.

The CHAIRMAN. We thank you, Mr. VURSELL, for the information you have given the committee.

To Balance the Budget Takes Skill, Courage; but It Is Possible

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1950

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Blair Moody from the Detroit News of January 15, 1950:

TO BALANCE THE BUDGET TAKES SKILL, COURAGE; BUT IT IS POSSIBLE

(By Blair Moody)

WASHINGTON, January 14.—By getting down to the real crux of the issue, Congress can balance the budget this year, vote a moderate reduction in excise or income taxes, and leave a small surplus to cut the national debt.

It will not be an easy task and cannot be done by a routine "more of the same" on Capitol Hill. It will require, if it is done, real political courage in standing up to pressure groups, the imagination and boldness needed to install a modern system of budget making based on standard corporate practice, and extensive changes in certain laws which now serve as open spigots, pouring out tax dollars.

But the opportunity is within grasp. And it can be done, as this article will attempt to demonstrate, without wrecking President Truman's international peace program—the customary target of some blunderbuss economizers on Capitol Hill—and without undermining either the activities of the Government which help to sustain prosperity, or

the military strength which is the free world's protection against aggressive communism.

BLANKET SLASHES NOT A CURE

To end the days of peacetime red ink on the Potomac, a program must have these three things:

1. A vigorous will to economize intelligently.

A vague impulse against deficit spending, if not accompanied by hard-boiled analysis of hidden subsidies, usually results in political demands for impractical "blanket" slashes after Congress itself has approved a long list of appropriations, some of which are unnecessary or plain waste. Possible specific cuts are listed below.

2. Recognition of the fact that not only the budget itself but the laws lying beneath it require revision.

Some of these laws establish specifications under which money is to be paid out, but set no limit on the height to which such mandatory payments can climb.

It is under such a law that $263,000,000 is being poured out in 2 years for potatoes which are being destroyed. Such a law required the Secretary of Agriculture to pay out $65,000,000 for eggs, while grocery prices were 85 cents a dozen, and bury millions in caves in the Midwest.

DOOR LEFT OPEN FOR SUBSIDIES

Another mandatory open-end appropriation has ballooned to $990,000,000 in a single year the cost of mortgages on new homes bought for cash by a single Federal agency. The subsidy for building and operating our merchant fleet has jumped out of control from eighteen to eighty-one millions in a single year. The cost of veterans' education was $500,000,000 above estimates.

These open-end laws are one reason Congress cannot conscientiously order the President, as one group tried to do in 1949, to make enough cuts to balance the budget. The President has no legal way to check some expenditures running into billions.

Nor does it do any good for Congress to go through the motions of reducing a presidential item, like its $400,000,000 cut in the veterans' fund last year, when this merely means it now must vote a "supplemental" appropriation of $700,000,000 to carry out its own law. In 1947 Congress reduced by $800,000,000 the item for tax refunds which taxpayers had coming to them by law. Of course, this "economy" had to be canceled later, plus.

WHERE SPENDING IS ORDERED

It would be impossible for Congress to set exact amounts for some programs which are thoroughly justified, because the cost varies with economic conditions. But it is important to realize that a big segment of the budget is written, not by the appropriating committees, but by those who write the phrases into these open-end laws.

3. Remove from the list of items which are to be paid for out of taxes the cost of loans or improvements which is actually to be met by payments from a second source.

In the new budget there are about $4,000,000,000 of such items. Under the present system they are being charged to the taxpayers, cash on the barrel head.

They include such items as home mortgages being bought outright. These will be liquidated by the people paying off the mortgages. If experience serves, the losses will be small. The whole transaction will wash itself out as a huge revolving fund. But this is counted as much an expenditure as a machine gun or a clerk's salary.

They include cash loans on huge reserves of corn, wheat, and cotton, which, come a lean year, will be sold. But the taxpayer pays cash now. They include loans for installation of rural electric lines and telephones, which pay for themselves. They include well-secured foreign loans made by the Export-Import Bank, money loaned to States and cities for public works planning, and investments in the vast reclamation projects which invariably return the Government's money 100 cents on the dollar.

THE TAXPAYER PAYS

But the taxpayer is asked to put up all the money for all of those returnable items this year, and if Congress does not think such heavy taxes are good for the country, then he is told Uncle Sam is running in red ink, the country is "deficit spending," and higher taxes seem to be called for.

Would a private corporation run its affairs on such a basis? Where would General Motors get if it built and equipped a new Chevrolet plant and then charged the full cost into the selling price of its cars in a single year?

The Government is using its credit to back the buying of homes by GI's, which, if such direct Government credit is sound at all, could properly become a revolving fund in the Federal Reserve System. Instead, the taxpayers pay cash for the homes, now, and get their money back over a period of years.

OUR REAL LOSSES

There is another angle to this lack of a capital budget in Federal finance. Millions of tons of topsoil are flowing down our rivers to the sea each year. They cannot be recovered. Billions of kilowatts of potential power are flowing to waste in undeveloped rivers. Hundreds of thousands of acres are still unfertile desert for lack of irrigation projects which would pay for themselves.

Why aren't they developed? Because the money for their capital improvements would be charged this year to the taxpayers. Therefore, we can't afford it. Therefore, vast resources become a net loss. Completion of the great self-liquidating Central Valley project in California and many others will take many years longer to develop than would be possible if the Government had a corporate system of bookkeeping.

This policy would be like Chrysler deciding how much it could charge to prices each year for a new plant, and then building only that much of the plant in that year, instead of getting the benefit of the plant at once and making the charge-off over a suitable period of years.

It would be like Detroit lumping the whole cost of its new $30,000,000 sewer system on the tax rolls in 1 year—or else not building the sewers.

CLOSE CHECK NEEDED

The deficit in the budget sent to Congress by President Truman was $5,100,000,000. By cutting expenditures where they can be cut without damage to the country, and by creating a reserve revolving fund, with a proper percentage set aside against losses, within RFC or preferably Federal Reserve, to finance all loans and programs which after hard-boiled appraisal qualify as self-liquidation, a minimum of $6,000,000,000 can be cut from the tax budget.

Close check should also be kept on the total outgo and total income in relations between the people and the Government. This flow of cash represents the impact of Government activity on the economy and must be measured against current conditions to guide the President and Congress in timing the size of Government programs from the angle of inflation, deflation, prices, and employment.

But the central issue posed by the annual budget made by the President is whether taxes are sufficient to cover expenditures.

POSSIBLE ECONOMIES

Even the shift to a capital budget would not balance the tax budget. Real economy is also necessary. Here is one way to do it:

1. An average over-all cut in Federal personnel of 8 percent, as recommended by Senator DOUGLAS (Democrat), Illinois. Some smaller agencies would be crippled by such a cut, but larger ones could absorb around 10 percent providing many of them are reorganized at the same time, as recommended by the Hoover Commission. Secretary Johnson says the Defense Department will operate more efficiently after 149,000 discharges than before. Saving in this area—$550,000,000.

2. Hidden subsidies buried in the theoretically inviolable interest on the public debt account. The average cost of Government borrowing is 2.2 percent, but the Treasury pays 3 percent to the two billion trust fund of the railway retirement account, a net subsidy of $16,000,000 paid by the general taxpayers.

The veterans' insurance accounts gets 3½ percent for its World War I trust and 3 percent for World War II trust, a net subsidy to this eight-billion-plus trust fund of $75,000,000. Saving—$91,000,000.

3. President Truman has frozen the contract authority for $306,000,000 worth of veterans' hospitals Congress has voted. Of the 1,800,000 veterans to be sent to school and college in the coming year at a cost of $2,400,000,000, more than half are in below-college-grade schools, some of which recruit students, collect tuition fees but do not provide adequate training, according to the President.

Budget experts estimate $500,000,000 to $700,000,000 can be saved in this area alone, with one big "if." If Congress changes the terms of the law so the Administration can get at the near racketeers.

NONSERVICE AILMENTS

Two-thirds of the veterans in hospitals have non-service-connected ailments. Their proportionate cost of hospital expenses—$314,000,000. They are admitted only if there is spare room in the VA hospitals, theoretically, but Congress authorized a building program topping $1,000,000,000.

The President says the Government should provide only for the needs arising out of military service. Experts estimate the potential saving at $200,000,000 if only those who really need the subsidy were admitted.

If administrative costs of the veterans' insurance trust funds were charged to its income, that would be another $44,000,000. Economy—roughly $1,000,000,000.

4. The budget includes $500,000,000 as subsidy to States and cities for roads. In theory, this is uncuttable, since under the hang-over system it is always authorized, and some contracts are let, before the money is voted.

However, State representatives could be called in, told Uncle Sam cannot afford so great a road subsidy this year, and asked to cooperate, always realizing that cooperation with Santa Claus pays in the long run. Potential saving—$250,000,000

PERSONNEL REDUCTION

5. Knocking down the overgenerous vacation leave from 26 days to 20. If done during the general shake-up which Hoover recommends this could reduce personnel sufficiently to save (DOUGLAS' estimate)—$100,000,000.

6. Reduction of subsidies on silver, and on potatoes and other agricultural commodities—$100,000,000. This is DOUGLAS' estimate. It is a variable because it depends on Congress changing the price-support laws.

If Congress would change the agricultural price-support scheme to a combination of the best features of the Aiken and Brannan plans, the saving could be much greater and everyone would be better off, he believes.

7. Slowing down the rate of construction in river and harbor projects. Saving (DOUGLAS' estimate), $300,000,000.

8. Reduction of maritime and other transportation subsidies; merger of Army engineers in Department of the Interior as Hoover recommended. Saving (DOUGLAS' estimate), $200,000,000.

These savings would total $2,500,000,000. They are, of course, very rough estimates. Nor do they include all savings that could be

made. But they give a measure of what might be done.

CAPITAL ACCOUNT ITEMS

Now for the capital assets that could be shifted into a capital account, to be financed through a revolving fund, to be considered in their impact on the economy, but not to be charged against the tax account. They could include:

Loans

RFC loans to industry and financial institutions, $194,000,000.

Rural electrification and telephone loans, $468,000,000.

Mortgages financed by Federal National Mortgage Association, $990,000,000.

Loans to States and cities for public-works planning, to be returned to Government when projects are actually financed and built by local communities, $241,000,000.

Export-Import Bank loans to foreign nations (these considered better secured than loans granted by ECA), $98,000,000.

Commodities

Grain, cotton, and other crops held by Commodity Credit Corporation, $621,000,000.

Stock piling of scarce and strategic materials, $650,000,000.

Physical assets

Self-liquidating reclamation projects, $354,000,000.

Tennessee Valley Authority extension, $118,000,000.

In total, the taxpayers are being asked to pay in cash this year for $3,674,000,000 worth of assets which will pay out. (The President's 4,000,000,000 figure included some items that are invaluable assets, like atomic-energy plants, but are not yet surely self-liquidating. He did not favor the capital budget.)

GET MORE FOR LESS

This analysis indicates that something over $6,000,000,000 could be clipped from the tax budget without altering the President's figures for either international aid or defense or halting such social projects as the proposed Federal aid to education.

Secretary Johnson has already made savings in the Defense Department officially estimated at $1,500,000,000 a year. But the purchase of equipment, especially airplanes, previously authorized by Congress will raise military spending to a point slightly higher than a year ago, even though the request for new authority to contract is less.

We are getting more defense for less money. If the additional $500,000,000 Senator DOUGLAS believes can be clipped from defense is feasible, it should be devoted to more equipment. The Air Force still warns it does not have what it needs to defend the United States and strike back if a sneak attack comes.

There is no need to cripple the vital programs for peace and higher living standards by cutting the budget. It can be balanced without that. This analysis does not intend to imply there are not other spots at which the budget could be cut. There undoubtedly are. But here are enough to do the job.

The Crisis the President Couldn't See

EXTENSION OF REMARKS

OF

HON. HAROLD H. VELDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1950

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Star of February 24, 1950, entitled "The Crisis the President Couldn't See":

THE CRISIS THE PRESIDENT COULDN'T SEE

As this was was written, Illinois schools were closed to more than 43,000 boys and girls. The buildings were without heat because of the coal strike.

Hospitals are keeping a watchful eye on their coal reserves. Householders who burn coal guard every lump and use it with the greatest economy. The State welfare department, with thousands of persons housed in its institutions, is scrambling in the open market for scarce coal and seeking other sources of heat, should the coal supply utterly fail. It seems likely at this time that a State-wide dim-out will be imposed in order that producers of electricity may conserve coal. The anticipated 25-percent power cut will be felt by many businesses.

Meanwhile scarcity has been producing its inevitable family of evils. Panic prices are being paid for coal. It is reported that at some small mines still operating, coal is sold to the highest bidders. Eugene A. Tetzlaff, chairman of the Peoria citizens coal committee, telegraphed to Governor Stevenson and to Illinois Congressmen Wednesday that there is virtually no coal in Peoria and that "suffering is imminent."

This is the crisis that was foreseen as inevitable 6 weeks ago. Every detail of it was predictable. We watched it fearfuly as it drew nearer, day by day.

The one man who denied it until even he could no longer refuse to face facts was President Truman.

No one can predict today how or when the coal strike will be settled. But we can say with certainty that the settlement would have come earlier if the emergency had been recognized earlier by the President.

We owe our present crisis largely to President Truman's reluctance, for political reasons, to use the Taft-Hartley law.

Amending the Tariff Act of 1930

EXTENSION OF REMARKS

OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1950

Mr. KING. Mr. Speaker, under leave to extend my remarks, I am including the following text of a bill introduced by me February 27 to amend the Tariff Act of 1930, together with a brief explanation of the bill and a statement of the need therefor:

H. R. 7447

A bill to amend the Tariff Act of 1930, as amended, with respect to sound-recording materials for use in connection with moving-picture exhibits and news reels

Be it enacted, etc., That paragraph 1551 of the Tariff Act of 1930, as amended, is hereby amended by adding at the end thereof the following new proviso: "*Provided further*, That on photographic or magnetic film, tape, wire, or other material of any kind on which sound has been recorded abroad by photography, magnetism, or any means whatsoever, and which is suitable for use in reproducing sound in connection with moving-picture exhibits (not including any of the foregoing which is photographic film on which pictures have been recorded, or any of the foregoing which is provided for in paragraph 1726 of this act, as amended), the duty shall be 1 cent per linear foot."

SEC. 2. That paragraph 1726 of the Tariff Act of 1930, as amended, is hereby amended by inserting, after the word "reel", the following: "photographic or magnetic film, tape, wire, or other material of any kind on which sound has been recorded abroad by photography, magnetism, or any means whatsoever, and which is suitable for use in reproducing sound in connection with moving-picture news reels."

EXPLANATION OF THE BILL BY SECTIONS

SECTION 1

This section extends the coverage of paragraph 1551 of the Tariff Act of 1930, as amended, to include photographic or magnetic film, tape, wire, or other material of any kind on which sound has been recorded abroad by photography, magnetism, or any other means, and which is suitable for use in reproducing sound in connection with moving-picture exhibits. It imposes a duty at the rate of 1 cent per linear foot on such materials. It excludes photographic film on which pictures have been recorded and undeveloped negative moving-picture film for use in connection with silent or sound news reels. Both of the latter are now covered by existing law. The language of this section is broad in scope and is designed to permit its application to such new materials or methods of sound recording as may be developed in the future.

SECTION 2

This section amends paragraph 1726 of the Tariff Act of 1930, as amended, by including in the free list sound-recording film, tape, or other material on which sound has been recorded abroad and imported for use in connection with moving-picture news reels. Undeveloped negative moving-picture film exposed abroad for silent or sound news reel is now on the free list.

NEED FOR THE BILL

When the Tariff Act of 1930 was enacted, the art of producing sound moving pictures was in its infancy. With the advancement of the art and the development of improved techniques for recording sound, new problems have arisen that point up the need today for enlarging the scope of the act's coverage.

In making sound moving pictures abroad, the accepted practice for years of American motion-picture companies is to photograph the moving picture on one piece of film and the accompanying sound on a separate piece of film. The separate films are returned to the United States and duty is paid on each at the rates provided for in paragraph 1551 of the above act, as follows:

Exposed and developed negative, 3 cents per linear foot.

Exposed but not developed negative, 2 cents per linear foot.

Photographic-film positives, 1 cent per linear foot.

By virtue of the most-favored-nation clause provision in the Reciprocal Trade Agreement with Mexico, January 30, 1943, the above rates of duties were reduced to 1½ cents, 1 cent, and ½ cent, respectively. Such rates are currently in effect.

Present-day plans of American motion-picture studios making moving pictures abroad call for the original production sound recording to be done by magnetic methods, using either magnetic film or magnetic tape. Magnetic film describes a film base, having standard sprocket holes, with a red or black magnetic oxide applied to the base in much the same manner as a photographic emulsion is applied. This film is driven in exactly the same manner as photographic sound film. Uniformity of speed and accuracy of synchronism with the picture are maintained by means of the sprocket holes.

Magnetic tape describes a tapelike material having paper, acetate, or other flexible base. Applied to this base, or impregnated in it, is either a red or black magnetic oxide, which is the recording material. This tape

has no sprocket holes, is approximately one-quarter inch wide, and the equipment for using it drives the tape with some form of friction drive. Magnetic tape is essentially a nonsynchronous material.

Since neither of the foregoing methods involves the use of photographic film, the sound track produced by magnetism is held to be dutiable on an ad valorem or cost-of-production basis rather than on the linear-foot basis provided for photographic film in paragraph 1551 of the tariff act.

Determining the cost of production of the sound track by itself is a cumbersome procedure. It involves an estimate of the cost of the entire production, moving picture and sound, and an approximation of the sound cost in relation to total production cost. In some instances, a few days' or a week's sound recording will be rushed to the United States. It is difficult, if not impossible, to fix a proper valuation on such limited recordings. On the other hand, the photographic film negative on which pictures are recorded, and to which the sound relates, may be similarly shipped and entry permitted on the payment of the linear-foot duty. Except in extremely unusual cases, the sound recording would represent only a minute part of the total capital expenditure for the production. Therefore, from the viewpoint of the development of a fair and consistent customs policy, as well as simplicity of administrative enforcement, the extension of the linear-foot measurement of duty on photographic film to sound-recording film, tape, etc., offers a practical and efficient means of determining the import duty that is fair to both the Government and the producer.

The proposed duty rate of 1 cent per linear foot, provided in section 1 of the bill, is a fair and reasonable rate in respect to the major element to which it relates—the film on which the moving pictures are recorded. Such duty rate is also the same as the duty rate currently in effect on exposed, but not developed, photographic-film negatives, a category as to which the exposed sound track has some resemblance.

Excise Tax Repeal and Oil Depletion Allowance

EXTENSION OF REMARKS

OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1950

Mr. HARRIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me to the Committee on Ways and Means February 14, 1950, on the repeal of wartime excise taxes and retention of the depletion allowance for oil as existed for almost a quarter of a century. I invite the attention of all Members of the House to this discussion.

Mr. Chairman, my colleagues and members of this great and important committee, I appreciate very much the opportunity of coming before this distinguished committee on the question of percentage depletion on oil and gas.

I do not want to appear presumptuous but I have given a lot of study to this and the other problems of the oil industry for some time. As a member of the House Committee on Interstate and Foreign Commerce, I have been privileged to serve on the oil special committee for 8 years. I am honored and privileged to be the chairman of that important committee now. I, therefore, believe that having the opportunity during these years to study all phases of the oil industry very closely in time of war and peace, I know something about the problems of the industry and I am glad to give you the benefit of what information I can on this question of depletion.

I am fully aware of the tremendous responsibility of this committee. No one wants their taxes raised and I know you seek most sincerely to adjust certain burdensome wartime excise taxes and justifiedly so. In fact, Mr. Chairman, I say in all candidness that such wartime excise taxes should be repealed. They were adopted as a war emergency. It was understood then, I believe, that following the war such burdensome taxes would be terminated. We provided in the act imposing such taxes that they should be automatically terminated within 6 months following Presidential proclamation ending the national emergency. Such proclamation was made in 1947 but the Congress in its enthusiasm to reduce taxes in 1948 unwisely made such excise taxes permanent. It might be recalled the President at that time recommended that they be continued for only 1 year.

In view of the original intent and this history, I am quite confident this committee will report a bill that will include the repeal or adjustment of these excise taxes which will be in the interest of the public. At the same time, I recognize the difficult task of this committee in its efforts to provide additional revenues to make up the losses as well as to try to bring increased revenues in an effort to close the gap in our deficit spending.

However, Mr. Chairman, I firmly believe that to follow the recommendation of the Treasury Department in reducing the depletion allowance on oil and gas would have a tremendous adverse effect on the future of this important industry. I firmly believe it would ultimately affect not only the economy of this country but the jobs of thousands and thousands of people. I firmly believe that it would ultimately and in a few years affect the available productive capacity and seriously endanger the future security of our country.

I do not want to be repetitious and I know you have heard the history and many phases of this question but I do want to give you briefly what I think are good and sound reasons supporting the statement of importance to our country and our future security. I want to present to you facts and specific instances not theoretical or assumptions, but how it actually works.

THE PURPOSE OF THE DEPLETION ALLOWANCE

In the first place, why did the Congress provide depletion allowance? What was its purpose? What was the objective?

As far back as 1918, it was recognized that the future of this country in a large measure would depend among other things on a sufficient oil supply.

Therefore, the primary purpose of Congress in adopting the depletion allowance was to enable the oil industry to provide our Nation with an adequate supply of oil in both peace and in war. Before tampering with this provision of our tax laws, it behooves the Congress to weigh most carefully the effects any changes would have upon the primary objective sought—that is, a sufficient oil supply.

The Congress, since the Revenue Act of 1913, has recognized the need for some means of returning invested capital to an industry, such as oil, of irreplaceable mineral assets. It was not until 1918, after experience under the earlier laws, that Congress recognized the need to provide further incentive so the oil industry could obtain the funds required to engage in the peculiarly hazardous and costly task of discovering and developing oil reserves.

The percentage depletion allowance, in its present form, has been in our laws since 1926. It was designed as a method of determining what part of an oil producer's gross income is properly taxable income, thereby providing him with sufficient capital to encourage him to go out and look for another oil field. It is an incentive that has worked—that has done the job Congress intended. On numerous occasions Congress has reviewed this tax provision and continued it without change.

The risk in the oil industry is great. It is a hazardous business. To find an oil field a producer may drill four or five dry holes, and sometimes more, before he finds a producing well. Even after an oil field is discovered there are many dry wells drilled in the development of that field. During the past 25 years the record shows that of all wells drilled—both exploratory and development—more than 25 percent were dry holes. This percentage of failures for the year 1949 increased to 86 percent. The tax provisions, including both the depletion allowance and the option to expense intangible drilling costs, have made this very highly risk-taking activity possible.

The Treasury Department now proposes that the Congress take action which would involve a gamble on destroying the ability of an industry, essential in a greater degree than any other to the national security, to continue an outstanding record of performance over a long period of time. It is unnecessary to speculate on what has been accomplished under these provisions. Under the present tax provisions during the past 25 years, the petroleum industry discovered and developed 48,000,000,000 barrels—more than one and a half times the quantity used by the consuming public.

DEPLETION ALLOWANCE HAS WORKED SUCCESSFULLY

Since the primary purpose of the Congress adopting the policy of depletion allowance is to provide the Nation with an adequate supply of oil, the question naturally follows—has it been successful—has it worked? That is a question you must consider and ponder well before making drastic changes as recommended by the Treasury.

In other words, through the years since World War I, has the depletion allowance provided the margin of encouragement that has meant the difference between having enough oil and in facing enemies with insufficient oil to fuel our war machines?

If so, Mr. Chairman, the Congress then cannot afford at this time to take any action that would discourage the discovery and development of domestic oil resources.

During World War II our Nation was called upon to fuel the greatest war in history by supplying six-sevenths of all the oil used by the United States and all of her allies. Had it not been for the wise course of action adopted by Congress immediately following World War I, by recognizing the need to encourage the oil industry by means of an incentive depletion allowance, the oil industry would not have been able to supply the oil we needed. Our oil supplies here at home meant the difference between victory and defeat.

Today the industry has recovered from the burdens and restrictions imposed upon it during the years of World War II and fortunately once again the domestic industry is able to provide all of our domestic demands and in addition, a reserve producing capacity above current demands. This is a reserve that we must have so as to be prepared for any emergency. In fact, our military authorities urge that this reserve capacity be increased.

The uncontradicted facts prove that it has worked and we have had a sufficient supply of oil. Even though the demands have sharply increased, the discovery of proven reserves have kept ahead of demands. We now have greater proven reserves than ever before. We have added over 1,000,000,000 barrels last year, 1949, from drilling. We drilled a total of more than 39,000 wells.

Consequently, the present tax provisions for oil and gas have proved to be effective, practical to administer, and equitable to the taxpayer. They have assured an adequate supply of oil which is essential to the Nation's prosperity on which income-tax revenues are based. This is even more vital to national security according to our military authorities.

OIL INDUSTRY PROFITS

There has been a great deal said about the profits of the oil industry and particularly with reference to the rate of income paid in dividends as compared with other industries. I am sure some erroneous impressions have been obtained from various reports singling out specific instances.

For example, the April 1949 monthly letter published by the National City Bank of New York, indicates that oil companies in 1947 and 1948 made a relatively high rate of profit as compared with other industries. The pertinent figures appearing in this publication are as follows:

Industrial group	Number of companies	Percent rate on net assets	
		1947	1948
Petroleum products:			
Integrated companies	44	15.7	22.1
Oil and gas producers	44	24.1	35.9
Total manufacturing	1,680	17.1	18.9
All industries	3,262	12.3	14.0

The above figures would seem to indicate that the oil companies, and particularly the group of oil-producing companies, made a relatively high rate of profit in 1947 and 1948. These figures are misleading and do not reflect actual conditions in the petroleum industry.

First, the above figures represent an extremely small sample of the petroleum industry. This is obvious from the fact that the 44 oil- and gas-producing corporations represent less than 1.5 percent of the 3,696 oil and gas corporations that filed income-tax returns with the Federal Government in 1946. In addition to these 3,696 corporations, there are many times that number of individual producers and partnerships for which this information is not available. The sample used by the National City Bank, therefore, cannot be considered as reflecting average conditions in the entire petroleum industry.

More important than the inadequacy of the sample, however, is the fact that the peculiarities of the oil-producing industry, as contrasted with other industries, result in a serious overstatement of real profits during 1947 and 1948. This comes about because the petroleum industry is engaged in the sale of capital assets found and developed in previous years whereas other industries in general are producing, buying, and selling goods acquired on a current basis. This means that the oil industry in 1947 and 1948 was producing and selling oil most of which was found several years ago when the cost of drilling and development was far below the 1947 and 1948 cost of replacing this oil. There is ample evidence that the cost of finding and developing oil reserves has been increasing steadily during the past decade. If the financial statements of oil-producing companies fully reflected the current cost of finding and developing, instead of the low cost in previous years, the book profits shown in the financial statements would be sharply reduced. This fact is well recognized in the oil industry and most financial statements contain an observation with reference to this situation.

A study will show that the oil industry normally has not made higher profits than other industries. For example, over the period from 1923 through 1948, 24 of the largest and presumably among the most profitable of the oil companies consistently earned an average rate of return lower than the average of manufacturing industries.

A further comment that is of interest in connection with this subject is the fact that the statistics of the Treasury Department show that the oil- and gas-producing corporations paid a larger share of their total income as Federal income taxes in 1946 (the latest year for which complete statistics are available) than the average of all industrial corporations. The 3,696 oil- and gas-producing corporations in 1946 paid 4.1 percent of their gross income as Federal taxes whereas the average of all industrial corporations was 3.1 percent.

In addition to paying its fair share of the Federal taxes, industry statistics indicate that during the past 15 years dividends paid to stockholders have reached 5 percent of net worth in only 2 years. The industry has found it necessary to devote an increasing share of its income to the discovery and development of new oil reserves. Industry figures show that a constantly declining percent of net earnings has been paid to the stockholders, or owners, in the petroleum industry.

THE TREASURY DEPARTMENT'S HYPOTHETICAL EXAMPLE OF THE EFFECT OF REDUCING DEPLETION ALLOWANCE FROM 27.5 TO 15 PERCENT

Now I want to refer to the testimony of the Treasury Department wherein a hypothetical example was given which is a complete misrepresentation of the facts. I want to give you a clear picture of an actual experience which is typical of the oil industry to show that this is not a hypothetical or theoretical problem but an actuality.

According to the Treasury Department, the hypothetical example was given as follows:

"This situation might be called the story of how to make profits in the oil business without paying an income tax. The following example illustrates the method of avoiding tax liability:

"Gross income, oil and gas sales	$1,000,000
Costs:	
Operating costs	250,000
Development costs	200,000
Total	450,000
Net income before depletion	550,000
Depletion at 27½ percent of gross income	275,000
Capital cost of drilling six additional test wells at $50,000 per well for intangible drilling costs	300,000
Net loss from total operations	25,000

"The proposed tax revision would decrease the rate of percentage depletion but would continue to allow the deduction of development costs. In the example above the result of the proposed decrease in percentage depletion would be as follows:

"Gross income, oil and gas sales	$1,000,000
Costs:	
Operating costs	250,000
Development costs	200,000
Total	450,000
Net income before depletion	550,000
Depletion 15 percent of $800,000 ($1,000,000 minus $200,000)	120,000
Net income after depletion	430,000
Capital development cost of six additional wells at $50,000	300,000
Net income from total operations	130,000"

The Treasury Department misrepresents the facts in this hypothetical case as a method of "avoiding tax liability." In doing this the Department implies that this taxpayer has evaded the payment of a proper tax. This is completely erroneous. The taxpayer has complied fully with all the laws established by Congress and the regulations of the Treasury Department. In no manner has he evaded any law or the payment of any proper tax.

Congress adopted the present tax provisions for the specific purpose of encouraging producers to spend money in the exploration for new oil fields. In this hypothetical case the producer at the end of the year was not liable for any tax only because he had spent $300,000 drilling six new wells. The fact that a decrease in percentage depletion from 27½ to 15 percent would subject this operator to paying income tax only proves that the Treasury Department's proposal would increase his taxes and thereby reduce his ability and incentive to engage in exploration development.

The ultimate effect of the change proposed can only be determined over a period of several years, not on the basis of 1 year. The tax revenue that the Treasury Department may expect to receive from the oil industry in the future, will depend upon the number of successful oil wells that the producers will drill. The income which will be subject to taxation in years to come depends upon the ability of the industry to spend money in finding and developing new oil reserves. The more exploratory efforts that are encouraged now will mean more production and more income subject to tax in future years. The proposed change shown in the above case, therefore, would merely mean a larger tax during the year shown, but less incentive for drilling and an ultimate decline in oil production and tax revenues to the Federal Government.

Now I want to refer to the testimony of the Treasury Department wherein a hypothetical example was given which is a complete misrepresentation of the facts. I want to give you a clear picture of an actual experience which is typical in the oil industry.

A FACTUAL TYPICAL OPERATION

Now, Mr. Chairman, let us see how this actually works in practice as totally different from the hypothetical case.

As I have just said, it requires a number of years to determine the actual return to the Government. Let me give you a typical case and approximate figures.

A producer in the early development of his properties in 1945, had a gross income of approximately $65,000. He had extensive development costs, which with other operating costs and expenses showed a total loss for him that year of a little over $100,000.

In 1946, having fairly good success, along with his extensive development operations, he had an income of approximately $700,000. Even so, with continued development and operating costs, depletion allowance, and other expenses, he again showed a net loss of over $300,000. But in 1947, in the development of these properties, the income went up and he had a net income after all development costs, operating costs, etc., of over $600,000 on which he paid Federal income tax. His income still increased extensively in 1948, but his development costs decreased. He began to show a substantial return of the tremendous risks and after all allowances, he pays to the Federal Government on a net income-tax return of more than $2,500,000.

In 1949, it was even more in income and tax payment. He received and pays income taxes on a net income of more than $3,000,000, and substantially more than 50 percent of his gross income that year.

In other words, over the period of 5 years and the development of these leases, even though the first 2 years showed a loss, you

can see in the 5-year period, the taxes the Government gets from this operation, and since it is being operated on a long time conservation basis, the Government will continue each year to receive a tremendous sum of taxes from these producers.

I think, Mr. Chairman, it would be safe to say, that had it not been for the incentive of the depletion provision, this operation as many other such operations, would very likely not have developed.

EFFECT OF REDUCING OIL AND GAS DEPLETION ALLOWANCE

Then what would be the result or effect of reducing oil and gas depletion allowances as proposed by the Treasury? That is the question you must consider. What would happen in the future in relation to consumer interest as well as our security? To change or reduce the long established tax provisions relating to oil and gas, I think, would certainly endanger the Nation's oil supply. Every dollar of increased taxes means one less dollar available for exploring for new oil fields. Congress cannot afford in this time of international uncertainty, to adopt a program that inevitably will result in a discouragement of the search for oil.

For some time the domestic oil industry has been facing some rather difficult and serious problems. Before this proposal by the Treasury Department there were other serious developments which were already discouraging and having its effect on our domestic industry.

It is continuously faced with the contention of shortages which have been disproved over a period of 25 years by new discoveries and increased known reserves beyond the yearly demands.

In addition to this continuing problem, imports of foreign oil have been rapidly increasing, crowding the domestic oil producer out of his own markets. Excessive imports have the same effect as would this proposal, by depressing the domestic producers' income and activities.

Last year, 1949, imports reached an all-time peak and has seriously hurt the domestic producer. The Interior Department reports that the 1949 income of the domestic oil producing industry was $500,000,000 less than in 1948. This was not all due to imports but they were cited by the Department as one of the specific causes of this reduced income.

In addition, we are faced with another serious situation, as a result of the recent British embargo, on oil shipments by American companies into sterling areas. This threatens to further depress our domestic industry by diverting large quantities of oil produced in foreign countries by American companies into the American market.

I have made a serious effort to appraise the specific results of the proposed tax increase. I have made inquiries among the oil producers in my own State of Arkansas. A typical response was the comment of one independent operator who told me that he did not know what the result of the Treasury Department's proposals might be for the entire industry but he did know the effect on his own business. He stated that he had seven drilling rigs and five of them are now shut down and inactive. In his own words: "I am not going to do any more drilling until I am sure that excessive imports and increased taxes will not make it impossible for me to take the chance of getting five or six dry holes before I get a producing well from which I can recover my investment."

In my State of Arkansas, the oil producers drilled 322 wells in 1949 of which 147, or 46 percent were dry holes and a complete loss. This is a higher rate of failure than the national average of 36 percent dry holes during 1949. By drilling these wells, producers in my State were barely able to replace the oil produced by newly discovered and developed reserves. Arkansas produced almost 30,000,000 barrels of oil last year. Under the existing tax provisions, exploration and development was encouraged so that about 30,000,000 additional barrels were found and developed to replace our production. As a result, the State still has about 300,000,000 barrels of proved reserves from which it can make its contribution toward meeting this country's oil needs of the future. There is no doubt in my mind that we would have fallen behind in our reserve position without the present tax provisions.

Only a few days ago another wild-cat discovery was made in our State. This is highly significant in connection with this program. This well was drilled to a depth of over 9,000 feet. It costs more than $120,000 but yet it is a discovery of a new pool of oil. In fact, it is a success from two depths—two formations. One of these unusual cases known as a dual producer.

The important thing is that had it not been for this depletion allowance, this important discovery would perhaps not have been made. You have got to provide this industry with the proper incentive to find oil.

Another example is the Scurry County Field in Texas, the biggest single discovery made recently.

The reason, I say, my colleagues, that these discoveries would not have been made is because these leases have been owned for years and many of them lapsed, hope was given up, yet others in the industry come in and were challenged to find oil where their competitors failed.

You are having now the greatest hunt in Colorado, all around Denver are companies conducting a wildcat campaign that stands yet to give to the Nation a lot more reserves of oil.

What is the alternative? Cut out this provision and you will see these efforts to discover oil subside. The reserves go down and you know what the result will be.

Look at our neighbor to the south. Very little discovery has been made in Mexico since the Government expropriated the private oil interests.

Furthermore you talk about revenues to the Treasury. Without a sufficient and adequate supply of oil, you will be called upon to appropriate millions and millions of dollars for synthetic fuel plants. For the last two Congresses, legislation has been presented here for the Government to provide $350,000,000 in a commercial synthetic-fuel-development program.

Yes, looking at the over-all situation from a national point of view, I am equally disturbed as to the probable results of this tax proposal. I recall the war period when the Office of Price Administration froze the price of oil at a depressed level. This denied the oil producers the necessary funds and incentive just as the proposed increase in tax would do. All of us remember the effect of this price freeze. The reserve capacity was used up in fueling World War II, and, because of the restrictions on money and materials, oil-development activities failed to keep pace with demand. By the winter of 1947–48 our oil supplies were close to the danger point and consumers in our eastern seaboard States were faced with temporary but serious shortages. That situation has been overcome but it seems to me that it provides a lesson that the Congress should not forget. The Government has already experimented in discouraging industry through price controls that limit or remove the profit incentives. The Treasury Department is now proposing the same policy through increased taxes. The Nation cannot afford another threat of shortages of oil which would inevitably result.

How Frightened Can We Get?

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1950

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of March 1, 1950, entitled "How Frightened Can We Get?":

HOW FRIGHTENED CAN WE GET?

There is nothing essentially new in what Hans Bethe, Frederick Seitz, Harrison Brown, and Leo Szilard have just had to say in their round-table observations on the prospective hydrogen bomb. As four of the Nation's outstanding atomic scientists, they have merely confirmed, with special authority and fresh detail, a fact that has been stated many times before—namely, that it is at least theoretically conceivable that the super-super-killer, when and if it is produced, will place within the reach of man the ability to destroy all life on this bewitched and bewildered planet.

As explained by the four experts, something like 500 tons of heavy hydrogen—exploded in just the right way in combination with certain common elements—might be enough to do the job. At any rate, the theory of the thing supports the possibility that such an explosion, in addition to causing an almost unimaginable abomination of death and destruction by means of blast effect, pressure wave, and uncontrollable fire within the general target area, would let loose a vast and all-pervasive cloud of radioactive particles. These particles, in turn, would play the role of a "suicide dust" poisoning the atmosphere everywhere and inflicting total death on mankind, thus leaving the earth lifeless in space—like the moon—except possibly for a few hardy bugs.

In any case, even if the hydrogen bomb never achieves its full theoretical potential as an absolute annihilator, today's actual and prospective instruments of mass destruction are—to put it mildly—terrible enough. Thus, according to the four scientists, a war with A-weapons, or with H-weapons not quite so frightful as the one these men have in mind, would create virtually insoluble problems of civilian defense. For example, over a period of 10 years or so, in anticipation of such a catastrophe, we might disperse about half our population and decentralize our major coastal cities at a total cost of hundreds of billions of dollars. But what good would that do? How could such a program be carried out without wrecking our free-enterprise economy and destroying the political and social fabric of our democracy? And why bother to undertake it when we know that our inland urban areas would be equally vulnerable and that there could be no real hiding place against radioactive clouds?

Actually, the more one thinks about the problem, the less sense can be found in proposals to establish an alternate National Capital or to embark on elaborate projects aimed at making life safe for civilians. The truth of the matter seems to be that the large-scale pursuit of such safety—by means of decentralization, dispersal, and things like holes in the ground—would be impractical to the point of impossibility. The fact everybody must face—both here and abroad—is that in an all-out, sustained atomic war, home-front populations would share the common threat of annihilation.

This is perhaps the most important single reality of our time, and by its very nature it is an incitement to fear. Yet, even though scientists and others are talking more and more luridly about it, the average individual appears to be admirably calm. As human beings with an inborn desire to enjoy life, most of us tend to resist being forever frightened by dismal possibilities. The Cassandras, of course, may be completely right. Still, it does not seem unwholesome to be reasonably optimistic and prayerfully hopeful that the terrifying destructiveness of modern weapons will in itself help mightily to prevent war.

In the last analysis, after all, everybody has to leave this earth sooner or later, in one way or another. There is therefore much to be said for the philosophical view that even if the worst happens and suicide dust engulfs us, the experience may in fact be less painful than such commonplace forms of extinction as being hit by a streetcar. In any event, if life is to be bearable, it must be keyed to something much better than a spirit of constant fear.

The Social Security Act Under Fire

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1950

Mr. CURTIS. Mr. Speaker, under leave to extend my remarks, I wish to include the following article appearing on the editorial page of the New York Herald Tribune on February 28, 1950, written by Elinore Morehouse Herrick entitled "The Social Security Act Under Fire":

THE SOCIAL SECURITY ACT UNDER FIRE—CRITICS CALL LAW A FLOP AND A FRAUD UPON THE WORKERS

(By Elinore Morehouse Herrick)

I

A swelling chorus of criticism of the administration's old-age and survivors insurance program demonstrates the imperative need for a thorough overhauling of the system. A Senate committee is now holding hearings on H. R. 6000, which presents a modified version of the administration program. Criticism comes not from opponents of a Federal social-security system, but from proponents, including some who led the fight for adoption of such a system.

Their indictment is: (1) That it benefits too few of the workers aged 65 and over; (2) that it has become subordinate to a vast Federal relief system which is morally, socially, and individually demoralizing; (3) that the complex benefit formula presents too many hurdles to applicants and falsely portrays it as a contributory system; (4) that the administration program perpetuates the unsound and undesirable Federal relief system; (5) that it is impossible to predict the future costs and that in any event the whole plan prevents development of a sound program. It is disturbing that those in the best position to evaluate the unsound and inequitable nature of the existing program should be advocating its continuance—namely, those who are administering the program, receiving their own salaries from taxes.

Who are some of the critics and what do they have to say about the existing law and the proposed changes? Right Rev. John O'Grady of the National Conference of Catholic Charities, testifying before the Senate Committee on Finance, said: "As a pioneer in social security I now have grave questions about its future. * * * What is the picture after 13 years? About a quarter of the aged who have actually retired are receiving benefits under old age and survivors insurance, amounting to $800,000,000 a year, while almost twice that number are receiving old-age assistance involving an expenditure of approximately a billion and a quarter a year. And, not only is old-age insurance competing with old-age assistance, it is also competing with aid to dependent children. What puzzles us at the present time is that at the most critical moment in the history of social security the Federal Security Agency is recommending an enormous expansion in public assistance and aid to dependent children."

Monsignor O'Grady points out that because payments are more liberal under the assistance program than under the "insurance" program there is an invitation to fraud. He cites cases "in which mothers have entered into collusion with fathers about their disappearing from the home. Many times the husband was in the same city earning good wages, but the mother was receiving aid to dependent children funds, nevertheless, on the grounds of desertion * * * or a family in which the father was earning $100 a week * * * while the mother was getting about $150 a month under A. D. C. * * * The situation is most demoralizing to the family life of our people." No one knows how much of this sort of chiseling is going on.

William Ruion Williamson, an experienced actuary who left an insurance company to join the staff of the Social Security Board in 1936 and remained until 1947, bluntly terms old-age insurance "a flop." We have millions of unpaid beneficiaries among the aged and orphans. * * * H. R. 6000 sets out to make this system even more intolerable. Nothing could justify its passage. * * * With varied assistance administration, in lots of places old folks give away their property to their children to qualify, others are reticent about their resources, some seem to remember an earlier birthday. The attitude toward easily-come-by Federal funds on the part of State administrators is the logical development of the handout complex. * * * Three Federal recognitions of the aged exist, overlapping. Two of them, insurance and tax exemption, give more to those who have more. The third tempts the honest and thrifty to lose self-sufficiency, become dole receivers and demoralize both the recipients and the nonrecipients. * * * We should not burden today's society with 'adequacy' for all needs and fancied needs, but in simple justice we should not give $300 a year to one group for a purely token 'tax,' called a 'contribution,' to another more than $500 as charity, on the basis of needs tests that are frequently farcical, and nothing to the rest."

Dr. Marjorie Shearon, who in 1937 wrote the economic brief supporting the Social Security Act before the Supreme Court and has had 17 years of experience with Federal and State agencies in this field, reminded the Senate committee that in 1935 when the Works Progress Administration was being liquidated Harry Hopkins said the Federal Government was going out of the relief business, but it has failed to do so. It has simply changed the names of the various types of public aid. In 1932 the Federal Government spent a little over $4,000,000 on social welfare. Three years later it spent $2,000,000,000. The country was then in the depth of a depression. We thought of the expenditures as a temporary expedient. But now, 15 years later, during years of great national prosperity, years when national income is high and unemployment low, the Federal Government is spending close to $10,000,000,000 a year on health and welfare services. This is about 4 times as much as was spent in each of the depression years of 1934, 1935, and 1936 and 2,500 times as much as was spent in 1932. * * * Had it not been for the Social Security Act which crystallized and made permanent a vast system of Federal public aid, we might reasonably have expected the demand for such aid to subside as unemployment receded and national income rose. But the Social Security Act saddled the country with a more all-embracing system of public charity than we had in the depression. * * * Public charity is being accepted as a way of life by millions of our people. An artificial distinction has been drawn between social insurance and social assistance. The former is supposed to be due to certain workers and their dependents as a right; social assistance, on the other hand, is given to other persons and their dependents as pauper's aid. In reality there is small choice between the two since both forms of cash payments are made from tax funds. * * * The various public-aid programs which now cost the people of this country about $1,000,000,000 a month * * * are all similar in character * * * they are simply tax-supported benefits for favored segments of the population. * * * Social insurance is a cruel hoax. Workers are not buying insurance; they are not paying premiums; they are paying an ordinary income tax. They do not have a contractual agreement that for such and such a premium they will be entitled to a certain annuity at age 65. * * * In reality they will not get anything unless they stop work at 65. * * * What they will get, if they get it, is a small wage-loss retirement annuity which will come to them as a gift from the Government, that is, from other taxpayers. These facts should be explained to the people so that we may have an end to all this talk about benefits as rights. The fact to be borne in mind is that millions of workers are destined to be fooled.

Both Mr. Williamson and Dr. Shearon point out the impossibility of predicting the future costs of the present system. Monsignor O'Grady joins them in demanding a fundamental change-over in the present system to one of social budgeting which all three term truly a pay-as-you-go policy.

Mr. Williamson says: "We cannot find out all the facts about today. * * * Way out yonder in the year 2000 * * * we are not very clear how things will be. We do not know how many old people there will be. We do not know at what age people will seem old. We do not know what effect this dwelling on personal retirement for decades in advance will have in taking retirement. We do not know what the marriage mores will be in the year 2000. We do not know whether the costs will be $9,000,000,000, $14,000,000,000, or $20,000,000,000. * * * Social budgeting is pay-as-you go. * * * We should forget the misused words 'insurance,' 'contribution,' 'adequacy,' 'as a right,' and should think about compensation for the robbery of the aged by inflationary procedures, a social dividend for our inherited plant, of the generosity that is spelled out in imposed and paid taxes. * * * If we pay for social budgeting we must earn the funds. * * * Let us have no more tampering with an intrinsically bad law until a thorough study outlines the logic of a sound program. Such study should be conducted by competent, qualified persons. They should not be directed from the social security bureaucracy."

From a Republican Congressman, CARL T. CURTIS, comes one of the best and most thoughtful discussions of the present social security system. He, too, ends up with recommending social budgeting as the best way to meet the ever-changing problem of the

elderly and dependency. Mr. CURTIS' findings and suggestions will be considered in another article. All thoughtful citizens are aware of the mounting pressure for a proper social-security system. The drive for private pension plans is a dominant factor in labor relations today and serves sharply to underline the failure of the Federal system. Private plans have the overshadowing weakness that their continuance depends upon the financial success of the particular business, not just now but for years to come. They tend to tie the worker to his job—which is individually and socially undesirable. Also, they militate against the employment of the older worker, whose unemployment will add seriously to the burden of the taxpayers. On the other hand, a Federal system will be assured of continuity as long as the Government itself lasts.

Assuredly, this is the time to make fundamental changes in a system which in 13 years has shown increasing weakness, which has worked so inequitably and which is costing so much.

The Social Security Act Under Fire

EXTENSION OF REMARKS
OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1950

Mr. CURTIS. Mr. Speaker, on March 2, 1950, a second article written by Elinore Morehouse Herrick entitled, "The Social Security Act Under Fire," appeared on the editorial page of the New York Herald Tribune. Under leave to extend my remarks, I include that article, as follows:

THE SOCIAL SECURITY ACT UNDER FIRE—PROPOSALS FOR CHANGES INCLUDE LESS BOOKKEEPING AND PAYMENTS WITHOUT NEEDS TEST

(By Elinore Morehouse Herrick)

II

The break-down of the Nation's social-security system is so clearly evident that its very break-down affords us an unparalleled opportunity to restudy the entire program and come out with a far better one. Fortunately, a growing number of people in and out of Congress recognize the need to reappraise the program. One of these critics is Representative CARL T. CURTIS, Republican, of Nebraska, who characterizes the old-age and survivors' insurance program as a "grossly unsound and ineffective tool." He calls for objective reexamination rather than a mere extension of its coverage or a mere numerical revision of its benefit formula, as the administration is urging. There must be a drastic overhauling of the program, even though it proves necessary to abandon completely those concepts upon which the current program rests. The discouraging factor is that those charged with administrative responsibility seemingly are unwilling to face the realities and the consequences of their program.

Mr. CURTIS criticizes the grandiose promises of the administration though relatively few of the aged can qualify for benefits under the insurance program. He points out that the old-age assistance program which makes more generous payments has led some people to conceal their assets while old people of the most deserving type have remained in need rather than face the stigma of a needs test, still others have become a burden upon their conscientious but poor children. In short, the artificiality of the line between covered and uncovered employments has put a large group of people who have worked hard all their lives to the necessity of pleading poverty in their old age.

The inequities of the present system can be seen in a few examples. A man whose salary is over $250 a month and who has been under social security since it started, and his wife, who is the same age, are drawing $67.86 a month. Yet this man paid into the trust fund a total of $390, or less than the amount he and his wife draw out in 6 months. H. R. 6000 would give a worker who has been steadily employed at an average of $250 a month $16 a month more than the benefits of a worker steadily employed at $100 a month. In short, the higher-paid man has paid for only $2.47 more in benefits but receives $16 more in benefits. This inequitable situation arises from the law's theory of compensating for the higher wage-loss suffered by the higher-paid worker upon his retirement although he has had more opportunity to save than has the lower-paid worker.

Mr. CURTIS attacks the method by which H. R. 6000 proposes to adjust the benefits of the insurance program to meet the change in living costs since the benefit formula was adopted. The remedy is not a satisfactory one, and the very problem is evidence of the program's basic unsoundness. * * * In view of the constantly changing levels of prices and wages, the revision could only be a temporary expedient. If wage and price levels fall substantially in future years, the ratio of benefits to wages could be disastrously high, both socially and economically. The more probable long-term trend, however, is upward, and not many years may elapse before this trend will give rise to a demand for further adjustment. * * * This continual need for revision of the benefit formula * * * points clearly to the absurdity of basing benefits on wage histories.

Representative CURTIS, like Dr. Marjorie Shearon, a former economic consultant to the Social Security Board, calls attention to the wastefulness of the wage-histories system. Elaborate records are kept, although the benefits paid bear no real relation to the amounts paid in—as in the case where the total sum paid would purchase a monthly benefit of $14.10 on an actuarial basis, yet the beneficiary would draw $47.95 a month under present law. "Even though the most modern labor-saving devices have been applied in the operation of the wage-record system, the cost is substantial, due to the inherent waste." Millions of wage records must be kept. For women, for example, who are only intermittently members of the labor force and who may never qualify for benefits, records nevertheless must be kept from the time they are first employed until death. "Or take the case of a man who starts to work, and works continuously, the keeping of his wage record by the Government is expensive. It is very likely that several times before he dies the cost of living and prices generally will change to the extent that the benefits he is to receive have to be changed, thereby rendering these past wage records entirely useless. We must also not forget that many fine citizens, who lead productive lives and make their contribution to society, never have a wage record. It is exceedingly difficult and in some cases almost impossible to apply the present program to these citizens."

Dr. Shearon describes in graphic detail the enormity of the wage-record system. "The Government is now paying more than $1,000,000 annually to rent IBM machines to keep the records in Baltimore. During the fiscal year 1949 wage records were posted to over 50,000,000 accounts. During the 1948 accounting year nearly 190,000,000 wage items were received. As of June 24, 1949, there were over 115,000,000 names in the employment index. Over 2,500,000 employers were annoyed with the necessity—and cost—of making out quarterly reports. As of June 30, 1949, the number of accounts which had been established was 93,356,137. The Social Security Administration is trying to persuade Congress to authorize an appropriation of $12,000,000 for a new building to house twice as many records. How many buildings do you suppose would be required during the next 50 years if the wage items kept pouring in at the rate of 190,000,000 a year? In 10 years there would be 1,900,000,000, in 50 years well over 9,500,000,000. The scheme is utterly fantastic and incredibly expensive."

Mr. CURTIS proposes that benefits be extended without a needs test to the millions of old people who cannot qualify under a wage-record insurance program on the grounds that they have worked just as faithfully as the more fortunate few who can now qualify. Broad universal coverage of the aged without the present law's restrictions upon the amount they may earn to supplement their benefits is economically feasible if we change our whole approach. Mr. CURTIS argues that "since social-security funds are necessarily limited in amount because they depend upon the amount of economic productivity in the Nation, the possibility of drawing off a portion of this productivity for social-security purposes is not too large to injure the Nation's economic health." In times of high employment the older worker would be able to continue contributing to national productivity and the amount drawn off for old-age benefits would be a relatively small portion of the national income.

A program of modest benefit amounts, one that could be borne by a present tax rate not much greater in total effect than the cost of Federal grants for public assistance plus the combined amounts of employer and employee contributions at present, is advocated by Mr. CURTIS. This tax should be in the form of an addition to the current normal income tax rates and the costly wage-record system abandoned. If the tax for social security were handled like an addition to the income tax there would be an immediate saving on the wage-history records. Approximately 8,000 of the 15,000 employees engaged in the administration of the present program are directly concerned either with the enforcement of the pay-roll tax or the processing of the quarterly employer reports and the maintenance of the many millions of wage accounts. Practically all these operations and some of the remaining operations could be dispensed with, if benefits were independent of these wage records. Administration of the old-age and survivors' insurance cost now in the neighborhood of $50,000,000 with about $45,000,000 for administration of the old-age-assistance program. The elaborate and costly network of regional offices would be unnecessary and other administrative economies would substantially reduce the present administrative costs if payments to the fund were handled as a simple income tax.

The nonpartisan, nonpolitical Brookings Institution has also studied the present law and the administration's proposed changes. They, too, recommend drastic changes: Immediate assumption of full load, payment of benefits no greater than are necessary to give full protection against need, and financing through a universal flat-rate personal income tax earmarked for social security appears the best system to use in these uncertain times. Brought face to face with full-load costs to be met annually, the people will be in a better position than

they are now to determine whether individuals with personal income sufficient to protect them from need should be paid a benefit equaling that given to individuals who without the benefit would be in need. Decisions on such vital matters should be arrived at with full knowledge of the size of the true load and the real costs of the system.

"The American people and the Congress have at present an opportunity to reconsider the fundamentals of the social-insurance systems that may not come again. Because of the upward spiraling of wages and prices that has occurred since 1939 the money benefits now being paid under the most costly part of the program—old-age and survivors' insurance—are comparatively small. They are small enough so that at present the existing system could without great difficulty be converted into one designed primarily to insure against the dangers of want, and that will to a high degree preserve the freedom of the individual to determine what use he will make of his earnings. Such a system will leave a wide field open for the voluntary savings that have been a source of capital, particularly venture capital."

What too few people seem to realize is that social benefits granted by whatever formula possible must be paid for out of our national productivity. Pay-roll taxes become a part of the labor costs and hence part of the price the consumer pays—and thus are passed on both to the worker who will ultimately benefit from the social-security program and to those now excluded from that program. Thus the very basis on which we now collect the social-security funds contributes to the high prices which make the benefits shrink. Congress has a great opportunity and duty now to reexamine the entire fabric and philosophy of our Social Security Act.

The Right To Strike

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1950

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Star:

THE RIGHT TO STRIKE

"There is no right to strike against the public safety by anyone, anywhere, any time."

So telegrapned Calvin Coolidge, then Governor of Massachusetts, to Samuel Gompers on the occasion of the Boston police strike.

Public response all over the country was so favorable that Coolidge may be said to have established a national policy. It is thought that this declaration had much to do with his later elevation to the Presidency.

The Taft-Hartley law was a reaffirmation of the Coolidge declaration. It was passed after a winter of disastrous strikes had fanned smoldering public resentment to flames of anger. The Congress that was elected in 1946 was generally considered to carry a mandate from the voters that legislation be passed to prevent strikes against the public safety.

President Truman has played shameless politics, with the Taft-Hartley Act. He is now reaping the harvest of the demagoguery he sowed in the campaign of 1948. The people now suffer because there is a major strike against the public safety and the Nation's Chief Executive, reluctant for political reasons to use the law which he condemned, waited too long to do something in behalf of the people.

Labor has no weapon but the strike. That labor is entitled to this weapon is also public policy in the United States. But that labor is entitled to use it without limit is not true. The people said so emphatically in the 1946 election. They are saying so now, as schools close, transportation slows down, and householders frantically strive to make a few bushels of coal last through the emergency.

We do not know how coal may be produced, if miners will not work, even though they are commanded to under the law of the land. But we do know that the people believe today, as they did in 1919 when Calvin Coolidge was Governor of Massachusetts, and as they did in 1946 after a winter of industry-wide strikes, that no one, anywhere at any time, has the right to strike against the public safety.

President Truman has failed in this crisis. We hope that better leadership will emerge from it. The 1950 elections cannot fail to reflect the public resentment over being the victims of the current coal strike.

The people of the United States believe that the right to strike does not include the right to strike against the public safety. They have said so through their Congress. They must say so again with such emphasis that the Federal executive department will respond to their wishes.

Are Local Chambers of Commerce Abandoning Their Fight for Local Industry?—Seventy-six Economists of American Economics Association Oppose Basing-Point Bill Because Against Public Interest

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1950

Mr. PATMAN. Mr. Speaker, it is inconceivable to me that over 3,000 local chambers of commerce will permit the parent organization here in Washington, the United States Chamber of Commerce, to vote them against their own interests. That is exactly what is being done in the basing-point matter. The old Pittsburgh-plus is rearing its ugly head again. This time monopolistic interests are not trying to conceal the fact that they want the power to destroy any local industry anywhere in the United States.

S. 1008 is a bill to perpetuate concentration of industry in a few areas around Pittsburgh, Pa. The Supreme Court outlawed the basing point when used for the purposes that these monopolies want to use it for now, on April 26, 1948. If the basing point is legalized, it means no decentralization of industry. Without the basing point every locality in the United States on water transportation is a potential site for a steel mill. With the basing point legalized it is not a potential site for a steel mill. If the basing point remains outlawed in every section where there is iron ore, there is a potential site for a steel mill, but if the basing point is legalized, such a site will not be considered. In practically every county in the United States there is limestone that can be used for making of cement. With the basing point outlawed there is no reason why a lot of cement plants should not be built. In fact, a large number have been built since the basing point was outlawed in 1948. If the basing point is legalized, there will be very few, if any more, cement mills constructed. The railroads strongly favor the basing point on account of the cross hauling that is caused thereby. This is very uneconomic, costing the consumers enormous amounts in excess of what should be paid, but it means dollars to the railroads.

I am inserting herewith an editorial from the Tulsa (Okla.) Tribune concerning the stand of the 76 economists on the basing-point bill. It is as follows:

A TEST JUST AHEAD

Seventy-six economists of the American Economics Association have just joined in a letter to the United States Senate asking it to defeat the basing point bill.

It is a measure designed to facilitate the use of basing-point or freight-equalization systems of pricing which were knocked out in the case of cement and steel by recent decisions of the Supreme Court.

The letter is a studied argument winding up with the idea that businessmen as well as Socialists can destroy free enterprise by engaging in national planning. According to John T. Flynn, author of The Road Ahead, the test of socialism is whether or not one believes in national planning.

It may be costlier for a time to stick to the traditional American policy of maintaining a free and competitive economy, but we ought to do it, the economists declare. To approve price fixing under the guise of clarifying the law, which they say is happening in this instance, would weaken the antitrust laws and hinder their enforcement, establish two systems of pricing, since only a few industries heretofore used the basing-point method, emasculate the Robinson-Patman Act, and be a blow to freedom by restraining competition.

The letter will be an irritation to those segments of business that believe sincerely there is nothing wrong but something very fair with uniform prices arrived at through manipulation of freight charges. Admittedly it complicates affairs for the large firms in such lines as cement and steel to have to sell at dock prices plus freight. It might even force them to such uneconomic ends as opening new plants in sections they have heretofore subsidized by absorbing most of the freight rate from the central plant. It might cost the people of the undeveloped portions of the country more for their heavy goods until enterprise comes along to open plants closer to them than Pittsburgh or St. Louis. And there is no indication that Congress is going to pay any heed to the letter.

But when the history of the country is written later the letter may have a place there, among the other warnings that it was a bad action to trespass onto the field of free competitive enterprise, whether the trespasser has a pink beard or a Van Dyke.

Trading on Bomb Control

EXTENSION OF REMARKS

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1950

Mr. JACKSON of Washington. Mr. Speaker, under leave to extend my remarks, I take pleasure in inserting into the RECORD an editorial which appeared in the Arkansas Gazette on February 14, entitled "Trading on Bomb Control."

This editorial supports the movement for world government that has been spearheaded in the House by my very able colleague, BROOKS HAYS. Under his effective leadership, this movement has gathered a momentum and a degree of support that would never have been dreamed of a year ago. This editorial is one example of the way in which the opinion of this country's leaders is rapidly being brought to realize that world government offers the best ultimate solution to the troubles that presently beset the world. It follows:

TRADING ON BOMB CONTROL

On the same day that Albert Einstein in America was warning that, if the hydrogen bomb is developed, it will bring the annihilation of life on earth within the range of possibility, a dispatch from the Soviet capital reported that possibilities of achieving world-wide atomic control have been revived by Moscow's diplomatic circles. But any idea that the Kremlin leaders may have been moved by a desire to avoid a hydrogen bomb cataclysm was destroyed by the Moscow dispatch's statement that Soviet UN delegate Jacob Malik had hinted that Russia would be ready to continue atomic control talks in the United Nations if China were represented by a Communist delegation instead of a Nationalist one.

It seems likely that the question of Communist representation for China in the UN is only one of timing. Sooner or later it will come. But the Soviet Union is not contributing to progress on atomic control by putting a price tag on its willingess to cooperate. Even if Communist China were represented in the United Nations, this would not change the balance of power. The West would still have a superiority in voting strength and Russia would still have its veto.

The atomic control question cannot be settled by the obsolete methods of political horsetrading. As Professor Einstein observes, it will require the creation of new supra national governmental machinery. The Russians have shown no awareness of this necessity. And Americans, although they have demonstrated an appreciation of the need for political pioneering, have not taken positive steps in this direction. Only when we have put ourselves squarely behind a policy such as that enunciated in Congressman BROOKS HAYS' world federation resolution, can we feel that we have explored the path which Professor Einstein is talking about. Meanwhile, we can hope that the Russians will be able to realize that Einstein is speaking for them too when he warns of the possibility of annihilation.

People Eager To Hear About Ways To Preserve Peace

EXTENSION OF REMARKS

OF

HON. WALTER K. GRANGER

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1950

Mr. GRANGER. Mr. Speaker, under leave to extend my remarks, I should like to insert in the RECORD an editorial from the Ogden Standard Examiner, Ogden, Utah, under date of February 5, 1950.

It is a brief but timely editorial on the subject of peace. As one of the sponsors of the world federation resolution I commend it to you for your reading.

The editorial follows:

PEOPLE EAGER TO HEAR ABOUT WAYS TO PRESERVE PEACE

If any man in Congress knows the number of billions required to prepare a nation to take part in an atomic-bomb war and the size of the catastrophe to befall the combatants and innocent bystanders alike if nations begin dropping that kind of bombs on each other, it is Senator BRIEN MCMAHON (Democrat, Connecticut), for he is the chairman of the Joint Congressional Atomic Committee.

Gripped by the strong emotions his knowledge inspired, the Senator last week called upon the Nation to move heaven and earth to stop the atomic armament race. The Senator proposed the spending of as much money as a tiny war would cost to provide financial aid to Russia and other countries in the hope that economic aid would reduce the spirit of aggression.

The Senator's speech touched off lively discussion, probably to his surprise, because he confessed that his proposal would be viewed by some critics as wild and impractical, as indeed it is so viewed by some, but the general opinion is that it was time that somebody spoke up as dramatically as MCMAHON did for the good it will do in mobilizing public opinion against the defeatist notion that nothing can be done to stop the drift toward war.

Congress is even now considering in committee the famous Resolution 64, which says: "*Resolved by the House of Representatives, the Senate concurring,* That it is the sense of the Congress that it should be the fundamental objective of the foreign policy of the United States to support and strengthen the United Nations and to seek its development into a world federation open to all nations with defined and limited powers adequate to preserve peace and prevent aggression through the enactment, interpretation, and enforcement of world law."

The number of Americans, including Members of Congress, who believe that action in harmony with the foregoing will be effective in preserving peace, is far larger than the number who will go along with MCMAHON on his peace program. Yet the world federalists, despite their number and influence, never have gained the Nation's dramatic attention with their program as the Connecticut Senator has done with his.

The lesson MCMAHON taught is that the country, and probably the world, is eager to hear, for a change, some strong and emotional instructions as to how we can be switched from the war path.

Letter From Edward Francis Baker, of Mount Morris, Ill.

EXTENSION OF REMARKS

OF

HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1950

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks, I am submitting for the benefit of the Members of the House of Representatives a letter from a young man from northwestern Illinois.

During my many years as a Member of Congress I have never received a more unselfish nor a more logical letter. It convinces me that as long as we have young men such as he, with such American ideals, those who desire to shoulder America with foreign ideologies are going to have trouble in saddling the American people with un-American panaceas and schemes.

The letter follows:

MOUNT MORRIS, ILL., *February 14, 1950.*
Congressman LEO E. ALLEN,
Washington, D. C.

DEAR SIR: I'm a young farmer (age 29), just getting started farming. I've been farming with my father for 10 years. This is my second year on a full-share basis. I'm married, with two children—a girl 4, and a boy 3.

Just getting started on my own, I'm naturally interested in making farming a paying proposition. I've voted a Republican ticket since I became 21. I'm in almost full agreement with everything the party has done in this period.

I (being an employer) believe Congress should keep the Taft-Hartley Act. There should be some protection against the loss of free enterprise, and no union has the right to tell an employer how his business should be run and what he has to pay. I'm also against the Brannan plan. I favor the sliding parity support plan. In case of an oversupply, let the price drop a little. The consumer has a tendency to feel bitter against the farmer on this direct payment. The potato situation is just a forerunner of what will happen if we continue to keep our support prices too high. I believe in letting supply and demand be the main factors in determining the prices we receive. A little Government control on marketing protection is about all I think we need. That is against speculators and large companies or syndicates trying to regulate the market channels. I think that with our present means of getting information out to the farmers (radio, farm meetings, etc.) we should be able to pretty well figure out just what is needed in production and how we can meet certain situations. I think emphasis should be placed on conservation of our soil and the Government agencies carrying on this work should not be cut out in any way. We don't quite need all we can produce now, but in another 50 years I think we may.

Getting back to my thought on our Government. I'm certainly against the socialized state. It has helped England to reach bankruptcy at a much faster pace than I think she might ordinarily have. I think it is exactly the opposite view from what our forefathers had in mind when they came to America. Let's give each American a little

incentive to work and not tax him to death, and I think our country will stay free and prosperous. If everyone is desirous of a Government job rather than one of his own, it won't be long until the people will be working for the State instead of the State for the people. I think we are at the crossroads today.

My whole thought on the matter is about like this. Let's keep every American an individual and not one of the masses. I love my work and I do it because I don't have someone telling me how to do it. I'm still my own boss, and I wouldn't trade this fact for all the promised security of some other system in the world.

Sincerely,

EDWARD FRANCIS BAKER.

Statehood for Alaska

EXTENSION OF REMARKS
OF
HON. EDWARD BREEN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1950

Mr. BREEN. Mr. Speaker, statehood for Alaska is a must, both for the people of the United States and for the people of Alaska.

Full development of Alaska is of vital importance to the United States from the standpoint of national defense.

Alaska has an area of about 586,000 square miles, about one-fifth the size of the United States, a little more than twice as large as the State of Texas. Only 56 miles of water, in the Bering Strait, separates Alaska from Russia. Out in the Bering Strait are two islands, Little Diomede, on the east, belongs to the United States; Big Diomede, to the west, belongs to Russia. They are only 2½ miles apart.

Alaska was the only part of the American continent to be invaded during World War II. Alaska is on the Great Circle route to Asia; the air route from San Francisco to Japan via the Aleutians is about 1,700 miles shorter than the route via Hawaii.

Gov. Ernest Gruening, of Alaska, has recently stated that Alaska is "wholly vulnerable" and that it "could be taken tomorrow by a minor-scale air-borne invasion from Siberia, either across Bering Strait or over the Pole." In the opinion of the Governor, statehood for Alaska and adequate defenses are inseparably linked, and one is dependent upon the other. Economic development calls for defense, and statehood will bring economic development. As long as Alaska remains undeveloped and militarily weak, the national safety is imperiled.

We are forcibly reminded of Gen. Billy Mitchell's statement that "He who holds Alaska holds the world." Any and all parts of the United States could be attacked from enemy-held airfields in Alaska.

While Alaska remains economically undeveloped, and what could be very strong military defenses are neglected, there is evidence that there is considerable economic activity across the Bering Straits. We are informed that permanent farm populations are being established to support industrial, mining, and military activities; and also that all kinds of experiments in agriculture are being carried on to determine how far north and under how adverse conditions foodstuffs can be grown; and that new kinds of crops and grains have been developed which prosper in the soil and climatic conditions there. In the meantime, I have been advised that little or nothing has been done in Alaska. Large expenditures have been made in Europe and elsewhere in the interests of security and for the containment of communism, and by contrast the importance of an area so near at hand and the one point at which the United States itself impinges almost directly upon the Russian homeland, has been neglected.

It must be pointed out also that Alaska and the United States are separated only by our friendly neighbor, Canada. The Canadian and American borders are the friendliest in the world and are the result of years and years of solid and genuine friendship and cooperation.

The time to concentrate upon building up Alaska in every respect, militarily and industrially, has come, and indeed such attention is long overdue. We cannot and should not be satisfied until we have a strong Alaska until Alaska's potentialities as a bulwark of defense and a source of valuable resources are realized to the utmost. I sincerely believe that the best way to accomplish this is to take the first step in the direction of statehood, and Alaska must have statehood now.

Federal Expenditures

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1950

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks, I am inserting in the Appendix of the RECORD a letter and certain tables relating to our fiscal situation, the material having been prepared by Mr. Paul O. Peters, research consultant, Washington, D. C.:

WASHINGTON, D. C., *March 2, 1950.*

Mr. DANIEL A. REED,
Ways and Means Committee,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN REED: A study of the economic reports issued by the President's Council of Economic Advisers indicates that the Federal Government now should embark upon a program designed to drastically cut Federal expenditures at all levels where they make no counted contribution to the gross national product.

At page 626 of the annual report of the Secretary of the Treasury for the fiscal year 1948, it is shown that approximately $19,700,000,000 of the $36,300,000,000 in Federal expenditures do not involve purchases of production and might well be carefully scrutinized by the Appropriations Committee of both Houses and drastically trimmed.

An economy that depends upon deficit financing in time of peace is an economy headed for disaster. The Federal spending is providing a pattern for deficit spending at State and local levels, and the only way to put the Nation's financial house in order is to start now to balance the budget and begin the liquidation of the public debt.

This can be done only by cutting down on expenditures which make no counted contribution to the gross national product and indirectly to our national income and security.

From the testimony of several of the witnesses who have so far appeared before the Ways and Means Committee I find but little attention has been given to the matter here presented.

For your information and use there is submitted herewith several compilations which show better than words in this letter how the substance of our people is being sapped for the benefit of people other than "we the people of the United States."

Also, in view of the fact that the purchasing power of our dollar has now dropped to approximately 58 cents, it is suggested that the committee review the present exemptions for single and married persons with dependents and place the exemptions on a realistic basis, say $750 for a single person and $1,500 for a married couple, with an extra $500 for each dependent. The hidden excise taxes, tied in with State and local taxes, put a heavy burden on every person's income, leaving nothing with which many are able to provide security for the hazards of life, including old age.

Respectfully,

PAUL O. PETERS.

Summary of postwar foreign credits, grants, loans, and capital investments of the United States Government for the period July 1, 1945, through Jan. 31, 1950

Capital investments:	
Paid to International bank	$635,000,000
Paid to International Monetary Fund	2,750,000,000
Grants and credits utilized:	
Lend-lease	2,553,000,000
Civilian supplies	4,211,600,044
European recovery program	6,353,693,213
UNRRA and post UNRRA	2,877,099,803
Interim aid	577,000,000
Chinese stabilization and aid	399,173,438
Greek-Turkish assistance	584,429,753
Philippine rehabilitation	346,000,000
Korean aid	11,000,000
Refugee assistance	153,000,000
International Children's Emergency Fund	65,196,904
Inter-American aid	29,000,000
American Red Cross	10,000,000
Surplus property credits	1,341,000,000
Other items	340,019,047
Export-import bank, loans and guaranties	2,455,000,000
British loan	3,750,000,000
Utilized total commitments	29,441,212,207

Compiled from Foreign Transactions of the United States Government, issued October 1949, and from Daily Treasury Statement for February 15, 1950.

This compilation does not include amounts expended for memberships in or contributions to international organizations, which costs were $144,629,262 for the fiscal year 1949, according to S. Rept. No. 1274, 81st Cong. 2d sess., issued February 14, 1950.

THE LOAN PROGRAMS OF THE UNITED STATES GOVERNMENT AND OTHER ITEMS AFFECTING THE GROSS NATIONAL PRODUCT

In computing the gross national product, the Treasury Department deducts from Federal budget expenditures items not involving purchase of production. Such items include expenditures for interest, veterans' pensions and benefits, tax refunds, grants-in-aid to State and local governments, loans to foreign governments, loans by Government-owned corporations, and such items and grants to foreign nations under programs like ECA.

The annual report of the Secretary of the Treasury for the fiscal year 1948, at page 626, shows that of budget expenditures of $36,300,000, items in the total amount of $19,700,000, representing expenditures not involving purchases of production were deducted leaving the contribution to the gross national product from Federal expenditures but $16,600,000,000.

The compilation following is submitted as an indication of the total of Federal expenditures for the fiscal years 1950 and 1951 which make no counted contribution to the gross national product of the United States:

[All figures are in millions]

	1950	1951
Interest on the public debt	$5,725	$5,625
Tax refunds	2,177	2,151
Grants-in-aid [1]	1,803	3,265
Export-Import Bank loans	71	48
Veterans' pensions, etc.:		
Pensions and compensation	2,243	2,237
Insurance	518	39
Loan guaranties	61	68
Readjustment benefits, etc.	2,871	2,542
Reconstruction Finance Corporation:		
Loans to cooperatives	10	30
Loans to prefabricators, etc.	52	45
Business loans and guaranties	153	155
Housing and Home Finance Agency: Loans to middle-income cooperatives		80
Agriculture:		
Loans to low-income farmers for housing	20	45
Farmers Home Administration, loans	26	26
Commodity Credit Corporation, loans	1,533	952
Rural Electrification Administration	362	436
European Cooperative Administration: Loans, grants, credits, etc.	4,040	3,250
Deductible totals	21,665	20,964

[1] Actual expenditure 1949; estimate for fiscal 1951.

The table is an indicator of the trend in Government spending. Just how the Government, operating at a deficit, is able to carry on loan and other programs which make only a negligible contribution to the gross national product is the growing problem which the Congress must some day wrestle with. Eventually—why not now?

FOREIGN TRANSACTIONS OF THE UNITED STATES GOVERNMENT FOR THE PERIOD JULY 1, 1949, TO JANUARY 31, 1950

From July 1, 1945, through June 30, 1949, the foreign transactions of the United States consisting of grants, loans, and credits to the people of other countries totaled over $26,725,000,000. For the first 7 months of fiscal 1950 additional foreign spending was as follows:

Agriculture:	
Assistance to Greece and Turkey	−$4,471.24
China Aid Act of 1948	1,275,665.00
Foreign Aid Act of 1947	−9,561.08
Relief to people of countries devastated by war	−260.00
Commerce: Bureau of Public Roads: Assistance to Greece and Turkey	118,784.53
Army:	
Military functions:	
Assistance to Greece and Turkey	$55,745,024.91
China Aid Act of 1948	88,130.27
Foreign Aid Act of 1947	28,711.20
Civil functions:	
Government and relief in occupied areas	551,600,044.68
Navy:	
Assistance to Greece and Turkey	9,949,122.79
Payments for UN relief and rehabilitation	889.90
Federal Security Agency:	
Assistance to Greece and Turkey	3,843.79
Payments for UN relief and rehabilitation	1,099.98
General Services Administration:	
Assistance to Greece and Turkey	106,849.55
China Aid Act of 1948	4,014,538.22
Foreign Aid Act of 1947	−103.46
Payments for UN relief and rehabilitation	−593.22
Maritime Commision: Payments for UN relief and rehabilitation	−1,592.80
State Department:	
Assistance to Greece and Turkey	−166,451.64
China Aid Act of 1948	446,826.39
International Children's Emergency Fund	7,196,904.05
Relief to people of countries devastated by war	−4,377.68
Economic Cooperation Administration:	
Disbursements by ECA	$1,710,144,423.13
Agriculture Department	235,451,515.84
Commerce Department	3,089,822.63
Defense Department:	
Army	38,774,272.15
Navy	−68,413.13
Export-Import Bank of Washington	71,868,285.08
Federal Security Agency	83,994.79
General Services Administration	1,091,846.77
Labor Department	15,489.07
Post Office Department	8,988,029.00
Assistance to Greece and Turkey	1,687,058.40
China Aid Act of 1948	−10,651,721.23
State Department	188,432.26
Foreign Relief Act of 1947	−580,713.07
Relief to people of countries devastated by war	−3,688.76
Other	17,351,638.46
Total, net expenditures July 1, 1949, to Jan. 31, 1950	2,707,769,295.52

Appropriations for international activities of the State Department other than the Foreign Service, for the fiscal years 1945 through 1950, both inclusive

Activity	1945	1946	1947	1948	1949	1950
Participation in international organizations	$1,431,087	$9,008,158	$14,616,414	$90,961,118	$100,966,490	$99,663,558
Construction loan to United Nations					65,000,000	
International contingencies	1,500,000	4,250,000	3,000,000	4,000,000	2,606,000	3,300,000
Cooperation with American Republics	3,450,000	4,098,370	5,375,000	3,900,000	4,100,000	
Salaries and expenses, Philippine rehabilitation			47,918,000	42,500,000	21,499,000	17,166,398
Mexican Boundary and Water Commission	430,000	1,636,200	10,130,000	4,950,000	2,514,428	2,020,000
Rio Grande emergency flood protection	100,000		100,000	25,000	100	15,000
Informational and educational activities				3,000,000	27,000,000	47,300,000
Expenses and salaries, international commissions	197,000	232,910	318,100	415,417	469,130	500,000
Cultural relations with China, Near East, etc.		1,390,000				
Liquidation, informational and cultural program				1,430,000		
Payment to Government of Finland						5,574,740
Payment to Government of Switzerland						14,600,000
Intergovermental Committee on Refugees		4,500,000				
Other miscellaneous expenditures	135,000	355,000	90,000			125,000
Transfers from war agencies:						
Salaries and expenses, foreign economic functions, State		3,747,454				
Office of International Information		24,934,134				
Inter-American Affairs functions		5,819,414				
Strategic Services functions		2,500,000				
Surplus-property disposal, Army		325,000				
Salaries and expenses, War Assets Administration, special		3,516,000				
Yearly total	7,246,087	66,312,638	81,547,515	151,181,535	225,149,148	190,204,696

Taconite—The Need for Research and Development

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1950

Mr. BLATNIK. Mr. Speaker, northern Minnesota is an area rich in natural resources and one which offers great opportunities for future development. In the past our great forests have been an important source of timber for the Nation—the high-grade iron ore of the Mesabi Range has been the backbone of the American steel industry for over half a century. But these resources are not unlimited. Our virgin forests are gone, and it is estimated that the high-grade iron ore of Mesabi will be depleted in another 20 years at the present rate of production. For this reason

we must give our attention to the development of other natural resources which are available in great quantities. We have enough low-grade ore and taconite to supply America's steel needs for a thousand years if such resources are developed. Northern Minnesota needs a reforestation program to restore our forests and rehabilitate the timber industry.

Northern Minnesota also has enormous deposits of peat—over half of all United States peat deposits are located in northern Minnesota—and the development of this peat offers this country a new and almost unlimited source of cheap power and fuel. For this reason it was most encouraging to note that the gentleman from Minnesota's Sixth District and my very good friend, Mr. MARSHALL, has recently introduced H. R. 7330, a bill to provide $1,000,000 in Federal funds for research in peat, and another $1,500,000 in loan authorizations to small business for peat production. This is an excellent proposal, and I want to go on record as being in full support of the measure. Congressman MARSHALL has my unqualified and active support in his efforts to secure passage of H. R. 7330.

I will now discuss briefly the question of taconite and the need for its development. Northern Minnesota is fortunate in having unlimited amounts of taconite, and this taconite contains the iron ore upon which our economy depends. For this reason it is proper that it should be discussed at this time.

A prosperous industrial economy and national security require, above almost all else, a continuous, adequate, sure, and safe flow of increasing supplies of iron ores to the country's iron- and steel-making facilities.

Without prejudice to the progress made to date, or to the sanguine hopes of the future, for the ultimate development of foreign sources of iron-ore supplies, one cannot avoid recognizing that the full success of such plans depends greatly upon an almost universal peacetime atmosphere. This condition certainly does not prevail in the cold war of today or appear on a nearby horizon.

The new set of realistic economic criteria used by Congress today in guiding it in its decisions should soon be brought to bear on this subject and be clearly passed on to industry, so that they can be applied mutually in endeavoring to assure adequate iron-ore supplies for the country. Violation of these guides, not yet fully recognized by many in industry, will surely endanger both our industrial health and security. We recognize that it has been necessary in the development of our decisions to adjust former peacetime economic criteria to the realities of our present era and responsibilities. Today we are fighting a cold war by unorthodox methods and unprecedented expenditures for national security and defense. Hence, determinations surrounding the supplies for production of and the marketing of industrial products must be kept in harmony under economic rules which realistically take into consideration the conditions of our present circumstances and the possibilities of a hot war.

Through two world wars the upper Great Lakes area has successfully supplied most of the required volume of iron ores without protective demands upon our military services. Today the same area still stands ready and capable of providing practically unlimited supplies of iron ores without the strain of military protection for its transportation routes such as are necessary in foreign fields or on open international sea lanes.

In addition to the types of iron ores supplied the country during the last two World Wars, the upper lake area has an abundant reserve of iron ores described as taconite. These are the types of ores upon which, in keeping with our American tradition of progress, we should begin to depend in larger measure. They represent a grade of ore in abundant supply within our own national boundary.

A large degree of national dependence upon foreign imported iron ores has many pitfalls adverse to both peacetime industrial health and wartime defense. It calls for a radical shift of plant location to certain coastal areas tending toward densifying population centers and increasing the strategic disadvantage of already critical target areas. Also importation of foreign iron ores tends toward delaying the necessity for an overdue advancement in iron- and steel-making techniques such as are known to be practiced on the European Continent and understood to be an important part of the Soviet program.

Sufficient progress has already been made in the beneficiation of taconite ores to point the way toward possible over-all economies by the broad utilization of these ores. These advantages are especially with regard to more efficient material-handling methods and adjustment of heat requirements. This beneficiation can be done locally near the ore bodies through the use of electric power and heat obtained from nearby reserves of heat.

These are only a few of the reasons why I have proposed that the Congress provide ways and means for prompt research and development of taconite for metallurgical purposes and heat for power and related purposes.

FEPC Bill

EXTENSION OF REMARKS

OF

HON. JOHN C. DAVIES

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1950

Mr. DAVIES of New York. Mr. Speaker, I wish to make a few comments and observations concerning the piece of legislation which passed this House last Thursday, February 23. That measure, originally called the FEPC bill, as we all know was so completely hacked to bits by the McConnell and other crippling amendments that it bore almost no kinship, either in scope or purpose, to the original bill. It was so unrecognizable, in fact, that the father of the FEPC bill, Mr. POWELL, refused to vote for the version which finally passed this House.

All of us know why the original bill had its heart cut out by the McConnell amendment. A bipartisan coalition rallied enough votes to pass the amendment. It was a foregone conclusion that no Member who represents a district below the Mason and Dixon's line would vote for the bill in its original form. But most people believed that the members of the Republican Party who sit in this body would cease playing politics as far as this measure was concerned. After all, did not the Republican platform of 1948 contain a civil rights plank?

Ah, but we who believed this, were wrong. We were hopelessly naive in the ways of politics. For even on a matter dealing with fundamental rights for millions of our citizens, many Republicans would not uphold the side of human freedom.

Our Declaration of Independence states that one of the inalienable rights with which our Creator endows us is the pursuit of happiness. Certainly, in modern society the pursuit of happiness includes the right to work in a free economy according to one's talents, regardless of religion or race.

In all justice I will admit that a few of the Members from the North who voted for the McConnell amendment did so sincerely, because they believe that racial and religious intolerance cannot be cured by legislation, but by education. In the final analysis it is true, education is the answer, but the original FEPC bill was a step toward that educational goal. It is true that we cannot legislate men's minds. But the Nation, during its tumultuous history, has been governed by many laws which, when passed, were shocking and revolutionary but within a few years were part of our national thought and philosophy.

But aside from this group, there was a much larger group of Republicans who teamed with southerners to emasculate the FEPC bill. I submit that these men voted for the McConnell amendment solely because the original FEPC bill was endorsed by the administration.

We Democrats admit that we are split wide open on the civil-rights question. But what happened to the supposed solidarity of the Republicans? For political expediency, many of them voted for the McConnell amendment so that they could cripple the administration-backed bill and get credit for the final product. Many strong civil-rights advocates voted for the final product, but only because, though it was worth while, it was better than nothing.

If those Republicans want credit for what finally passed this House, I say let them have it. It is certainly nothing to be proud of and I seriously doubt whether many citizens, regardless of their political affiliation, are proud of those Representatives who voted to cripple the original FEPC bill.

I only hope that the voters whom those men represent come to the polls next November and show them that human rights are a matter above the level of partisan politics.

A National Tragedy

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. REED of New York. Mr. Speaker, the constitutional rights of the people to life, liberty, and property have been brought to a very low ebb by the failure of the President of the United States to take immediate action in the coal strike still continuing, notwithstanding the belated injunction and contempt procedure. Millions of people, old young, sick, crippled, and those who are institutionalized for one cause or another, are made to suffer because of the stubbornness of our Chief Executive. I wonder if his failure to act in this great crisis at a time when he should have acted, notwithstanding the suffering his dereliction will cause, is a result of his desire to curry political favor with John L. Lewis and his followers.

Right now in the North the weather is extremely cold and from time to time snowstorms are sweeping over my congressional district, where there is actual suffering, and unless coal is made available without further delay the consequences to human health and life will be tragic. I am in a minority in Congress; therefore, I am not in sympathy with the socialization of our coal industries by having the Government take over the mines. This would be one of the steps in the program of both the Communists and Socialists whose voices seem to be the only ones heard by the administration.

This strike in the coal mines clearly indicates that the control of only a few industries by a political-minded administration can quickly deprive the people of their rights to life, liberty, and property, which is in violation of our Federal Constitution.

With the coal mines under the control and domination of one man, aided and abetted by a political administration, a large percentage of the industries essential to life, liberty, and property, can be ruined.

I deplore that in a supposedly free country one man should be able to inflict such consequences upon millions of people.

To suffer and permit the industries of this country to be closed will obviously inflict a cruel blow upon the employees of these industries and unless relief from the coal shortage is forthcoming it will mean in many cases loss of homes, evictions, untold suffering, deaths, and consequences that are immeasurable.

I have called upon one of the many industrial cities in my district for facts pertaining to the effect of the present coal strike. I have received a telegram this day, March 2, 1950, in reply to my request, which under leave heretofore granted I am inserting as a part of my remarks. I believe that this report from the industrial city of Jamestown, N. Y., will fairly represent the perilous plight of cities and villages throughout the Forty-fifth Congressional District of New York. The wire reads as follows:

JAMESTOWN, N. Y., *March 2, 1950.*
Hon. DANIEL A. REED,
Member of Congress:

Coal situation this industrial community desperate. Note following facts:

1. Municipal light and power plant, which also furnishes heat to city hospital, has scant 10 days' supply.
2. Fifty percent of industries facing shutdown by March 7 or 8.
3. Furniture plants burning waste consume more coal when not operating and therefore will freeze when shut down.
4. Dim-out already in effect.
5. Prices for inadequate supply of poor coal now about double pre-strike price of good coal f. o. b. mines.
6. No profiteering by coal dealers.
7. Trickle of coal mined comes from stripping (surface operations) which are uncertain due to weather and roving bands of pickets.
8. Closing of industry means heavy loss of workers even though they receive unemployment benefits, plus suffering among those who can least withstand it.

Unless mining of bituminous coal is resumed at once, permanent loss will be serious.

JAMESTOWN INDUSTRIES, INC.,
H. G. KING, *General Manager,*
Division of the Manufacturers
Association of Jamestown, N. Y.

Treachery Is Protected by Statute of Limitations

EXTENSION OF REMARKS
OF
HON. L. GARY CLEMENTE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1950

Mr. CLEMENTE. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD George E. Sokolsky's column of February 14, 1950, in which it is pointed out that an act of treachery against the United States is protected by the statute of limitations:

THESE DAYS

TREACHERY IS PROTECTED BY STATUTE OF LIMITATIONS

(By George E. Sokolsky)

A point to note is that a fellow can commit an act of treachery against the United States, wait 3 years, announce his crimes, and nothing can be done about it. The statute of limitations shall have run and he is safe. This is the open season for ex-spies announcing their crimes. There is even money in such confessions.

That is why former spies like Whittaker Chambers, Henry Julian Wadleigh, and Mrs. Hede Massing can tell their stories in safety. That is why Alger Hiss could only be held for perjury. That is why some of them are only held in contempt of a congressional committee. The statute of limitations gives them a wonderful blanket protection for the crimes they actually committed.

The Hiss case, as important as it is, must reopen the question of the statute of limitations in such crimes. Actually, there ought to be no statute of limitations in crimes involving treason, espionage, treachery. There is no statute of limitations for murder; and while a murder may involve only one person, such treachery as the theft of the A-bomb involves all of us.

I want to quote from A Factual Review of the Whittaker Chambers-Alger Hiss Controversy, by William Marshall Bullitt, a distinguished lawyer and a trustee of the Carnegie Endowment for International Peace, of which Alger Hiss was president.

"On or about August 29, 1939, Chambers and (Isaac Don) Levine dined with Mr. (A. A.) Berle at the latter's Washington residence. Chambers revealed to Berle his whole story of the Communist underground in Washington, and particularly mentioned the names of Alger Hiss, Donald Hiss, Nathan Witt, and Lee Pressman.

"Mr. Berle was both worried and disturbed, because he believed that Chambers was telling the truth as he saw it. Berle at once took the following precautionary steps: (I) Established very close relations between the State Department and the FBI; (II) organized a special section in the State Department to follow any Communist activities; (III) arranged to have a weekly liaison meeting with the FBI for the exchange of information; (IV) worked with the Department of Justice in passing needed legislation for the Government's protection; and (V) twice checked with Dean Acheson, Assistant Secretary of State, who had Alger Hiss as his executive assistant; and Acheson vouched for both the Hisses absolutely.

"Sometime later, Levine conveyed the Chambers revelations to William C. Bullitt, then Ambassador to France, and to Lloyd (he must mean Loy—G. E. S.) Henderson, in charge of the Russian section of the State Department. Since then, the State Department has removed 134 members of the State Department, for disloyalty reasons. (The pamphlet was prepared in December 1948—G. E. S.)

"In 1943, and again in 1945, Chambers reported the facts about Hiss to the FBI."

In a word, as far back as August 29, 1939, the State Department and the Department of Justice had a lead to the Harold Ware Communist cell and its members. The FBI knew about Alger Hiss and must have followed the lead as a routine matter. On August 29, 1939, Soviet Russia was not our ally; in fact, Soviet Russia and Nazi Germany were in alliance and had signed the Molotov-Ribbentrop pact to divide the world by war. The nonaggression pact, as it is formally called, was signed on August 23, 1939. Actually, the war eventuated 9 days later by the invasion of Poland simultaneously by Russia and Germany, in accordance with the Stalin-Hitler alliance.

From August 23, 1939, until June 21, 1941, Soviet Russia and Nazi Germany were in alliance and the United States was fearful of the implications of the war they had made. Actually, it took us into a disastrous war. Yet, these high officials, A. A. Berle, Dean Acheson, William C. Bullitt, Loy Henderson, to say nothing of the Secretary of State, Cordell Hull, and the Attorney General, Frank Murphy, did nothing about the information which Whittaker Chambers gave them, and which now has been proved true in two trials before an American jury.

Many say today that Hiss and his associates should be forgiven because they operated in the wartime pro-Russian atmosphere. The truth is they were brought to the attention of our officials during the Stalin-Hitler alliance.

The issue raised here is one of responsibility. Who was ultimately responsible?

The Road Ahead

EXTENSION OF REMARKS
OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Thursday, March 2 (legislative day of Wednesday, February 22), 1950

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a condensation of the book entitled, "The Road Ahead." This condensation of the book by John T. Flynn was published in the February 1950 issue of the Reader's Digest. I wish to say that the condensation of the book exceeds what may be printed in the RECORD without an estimate. I have received an estimate from the Public Printer of $348.50 as the cost of printing the matter in the RECORD.

Mr. LUCAS. Mr. President, reserving the right to object, may I ask the Senator what the matter is?

Mr. BREWSTER. It is the condensation published in the Reader's Digest of the book entitled, "The Road Ahead," by John T. Flynn.

Mr. LUCAS. Its printing will exceed the number of pages permitted to be printed in the RECORD without an estimate being furnished, and the Senator says the cost will be $348?

Mr. BREWSTER. And 50 cents. I am sure the Senator will feel it is worth that amount, if he has the opportunity to read it.

Mr. LUCAS. I have read the book and I do not agree with the Senator that it is worth it. I do not think the Reader's Digest article is worth $348 of the taxpayers' money. If the economy-minded Senator from Maine wants to spend that amount of money, I am not going to object.

Mr. BREWSTER. I very much appreciate the Senator's courtesy.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ROAD AHEAD—AMERICA'S CREEPING REVOLUTION

(By John T. Flynn)

Most people in this country believe that the American Communist Party and its dupes are the chief internal enemy of our economic system and our form of government. This is a serious mistake. The Communists are a traitorous bloc in our midst, but if every Communist in America were rounded up and liquidated, the greatest menace to our form of social organization would be still among us.

This most dangerous enemy is the American counterpart of the British Fabian Socialist, who denies that he is a Socialist and operates behind a mask which he calls National planning. These Socialist planners are enticing us down the dark road that has led so many European nations to their doom. Unless they are recognized for what they are, and are stopped, they will destroy this country.

Our people have been so far from the European scene that they have not observed closely the forces which in the last 30 years have been eating away the foundations of European civilization. The same forces that ruined Germany, Italy, France, and Britain are repeating their work of destruction upon our economic and political organisms.

Of the countries in Europe which have moved into the Socialist camp, the two which concern us most are Russia and Great Britain. Each adopted socialism by a different route; each organized its Socialist society upon a different model. But both are Socialist. Russia was conquered overnight by a sudden, violent revolutionary convulsion. Great Britain moved into socialism a little at a time, without bloodshed, in a journey that took almost 40 years.

We are following in the footsteps of Great Britain. We are much further along the road than we suspect. If we do not clearly recognize that fact and abandon that fatal road, we shall inevitably, perhaps in less than a decade, be in the condition the British now find themselves in.

In Great Britain we have a perfect case history of the infection and progress of the Socialist disease and, while this book is about America, we should briefly review the carefully concerted Socialist plan by which that once great country—the home of modern capitalism and modern free government—was led stealthily to her present state.

The Socialist government in Britain did not come into power by accident. In 1883 a small group of Socialists organized what they called the Fabian Society. Among its members were such eminent persons as Sidney and Beatrice Webb, George Bernard Shaw, and Ramsay MacDonald. This group realized that if socialism were to make any headway against the solid rock of British opinion it would have to proceed gradually, by political methods. They adopted the policy and the name of the Roman general, Quintus Fabius, who held that the only way to conquer his principal enemy was to lure him to battle in small sectors and defeat him bit by bit.

They began by advocating not a Socialist state but a welfare state. Deciding against state ownership of land and industry, they simply proposed state ownership of such basic sectors of the nation's economy as credit, electric power, transportation, and coal. The rest of the economic system would be left in private hands but operated under plans made by the state.

They knew they must capture the mind of the working class and must take over the apparatus of the labor unions, so they formed a political arm which later became the British Labor Party. They would begin by cooperating with the Liberal Party, which corresponded to our Democratic Party, until their own Labor Party acquired strength enough to displace it.

They agreed they must penetrate and capture the instruments and leaders of public opinion and information—writers, churchmen, and schools.

This plan's central aim was to bring on socialism without mentioning that odious word—to offer to the voters one small part of the Socialist program at a time without the Socialist label on it. Thus they would smuggle socialism into the social fabric without arousing the suspicions of the people.

The small coterie of Socialist doctrinaries, which never had more than 4,000 members, got into action about 1905. Thirteen years later their party had pushed the old Liberal party aside. In 5 more years their leader, Ramsay MacDonald, was Prime Minister of England. At that time MacDonald did not remain long in power, but the Socialists continued to push through social-welfare measures which eventually accustomed the citizens to look to the State for the correction of all their ills. The climax of this creeping revolution came in 1945.

The First World War had hit Britain a smashing blow from which she never recovered. The Second World War struck her with such epic violence that her empire withered away. Her foreign trade disappeared and her economic system lay in ruins. No capitalist government had anything to offer other than sweat and short rations for a decade at least. Only the Socialist had his radiant rainbow ready, his promises of the good life, jobs for all, security for all from the cradle to the grave. And so in the general election of 1945 the inevitable happened: the Conservatives were swept out and a Socialist government came to supreme power in Great Britain. The Fabians' plan had succeeded.

For 4 years now the Socialist prophets of abundance and security have been in power. Finally it has dawned upon the British people that the realities of the Socialist paradise does not correspond with the rosy dream. The dream has turned into a nightmare.

Socialist propagandists from Britain are fond of claiming that they have socialized only about 25 percent of the economic system and that 75 percent remains under capitalism. This is a distortion of the facts. Britain has nationalized about 25 percent of her economic processes, but she has socialized almost the entire economic system.

The government has nationalized the following: the Bank of England (credit); cables and wireless (the overseas communications system); civil aviation; railways, bus transport and inland waterways; coal mines; electricity; the gas industry; medical services.

The rest of the economy has been socialized by a method under which the state makes the plans for all forms of business—farms, factories, shops. Government bureaus decide on production quotas for an industry as a whole and in many cases for the individual units. They fix the quotas, priorities, and prices on raw materials; fix wages; determine who shall get credit at the banks and who shall not. In sum, the state generally makes the blueprints upon the basis of which all business operations are carried on and polices those operations to insure faithful obedience to the state's plans.

If the British Socialist experiment were successful one would suppose that it would have produced more goods at lower prices, and workers would be better off than under the old capitalist regime; that the security of the Nation would be advanced in every way.

But these promised benefits have not appeared. On the contrary, by every economic, physical, and moral test, socialism has been a tragic failure. It is already falling apart. The people cry out against impossible prices, against scarcities, oppressive taxation, and bureaucratic oppressors.

Britain's foreign trade—the foundation of her economic existence—is being washed away. Even with the aid of billions of dollars from capitalist America she cannot settle her foreign debts except by the gradual extinction of her gold reserves.

Her people have seen withering away those great freedoms for which Britons have fought through the centuries—freedom from seizures and searches without warrants, freedom to work where and at what they choose, freedom to engage in business and to own property, freedom to work their privately owned farms as they choose.

Let us look at the black record. The Socialist government has operated at a loss the basic industries and services which it took over. At the end of 1948 it was producing coal at the rate of 7,000,000 tons a year less than the mines under private ownership produced before the war, notwithstanding the expenditure by the Socialist government of over $170,000,000 on mechanization to increase output. The national coal board lost about $95,000,000 in 1947. By raising the price of coal it managed to cover costs in 1948, but it is still in the red about $90,000,000 since it began operations.

The miners, despite the fiction that they are now the owners of the mines, will not

produce as much for themselves as they produced before the war for private owners. Around 84,000 miners a day fail to show up for work.

The Government owns and has operated the overseas air-transport industry in the Atlantic area at a loss of $244 on every passenger carried.

The railroads have been run at a considerable deficit.

Of course, every loss sustained by the Government on its enterprises must be paid through taxes taken from the people. There are no longer enough rich individuals to soak with any appreciable results. In fact, there are only 45 persons in England whose incomes after taxes exceed $24,000 a year, and only 35,000 with incomes between $8,000 and $16,000. Hence, to pay the losses of Britain's nationalized industries, everybody must be soaked, including the workers.

We have heard a great deal about Britain's achievement in providing homes for its workers. Actually, despite the Government's free-handed spending on housing, it has provided only about 230,000 houses a year compared with 364,000 in each of the two prewar years.

Britain's exports have fallen off disastrously. She can fix the prices her own people must pay, but she canont fix the prices to her foreign customers. In foreign markets she must meet the prices of her competitors. She cannot sell abroad goods whose prices must include the enormous taxes of the Socialist government.

This Socialist regime may be able to drag on as long as it receives free billions in aid from private-enterprise America. When that ceases—as it must—Britain will have to face the grim realities. If there is one prayer British Socialists should send up nightly it is that God will save America from drifting into socialism.

The bait held out by the Socialists to the workers was the vision of a softer and more abundant life. But poverty has not been abolished; it has simply been distributed. A small minority have been benefited a little; the great majority have been greviously brought down.

John Strachey, Minister of Food, boasted that the British people "are getting enough money to buy all the food they ought to have." Here is the permitted ration: 1 egg and a half a week, 3 ounces of butter, 6 ounces of margarine, 1 ounce of lard, 1 ounce of cheese, 1 ounce of bacon, 8 ounces of sugar, 6 ounces of meat, 2 ounces of corned beef. This is Socialist abundance 4 years after the war ended.

The Socialists' great boast concerns the social services they provide from the cradle to the grave. These begin before birth with prenatal care and cover medical care, hospitalization, old-age retirement payments, unemployment insurance, allowances for widows and for families in need. The allowances, however, are meager. But thin as they are, these social services, along with the losses on the nationalized industries and the cost of the bulging bureaucracy, are wrecking Britain's enervated economic structure.

Workers were led to believe that socialism would end wage slavery. But in fact the worker has now merely exchanged the old boss for a new one—a bureaucrat. The old boss might have been a tough fellow, but he usually was also a fairly decent human being. The boss now is a cold, impersonal, remote bureau.

No decision can be made on the job without an immense amount of paper work that begins at the local office and moves snail-like through various local boards, subcouncils, regional boards, and other bureaucratic nests up to London, and finally back through the same succession of petty bureaus.

Added to all this are the controls which are worse than they were during the war. Regulations and amended regulations pour from the presses daily so voluminously that neither shopkeeper nor housewife can keep up with them. There were 30,000 prosecutions for infractions of the regulations in a single year.

The Socialist leaders declared fervently they would never interfere with the right of British workingmen to choose their occupations. But adequate supplies of labor and full effort by workmen have not been forthcoming in the industries the government wishes to stimulate, so the government had to enact a law which says that no man between the ages of 18 and 50, or woman between the ages of 18 and 40, can change occupations at will. The Minister of Labor has the power to direct workers to the employment he considers best for the national interest. This power has been exercised upon occasion, and men have been put in jail for resisting it.

This ruthlessness extends to the farm. Over the farmer's head hangs a threat perhaps more serious than that applied to the industrial worker. Farmers are paid large subsidies to produce what the government wants them to raise, but there is a regular inspection of every farm and a record kept of its produce. If the farmer falls short of what is expected of him the government can put a price upon his property, pay him for it, and put him off the farm, which then passes into the hands of a government manager.

The British Socialist planners who have done these things are not wicked men; they simply believe they know how to run the economy of an entire nation. They have now discovered that this cannot be done without applying compulsions to labor and farmers as well as to owners of industries.

One of the curses of this system is that nothing is called by an honest name. Words are used to deceive. Hateful practices, abhorred for ages by a free people, are now identified by luminous words, while praiseworthy practices are ticketed with odious names. The man who works in a privately owned factory is a wage slave. Socialism itself is never called socialism—it is national planning. Thrift is a vice until the Government asks you to save and lend it money; then it becomes a virtue.

Socialists say that the most diabolical crime against society is profit. Private industry runs at a profit and uses that profit to expand its producing capacity. Government industry runs at a loss and taxes the substance of the people to pay for its inefficiencies. Which is the greater crime against society?

The British Socialists have been destroying freedom. This was inevitable. Years ago it was prophesied that the Socialist state, uniting the functions of political ruler, landlord and employer of the population, would result in tyranny. This is what happened in Russia.

Today the British Socialist, faced with the problem of compelling citizens to comply with his plans, has turned to compulsions. The Government has plenty of machinery for this, since it now possesses credit, electric power, transportation, and fuel—without which no man can operate a business—and can grant or withhold these.

The citizen's right to spend his income as he chooses is almost permanently abolished, since the government takes so much of it in taxes that most people have only enough left to cover the bare necessities of life.

It would be possible to fill a book with accounts, amusing and terrifying, of the blunders of men who assume that they know how to plan the economy of an entire nation. In 1947 Emanuel Shinwell, then Minister of Fuel and Power, ordered all electricity used for power shut off in the extensive industrial areas of London and the Midlands. This shut down 75 percent of British industry. The reason given was the shortage of coal. It would last, said the Minister, only 2 or 3 days. But it actually lasted 3 weeks, threw 2,000,000 people out of work and lost over $800,000,000 in desperately needed export trade.

Many predictions of the coal shortage had been made public. Why was no provision made against it by the Minister?

In 1946 Shinwell had foreseen there would be a coal shortage that year, so he suggested to Alfred Barnes, Minister of Transport, that 1,200 locomotives be converted to oil to effect a saving in coal. (Oil, being imported, is far more expensive than coal, and if 1,200 locomotives had been converted this policy would have cost about $16,000,000 a year more for fuel.)

Barnes converted 93 locomotives to oil at a cost of $6,000,000. Then he inquired about getting oil—and discovered there was none to be had for this purpose. The British Transport Commission reversed the plan. Barnes and Shinwell now had on their hands 93 locomotives for which there was no oil, so the 93 were converted back to coal.

In January 1947 the great housing plan was proclaimed: the Government would build 250,000 houses that year. Brick, cement, plumbing, nails, plaster, and other materials were ordered, and factories went to work to produce them. All this was well along when it was discovered that lumber could not be supplied for more than 60,000 houses, and that there was not nearly enough labor for the program. In the meantime, all the other materials were being furiously produced; mountains of bricks lay in brickyards, innumerable materials were piling up.

The great plan fell short by 190,000 houses.

These are just a few samples. We can match such blunders among our American planners. When they occur, the critics point to the stupidity of the planners. But the fault lies rather in the fact that no one man or small group of men, no matter how brilliant, can ever hope to comprehend the vast amount of data and the innumerable conditions which would have to be grasped in order to make effective plans for a large industrial nation. It simply cannot be done.

In taking over the railroads, the coal industry and others, the Socialists bought the properties outright from the corporations and stockholders who owned them. They paid for them with British bonds paying 3 percent interest. With each new industry it takes over, the Government adds another heavy obligation to its already crushing national debt. The folly of this lies in the fact that under the old order the stockholders had no claim for any return on their investment if the industry made no profit. But these bonds are now a fixed charge upon the Government, and it must pay interest on them whether the industry makes a profit or not.

England is being taxed to death. For instance, a clerk with an income of $2,800 a year gets one deduction of $560, an additional deduction of $720 for his wife, and $480 for his two children. Total deductions: $1,760. This leaves $1,040 of his income subject to visible taxation.

On the first $200 he pays 15 percent	$30
On the next $800 he pays 30 percent	240
On the next $40 he pays 45 percent	18
Total tax	288

A man with the same family and salary in the United States would pay $26 in visible taxes.

If a worker goes to the pub for a glass of beer to forget his troubles, he pays a tax of 16 cents on the pint. Half of the 80 cents paid for a ticket to a movie goes to the Government.

The dark realities of the condition created by this floundering Socialist regime have

brought more than one Socialist up with a jerk. Alfred Edwards, formerly a Socialist member of Parliament, declared: "I have spent years discoursing on the defects of the capitalist system. But we have seen the two systems side by side. The man who would still argue for socialism as the means of ridding our society of the defects of capitalism is blind indeed. Socialism just does not work." (Naturally he was promptly expelled from the party.)

In 1949 Lord Milverton, Labor whip in the House of Lords, renounced his party affiliation during the debate on steel. In a speech on the floor he declared, to quote the London Times, that "he had certain ideals and had thought the Labor Party could deliver the goods. He was now appalled at the type of goods which were being delivered. He thought he was participating in a crusade but found himself a camp-follower in a rake's progress. The road on which they were traveling led to a precipice at the foot of which clearly emerged the totalitarian state."

This is the system of socialism we in the United States are being asked to imitate.

We have seen what socialism means in Britain and the plan by which it was brought into effect and the consequences visited upon the British people. Do we have in America any movement comparable to the Fabian Socialist movement in Britain? And if so, what is it doing, how is it progressing and what are its chances of success here?

The answer is that we have precisely such a movement here; that it is making rapid strides; and that, unless it is soon arrested, nothing can prevent its extension here on the British model.

Do not confuse the present Socialist movement in America with what we have known for so long as the Socialist Party. This party has reached a low estate in numbers and in growth. I am referring to an entirely different movement led by entirely different men and under wholly different banners.

There are some persons who brand as socialism almost any intervention by the state into the economic system. Many imagine that socialism means confiscation by the state of the whole economic apparatus of the Nation. These concepts are incorrect.

As we have seen in Britain, modern socialism means the assumption by the state of the responsibility and authority for the control of the entire economic system. This does not mean that the state will take over every farm, mine, shop and factory. It will operate the great basic functions of credit, power, fuel, transportation and insurance. The rest of the economic system may be kept in private hands but must be operated according to plans made by the state and carried out under the supervision and compulsions of government bureaus.

This is the type of socialism with which America is now threatened. And just as it fastened itself on Britain by a movement that avoided calling itself Socialist, so it is being promoted in America by persons and organizations, that never use the word socialism. They call their system the planned economy. What that cunning label means is precisely the same thing that is now in operation in Britain.

The advocates of planning believe that the economic system must cease to be a free system and that the state, which under our system was forbidden to intervene in the management of industry, should be established as the master of industry with the power to make the plans for the whole economic system.

Who are these mysterious American Fabians? What is their organization and who are their leaders?

The crash of 1933 and the inauguration of Franklin D. Roosevelt brought into Washington swarms of men and women with blueprints for the reconstruction of civilization upon every conceivable model. Such a miscellaneous menagerie of social philosophers had never before been gathered together.

Because of the presence in positions of power of men like Wallace, Frankfurter, and Tugwell, streams of out-of-work or low-salaried Socialist professors and instructors, young lawyers, and economists flowed into nearly all the bureaus in Washington. As the bureaus increased in number, fresh hordes of Socialist doctrinaires, ranging from dark-red revolutionaries to mild-mannered pink reformers, multiplied in the Government. In time, the left-wingers floated to the top.

The crack-up of 1938 and the rise in unemployment created the opportunity for a new type of radical who called himself an economic planner. This new form of hooded socialism gained immense ground. A man could espouse it without confessing himself a Socialist. Actually a great many of the men who were arguing for the planned economy declared their purpose was to save capitalism.

The theory of economic planning which Stuart Chase, George Soule, and others had been preaching for years rose into respectability. This philosophy, newly equipped with glorious spending theories and magical proposals for practically endless Government borrowing, brought the school of planning into official favor.

The first attempt to provide this idea with an organized propaganda machine was the formation of the CIO Political Action Committee by labor leader Sidney Hillman in the 1944 presidential campaign. In this committee Socialists of every description—planners and Communists by the thousands—were collected together. To reach various elements outside of labor Hillman formed the National Citizens Political Action Committee. Intellectuals were formed into the Independent Citizens Committee of the Arts, Sciences, and Professions, which included professors, writers, dramatists, actors, movie stars, lawyers, doctors, and editors.

The Americans for Democratic Action was formed in January 1947. This organization has now become the spearhead and the central planning and propaganda machine of the national Socialist economic planners in this country. The basis of their program is in their statement of policy on March 2, 1948. It states that there are areas of the economy which cannot be controlled while in private hands. These may be dealt with in two ways. One is to have them taken over by cooperatives operating under one of the Government agencies—the Rural Electrification Administration, for instance. The other is complete public ownership. The rest of the economic system they will subject to national economic planning.

They propose first a vigorous use of the power to tax and spend, in order to shape and control the economic system. They advocate what they call "balanced production targets for the whole economy," and say there must be "price, allocation, inventory, and credit controls." Those and other trade phrases are actually a costume of words for socialism. What the planners intend to bring here is precisely what the Fabians brought to England.

Americans for Democratic Action have brought together many of the most powerful figures in the three great labor groups; there, too, will be found most of the old New Deal planners.

The ADA announces that it "is not a political party," that "it works through established parties," and that "its tools are education and political action." It declares its intention of "telling the people the facts and what they can do about them; working in party primaries to nominate liberal candidates; campaigning for their election." It has spread through 48 States, with over 75 full-fledged chapters and 100 student groups.

Of course, it will offer, as in England, personal benefits to various groups. At the moment it is putting its power behind a very important drive: socialized medicine. But it will never use the word socialism. That word will not emerge until the country is carried so far along the road that it can no longer be disguised from even the most ignorant.

At every stage of this subject the Communist issue arises to confuse us. The Communist Party in the United States is a political organization, but is not a party in the sense in which we understand that term. It is a secret, conspiratorial brotherhood, engaged in wrecking the American system as a prelude to making this country into a Socialist nation. (It is also the agent of a foreign power in carrying out the objectives of the Russian Government in this country, and to this extent it is organized treason.)

In a left-wing gathering it would be difficult to determine whether a given person is a Communist or a Socialist. They all believe that the capitalist system must go. They are agreed that socialism in one form or another we must have, and on this plane all of them—Communists and Socialist planners—must be grouped together as enemies of our traditional American system.

Communist Party members favor anything which will tend to wreck our private-enterprise system. For instance, they know that nothing will wreck it more quickly and more surely than extravagant spending and the accumulation of public debt. They are, therefore, for any program that will pile new tons of debt on the Nation. Our less-intelligent Socialist reformers, who know little about economics and despise its lessons, support public spending because the effects are immediately pleasant and because they have been persuaded by a new school of so-called economists that it is a sound policy.

The Congressional Committee on Un-American Activities has compiled a list of 1,160 organizations and movements brought into existence by the American Communist Party to promote all sorts of seemingly laudable social objectives. Until the war ended, you would find in these "front" organizations the names of most of those men and women who have been prominent in Socialist activities.

My point is that there is no need to make a fine point of the distinction between Communists and Socialist planners. They have been good soldiers together, marching in the cause of wrecking the American capitalist society in favor of socialism. They have penetrated labor unions, professional groups, teacher organizations, political bodies, religious bodies, racial groups. They are doing a job together upon the minds of the American people, creating in us a mood of frustration and despair about our traditional way of life. They paint a vicious picture of America which makes this country seem rotten with poverty and injustice. They proclaim that there is no prospect before us except to follow the "democracies" of Europe and throw ourselves into the arms of the planners.

Since the war ended and the terrible truth about Communist Russia has been revealed, it has become the fashion to be anti-Communist. But behind that anti-Communist label you can be a Socialist planner. As we look around for the real enemy who must be kept constantly in sight and kept ruthlessly out of positions of power where he can do his work of destruction, we need be in no doubt about that enemy. He is the Socialist planner.

In 1936 John L. Lewis, Sidney Hillman and David Dubinsky, in a deal with President Roosevelt, put their unions and the CIO

into politics and gave Roosevelt $500,000 for his campaign fund in return for certain pledges from him.[1] One of the byproducts of this deal was the delivery of the unions into the hands of the radical labor politicians, who wanted control of the officers, funds, and educational machinery of the unions. This propaganda apparatus they proceeded to use upon their own members.

They have brought to bear upon the minds of the rank and file vigorous propaganda pressure for all sorts of blessings which are to come from a benevolent Government—guaranties of perpetual employment, endless prosperity, and Government responsibility for the welfare of every worker. These are what might be called the first steps in a Socialist program, after which follow such things as socialized medicine and endless Government spending to provide employment at constantly rising wages and prices.

The immense, powerful, well-financed propaganda apparatus of the unions is now at the service of the Socialist planner.

The Democratic Party is at the Socialist planners' mercy in precisely the way the British Liberal Party became the prisoner of the British Labor Party. Through third parties in New York State the Socialist planners have the margin of votes which can spell victory or defeat for the Democrats; therefore, that party must subscribe to their demands. The next problem is to crack the Democratic South, and the planners now have elaborate plans for this job. Meantime, they propagandize through the schools, the press, the theater, the movies, and strangest of all, through the churches.

I have tried to make it clear that our American system is being destroyed by groups united in the design of luring this country into a Socialist system on the British model. The Communist would like to ruin the American system by clubbing it over the head. The Socialist planner does it by slow poison. Both types of assassin are at work here now, but the latter is by far the more dangerous. And their campaign is succeeding.

Just how far have the planners advanced their program for socializing this country?

For one thing, our Government now has almost as large a control over our private banking system as England has over its banks. It has not yet the power to decide what types of loans may be made to private in'ustry, but is geared now to assume that power with only a slight alteration in the set-up. It would then possess the power of life and death over every industry.

The Government itself has moved into the business of banking, including money lending, upon an astonishing scale, through a large number of major lending agencies whose loans and investments total $6,575,000,000, while the private banking system is at the Government's mercy because the Government is now the bank's biggest borrower and most powerful customer.

Next to credit, the most important key economic weapon is electric power. Our Federal Government's authority to engage in flood and navigation control has been seized on as a pretext for engaging in the manufacture of electrical power. The public has little conception of the extent to which our Government has penetrated that industry.

Up to now the Tennessee Valley Authority (TVA) has been the largest entry into that field. But President Truman has sent to Congress a demand for an extensive project on the Columbia River which would embrace river systems draining Washington, Oregon, Idaho, and western Montana. There are 16 other similar power projects. This is just the beginning of a program which is intended to cover America, take the power industry out of private hands and put it into the hands of the Government.

While Government power systems are to a great degree free of taxes and of interest charges on investment, amounting to countless millions a year, and are permitted bookkeeping practices which would land a private utility official in jail, the privately owned power companies are weighed down by every form of Government shackles. Private power systems must run at a profit or die. The Federal power systems run at losses while loudly claiming fictitious profits.

The Socialist planners believe they have the private power systems on the run. The total capacity of the private systems now is 45,000,000 kilowatts. Present Government plans call for Government plants generating 41,000,000 kilowatts. It is all being done in the name of reclamation and flood control. Little will be said about power, but the drive is to socialize the power industry.

Another project now heavily pressed by the Socialist planners is socialized medicine. It is called health insurance. The plan, which ostensibly came from Oscar R. Ewing, head of the Federal Security Agency, calls for an increase, with Federal aid, of the number of hospitals, doctors and nurses, and dentists, along with what he calls compulsory health insurance. This plan is similar to Britain's. Under it, all employers and their employees would be taxed at the pay-roll window for medical care.

The proponents of this scheme had the effrontery to call it free medical care. Of course it is not. It will be paid for by taxes from everyone's pocket.

It is important to remember that, while each of these proposals—Federal invasion of banking, Federal invasion of electrical power and socialized medicine—is promoted as if it were just a single reform unrelated to all the others, the fact is that each is intended to liquidate some sector of the private-enterprise system and expand the area of socialism.

The President has announced his wish to have authority from Congress to build additional steel mills because he believed the private steel industry was not producing enough steel. He was egged on to this by his Socialist labor-leader supporters, who are eager for the Government to get started on this course.

Congressman BRENT SPENCE, of Kentucky, has proposed a law called the Spence Act which would authorize the Government to use vast powers under certain conditions. These powers are stated in such broad terms that the President can use them whenever it suits his purposes, and under the plan he is to be the sole judge of whether or not the conditions exist.

If this act becomes law the President can decide how much ought to be produced of any essential commodity, and make up a national production budget which industry will be directed to meet under Government plans and compulsions. He can order new factories constructed. He may set up priorities and allocations of materials.

Manufacturers would have to get permission to buy materials, and a bureau would decide in what order and in what quantity each would get it. Here is the power of life and death over industrial enterprise. He can establish maximum prices on materials or facilities. Here is the beginning of the end of the price system without which a private-enterprise economy cannot possibly exist. And he may make such inspection of the books, records, and premises or property of any person and make such investigations as may be necessary to the enforcement or administration of this act. Here is the power of seizure and search upon a hitherto unimagined scale.

This is the planned economy so far as industry is concerned. If this law were enacted, our country would be further along the road to the Socialist-planned economy than Britain was 3 years ago.

What appears in this Spence Act, of course, is only one part of the scheme. Another Federal administration approach to the planned economy is the Brannan plan, sponsored by Secretary of Agriculture Charles P. Brannan.

The Government has been pegging prices of some crops to provide high prices for farmers, but the harassed housewife has been crying out in anguish. To meet this situation the Government has invented an incredible scheme.

There would be no more Government pegging of farm prices. The farmer is to sell his produce in the open market at whatever prices he can get. This gives the housewife the benefit of a low price. The other prong of the scheme is to give the farmer his same old high prices by a subterfuge. A price level for produce will be fixed; then the Government will pay the farmer the difference between the price at which he sells his crop and the price which the Government guarantees him.

For instance, if the guaranteed price on his crop were fixed at $2,000 and it brought in the open market only $1,500, the Government would pay him the remaining $500. The farmer would thus be paid for one part of his crop by the consumer and for the other part by the Government. But, of course, the consumer would really pay it all, and the part paid indirectly to the farmer through the Government in taxes would bear the additional charge of the salaries of bureaucrats needed to run this show.

Secretary Brannan has thus far refused to estimate the cost of his scheme, but others have indicated it might run from five to ten billion dollars a year in additional taxes.

From these Spence and Brannan proposals we may form a picture of the society into which we are being tempted by the bait of Government planning and spending. These are not schemes which may at some distant day appear as a program of government. They are the program of the present Government, and have been announced as such.

From it all emerges the spectacle of a society in which the Government makes itself responsible for the security of every citizen from the cradle to the grave, and for the operation of the entire machinery of business and farming. The ultimate aim, of course, is to control banks, transportation, power, coal, iron and steel, and the entire business of insurance. The rest of the system will be operated by private owners, following plans made by the Government under broad powers and a multitude of planning and enforcement bureaus. This corresponds in every essential respect to the system which is now wrecking Great Britain. And this is what we will have here if the men now in power in our Government are permitted to have their way.

This, then, is the road we are traveling. It is the road to socialism. And we will continue to travel it until Americans realize this and take vigorous measures to halt the journey and to reverse it.

One of the first things those opposed to this socialistic program must do is to rid themselves of the moral intimidation which

[1] In his new book, John L. Lewis, An Unauthorized Biography, Saul Alinsky quotes Mr. Lewis as saying this to him personally:

"The United Mine Workers and the CIO paid cash on the barrel for every piece of legislation we have gotten. It is common knowledge that we spent approximately three quarters of a million dollars in the 1936 campaign. And you might be interested to know that the $500,000 direct contribution wasn't my price but was the figure named by the White House, and I was given approximately 48 hours to get that money."

has been imposed on their minds. In the debate around this problem, the American system has been painted as something wicked, bungling, even brutal, while the planned new world of the future will be filled with sweetness, light, and plenty. The very word "profit" has been endowed with the most sinister implications.

But it is not a choice between a perfect system called socialism and an imperfect system called capitalism. It is a choice between two human systems both of which will inevitably have their imperfections because they are human. But the Socialist planners do not concede this. Capitalism they present to us only in terms of its defects. But socialism is painted only in terms of the wonderful things it is going to do someday.

But we do not have to rely on the promises any longer. Socialism in various forms has had plenty of trial. Russia is a Socialist country, though the Socialists would like to escape that fact. The old Socialists who first lifted the torch in Russia talked of the perfect day of the free life which they would bring. No one arraigned tyranny more vigorously than Lenin. But when they set their ideal into motion it rushed along to its inevitable end—tyranny, the most terrible tyranny in history.

The old Socialists, with their luminous dreams, got power in Germany after World War I and operated a society not greatly different from that now in effect in England—partially nationalized and partially planned. It ended in fascism and Hitler, for the line between fascism and Fabian socialism is very thin. Fabian socialism is the dream. Fascism is socialism plus the inevitable dictator.

In Italy, Socialists of various schools dominated the political life with the same results as in Germany, and that, too, ended in fascism and Mussolini.

Now Britain makes the experiment, blown-up with promises of freedom. But already she has got around to the ways of the tyrant. She asserts over the worker the right to say where he shall or shall not work. She asserts the right to throw the farmer who does not meet her directives off his farm. And this British experiment would collapse tomorrow if the strong arm of American capitalism were withdrawn from its support. Indeed it is collapsing now even with that powerful arm around it.

On the other hand, the greatest and most efficient producing machine in the world is in this country. This did not happen by accident. It is the result of the soil of freedom in which it grew.

The road we are traveling is sufficiently clear. We cannot delude ourselves with the expectation that we may go a little way further and then stop in the belief that we can combine socialism and capitalism and preserve the best features of each. The very first hard and cold fact we must face is that these two systems cannot live together in the same society.

If we keep on the way we are going, nothing can save the capitalist sector of our economy from extinction, because it will inevitably be called upon to pay the cost of operating its own sector and the greater portion, if not all, of the cost of operating the Socialist sector. In the United States the few Government-operated industries we have are operated at a loss. Private industry must produce the income out of which the losses of these Government industries are paid, and the attendant costs of Government as well.

We must arrest the course of the social disease that is destroying us and set our hands to the hard task of lifting up and revivifying our shattered system of free enterprise. If we do not, we shall go on stumbling down the path along which Europe has slipped.

It is not possible to lay down a program in detail for checking and reversing our direction. And it is not necessary. What is necessary is to see clearly the general principles which must govern our effort. These I shall now attempt to enumerate as briefly as possible.

We must put human freedom as the first of our demands. There can be no security in a nation without freedom. Let us work to make our country a more bountiful home for all to live in, but the first and indispensable test of every plan must be whether it will impair our freedom. A better life for all, yes—but not at the expense of our liberties.

We must stop apologizing for our capitalist society. It has made us strong, and has provided us the highest standard of living in world history.

Not one more step into socialism. There is, of course, much to be done to repair all the damage already done to our system by the advocates of socialistic measures, but the first militant maneuver must be to hold the line for the American way.

Get rid of compromising leaders. Let us put a mark upon every man in public life who is willing to surrender further.

We must recognize that we are in a social war, and that we must fight it as such. Our enemies have managed to capture many of the instrumentalities of the classroom, the platform, the pulpit, the movies, and the radio upon an amazing scale, and to use them not for their traditional purposes but to carry on an attack upon the minds of the American people.

We must put an end to the orgy of spending that is rapidly bankrupting the Nation. Among the most critical conditions that menace us are the fantastic commitments for spending countless billions and the crushing weight of our national debt upon our economic system. From July 1, 1945, to June 30, 1949—President Truman's years in power—he spent $184,000,000,000. This is $30,000,000,000 more than was spent by this Government in all the 147 years of its existence from George Washington to the end of Franklin D. Roosevelt's first administration. We must not permit one more cent for any purpose beyond our present commitments.

We must stop planning for socialism and begin planning to make our free system of private enterprise operate at its fullest capacity. Since 1933 the Government has waged relentless war upon the capitalist system, at first ignorantly, but recently with a definite design to cripple and destroy it. The man who runs a business has been pilloried as a criminal, and the Government has taken measures to prevent him from accumulating those savings which make expansion possible. It has held him up to public scorn and hatred. It has taxed away his savings, and it has so choked the streams through which savings flow into investment that our system is wilting away.

Our system is in an appaling mess now, what with the public debt, the confiscatory taxes which draw the blood from its very veins, Government intrusions, and the threats of ultimate extinction that are taking ever more terrifying shape. The task calls for patriotism and courage; it must not be delayed another day.

We must set about rebuilding in its integrity our republican system of government. We cannot depend on any political party to save us. We must build a mass organization outside the parties so powerful that all parties will be compelled to yield to its demands. Our forefathers gave to the world the sublime example of statesmen who cast off the tyrant state and built up the sovereign people, unleashing the energies of free men. It was this historic experiment which set off the astonishing surge of human energy that created here such abundance and freedom as the world has never known.

The task before us is clear. For our principles of action we must go back to our Constitution, to our Declaration of Independence, to our history and to the example set by our national fathers. We must begin now to dismantle the tyrant state in America and to build up once again the energies of a free people.

Address of Hon. Knox T. Hutchinson, Assistant Secretary of Agriculture

REMARKS

OF

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1950

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable Knox T. Hutchinson, Assistant Secretary of Agriculture, a Tennessee farmer, made at a luncheon meeting in Minneapolis, Minn., today.

I am particularly happy to have the opportunity to submit this talk through the courtesy of Mr. Hutchinson and Representative PAT SUTTON, of Tennessee. This talk in my home city, which I am honored to represent in Congress, brings to mind that my constituency is composed partly of five rural counties made up of agriculture and agricultural communities, and Minneapolis made up largely of industrial workers.

These people are the very heart of America and it is for them that the program laid down by Mr. Hutchinson is timely.

The address is as follows:

LET'S TALK FACTS

I feel honored, indeed, to have a part in this program.

The influence of the Farm Forum has widened year by year until it is now a most valuable source of information and mutual understanding. I congratulate the Minneapolis Chamber of Commerce and all the other organizations and individuals responsible for setting up this annual event and keeping it going.

It's a healthy thing when representatives of the important branches of our economy get together, talk together, and arrive at a better appreciation of the fact that the only way we can go forward is to go forward together. So I appreciate this opportunity to come out here to talk facts about agriculture.

And I'm going to do just that—talk facts.

It seems to me that this year's meeting is of special moment. Highly desirable as fact-facing is at all times, it becomes absolutely vital in such a situation as we now face.

Can anyone look with complacency upon the world today?

Was there ever greater need for world peace than now?

We have seen what block-buster bombs can do. We have had a glimpse of what primitive atom bombs can destroy. But we can only imagine the horrors that might accompany the unleashing of the H-bomb.

Was there ever greater need for national prosperity than now?

We have seen what depression can do. We have seen how depression can focus our eyes upon ourselves and make us blind to growing

dangers from abroad. But we can only imagine the cost and chaos and the threat to our very civilization that might follow from depression now.

The recent course of world history reminds me of those tube-shaped toys that one can look into and see a pattern of colored glass; and whenever you turn the tube the glass pieces at the bottom are rearranged and form a new pattern.

Throughout human history the world has been like one of those tubes. But whereas in other ages the tube of world events turned slowly, now it spins rapidly—and always more rapidly.

It took human ingenuity all the ages of man's existence until about three-quarters of a century ago to make an electric light; now there are billions of them.

It took all the ages of human existence until 57 years ago to make an auto; last year this Nation alone produced them by the millions.

It took all the ages of existence until 1903 to make and fly a mechanical airplane; now scientists make plans concerning flying by rocket to the moon.

Never have the processes of change been as breath-takingly quick as now.

How long has man inhabited the earth? The most conservative estimate says thousands of years. Others say millions. Whether the answer is actually thousands or millions, in all the history of his existence until this past century the top speed at which man could travel was no faster than a horse could gallop—something less than 40 miles an hour even for a Man o' War. There was safety in distance in those days.

But in less than one century man has stepped up his speed of movement to 500, 600, 700 miles an hour—faster even than sound itself. There is no longer safety in distance. That is one reason for the emergency today.

Change! It is rapid change that creates emergencies—and the world is changing now as never before. We are more interdependent now than ever before. We are less able to live our own lives or mind our own businesses. We are all tied together by the complexity of modern life—and that is why this kind of meeting with the understanding of our mutual interdependence that it promotes is so immensely valuable.

We cannot face the future with confidence unless we understand the issues and are prepared to make the continual adjustments demanded by the fantastic pace of world change.

Other nations have looked to our democracy with faith in our ability to meet our changing international responsibilities and to solve our changing domestic problems. We dare not permit that faith to be uprooted.

The old idea that there's plenty of time to make adjustments tomorrow contains the germ of our own destruction.

Tomorrow might not be time enough to do all that needs to be done to preserve our national strength.

That is why the Secretary of Agriculture has been doing his best to impress upon the people our grave need for an improved farm program—not tomorrow but now.

That is the real reason I am here today.

To face the future we need a strong economy. But we cannot have a strong economy without a strong agriculture. Our farms supply the basic raw materials for industries that produce one-third of all our manufactured products. Roughly half the money the American people spend for commodities and services goes for products that originate on farms. And approximately two out of five working persons in the United States are employed either in agriculture, or in handling and selling agricultural products, or in producing and selling goods and services to farm people. Again and again the economic history of our Nation demonstrates the importance of farmer buying power to national prosperity.

To face the future we must be a strong people. But we shall not be a strong people without a strong agriculture. The health and vigor of any people depend largely upon an adequate well-balanced diet. In the 1930's when agriculture was weak and our whole economy was struggling out of depression, it was estimated that only one city family in four had a good diet. Many of the American people were existing on a bread and potato diet. They could not afford enough meat, milk, eggs, fruits, and vegetables. And farmers couldn't afford to produce enough of these foods.

The Nation paid for that in the number of young men rejected for military service. It paid in absenteeism and lessened efficiency in the factories and mines.

In recent years diets have improved greatly. As the people found more food money in their pockets, they could afford to buy more meat, milk, and other protective foods. And farmers could afford to produce more of these foods—and they did.

To face the future we need a strong defense. But in the long run we cannot have a stronge defense without a strong agriculture. This is more than ever true in an age wherein wars are waged and won by the nation with the better machinery.

If a strong agriculture is so vital to our economy, our defense, and the health and vigor of our people, we should be foolish indeed if we did not ask ourselves: What is the condition of our agriculture? Wherein is it strong, and wherein weak?

American agriculture is stronger than ever before in its ability to produce.

A century and a quarter ago, one person engaged in farming was able to provide for himself and three and a half other persons. Today the person engaged in agriculture provides, on the average, for himself and 13½ other persons. That's a long-range measure of our agricultural progress.

But we have ample evidence of increasing farm productivity in the short range, also. In the past 10 years, American farmers have set six new all-time production records. In 1948, despite some 9 percent fewer farm workers, our agriculture turned out about 40 percent more food and fiber than before the war. Last year, the all-time record of 1948 was equalled.

We have profited immensely by long years of research. Hybrid seed, improved varieties, electric power, and tractors and other equipment have made it possible for farmers to take advantage of a break in bad weather to put in and harvest big crops where 15 years ago crop failures would have resulted.

Pest-control chemicals—DDT and 2,4-D for example—and the increased use of fertilizer have remarkably stepped up yields of some crops.

Improved methods of breeding and feeding livestock, better soil management, and the ever-widening use of machines and electric power have given farmers a new control over production.

Many agricultural scientists say that we are only at the beginning of progress, and that, in the field of hybrid vigor, for example, we have only penetrated the fringe of things to come.

Obviously, then, so far as ability to produce for the needs of our people and our economy is concerned, agriculture is strong and healthy. I cite that as a plain fact.

In a free economy, however, ability to produce is not enough. Farmers have to be able to market what they produce, or eventually they will find themselves burning their corn for fuel as they did in 1932.

Farm capacity to produce is outrunning population. Production is up 40 percent since prewar, but population has increased approximately 15 percent.

For a time, it appeared that the gap would be made up by increased per capita consumption. In 1946 our people consumed 19 percent more food per person than they had in 1935–39. But consumption has fallen off since 1946 and last year it was only 11 percent above the prewar average.

Partly as the result of this decline in per capita consumption, farmers are running into sharp price and income difficulties. Feed grains and hay have dropped almost one-half; food grains and meat animals about a third. Prices received by farmers have dropped nearly 25 percent from their postwar peak. The prices farmers pay, however, have come down only 5 percent.

Even though agriculture is producing at a record level, farm net income has been greatly lowered by falling farm prices. In 1947, farm net income totaled nearly $18,000,000,000. This year it may fall below twelve billion—a drop of one-third in 3 years.

Economically, therefore, agriculture is extremely vulnerable. I cite that as another plain fact.

We must all realize that farming is unlike most other industries. Some people try to compare agriculture with the auto industry, or the steel industry, and they cannot see why farmers are unable to protect themselves against economic pressure as many businessmen are able to do.

But even if farmers could adjust their production and prices with their eyes on the largest possible amount of profits, would the people want them to do so? Could we, under these circumstances, depend upon abundant production of food and fiber—when the events of our economic history plainly show that farmers get a considerably better return from producing a little less than enough to meet demand than they do for producing a little more than enough?

Do we want to take a chance on too little food? Suppose farmers had been able to cut back their production to 12 percent of capacity as the steel industry did in the early thirties? Suppose farmers in 1932 had cut their output down to about one-quarter of the 1929 level—as auto manufacturers did when they reduced the number of cars produced from about 5,500,000 in 1929 to less than 1,500,000 in 1932? We can get along for quite a while on old steel and old cars—but we can't get very far without a continual supply of food.

In actual fact, the individual farmer has almost no control over the price of his products. He competes for a market against nearly six million other farmers. He cannot by himself adjust production to demand, because his production is a drop in the bucket. Moreover, once his crop is in, how big it will be depends upon the rain and the sun—so that he cannot even control his own production. He sells in the market for what he can get—unless he has the backing of some kind of national farm program to give him a little of the protection and freedom of choice that other business people are able to provide for themselves because of the control they exercise over output and prices.

If agriculture is to achieve economic stability, it requires an effective national farm program. I cite that as another fact.

In much of the agricultural legislation that has been enacted in the past two decades you will find this basic idea that programs are needed to make agriculture economically more stable.

This was a basic element in the agricultural adjustment programs of 1933 and after.

It was basic in the Agricultural Adjustment Act of 1938.

It was a reason for the Steagall amendment which guaranteed price supports on many farm commodities during the war and for a period afterwards.

I believe it is fairly obvious now that the American people have accepted the philos-

ophy that if agriculture produces abundantly for the needs of the Nation, farmers should not be left completely to the mercy of the market place.

Agriculture deserves—and the Nation needs—a farm program. Most of us agree on that. The question is: What kind of farm program will best serve farmers and all our people?

For almost a year this question has been hotly debated. The debate began when Secretary Brannan, at the request of Congress, presented to the agriculture committees of the Senate and House of Representatives, certain recommendations for improving the national farm price support structure.

Nothing in recent years that has been proposed for agriculture has created so much discussion—and I might add, so much heat.

What did the Secretary propose that caused all this furore?

Some new and radical departure from traditional American procedure? No, there is nothing new in his recommendations. They are on the contrary, the logical development of the price support programs that began in the thirties. He sought only to apply farm price supports to the needs of producers and consumers in our present postwar economy.

There are four principal points in the proposals which Secretary Brannan recommended on behalf of the administration.

1. We start from the premise that farm buying power must be maintained at a reasonable level or the entire economy will suffer. We seek as an objective such prices as will return to farmers as much buying power as they had in a recent, movable 10-year period.

2. Instead of supporting the prices of only the so-called basic commodities—cotton, wheat, corn, tobacco, peanuts, and rice which bring in only about one-fourth of all farm income—we would support (besides cotton, corn, wheat, and tobacco) milk, eggs, chickens, beef cattle, hogs, and lambs. This would provide support on about three-quarters of all farm income.

3. To present methods of support, which work well for storable crops, we would add the method of direct payments to producers when supporting such nonstorable crops as milk, meat, and poultry products. Instead of keeping the prices of perishables at an artificially high level through Government purchases, we would let perishables seek a supply-and-demand price. Consumers would then have the benefit of the entire supplies of meat, milk, and poultry products—and at a market price that would encourage consumption. Instead of buying nonstorable commodities and withdrawing them from the market—instead of being forced to get rid of these nonstorables in uneconomic ways as we are now doing with potatoes—we would use this purchase money to make payments directly to producers. The amount of the payment would be the difference between the average market price and the support level.

4. Price support would be subject to certain conditions. Wherever possible, observance of good land-use and conservation practices would be required. If supplies of a commodity made marketing quotas necessary, the support program for the commodity would depend upon acceptance of the quotas.

Finally, we feel that price supports should provide financial encouragement for operators of family-size farms, but not for the continued development of extremely large-scale, industrialized farming which concentrates farm land in fewer and fewer hands. Therefore it has been proposed that supports be limited to about that amount of production which is available for sale from our largest family farms.

Those are the proposals.

There is nothing new, nothing shocking, nothing without precedent in any one of them.

For many years farm leaders and farm organizations have claimed that they stand for a fair share of the national income for farmers.

Farmers surely do not have a fair share of the national income now. In 1948 the total per capita income of people on farms was only about 60 percent as large as the per capita income of nonfarm persons. In 1949 the per capita income of persons on farms—and this includes income from all sources, mind you—was only $763 per person, compared with $1,555, more than twice as much, for nonfarm persons.

If the 1949 trend of farm and nonfarm income continues, farm people this year will have less than $40 of income for every $100 that nonfarm persons have.

When we restrict our consideration to income from farm sources alone, the picture is even worse. Farmers and their families constitute nearly one-fifth of the population. This year it is estimated that their farm income may be less than one-fourteenth of the national income.

This is not a theory. This is the hard fact of what is now taking place under present price-support legislation.

I mentioned before that farm prices have already fallen to a point one-fourth below their postwar peak—and they are still going down. Prices of feed grains and hay are down 47 percent. Farm net income this year is expected to be about one-third below the income of 3 years ago.

I repeat these facts because they show so clearly that present price-support legislation is not adequately supporting.

If we accept the objective of an equitable share of the national income for agriculture, let's be consistent when we come up against facts.

The administration takes the position that farmers are entitled to a fair return and that price supports are a positive mechanism to help them attain it. From the Secretary's viewpoint, price supports are not merely a system of protection against bankruptcy. They are not a stop-loss mechanism. We are not seeking merely to assure agriculture 60 or 75 percent of the parity price of a few commodities.

We are working toward a fair share of the national income for agriculture, because that is vital to the Nation in the emergency situation it faces today.

Let's see what kind of protection the present legislation provides. For some commodities the lower level of support is 60 percent of parity. For most commodities assured of support, the lower level would eventually become 75 percent of parity. But some of the most important commodities—meat and eggs, for example—are not assured of support at all.

Is 60 percent of parity adequate protection against unreasonable price declines? Is 75 percent adequate protection?

In 1932 all farm prices averaged 59 percent of parity, as it is figured today.

From 1930 to 1934, farm prices averaged 69 percent of parity—and as Secretary Brannan pointed out recently, three-fourths of a million farmers lost their farms. In 1939, farm prices averaged 80 percent of parity. And still every major farm organization in the country felt that 80 percent of parity was not enough.

Let's face the facts. The scale of support provided in the present legislation just does not do the job of protecting agriculture's right to a fair income.

In view of this obvious fact, why do some farm spokesmen cling so tenaciously to the present law? Why do they advance such emotional arguments against the administration's recommendations for improvement?

I want to say that it makes me more sad than angry when I see the cuttlefish approach that some of those who oppose the administration proposals are using.

It makes me wonder about their sincerity when I hear wild assertions that these proposals threaten the independence and integrity of the American farmer.

I have more confidence in the American farmer.

I know how jealous he is of his freedom, and I know also that he is far too intelligent to be fooled by this obvious smoke screen.

There is not one bit more regimentation asked or implied in the administration recommendations than is already existing in the present legislation—or than has been on the books for the past 12 years. That's another plain fact.

As for the squeamishness which some people profess about accepting a subsidy, what is this but another instance of the cuttlefish approach? Price supports under any guise are a subsidy. Let's face it. But is it wrong for the farmer to accept a price-support subsidy for producing the most essential product of all—food—and right for the manufacturer to accept the subsidy of a protective tariff—or the air-line company to accept the subsidy of a Government air-mail contract—or the publisher to accept the subsidy of postage concessions.

Let's have more honest argument and less appeal to the emotions.

We hear a great deal about the possible cost of the administration's proposals, and some critics let themselves be carried away by the fervor of their opposition. I read one estimate of costs the other day that would have the Government paying farmers some 15 percent more than the total gross income of American agriculture has ever been in its all-time peak year. According to this absurd estimate, farmers would not only give away for absolutely nothing all that they produce, but they would even pay nonfarmers for taking the agricultural produce off their hands.

But though we hear a great deal of nonsense about the possible cost of the administration's recommendations, we hear very little from the opposition about the cost of the present program. It seems to me that American citizens are paying a pretty penny now for something that satisfies neither farmers nor consumers. Our operations on 1949 potatoes alone may run to $80,000,000. The over-all cost of potato supports since the end of the war is approaching a half billion dollars. The American people have been paying artificial prices for the spuds they eat, and besides they've been paying tax dollars for the spuds fed to hogs or diverted to other uneconomic uses.

No wonder the people are getting fed up with such a senseless procedure.

The administration recommendations would actually lower the cost of supporting some commodities, and would also do a far better job of placing nonstorable commodities in the hands of consumers, where they are useful and where they belong.

On this question of cost, I should like to quote Secretary Brannan's recent statement. "By maintaining farm income at the level of average farm purchasing power in a recent 10-year period," the Secretary said, "we should be moving effectively to prevent the onset of depression. The 'stop-loss' and 'protection against unreasonable decline' theory on the other hand would leave us, I'm afraid, in the position of calling the fire department after the house had burned half way down. Which is cheaper: Fire prevention or fire-fighting?"

Although I have devoted much of my time to the price-support question, I want to make it plain that the administration's proposals are not regarded as a complete farm program. The main reason why the Secretary has hammered on this issue is that price and income considerations are the core—the heart—of an over-all program.

The reason is not obscure. The reason is that all other elements of a well-rounded

farm program inevitably are affected by, and are largely dependent on, farm income and farm prices. How can a farmer be expected to give his land the care it requires, if he is forced to farm it to the limit to keep possession?

How can we expect a farmer to take advantage of rural power lines, unless he has income enough to pay for installation of electricity? Obviously, this is one reason why a larger proportion of farms are electrified in relatively good-income States than in low-income States.

How can we expect a farmer to take advantage of credit facilities, if lack of income makes him a bad risk?

But though we have fought long and hard for adequate price supports—and make no mistake, the fight will go on—there is no responsible Department representative who is not anxious to get on to the other elements of a sound agricultural structure.

We have made immense progress in conservation. But we still have far to go. Let us settle this price question, and get on faster with conservation.

We have made great strides in electrification—four out of five farms are now electrified, whereas only about 1 out of 10 had electricity 15 years ago. But well over a million farms are still without power lines. Let's settle this price question and get on faster with electrification.

We've made advances in the level of rural living. But millions of farm homes are wretched structures. Millions are without running water, telephones, and other necessities. Millions of farm families are still denied adequate educational opportunities, hospital care, medical and dental attention, and recreational facilities.

One-fourth of all farm families had total incomes in 1948 of less than a thousand dollars. The answer to the problems of these families is not prices so much as it is production. They need, above all, the opportunity to produce enough for a better living.

Let's settle this price question and get on with building better production opportunities and better rural communities. For it is from the rural communities that much of our future population is coming—much of our manpower—and a lot of our genius and leadership. Nearly half the Nation's children are the product of rural families.

We need to develop that potential manpower—that genius—that leadership. It is a real emergency we face today.

We need, as never before, a strong and economically secure agriculture.

The strength of our farms has served us well in peace and in war. We must not dissipate that strength—for that would be a betrayal of freedom and a great service to the enemies of democracy.

We have built well in the past 17 years. But we must not stop building now. It is our privilege tt move forward for larger abundance and more complete security in the interests of the whole Nation.

It is the job not of farmers alone, nor of farm organizations, nor of Government to build that sound and secure agriculture.

It's a job for all of us.

If we have not already learned that every right-thinking man is indeed his brother's keeper, we had better learn it fast.

If we have not already recognized that we must all seek not only our own selfish desires, but the common good of all, we had better take a long, serious look at the world we live in.

It's a changing world—a terrifically fast-changing world.

No longer are empires, as in ancient times, slowly built and slow to disintegrate. Adolf Hitler rose and fell in only 12 years. In only 31 years the Comintern of Russia has achieved domination over perhaps a third of all the world's people.

We must try to keep peace among all nations—for wars between major powers can no longer be kept in quarantine. They speedily become global—and total—struggles.

We must try to maintain prosperity for all groups in our land—for depression is a communicable economic disease, and it quickly spreads, paralyzing all industries, affecting all groups.

We need a strong agriculture. We need it to maintain prosperity. We need it because it is basic to our national defense. We need it because it is the indispensable requirement of a healthy, vigorous, free people.

Let's start building the kind of agriculture we need—an agriculture of abundance—an agriculture with economic stability—by providing an adequate, realistic, and efficient program of price and income support.

Let's start now.

England's Public Medicine: The Facts

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1950

Mr. BIEMILLER. Mr. Speaker, everyone has an opinion on the experiment in national medicine now going on in Britain, but very few people know the facts about it. I was delighted to find an article on the subject by Dr. James Howard Means. Dr. Means who is Jackson professor of clinical medicine in the Harvard Medical School and chief of the medical services at Massachusetts General Hospital, is a recent past president of the American Association of Physicians, one of the most distinguished professional organizations which admits only outstanding doctors. He is the author of many books and over 150 articles on medical subjects.

Dr. Means article, which appears in the Atlantic Monthly for March, gives a simple factual report of his observations of the system in England. His standing in his profession gives us all complete confidence that his findings are fact, not opinion prejudiced one way or the other. Under leave to extend my remarks I insert this article in the RECORD, as follows:

ENGLAND'S PUBLIC MEDICINE: THE FACTS

(By James Howard Means, M. D.)

I

I hold no brief either for or against the British National Health Service, but I firmly believe that information about its success or failure will ultimately prove to be of great value to us in our own country. We have problems in this field to solve ourselves. We can be aided by the experience of others.

Americans either hold up the British Health Service as a horrible warning or use it as a talking point in favor of compulsory health insurance for the United States. Neither of these positions can be regarded as objective or realistic. What is needed is less recrimination and more investigation, and the first question to be put is, How is the system serving Britain? On my visit to England and Scotland last year I chatted with many people, both medical and nonmedical, I visited clinics, and I read a variety of British newspapers and journals. Some of the people I talked with were friends of many years' standing, the value of whose opinions I am sure I know accurately. Others were new, and some were chance acquaintances. Since returning home I have kept up a brisk correspondence on the subject.

I started off with the steward and stewardess aboard ship going over: both are English; both live in Liverpool. The steward was strongly in favor of the health service; the stewardess was against it. Both were working people, but one belonged to the Labor Party, the other to the Tory. This even split, it soon became evident, was no accurate indication of how the British people as a whole view the health service. There can be no doubt whatever that, with varying degrees of enthusiasm, the vast majority of the people are for it.

The attitude of the doctors, however, is very different. Among them there is undoubtedly much discontent. This runs all the way from trifling dissatisfaction to something approaching actual hostility. A very small number are enthusiastic proponents of the service. Organized medicine in Britain, represented by the British Medical Association, fought certain provisions of the National Health Service Act vigorously, but did not oppose its basic principles in any such uncompromising fashion as the American Medical Association has resisted any and all proposed legislation for a national health program here at home.

In Britain at the present time, the health service being a fait accompli, I found it to be practically the unanimous opinion of all with whom I talked, doctor and layman alike, that it is there to stay, regardless of the outcome of February's general election. The problem is how to improve it to the point where it is for everyone, fit to live with.

The actual direction which the development of Britain's National Health Service has taken was conditioned to a considerable degree by the war. When, in 1940, invasion of Britain became imminent and aerial bombardment certain, an integrated emergency medical service (EMS) for the entire realm, to take care of military and civilian wounded and sick, was rapidly set up under the wartime powers of the Government. The system devised made use of all hospital and professional services in the United Kingdom. Each individual, each unit, was assigned an area of responsibility—a particular function in relation to the whole. First aid, dispensary service, and hospitalization were systematized and services distributed so as to become universally available. Channels for the evacuation of sick and wounded were established. Though set up hurriedly, the EMS worked with great smoothness and success. Forced upon Britain by the war, it set the pattern for, and accelerated the tempo of, the socialization of medicine.

The main intent of the act which brought the national health service into existence on July 5, 1948, is to provide complete medical care for all people, to promote health, and to prevent disease. The training of professional personnel and the conduct of research are both recognized as essential to the success of the plan, and although these are primarily still in the hands of the universities, there is extensive interlocking with the health service at the level of the teaching hospitals. In a Socialist state it becomes an obligation of government to insure the production of a sufficient number of optimally trained physicians and surgeons and other professional personnel; also to see that medical knowledge is advanced to the greatest possible extent through research. In our more conservative democracy these functions have been left to a considerable degree to private enterprise. With us, the Federal or the State Governments take some, but by no means complete, responsibility for them.

Although intended to provide medical care for all people—even aliens temporarily in the country—the health service is not compulsory; any person or any doctor can remain out of it. Doctors may serve under it and also engage in private practice, if they can

find any. Medical care in Britain today is on a basis analogous to that of primary and high school education with us. All are entitled to it without direct payment but are not compelled to take it. As we may send our children to private schools, so Britons may go to private practitioners of medicine if they wish, and can afford to do so. But as we pay for education in this country through taxes, whether we send our children to private or public schools, so do British citizens pay for the health service through taxes[1] whether they use it or not. Harley Steet in London and its equivalents in provincial cities seem as full of doctors' offices as ever, and a considerable volume of private practice is going on in them. However, the doctors with whom I talked were convinced that it would slowly diminish until it might reach the vanishing point.

II

Final responsibility for the administration of the entire health service rests with the Minister of Health, a cabinet officer appointed by the Prime Minister, and therefore likely, as with us, to be replaced with each change in the government. The present Minister of Health, Aneurin Bevan—one of Winston Churchill's pet antipathies—while by no means the originator of the concept of a unified national health service, was nonetheless to a considerable extent the architect of the present act. Of it in 1946 he said, "We have just passed through Parliament the greatest single health measure of our history. We are facing, at this moment, the monumental task of putting it into operation. We are trying to secure that in future the medical and health resources of the country are available to everybody in a rational and organized way, irrespective of personal means. But the availability of the health services is not our only object: we are also aiming at their improvement and expansion. This will not be achieved in a moment; it will require a great deal of hard work, and it will require the intelligent cooperation of the public."

He might have added "and of the medical profession," but he didn't, and there, I gather, lies a considerable portion of the rub. The majority of doctors with whom I talked had the feeling that Bevan had consulted the profession inadequately in drawing up his plans. This has embittered them rather extensively. It is not health acts in general to which they are opposed, but this particular one, which they think was set up in a bungling manner.

From the Minister of Health extend three main ramifications of administrative responsibility—namely, those of hospitals, general practice, and local health authority. The classification of hospitals and doctors under the act needs elucidation. Hospitals in Britain, as with us, prior to the inauguration of the National Health Service, fell into three major categories: voluntary hospitals, municipal hospitals, and private or commercial hospitals—generally called "nursing homes." The so-called voluntary hospitals, such as Guy's or St. Bartholomew's in London, are the equivalent of our privately endowed charity hospitals, such as the Massachusetts General Hospital in Boston, the Presbyterian in New York, or the Barnes Hospital in St. Louis. The voluntary hospitals are the ancient hospitals of Britain; originally run by the church, they later became secular charitable enterprises. It is in them for the most part that medical education has been conducted.

For the administration of the government-owned hospitals, England and Wales have been divided into 14 hospital regions, each based on a university medical school. In Scotland, which has an independent but similar national health service, there are six regions. The administrative control of the Scottish system lies in the Secretary of State for Scotland. Each region has a regional hospital board appointed by the minister to govern hospital affairs.

On July 5, 1948, the ownership of all voluntary and municipal hospitals was transferred to the Minister of Health. The nursing homes were left out, I have no doubt with the expectation that they will gradually wither on the vine.

It must be remembered that at the end of the war the voluntary hospitals were close to bankruptcy. Something had to be done about them, and done fast. The hospitals and the doctors at the head of them were swept along in the process of socialization then taking place in Britain.

The doctors of Britain under the Health Act are classified into four categories: (1) general practitioners, (2) a large and diverse group of hospital doctors, consultants, and specialists, (3) full-time clinical teachers, and (4) medical officers of health and their associates in the local health authorities.

In the promotion of health and the attack upon disease, the general practitioners are the front-line troops. Each general practitioner has a list of persons in his area who have joined the Health Service, who have chosen him to be their doctor. Such a practitioner is paid by the government so much a head per year for every name on his panel. He is allowed to take up to 4,000 persons. In our country this number would usually be considered excessive. To them he must render complete general practitioner service. The patients under this system are entitled to free medicine, which they can get on the doctor's prescription only.

Does the patient have any choice of physician? Yes, to a certain extent. So far as possible he is allowed to choose among the doctors in his area, but obviously in any area ultimately the total number of patients must be assigned among the available doctors in some reasonable proportion. The doctor is not obliged to receive any patient on his panel that he doesn't want, nor is the patient compelled to remain with a doctor he does not like. No troublesome obstacles are placed in the way of patients wishing to change doctors. General practitioners also are allowed to take on as private patients any persons not enrolled on their panels and charge them fees for service.

When the general practitioner encounters something he cannot handle, he transfers the patient via a hospital to one of the doctors of the class which I have numbered 2. This class includes the great group of practitioners who under the previous regime were on the staffs of voluntary or municipal hospitals. They made their living in whole or in part in private practice, chiefly of a specialist or consulting character—they were the Harley Street type of doctor. Under the National Health Service they function much as before, but they are paid by the government for everything they do for the service. They are based on hospitals and see their public patients as arranged by the hospital administration. This duty may be in ward or dispensary (out-patient department); or when necessary, arrangements can be made through the hospital for the consultant to see a patient with a general practitioner in the patient's home, and this type of domiciliary service is proving very helpful for a class of society to which it was not formerly available.

Payment of the consultant-specialist class of doctors is not on a panel system; it is on a time basis. The word "session" has been employed as the unit of work for doctors of this class. A session is half a day's work once a week per year. It may consist of any kind of professional work which this type of doctor is called upon to do—consulting, operating, or teaching.

Doctors are free to choose how many sessions they will serve, up to a total of 11, and for each they receive a flat rate per annum. A doctor taking nine and a half sessions or more is considered to have an adequate wage without the necessity of supplementing it with private practice. There are a few doctors who have stayed out of the health service altogether and still succeed in making a living on the old private-practice basis, but they are excluded from all the nationalized hospitals—which is, from the point of view of keeping educated, a great handicap. There are a larger number who fall between these extremes, and carry on some public and some private practice.

A very significant item in the over-all administration plan of the health service is that those hospitals which have been designated as teaching hospitals have been put in a special category. In England and Wales they are not directly under the regional hospital boards (in Scotland they are), but instead have their own boards of governors, which are appointed by joint action of the university concerned, the hospital staff, and the regional board.

This arrangement is to be interpreted as a consciousness on the part of the drafters of the plan of the fundamental necessity of preserving a measure of academic freedom in medical education, and of protecting it against any kind of political influence. My observations would indicate that this objective so far has been attained. It is through the teaching hospitals that the universities and the National Hea'th Service find themselves engaged in a joint enterprise. The universities beyond this are not related to the minister of health. They as yet have not been nationalized.

Research is done chiefly in the university medical schools and the teaching hospitals as with us, although the Health Act gives every regional hospital board and every hospital management committee the power to initiate research and through a separate amenity fund to spend money on research.

It is interesting, however, that the most important research organization in the country, the Medical Research Council, is not under the minister of health at all. It is administered through the privy council, a separate department of the government. The Medical Research Council was set up in this way during the First World War, and was not changed when the Health Service came into being after the second.

III

The Health Service is working—that much is fact—but how well? Fairly well, but far from perfectly would be my judgment. Its success or lack of success, for want of an adequate frame of reference or control, cannot be measured quantitatively. One can only attempt to find out whether the British people are getting good, bad, or indifferent medical care under the National Health Service, or whether postwar Britons are getting as good service out of their medical system as prewar Britons did out of theirs. One cannot expect to discover whether, as things are now in Britain, the service provided under the National Health Act is better or worse than that which might be provided under some other type of system.

I have had opportunities occasionally to observe the work in the great British hospitals over a period extending back to 1913, and what I saw this past summer gives me the impression that there has been no important change, certainly no deterioriation in the quality of care provided. At no time in Britain, in the United States, or in any other country has the practice of medicine been as uniformly good as the medical knowledge of the time would permit it to be. There is always abundant room for improvement. To those tub thumpers of organized medicine in the United States who rant about our having the best medical service in the

[1] A small fraction of the expense of the health service is met through pay-roll deductions in the case of employed persons, and from compulsory contributions by employers.

world, I would say, "Possibly, but how many people get it?" Not many, I am sure. In both countries either now or in the past, there is, or has been, good, bad, and chiefly indifferent medicine. To evaluate a national medical system we need to know the overall standard of medical practice provided under it. I am unable to assert that the general standard is higher in Britain under the national health act than it was before that went into effect; but, on the other hand, I have encountered no convincing evidence that it is lower, and certainly more people get it.

There are many "bugs" to be gotten out of the health service—after all it has been going for only 19 months. Doubtless in time they will be gotten out, and the service will improve accordingly. Right now an amending bill is on its way through Parliament which will correct a number of the faults already found in the act. One of the most crying needs is to improve the lot of the general practitioner. He is today unquestionably overworked, underpaid, and insufficiently related to hospitals. But these abuses are correctable. One of the sorest points is that dentists are making about double what the general practitioners of medicine are. This is partly due to the fact that dentists are paid by the job, whereas general practitioners of medicine are paid on a capitation basis.

Abuse by patients of their privilege to see the doctor is another difficulty. Since it costs them nothing, they go, it is claimed, oftener than is necessary. There is reason to believe that this situation will be rectified. A token fee for each visit might be imposed, sufficient to put on a slight brake without vitiating significantly the principle of free care. Recently a charge of 1 shilling, not for visits to the doctor but for prescriptions written by him, has been imposed. Whether this will serve a useful purpose is not yet clearly discernible.

A great clamor has been made about free eyeglasses, free dentures, and even, in certain cases, free wigs, provided by the health service. Certainly there has been a colossal demand for these props to health. But is that fact a just criticism of the health service? All it would seem to mean, when viewed dispassionately, is that under the previous system there were great numbers of people who needed these prosthetic appliances and could not afford to get them. The stories of abuses of these privileges I am convinced are exaggerations, and I am assured that steps are being taken to eliminate such abuse as does exist.

One of the important elements of the program is the development throughout the country of local health centers. These will be primarily to implement and facilitate the work of general practitioners. They will even provide them in many instances with office space.

The difficulty is that the health centers have not yet really got going. The London County council's first large health center, I am told on good authority, will be in full operation in 1950, and three or four others in 1951. But for the most part the health centers are still largely in the blueprint stage.

The two most serious criticisms of this system that I encountered were that it is costing more than the country can afford, and that it is undermining the incentive to doctors to do good work.

Certainly the Health Service is costing much more than was anticipated. Whether it is more than the country can afford is a question inextricably bound up with that of the whole economy of Britain. I am a physician, not an economist, and cannot possibly throw any light on it.

The undermining of incentive to excel would be a serious defect. It is difficult to determine to what extent, if any, it actually prevails. One English prophet of doom, Lord Horder, who talked to American doctors at Atlantic City last June, can see nothing but deterioration ahead for British medicine under government control, but I did not find such a totally pessimistic view to be, by any means, universal among British doctors. It should be remembered that hardly anything but opinion is available at present. Only experience will answer the question, and 19 months' experience with the Health Service is not enough time by which to judge it accurately.

My feeling is that Britain is trying a momentous experiment in the nationalization of medicine. Since we too have great problems before us in our own country regarding the promotion of health and the provision of good medical care to all who need it in the community, it behooves us to watch closely and objectively the progress and outcome of Britain's project. Our observations will deepen our insight and may lead us to make wiser decisions concerning our own problems, which admittedly are different in many ways from those of Britain. We should be grateful to Britain for making this venture.

Letter From Constituent

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1950

Mr. MACK of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD and include extraneous material, I include a letter I have received from a Washington State constituent who is temporarily in California.

The writer of this letter is a successful businessman, who is an authority on wildlife and who is familiar with the game problems of Alaska. His information, I am sure, is accurate and his viewpoint constructive and convincing.

His letter to me follows:

SAN DIEGO, CALIF., *February 24, 1950.*
Hon. RUSSELL V. MACK,
House of Representatives,
Washington, D. C.

DEAR MR. MACK: I trust you will bear with me while I point out the importance of an adequate appropriation for the Alaska Game Commission. Last year $100,000 was appropriated for the purpose of securing some measure of predator control and the apprehension and punishment of game law violators in the Territory. While some good has been achieved the amount is not enough to do the job as it must be done if the once vast herds of Alaska's wild game is to be saved from complete extermination.

The amount to be devoted to this purpose should be not less than $300,000. Up to now, wild game has constituted the major source from which the natives have obtained their food, clothing, and in no small measure their shelter. If this source is destroyed or seriously depleted this burden will fall on the Federal Treasury. It will be called upon to feed, clothe, and house something over 40,000 natives in the Territory. This will also be true of perhaps 50 percent of the white population.

The seriousness of the situation can be realized when the amazing depletion of the game herds during the past 15 to 25 years is pointed out. Here are a few figures. Twenty years ago the number of reindeer in northern Alaska was estimated at 600,000. Today there are less than 50,000. Twenty-five years ago there were one and one-half to two and one-half million caribou in the Territory. Today the most reliable estimates place the numbers at not to exceed 100,000. In the late twenties there was an enormous population of the white—or Dall—sheep in the Territory. Today these animals face complete extermination. For instance, in the late twenties the number of wild sheep in McKinley Park were estimated at fifteen to twenty-five thousand. Today, by actual count, there are less than 500.

Everyone familiar with the situation agrees that the big Arctic wolf is the worst offender. The slaughter by these savage killers is devastating. While the kills for food are considerable the major damage results from kills in teaching the young to fend for themselves, kills to satisfy an insatiable lust for blood letting and deaths from starvation because of the presence of these animals on the winter feeding grounds of wild game. Because of deep snows and subzero temperatures these areas are limited. The presence of a few wolves can prevent game from obtaining the nourishing food essential to survival. As a result mass starvation ensues. These combined with the depredations of game hogs and law violators account for most of the slaughter.

It may surprise you to learn that the coyote, commonly called the prairie wolf, entered Alaska some 20 or 30 years ago and is now found throughout the Territory in considerable abundance. These in conjunction with the wolves have invaded the nesting grounds of migratory waterfowl on the vast northern tundras and are literally destroying the eggs and the young by the millions. Since these areas provide the major source for birds that traverse the Central and Pacific flyways the effect naturally drastically cuts the numbers that visit these areas. Obviously control of these two mammal predators would have the effect of increasing the waterfowl in the Western States and assure better shooting for the thousands of scatter gun addicts resident therein.

The remedy is to be found in an adequate corps of trained patrolmen. Today but 10 men are provided to patrol a rugged roadless area almost as large as the United States east of the Mississippi River. Three to five times that number are needed. Surely three or even five hundred thousand is a small price to pay for the conservation of Alaska's once abundant wildlife.

You can help mightily toward securing adequate funds for the Alaska Game Commission. The need is so vital and the amount asked for is so small compared with other appropriations. I trust you can see your way clear to give this proposition your wholehearted support.

Sincerely,

I. P. CALLISON.

Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. IVOR D. FENTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1950

Mr. FENTON. Mr. Speaker, Thursday, February 16, was officially designated as Republic of Lithuania Day in Pennsylvania. At this time I place in the RECORD a proclamation issued by the Honorable James H. Duff, Governor of

Pennsylvania, an editorial from the Shenandoah (Pa.) Evening Herald, and a resolution adopted by Americans of Lithuanian descent assembled on February 19 at Girardville, Pa.

The text of Governor Duff's proclamation is as follows:

In conformity with the doctrine of the right of self-determination guaranteed by democratic freedom-loving peoples, the Council of Lithuania, on February 16, 1918, formally declared Lithuania to be free and independent.

Twenty-two years later, the Republic of Lithuania was absorbed by a neighboring state, and today no longer exists as a free nation. Thus, it is that Americans of Lithuanian descent will celebrate the Republic of Lithuania Day with the hope that their homeland will some day be restored to her rightful free and independent place among the nations of the earth.

Pennsylvania is proud of its many citizens of Lithuanian ancestry, and join with them in the celebration of their anniversary of independence.

Therefore, I, James H. Duff, Governor of the Commonwealth of Pennsylvania, do hereby proclaim Thursday, February 16, 1950, as Republic of Lithuania Day.

Furthermore, I call upon the citizens of Pennsylvania to give proper recognition to this important anniversary and to join in such exercises as may be appropriate for its observance.

JAMES H. DUFF, *Governor.*

[From the Shenandoah (Pa.) Evening Herald]

A HOLIDAY OF HOPE

Last December, on the occasion of Stalin's seventieth birthday, State-owned printing presses flooded the Soviet domain with tributes, special editions, and biographies of the dictator.

One sample: "Joseph Stalin is the leader and teacher and friend of all the suffering and oppressed."

It is not difficult to picture the grim feelings of Lithuanians as they scanned this propaganda at the time. And it requires little or no imagination to visualize the attitude of these same people today—the thirty-second anniversary of the Declaration of Lithuanian Independence.

It was on February 16, 1918, after some 160 years of domination under the Russian czarist rule, that Lithuania proudly proclaimed to the world that it was free and independent. The long enduring chains of oppression were finally severed.

All of the powers recognized the Republic of Lithuania, including the United States of America. For that matter, officially we continue to recognize her independence. The Soviet Union, too, acknowledged the existence of this free state, but that gesture was not to continue for any appreciable period.

The black clouds gathered and finally broke in June 1940, when the Soviet moved in its troops—a direct violation of the treaty of 1926. The Communist octopus snaked its tentacles around the people of Lithuania and also those comprising Latvia and Estonia. The economic blood-sucking started it. It shows no signs of abatement even to this day.

Midnight descents by the secret police and constant spying no longer surprise or shock the Lithuanian people. It is a part of their daily life. Religious worship as these oppressed people once knew it simply is no more. A national culture is in the throes of plotted elimination. Education consists of an evil process to twist facts and figures to suit the nefarious purposes of the U. S. S. R.

As for the shocking toll of atrocities, the evidence is clear and unmistakable. The firing squads deal out their volleys of death to all attempting to shake off the bonds of tyranny.

But any regime built on a foundation of murder, pillage and general misery for innocent peoples cannot long endure. All of the past examples of world history prove this.

In Lithuania today, February 16 conveys a hollow ring to those who remember the era of the Republic. They know, however, they have the full sympathy of all liberty-loving Americans and many other nationalities in different parts of the globe.

Theirs is a matter of fortitude until Lithuania is once more saluted and honored as a restored free republic. Meanwhile, their courage will see them through this trying period, the end of which is not yet in sight. Time has a singular way of balancing accounts.

LITHUANIAN DAY ASSEMBLY

Americans of Lithuanian descent assembled this February 19, 1950, in St. Vincent's Hall, Girardville, Pa., to commemorate the anniversary of the independence of the Lithuanian nation, have unanimously declared that—

(a) The ethnic, cultural, linguistic individuality and political tradition of the Lithuanian people;

(b) The Ancient Lithuanian statehood dating back to the year 1200 A. D., its splendid historical record of tolerance, of individual, racial linguistic, and cultural liberty;

(c) The long unceasing, and determined struggle of the Lithuanian people against the foreign Muscovite domination and oppression;

(d) The heroic sacrifices of each succeeding generation of the Lithuanian people in the great mass insurrections of 1794–95, 1812, 1863–64, 1905, 1918–20, and the epic Lithuanian fight for basic human rights, for human dignity, for the freedom of the press and of the printed Lithuanian word during the 40-year suppression of all Lithuanian literary activities, 1864–1904;

(e) The imposition by the Soviet Union—by threat of superior force and in connivance with Nazi German war criminals—of a mutual assistance pact on October 10, 1939, whereby Lithuania granted and leased to the Soviet Union military bases in the strategic centers of Lithuania in exchange for a solemn Russian guaranty of the independence of Lithuania and of Russian noninterference in the domestic, political, social, and economic order of the country;

(f) The Soviet invasion of Lithuania, June 15, 1940, violating all treaties—the peace pact, the nonaggression pact, and the mutual-assistance pact with a guaranty of the political independence and noninterference in domestic affairs—then and now in force between the Soviet Union and the sovereign Republic of Lithuania;

(g) The Atlantic Charter declaration holding out a promise of the restoration of sovereignty to the peoples forcibly deprived of same, and the subsequent embodiment of the Atlantic Charter as a part of the declaration by the United Nations, including the Soviet Union, on January 1, 1942;

(h) The effective Lithuanian underground liberation struggle during the 8 years of German occupation and continuing to this date, directed against Soviet attempts to annihilate Lithuania as a sovereign nation: Therefore be it

Resolved, To call on the Congress of the United States to create conditions enabling—

(a) The formation of broadly representative interim governments of Lithuania, Latvia, and Estonia;

(b) The repatriation of Baltic deportees from Siberia and northern Russian exile, under the supervision of the United Nations;

(c) The evacuation of the Russian troops, police and Communist Party apparatus from the territories of the Republicans of Lithuania, Latvia, and Estonia helping the sovereign peoples of Lithuania, Latvia, and Estonia to restore their democratic self-governments after the harrowing experiences of three successive hostile occupations; and

(d) The initiation of a move for an immediate admission of Lithuania, Latvia, and Estonia, still full-fledged members of the League of Nations, into the United Nations Organization; be it also

Resolved, That copies of these resolutions be printed and mailed to the President, Secretary of State, to Foreign Affairs Commission and Members of both Houses of Congress.

LITHUANIAN DAY ASSEMBLY,
FRANK P. MAJIKAS, *President.*
ALBERT J. VILLINSKY, *Secretary.*

Wisconsin Spends What It Has and No More—Uncle Sam Should Do Likewise

---

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, the State of Wisconsin will not go broke nor will it pile up a huge debt for future generations to pay. Under our State law there can be no deficit spending. The money must be in the State treasury before it can be disbursed. The law thus protects the State employee and it also assures the taxpayer that he can expect economy and prudent management in fiscal affairs.

John Wyngaard, a prominent State columnist, in his daily report from Madison, tells the story and I am including it as part of my remarks:

STATE GOING BROKE? IT CAN'T; IT SPENDS ONLY WHAT IT HAS AND CANNOT BORROW FURTHER

(By John Wyngaard)

MADISON.—State administration spokesmen are scouting the impression, assiduously cultivated by the Democratic opposition that the State is going broke. A combination of high spending during the last session of the legislature, uncertainty at budget time a year ago about biennial tax trends, the habit of caution among State fiscal managers, and the campaign activities of the Democratic opposition to distract attention from the Truman deficit budget in Washington, have served to create the idea that the State is confronted with a severe financial crisis.

Actually, in the fairest analysis, it is far from a crisis or prospective crisis. The State government will be required to pull up its belt after the flush years of the war and immediate postwar period. But State employees are in no danger of missing pay days, and municipalities need not fear that their State aids will not be paid on the dates due.

THE FACTS

As other commentators have pointed out, it is inaccurate and misleading to talk about a deficit in State government terms. The State can't have a deficit. If it doesn't have the money, it can't spend it. The State cannot borrow.

In that lies an important distinction from the national budget. President Truman has

presented a budget to Congress that deliberately plans a deficit. The difference between the year's income and the year's outgo, under his program, will be made up by borrowing and an increase in the national debt. That can't happen here. The State does not borrow. It spends only as it collects.

Nor will there be a deficit in the sense that there will be a shortage of money. When the present budget was worked out last year, it was based upon a conservative estimate of receipts during the biennium, including the new revenue measures and the use of the wartime surplus that had been saved precisely for the purpose of financing postwar improvements.

Moreover, that cautious financial program was planned to have a cushion of some $7,000,000 for contingencies, as a working fund in the treasury.

A YEAR LATER

State officials now know they were unduly conservative. (They must be, because of the prohibition against borrowing.) Tax receipts have been higher than they dared to hope.

Moreover, the next State budget will very likely be smaller than the current program. The present appropriation laws contain items that will not recur, presumably. The big institutional capital authorizations are an example.

There also is the prospect of sizable lapsed balances—appropriations made and now representing claims against State revenues, but unlikely to be executed. The big veterans' housing appropriation illustrates here. Individual applications are coming in slowly, and not a single request for aid from a municipal housing authority has yet been filed. There is every indication that much of that money will remain to be available for other budget purposes in future years. Altogether, therefore, there is no chance for a State deficit in the strict meaning of the word, and the State's over-all financial situation is much better than was forecast a year ago.

In Greece There Is No Children's Hour

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1950

Mr. JAVITS. Mr. Speaker, the kidnapping of 28,000 children by Communist guerrillas during the recent Greek civil warfare has understandably shocked the conscience of our civilized world. Appended is a pointed editorial on this subject from one of America's outstanding Greek-American journals, the Atlantis of New York, Solon G. Vlasto, publisher, from its issue of Sunday, February 26:

AN APPEAL TO THE WORLD

The appeal of the Greek Church to the world public opinion in behalf of Greece's abducted children is answered in the United States by a touching and wide interest of the American people in the fate of these unfortunate Greek children. It is natural that this atrocious crime is decried generally in our country.

By the hateful and deliberate practice of the Communist forces, many thousands of Greek children have been abducted from their homes, their villages, and their country, to an unknown fate. The abduction of 28,000 Greek children by the Communist-supported bandits represents one of today's greatest crimes against humanity, and if there is any conscience left in the world, some means must be found to return these children to their parents.

Cruelty reaches its depths when children are torn from their fathers and mothers leaving the parents in the agony of suspense, not only from the separation itself, but also as to how their children are being treated, or if they will ever see them again.

Representatives of the Soviet and satellite countries made a great point at the last meeting of the United Nations General Assembly of the fact that criminals were being convicted and punished through the due process of law. Yet these representatives of countries which do not even hold trials, or whose trials are travesties of justice, had bleeding hearts for those convicted in Greece for offenses against the state and their own people. How these representatives can justify the great crime of abducting 28,000 Greek children and making 18,000 additional homeless in Greece is impossible for a free man to understand.

Humanity and civilization have shown their keen interest in the fate of these tragic children. But world opinion must be aroused to the point of forcing the Communist countries to atone for this crime and return these children to their suffering parents at once. To hold these children any longer is but further proof of the criminal intent of their abductors. The appeal of the Archbishop of Athens and Primate of all Greece is an appeal to the whole civilized world and on the basis of human rights.

What Do Past Elections Disclose?

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1950

Mr. O'SULLIVAN. Mr. Speaker, we hear so much these days about the swing to socialism at home and abroad. England is pointed out every day as the horrible present-day example of socialism. A terribly devastating war and all of its aftermath of privation and suffering, of course, had nothing to do with England's present plight according to some present-day nonreasoning people. The doctors scream about England's socialized medicine, and every other selfish group points out that we are heading for the same fate which Britain has now arrived at. All of these comparisons are so ridiculous that it should not be necessary to discuss them at all.

Is England's Government really socialistic? If it is then socialism has surely taken on a most strange window dressing. Just imagine a dangerous socialistic government with a king, and a royal family, and all of the estates, and castles, and social tomfoolery that a king and his court and his royal retinue requires and demands. No; every person in England, after the last war was over, needed to be put under guardianship, and there being no proper guardians available they all joined hands, community style, until they could recover sufficiently from their physical and mental shock and incidentally remove the great want and privation which stalked their land. They are a limited monarchy now and most probably will continue so to be in the future. When their government recovers the old tory classes will take the helm again and liberalism will find its same old poverty hole again also.

England pulled together both before and after World War II, and at intervals pulled great aid out of us also. On the contrary we people of the United States pulled together during the war and did a great job, but after the war the selfish gougers of our Nation combined to restore to themselves again their golden empire, but unlike England, in this Republic the people will not let the days of old come back again. The extreme right-wingers had better take heed because the ballots of the thinking man and woman are theirs no longer for the asking, or the forcing, or the buying.

A lot has been said about the people of the Republic, swinging to the right again, but I think that the people are too wise to thus knock themselves out of all of their gains and advancements by their own ballot-box punch.

I wish to submit, in conclusion, the following timely article published in the Christian Science Monitor on February 28, last, which gives us food for thought:

BRITAIN SWINGS RIGHT—BUT NOT FAR

(By Joseph C. Harsch)

WASHINGTON.—As in the case of the New Zealand and Australian elections, the British elections prove that the political tide can swing from a leftward to a rightward direction.

In other words, it is now well established by three postwar elections in English-speaking countries that the cause of conservatism has not been foreclosed by events of the past decade. Governments of the left can be thrown out of office, as they were in the first two countries. A government of the left can be so nearly defeated as to nullify its plans for more leftward legislation, as in Britain.

From this fact men of the right and center may take comfort, as they are.

But before they take too much comfort, or relapse into an easy confidence that because it happened in three other places it will automatically happen here, too, they had best note two aspects of the matter which have been somewhat overlooked in the original enthusiasm.

The first is that the pattern of the past lends almost no support to the theory that British and American electorates tend to follow each other. On the contrary, it would almost seem as though the two electorates were perversely determined to move as frequently as possible in opposite directions.

For example, when the United States had Herbert Hoover—a man of the political right—the British swung left to Ramsay MacDonald. Then when American voters swung left under Franklin Delano Roosevelt, the British soon turned right under Stanley Baldwin and Neville Chamberlain.

Following the war, Britain turned abruptly left under its Labor government. But the first American postwar election was a swing to the right—the Republicans capturing both Houses of Congress. There was a resumption of a leftward trend in America in the 1948 election, but now the inclination in Britain is rightward, even though not quite far enough to overthrow the government. Judging from the past, there is certainly no reason to assume that the American electorate will turn rightward just because the British have. Over the past half century the political cycles in Britain and the United States more frequently conflict than coincide.

The second aspect of the matter is that the British conservatism which did better than expected in last week's elections is a very different thing from the conservatism of

the presently dominant group in the American Republican Party.

The British voter may or may not have consciously repudiated nationalization of industry by his votes. But the British voter has made it extremely difficult, if not impossible, for the British Labor government to proceed with much more nationalization. However, if we judge what a Conservative government would do from its campaign record one must conclude that the British voter has most definitely not repudiated the idea of the welfare state.

The Conservative Parties which won in Australia and New Zealand, and nearly won in Britain, are all pro-welfare-state parties in the broad sense of the term. That is to say, if you are to draft a formula for a Conservative platform from the experiences of the three British Commonwealth elections your formula would be built on accepting the welfare state just as firmly as on rejecting the nationalized state. That has been the winning combination twice, and the nearly winning combination once.

It remains possible, of course, that a Conservative Party can win someday by being against both nationalization and the welfare state. But there is no basis in any of the three British elections for such an assumption. Those elections prove only one thing—that the combination of the welfare state with private capitalism is appealing to the voters of New Zealand, Australia, and Britain. It does not prove that any other combination will be appealing to voters anywhere. Nor, of course, does it disprove it.

Representative Lovre's Long-Range Plan for Agriculture

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1950

Mr. COTTON. Mr. Speaker, my distinguished colleague, the gentleman from South Dakota [Mr. LOVRE] has spent a good deal of time working on a long-range plan for agriculture. Recently he announced the objectives of his plan, which drew Nation-wide comment, most of it favorable. I would not attempt to comment on the merit of the proposal without a long and thorough study of its details, but, having great respect for Mr. LOVRE's knowledge of farm problems and confidence in his judgment, I believe that his suggestions deserve the careful study of Members of this body on both sides of the aisle. Our long-range farm policy is the most vital domestic problem before the American people, and our decision in regard to it may well determine whether we are to take the road to regimentation and socialism or to a free and expanding economy. Therefore, every suggestion should receive our conscientious consideration.

For this reason I ask to have printed in the RECORD an article from the Mitchell (S. Dak.) Daily Republic of Wednesday, February 22, discussing Mr. LOVRE's plan. W. R. Ronald, author of the article and publisher and editor of the paper, has spent many years studying problems affecting agriculture. His observations are worthy of note.

CAN ATTAIN LOVRE FARM PLAN'S GOALS BY ONE MAJOR CHANGE IN PRESENT LAW

(By W. R. Ronald)

When Representative HAROLD LOVRE of the First South Dakota District, announced yesterday in Washington the provisions of the grass roots bill he will introduce, it was the culmination of 17 years of experience and effort by farmers administering the AAA and PMA measures.

This South Dakota Representative had already broken with the National Republican Committee because of its inane, one-sentence proposal for agriculture. He said he would present legislation to set up a farm products price support program.

He had found in 32 meetings, held after he had sent 85,000 post cards to farmers in his district to tell him what they wanted, that 90 percent, of course, asked for:

Full parity price on normal domestic consumption.

A completely self-financing program.

A two-level price system under which the surplus would be segregated.

Administration by county, State and national committees or boards made up of farmers, either nominated or elected by the farmers.

Tuesday Representative LOVRE announced the provisions of the bill he will introduce, which would:

1. Provide full parity price at all times for all normal domestic consumption of any of the farm products upon which the law would be operative.

2. Be fully self-financed, thus ending the use of taxpayers' money for subsidies for farmers.

3. By a simple device segregate surplus so that the farmer will receive only what it brings when sold.

4. By using market devices only, terminate all efforts to control production by the Government, but insuring that the farmers would themselves reduce production when the amount received by them for surplus becomes low enough.

5. By calling loans or selling surplus, make the parity price also the ceiling, thus protecting consumers.

6. Make it possible for the Government to get back probably most of the fourteen billion it now has invested in surplus foodstuffs.

7. By recovering this amount and adding at least the $2,000,000,000 of income which Secretary of Agriculture Brannan says is the amount by which farm income has already been reduced below what farmers should receive, go far toward balancing the Federal budget.

8. Providing a system under which, by adding a few cents to parity and then collecting it from farmers, it could provide insurance of crops against any and all loss, without any expense to the Government.

9. Make the application of the law voluntary, by using the same provision in present marketing laws, namely, a referendum in which two-thirds or more of the farmers must vote for its use before it goes into operation.

10. Set up a system of marketing under which the cost of depreciation of farm plants and of restoring the fertility of depleted soil, could be financed by adding the necessary amount to be the parity price, to be retained by the farmer only if used for those purposes, thus making possible the most extensive soil-conservation program ever put into operation in the United States.

11. Make it possible to control exports of surplus at less than parity within any policy established by Congress and without breaking down agriculture in other countries.

12. Establish administration of the law by farmers. This would be accomplished by the election of county committees of farmers, as under the AAA and the PMA; nomination of farmers for the State committee by the county committees, the Secretary of Agriculture making his appointments from this list; and nomination of farmers for the national committee or board by the State committees, the Secretary making his appointments from this list.

ONLY ONE MAJOR CHANGE NEEDED

All of this would be accomplished by only one major change in present law. Congress, a number of years ago, passed marketing quota laws to keep surpluses from breaking prices. Under this or any other such laws, the farmer is given a quota under which he may market only his share of the normal total domestic consumption of the commodity as to which the law is in operation.

By adding one amendment, namely, to require the farmer to purchase any additional marketing quotas for the sale of any surplus, the Federal Government would thus have the funds with which to provide food stamps for low-income families, aid new uses of food and through export to move any surplus it acquires, either by purchase or loans, always at parity.

"I was surprised by the unanimity of the farmers on the program they want to assure them decent prices," Mr. LOVRE told me about the meetings he held in October, November, and December. "I was astonished at the number who responded to my post card invitations. I would say that about 90 percent want full parity under a self-financing program, with a two-level price to them. By a two-level price, they mean full parity on their share of normal domestic consumption and whatever is realized on any surplus they may market by buying additional marketing quotas. I know this measure is what they desire and I am going to give it everything I have got."

FARMERS IN OTHER STATES WANT THIS LAW

I can say that Mr. LOVRE, through his meeting, found exactly what the Daily Republic was given, in meetings with farmers in eight States, North and South.

Politically, Mr. LOVRE has shown the way by which the Republicans can surely win the 1950 elections in the Farm Belt. If they are smart, they will get behind the Lovre bill.

Readers should appreciate what Mr. LOVRE did by issuing his statement when he did. The policy, or program, outlined by Chairman Gabrielson of the Republican National Committee, referred to agriculture in general terms.

Mr. LOVRE, to his great credit, immediately declared that this Gabrielson statement on agriculture did not go far enough, and announced his intention to introduce the grass-roots bill. It is unusual for an officeholder to break so quickly and so frankly with the head of his party's organization. Obviously Mr. LOVRE was influenced by his knowledge of what the farmers of his district want, obtained by his 32 meetings with them. That, in turn, presages an aggressive effort by the Congressman to put over his measure.

So, by summoning all the farmers of his district to a frank, nonpartisan statement of what they want, Mr. LOVRE not only did a smart thing, but gave an exemplary example of democracy at its best.

I think I know why Mr. LOVRE found a response that surprised him. This was manifested in the number who came to his meetings.

ELECTION WITHOUT REPRESENTATION

Not only office holders and politicians, but also news writers, have failed to appreciate what it has done to the farmers to have held 17 annual elections of county AAA and PMA committees, beginning with 1933. The Secretary of Agriculture has named the State committees and has dictated what they should say and do; the county committees

have not only not been invited to make suggestions, but when they have tried it, have been rebuffed.

Anyone should imagine the resentment that has been accumulating with the farmers, as, year after year they have held their elections of county committees, only to find that these county committeemen are not permitted any voice in forming a farm program. It has been election without representation. And, since this is contrary both to the theory and practice of democracy in the United States, the farmers not only do not like it, but properly resent it. That is why they will insist on State and National committees or boards made up from lists of farmers they nominate for any permanent farm plan. Moreover, it would insure the interest and activity that would handle the details of any program correctly and with understanding and dispatch.

HOW IT WOULD WORK

How the plan would work may be illustrated by a farmer who had been given a marketing quota on corn at a time well in advance of planting. We will say this is for 5,000 bushels. But, because of unusual favorable weather, he produces 6,000 bushels of corn. He could dispose of the 5,000 bushels, either for cash or by feeding.

If under his alloted quota he should desire to market also the 1,000 bushels of surplus corn he had produced, he could do so, but only by purchasing a certificate for surplus marketing of 1,000 bushels from his county committee.

If parity on corn were $1.50, he probably would be charged at least 75 cents a bushel for this surplus certificate. He would sell at full parity, and the $750 he had paid to be allowed to market the 1,000 surplus bushels would go to the Federal Treasury.

The Federal board or committee administering the law would at any time purchase at parity, or make full parity loans, on any amount of corn necessary to maintain the parity price of $1.50 per bushel.

This national committee or board would store surplus up to the amount of carry-over desired in order to provide a reserve against a shortage through crop failure or increased demand.

But if the national board should acquire more than the amount desired for reserve, it could and would move it at whatever reduction in price is necessary. Food stamps for any such surplus would be issued to low-income families.

The national board would determine the value of the stamps, whether for 20 or 30 or whatever cents per pound of foodstuffs. And it would also determine the number to be issued. In any event, they would be discontinued when the market for the commodity no longer needed support. (No doubt the board would be authorized also to sell at a discount to firms experimenting with new uses for corn; and also to export at a price below parity, as may be in keeping with the policy of Congress or any agreement such as the Marshall plan.)

The cost of moving any and all surplus in those ways would be met by the amounts paid by farmers for surplus marketing certificates.

BALANCES DUE FARMERS

At the end of the year, the national board would have a record of the average amount received for any surplus corn, for example, it had disposed of. Thus it would know the average realized per bushel. Let it be supposed that this amount was $1 per bushel. Farmers selling surplus had paid 75 cents per bushel for these surplus quotas and received $1.50 (parity), and so would have obtained a net of 75 cents per bushel. They would have 25 cents per bushel coming to them from the Federal board, because it had netted $1 per bushel on surplus. This would be collected by the farmers from the county committee by presenting the surplus marketing certificates they had purchased.

So, the two-level price system would work out this way. Each farmer would receive full parity for his share of the total normal consumption, and the amount realized on the sale of any surplus by the national committee or board administering the program.

This is the private-enterprise system. It is what every merchant does: sell the bulk of his stock at full price and then dispose of his surplus at reduced prices. The farmer must have the Federal Government act as his agent to handle his output in the same way, because he himself has nothing to say about the price he receives.

QUOTAS CORRECTED ANNUALLY

Each year the Secretary of Agriculture would estimate the normal domestic consumption, at the same time making a correction on the estimate for the preceding year or years as compared with the actual.

If farmers were to continue producing large surpluses, the national board would charge more and more for surplus marketing certificates in order to have funds to pay for a larger amount of food stamps or other discounts. So the farmer might have to pay $1 or even $1.25. (If in any year it is found the charge is too low, it could be immediately increased.) The farmer would receive less and less, net, for his surplus. And presently he would voluntarily reduce his production, on that account.

Under a one-price system, the more the price drops the more units the farmer tries to produce, to keep up his gross income. Only when he is obliged to take a lower price on the surplus, and the surplus takes all of the beating on price, so that it would pay him less and less, will he find he is money ahead if he reduces his plantings.

In order to reach the sale of any feed crop in the form of byproducts, namely, livestock, dairy and poultry products, all grains and probably soybeans and sorghums and hay and livestock, dairy and poultry products would be treated as one commodity. Thus, upon any of these products of which the national board acquires a surplus that should or must be marketed, food stamps would be issued whether it be eggs or butter or beef or pork or grains.

COST OF CONVERSION KNOWN

Not only the Department of Agriculture and State agricultural colleges but many farmers know how many bushels of each kind of feed is required to produce 100 pounds of meat or a gross of eggs or 100 pounds of chickens and the surplus marketing certificates bought by the farmer would be valued accordingly. That is why, if the law should be approved by this Congress, and a referendum were to be put into operation on grains and their byproducts, the Government could get its money out of any surplus of any of these products it now holds. As it is now, it cannot at the same time buy and sell on the public market without breaking the price. That's why it is destroying foodstuffs and unnecessarily losing millions, and if this practice is continued, billions.

In this respect the Government is in the very same quandary as was the Hoover farm board. It will be recalled that the more it bought of wheat the lower it went. When it began operations wheat was selling for $1.25; when it stopped wheat was bringing 40 cents.

ONLY WAY TO SAVE BILLIONS

Thus Representative LOVRE is offering the one way by which the Government can get out of the mess in which it finds itself by continued purchase of farm products to support the market, with no way to dispose of its holdings without lowering the price, to support which the purchases were made. As it is, the Department of Agriculture doesn't know what to do except to keep on buying. That is why Secretary Brannan a few days ago asked for another $2,000,000,000 for that purpose. If that were given to him, and he spent it, the Lovre bill could save six instead of four billions.

Since any addition to farm income adds seven times as much to national income, and even Secretary Brannan admits the farmers this year will get $2,000,000,000 less than they should (which is less than parity), and their returns are increased only by that amount, it would add fourteen billion to the annual income of the whole country and that in turn would increase the return from income taxes.

So the Lovre bill not only is the one and only method proposed by anyone that could balance the budget, but in all probability would do that very thing if the Eighty-first Congress passes the measure.

Hidden Taxes

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, hidden taxes have lulled the taxpayer into a fool's paradise. He does not know what his tax bill is nor does he seem interested. In some way he must be aroused. At this point I include a timely editorial that appeared in the Evansville (Wis.) Review:

In an editorial called Those Hidden Taxes, the New York Herald Tribune observes, "The citizen who grins and bears it each week when he takes note of deductions from his take-home pay, or who gulps when he makes the quarterly payment on his income tax, has perhaps mercifully been spared a consciousness of the hidden taxes which fall upon him every day. * * * The problem of tax reform, however, requires knowledge on that part of the citizens. It is to the advantage of the individual that he sees through the tax smoke screen which the experts have laid down, that he feel the pain of what has been devised to be painless."

The Herald-Tribune ran a series of factual articles, by Robert S. Bird, dealing with the impact of hidden taxes on the ordinary taxpayer. It is a sure bet that not 1 citizen in 10,000 has any accurate idea of how deep these taxes cut into his earnings. For instance, on a $10,000 house it was found that no less than 639 hidden taxes were involved in the construction, development of site, and purchase financing. These taxes, Mr. Bird says, were collected by the Federal and State governments from the architect, builder, banks, agents, insurance companies, contractor, manufacturers, jobbers, and others.

Hidden taxes are not confined to big purchases like a house. The tax foundation found that 151 taxes applied to a loaf of bread. A woman's hat carried 150 taxes. A man's suit came in for 116. A humble egg accounted for 100. Mr. Bird writes: "In none of these studies were local taxes taken into account, nor the Federal and State levies on the various steps behind the supply and manufacturing point. As an example of how complex the tax-shifting devices work, the economists found that even the length of

time an article remains in stock sometimes determines who bears the weight of a particular tax."

No one knows the actual total of hidden taxes. Estimates indicate they may run as high as $700 per family per year. And, of course, they come on top of all direct taxes. The magnitude of the latter is shown by the fact that in 1949 the average taxpayer worked 1 month for the Federal Government to pay the Federal income tax alone.

The Federal Government is the biggest tax eater by far. It takes 71 cents of each tax dollar, while the states take 15 cents and local units 14 cents. By contrast, in 1932, the Federal Government took but 22 percent and in 1939, 39 percent.

What to do about this tremendous problem is a tough question. The Herald Tribune says, "The overlapping of tax jurisdictions, the continuance of taxes which have outlived their original purpose, the crushing proportions of the tax burden as a whole, require the most careful * * *. But the first step is to know, and the second is to be aroused."

Depositors Who Remember GOP Era of Bank Failures Appreciate New Deal Protection of Their Life Savings Through FDIC

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Thank God for the Federal Deposit Insurance Corporation," which appeared in the Daily Times-Democrat of Pryor, Okla.:

THANK GOD FOR THE FEDERAL DEPOSIT INSURANCE CORPORATION

People who lived during the past depression and happened to be residing in a community where there was a bank failure, can appreciate the beneficent and glorious service the Federal Deposit Insurance Corporation is rendering to this community at this hour.

The Federal Deposit Insurance Corporation started work quickly upon discovery by the bank examiners of the condition of the bank. For their promptness this community will be forever grateful.

Moreover, the people of this community should be grateful for the fact that we have living in our community men with determination and financial means to assist in building the financial structure of even a larger bank than the old one. And also we should be pleased that our community has attracted Charles H. Fawks, president of the new bank, to come here with his talents and means.

This is the hour when due credit should be acknowledged and this community will be grateful forever for the ultimate and satisfactory relief from this financial crisis.

Under the Federal Deposit Insurance Corporation, deposits are guaranteed up to $5,000. However, in the case of the Pryor bank, a new bank having been organized, the Federal Deposit Insurance Corporation will make a purchase of the assets of the old bank and all depositors will be paid in full.

The National Security

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, March 3 (legislative day of Wednesday, February 22), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have included in the Appendix of the RECORD a thoughtful, analytical, and constructive speech of our colleague, the distinguished junior Senator from Texas [Mr. JOHNSON], which was delivered at the breakfast of the American Association of School Administrators at Atlantic City, N. J., on February 28, 1950. Those of us who have served both in the House of Representatives and in the Senate with the Senator from Texas know that he always thinks through the problems confronting our Nation and that he courageously stands for what he believes to be in the public interest. These characteristics are shown in the address I asked to have printed.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Thirteen years ago, a majority of my neighbors and childhood friends in central Texas concluded that the State of Texas would best be served if I were sent away to Washington. Except for that, I might well be one of you this morning.

My earliest ambitions, after graduating from teachers college at San Marcos and entering the education field, were toward the work of school administration. At that time, Texas had an unusually large number of able and inspiring public-school administrators. The honor of the work was high, but the honorariums were low.

Today the honor is still high—and the honorariums are no longer so low. I hope both will increase in future years.

It was not my purpose in coming here from Washington to talk with you about school administration. You know that field—and you are doing a wonderful job.

Instead, I propose to talk with you about our national security.

My first committee assignment as a member of the House of Representatives in 1937 was the Naval Affairs Committee. From that year to the present, I have had the rare opportunity and the great responsibility for participating in a continuing study of this Nation's defense and security.

I do not pretend that this service qualifies me as any rare expert, either in matters of defense or in matters of our international relations.

I know that I do not possess any great store of startling and secret information, and I will not seek to stimulate those who may have an appetite for the sensational by pretending that I do.

From my years of service, I am sure of only one thing:

Modern politics and modern science have made it impossible for any nation to be certain that its defenses are adequate.

Remember that. We may appropriate and appropriate, build and build, plan and plan for our defense, but we can never be sure we have done enough.

This is a fundamental fact, a simple and obvious reality of our world.

We may as well accept it; we cannot escape it.

I emphasize this for a purpose.

A NEW ROLE

Within the past 6 months, two events have forced upon us a new role in the defense of freedom.

First, well ahead of schedule, communism has come into possession of the atomic bomb.

Second, communism has sealed the back entrance to Soviet Russia through the conquest of China.

What do these events mean?

For one thing, international communism has, for practical purposes, accomplished many of its major goals nearly everywhere except in the United States and in those nations allied with the United States through the Atlantic Pact.

Whatever advantages we may have held because of the Kremlin's diversion to other interests are now dissolving.

Furthermore, the Soviet atomic bomb changes the balance of the physical strength of communism and freedom.

We know that we no longer possess an explosive force mightier than the Soviet; we can only hope ours is not weaker.

Stated bluntly, this may be alarming.

Certainly it is disturbing.

What we have lost, thus far, is time.

Worse, however, we are losing both time and our relative strength every day.

In 1945, year one of the atomic age, scientists told us that we might have 10 years of monopoly on the atomic bomb.

The predictions were too optimistic.

Instead of 10 years we had barely 3 or 4 years.

The world of 1955 has now arrived ahead of schedule, and free men have found themselves running late.

OUR POLICY OF CONTAINMENT

For a few years we had a policy of appeasement, and then we adhered to a policy of containment. With our military resources and with our money we have attempted to hold in check the imperialism of communism. As a legislator, I have supported the policy and I have looked forward to its successes.

In those places where the policy has succeeded, it has succeeded, as Churchill pointed out, only because we held the advantage of the atomic bomb. In other places, it has not succeeded at all.

Force can only be countered by superior force.

We no longer possess a superior force. In addition to the world's largest underseas fleet, the largest land army, and one of the largest air forces, Russia has an atomic bomb. We are building an H-bomb—there was no choice other than to build it. But only the naive, only the hopelessly innocent or ignorant, would bother to contend that the H-bomb is an American monopoly.

We should now admit to ourselves that peace does not come in bombs.

Whatever bomb free men build, slave men can build also.

If slave men ever use their bombs, free men must use theirs also—that is, of course, if the first attack of the aggressor is not fatal.

Because of Russia's bomb, and because of our bomb, I believe our people need to look thoroughly into our whole policy of containment for Communist imperialism.

If all of us adhere stubbornly to a policy born in a different day and age, we may easily succeed only in containing ourselves. In other words, we may find we have fenced ourselves in, instead of fencing in communism.

What results such a review might produce I do not know. I do not think there is profit or worthy purpose in proposing reviews merely to announce what the outcome should be.

This I do sincerely hope: That not all suggestions for review or reexamination of our policies will be dismissed by any free people with the reply to that change—or suggestion of change—would be interpreted by the Communists as a sign of weakness.

We should not freeze our vision or destroy the strength that hope gives by accepting this answer.

CHANGE IS OUR STRENGTH

It has long been my belief that the greatest strength of free peoples in the struggle with communism is their unique ability and their traditional willingness to change, to adapt themselves to changing situations, to find new answers to old problems.

That is what distinguishes democratic systems from totalitarian systems.

Our freedom, of which we speak so much, is actually the right and the ability to change.

If we want to lose our freedom and lose our strength, we can do so by permitting communism to frighten us away from change.

I am not one who agrees that the active quest for peace is indicative of weakness. Only those who are strong, and who are confident of their strength, can effectively seek peace. Peacemaking should not be only the business of the weak.

I believe this Nation must remain sufficiently strong to sit at the conference table with Russian representatives and seek the answer to the survival of two worlds.

In our foreign policy, we can have the combination of hardheaded realism and dynamic imagination of our forefathers—and, perhaps, more of the audacity of such bold strokes as the Monroe Doctrine, the Louisiana Purchase, and the purchase of Alaska.

Those ventures kept democracy's enemies on the defensive.

We must not leave today's problem—our greatest problem—to be answered by a static, negative policy of containment.

My point is this:

So long as we held a monopoly on the bomb, our policy was successful. Now, the monopoly has ended, and our policy's continued success may be ending.

What we seek is a policy that will continue to be successful. We can—and we will—shape such a policy. That is the reason for the present public discussion of our policy, we are not attempting to find a graceful way to surrender, as some seem to believe; we are attempting to find a policy that will be even stronger and more effective.

MOSCOW MUST UNDERSTAND

I believe it is as imperative that Moscow understand our policy and our purposes as it is for us to develop and maintain effective policy and determined purpose.

Twice before, once in 1917 and again in 1939, foreign dictators failed to comprehend the depths of our determination. The Kaiser misunderstood us, Hitler misunderstood us.

The cause of peace will be served now, I believe, if our President or our Secretary of State will make clear our willingness to outline American intentions frankly and openly to the Soviet. Men such as President Truman, Chief Justice Vinson, General Eisenhower, General Clay or General Bedell Smith could, I am sure, impress upon the Soviet leaders the firmness of our purpose and the clear outlines of our policy.

Free men do not desire to dictate the course of allied governments or to attempt to overthrow the chosen governments of other independent nations.

Free men cannot easily guard the secrets of their strength from the eyes of enemy powers, unless they prize the secrets more highly than their freedom.

Finally, free men cannot keep their freedom—nor guarantee their security—if they attempt to keep pace in an armaments race with a totalitarian nation.

We may be entering the final stages of the cold war. Indian summer is over.

We know that we are not bluffing. We can presume no longer that Russia is bluffing.

FACTS OF OUR STRENGTH

The facts are these:

In terms of superexplosives, we are ahead in production, which may not last long, but we now know we have no monopoly on any type of superbomb.

In the air, Russia is considerably stronger today than is the United States.

On the sea, Russia is much stronger in effective submarine strength.

On land, Russia is the strongest nation in the world.

What does this mean? What should be our reaction to these facts?

Shall we pretend to equalize these odds by ignoring them? Shall we attempt to intimidate the Soviet by displaying 160,000,000 stiff upper lips?

Shall we take another course some suggest and arm ourselves more heavily than the Soviet?

Again, I say no.

If we should enter an armaments race with Russia, we would very likely destroy ourselves attempting to win. A nation cannot dedicate its full resources to munitions production and still retain freedom for its citizens.

We do not have the population to compete with Russia in an arms race.

We do not have the fiscal resources to compete.

We do not have the time to compete.

THE MINDS OF FREE MEN

What shall our course be?

If communism and freedom are to be equal in terms of superbombs and explosive power, we must find salvation for our world in the greater achievements of the minds of free men.

Freedom's great basic advantage over communism is that free men have the opportunity to think.

We must—and we can—out think the Communists in the field of foreign policy.

I am convinced that we can—and must—out think the Communists in the field of our military defense.

For 5 years, since the end of the war in Europe and in the Pacific, we have—perhaps unwittingly—fallen into the routine of a sort of false-front armaments race with the Soviet. Instead of holding our own, we have lost ground.

At the first hint of Russian aggression, we nervously lowered our vision from the distant future to the immediate present. We began to assemble our armed forces on a day-to-day, hour-to-hour basis of urgency and need.

Our purpose has not been realized. Russia has greatly increased the size of its forces in relation to ours. And we have suffered the casualty of lost imagination, lost invention, lost planning.

A look at the defense budget will explain what I mean. This year we are spending $14,000,000,000 on our National Military Establishment. We are asked to spend $13,000,000,000 in the next fiscal year.

This is the largest item in our Federal budget—it will take 32 percent of your taxes.

THE DIVISION OF DEFENSE FUNDS

What interests me and what I hope challenges you is the division of funds and division of emphasis which we are making.

Of our total defense budget for 1951, less than 5 percent will be devoted to research and development of new weapons for future wars.

Less than 5 percent for the future.

What we have in our arsenal is impressive and it is tested; but, we know that much of it will be outmoded at the time any future war starts.

I say that helpfully, not critically, I believe it is true.

Recently, I had opportunity to look into one specific phase of our defense development—the field of guided missiles.

It was disturbing to me to find that, to the best of our knowledge, Russia probably is 2 years ahead of us in some missile research.

Our services are conducting research—on a limited scale and on a limited budget. Less than 1 percent of the total defense budget is going for these weapons which may be vital to our defense in any future conflict.

Despite this limited operation and despite the great need to acquire workable weapons in this field, there is duplication, triplication, and, in one instance, quintuplication of effort.

We do not have the time—and we do not have the brains—to condone such a squandering of talent and effort.

Imagine the chaos if, for example, there had been three Eisenhowers trying to invade the Continent of Europe. We might have been working till yet if our brain power had been misused so flagrantly.

The time has come for free men to recognize their greatest resource—free minds—and put those minds to use.

MAKE UNIFICATION WORK

For the armed forces, unification was originally conceived to economize on talent and time. It was meant to make all three services richer in terms of effectiveness, not poorer in terms of money.

The time has come to make unification work toward greater effectiveness.

Research, new methods, new inventions—that is the area in which free men can win and hold supremacy over the dead hand of totalitarian systems.

I believe we can defend ourselves with a $13,000,000,000 budget. We can do it if the services work as one, not as three. We can do it if we make sure that no brain power, no talent is being wasted.

There is fat in the Defense Establishment—physical fat and mental fat. I am most anxious that we fry out the mental fat.

SEEK FULL USE OF OUR TALENTS

With statements and counter statements now appearing in the press regarding the condition of this country's strength, I believe the time is near when the proper authorities must determine the facts concerning the strength of our Military Establishment. This should be done, not in a spirit of bias or a spirit of petty revenge, but in the hope of making full use of this Nation's scientific and technological resources.

In addition, I think we should look into our stock-piling program, so that we can avoid the great hazard of being caught short in essential strategic materials.

Also, we must look thoroughly into the conditions of our military housing and other factors relating to personnel so that the morale of our forces will not be lowered and their efficiency reduced at this period when the utmost is demanded from all of us, individually and as a team.

We have the advantage of a long history of free public education, which has given us the world's greatest reservoir of enlightened manpower. We have the further advantage of freedom, which permits the full use of the minds and learning of our citizens.

This is our great source of strength. We must put that strength to use in the military as in all other areas of our Government.

For 5 years, we Americans perhaps have to some extent isolated ourselves behind the security of an atomic monopoly. We did not extend ourselves mentally or physically. We were tired from the exertion of war, weary of crisis. We concentrated our national energy and our national talent on our own comfort more than on our security.

This is true in the formulation of our foreign policy, true in the formulation of our domestic policies, and true of the broad conduct of our Military Establishment.

That isolation is ended.

CHALLENGE OURSELVES

We can no longer indulge laziness or sluggishness.

We must challenge ourselves—and in that challenge we will find the salvation of the world.

I have spoken of these things to you because I think it important that you, as leaders in your community, carry back to Texas the realization that these times demand the best in us—and pray that the best in us is adequate for the challenge.

We will profit nothing if we succumb to hysteria, to panic, or to demands that we try to match Russia plane for plane, submarine for submarine, bomb for bomb.

We will profit nothing if we mistake change for weakness. When we talk of new policies, new ideas, new approaches, we mean more effective policies, better ideas, more successful approaches—we are talking of strength, not surrender.

You can serve a most valuable purpose if you will admonish your neighbors and friends against hysteria and panic, against fear that this Nation is to be overwhelmed by the military forces of communism.

The facts are grim, but we must face them. Only by facing facts squarely we can and will find the answers to our problem of survival.

This is not the darkest hour in our national history. If the challenge of the moment stirs our imagination and our capacity for invention, we may see the brightest hour of civilization.

There is hope for us and for the world—so long as we keep hope alive.

Lincoln Day Address By Hon. Margaret Chase Smith, of Maine

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Friday, March 3 (legislative day of Wednesday, February 22), 1950

Mr. BREWSTER. Mr. President, I ask unanimous consent that there be printed in the RECORD a Lincoln Day address by my colleague, the junior Senator from Maine [Mrs. SMITH], before the Portland Lincoln Club, in Portland, Maine, February 10, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Last year at the Lincoln Day dinner in Washington, I addressed the attending Republicans as "fellow mourners." That dinner was more like a wake at which we were making post mortems on why we had lost the Presidency for the fifth straight time. We talked about the mistakes that the Republican Party had made.

But this year is different. This year I address you as "fellow fighters" because something happened in Washington this week that convinces me that the underdog Republican Party has started on the comeback trail and has started fighting.

Monday in Washington we had the kick-off Lincoln Day dinner. It was a dollar box-lunch affair—a common man's affair, not a $100-a-plate rich man's affair like the Democrats have in building up their campaign war chest. There were those who said it would be a flop—that it was fantastic to try to get a crowd of any size in the Democratic jobholder city of Washington.

But it wasn't a flop. A record, roaring crowd of 12,000 cheering people jammed the Uline Arena. There was hardly breathing space and there were 3,000 people outside who couldn't get in because there just wasn't room for them. I have never seen so much enthusiasm in a crowd.

Yes, I think the Republican Party was resurrected this past Monday night.

Monday, the Republicans issued a 2,500-word restatement of principles. Eloquent as it might be, I think that it could have been stated in less than 100 words—and in common, everyday words of the average man in the street—the man whose vote we have to get to win in 1950 and 1952. My boiled-down version of the Republican restatement of principles is not only a mere 89 words of Republican Party position but also an indictment of the Democratic Party on 10 counts for the Democratic Party has not only failed miserably on each of these points but also has made it clear that it opposes each of these points. My concept of what the Republican Party stands for and what the Democratic Party is against is: (1) Reducing taxes; (2) balancing the budget; (3) fighting deficit spending and Government waste; (4) fighting communism here instead of complacently condoning it; (5) making foreign policy truly bi-partisan instead of merely rubber-stamped; (6) fighting and exposing something-for-nothing deception, whether it be socialized medicine, socialized farming, or hidden taxes; (7) preventing either management or labor from getting too much power at the expense of the public; (8) maintaining an adequate social-security system that does not limit opportunity nor discourage initiative and saving; (9) opposing any curtailment of veterans' benefits; (10) smashing the filibuster on civil rights.

No other political party can make that statement—much less the Democratic Party. Only 89 simple words to show the basic issues between the Republicans and the Democrats—to tell the difference between the two parties.

I was elected to the Senate in 1948 on the slogan of "Don't Trade a Record for a Promise." That is equally applicable for 1950 and 1952. The Republicans promise changes if they are put into power. The voters can rightfully ask, "Do you have a record to back up your promises?" And the Republican Party can confidently say, "I'm glad you asked that question. The answer is unqualifiedly 'Yes.' Here is the record."

1. The only tax reduction that has been given to the American people in a generation was by the Republican Eightieth Congress, the only Republican controlled Congress in the last 20 years;

2. The only time that the budget has been balanced during the last 20 years was in 1947 and 1948 by the Republican-controlled Eightieth Congress;

3. The only real fight that has been made against deficit spending and Government waste is the fight made by the Republicans;

4. The only real fight to expose and purge Communists and their fellow travelers from key posts in our Government so that they could not send our vital secrets to Russia has been that made by the Republicans in Congress;

5. Republicans have made our foreign policy bipartisan. But the Democratic administration is now excluding Republicans from a voice on policy formulation. The Democratic administration has turned what was once a cooperative two-way street into their own secretive, one-way back alley where only the Democrats make the decisions and then try diplomatic blackmail under the guise of unity to make Republicans mere spineless, rubber stamps.

6. The only effective efforts to expose the something for nothing fraud and deception practiced upon the American people by the Democratic administration under the policies of socialized medicine, socialized farming and hidden taxes, have been the efforts of the Republican Party to warn the people that they were in danger of trading away their individual freedom without realizing it for the mental opiate of a false sense of security;

7. It was the Republican Eightieth Congress that passed the Taft-Hartley Act to prevent either management or labor from getting too much power at the expense of the public. Republicans created the Department of Labor. One of labor's greatest champions, Senator George Norris, was a Republican;

8. As far as social security is concerned, it was Republicans that first adopted a valid old-age assistance program in Montana 12 years before the Federal Social Security Act;

9. As far as veterans are concerned, the Republican Eightieth Congress was the champion of them all, passing more favorable legislation for veterans and reservists than any other Congress in history;

10. As far as the opposition to civil rights is concerned, everyone knows that it is the Democrats who are blocking it with filibusters. The Republicans are constantly trying to break these filibusters. And does anyone dare deny that Abraham Lincoln, greatest of all Republicans, was the father of civil rights?

If any of you are still unconvinced, try this for size. The Republican Party created the Department of Agriculture. It is the original trust-busting, antimonopoly party that gave us the Sherman Antitrust Act. The Republican Party is the party that gave women the right to vote—the party that got Alaska from Russia for only $7,000,000, the party in power when we acquired Hawaii, Guam, Puerto Rico, Midway, and the Panama Canal.

The Republican Party is the party that stopped a Democratic President from packing the Supreme Court and from destroying the independence of our judicial branch. It is the party that discarded the spoils system and set up the civil-service system on Government jobs by merit and qualification instead of by the political patronage standard of whether you voted for the winning party.

Now what has the Democratic Party given the American people? Time permits me to mention only one thing—and I have chosen that which you are most aware of now—taxes. The Democrats have given you the highest taxes in the history of the country and the Democratic administration has asked that those heavy taxes be made even higher and heavier. You realize that now by merely looking at your income-tax return. But what most of us don't realize is what we pay that doesn't meet the eye—in hidden taxes. Were it not for hidden taxes, the quart of milk you pay 21 cents for you could get for 14 cents because now you pay 7 cents in hidden taxes on that 21-cent quart of

milk—were it not for hidden taxes, you could get that 47-cent can of baby powder for only 29 cents, that $2,100 car for only $1,400, that $10,000 house for only $7,000, that 10-cent candy bar for only 7 cents (look back in Republican days, full-size candy bars were only 5 cents), that 15-cent loaf of bread for only 10 cents, that 25-cent gallon of gas for only 14 cents, that 50-cent movie for only 30 cents.

Our Democratic President campaigned successfully in 1948 on the slogan of "Telling the people the facts of life." We Republicans can well take a cue from the opposition and start "Telling the people the tax facts of life." I could go on for hours talking about the tax facts of life on examples of hidden taxes on specific products and services that most of us don't realize, but let me conclude with one of the best of all examples on hidden taxes—you even pay a tax on the air in the tires of your car.

These are the facts that the party of Abraham Lincoln—the most human, the greatest representative of the common man ever to be President—must bring home to the American people if our free way of life is to be recaptured and preserved, if we are to remain loyal to the principles of Lincoln.

The Republican Party now has the fighting spirit of the under dog. It has the most admirable of causes to fight for. It has the ammunition to fight with—a past record of positive accomplishments—and the stumbling, fumbling errors and deliberate deceptions of the Democratic administrations for the past 18 years.

We can and we will win with our undeniable cause and record, if we just keep fighting to tell the people the facts of life that the Democratic administration is trying to keep from them. Let's lift the iron curtain set up here in America by the Democratic administration between the people and the Government. In that way, we can return the American people to the most basic of all freedoms—the freedom to be let alone.

The Home Owner and Honest Money

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Friday, March 3 (legislative day of Wednesday, February 22), 1950

Mr. CAIN. Mr. President, on Washington's Birthday, February 22, 1950, the junior Senator from Washington enjoyed fulfilling an invitation to address the annual convention of the National Association of Home Builders in Chicago. The address which was offered under the subject of The Home Owner and Honest Money has aroused considerable interest and some controversy. In order to satisfy requests for copies I ask unanimous consent that the speech he printed in the Appendix to the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE HOME OWNER AND HONEST MONEY

Mr. Chairman and fellow Americans, I feel deeply that I would rather be in your company this afternoon than in that of any other group in all of America. Many among your membership are close and personal friends of mine. I respect what you stand for and I have willingly enjoyed fighting for what I conceive to be your rights as American citizens and as the home building industry of the United States. In a word I respect what you have accomplished for the good of our Nation and have high hopes for the contributions you will make to all men and women in the future.

It has been a long time since I have read a written speech. I now intend to read a statement in order that I may adhere to your time schedule and because I want to think that what I want to say will be reprinted and read by other Americans everywhere.

In very simple but positive language I want to tell you a story which is typical, which you can uncover for yourselves by looking in any direction you will and which is deeply tragic. This story characterizes the road on which most American families find themselves these days. After this story has been related, I wish to offer a recommendation for your consideration and whatever action you think it proper to give.

No group in this country has a better interest in the future of America than you men and women. You are gathered here to consider the problems of home construction, home financing, and home ownership. The happiness, the pride, the future of the family, depend in a special sense upon its ability to acquire and own a home. It is your business and professional task to promote this deep-seated instinct of the human race. I do not claim originality when I say that a nation of home owners is a nation with stable institutions and a bright prospect.

Home ownership, however, serves a much deeper purpose than the immediate happiness of the family group. I do not mean to disparage that happiness. The individual is the focal point of community interest. Those of us who have not been swept off our feet by the nostrums and gold brick promises of the welfare state appreciate this.

Every schoolboy has been taught that this is a government of the people, by the people, and for the people. This means individuals. It means families. It does not mean some vague abstraction. It does not mean a blank check for dictatorial power. It does not mean paternalism and spoon-fed pap for those who do not have the energy, the courage, and the self-respect to struggle for their own rewards.

While the happiness of its citizens is the proper goal of every government, this does not mean, in my opinion, a bib and a bottle for every citizen. It means, on the contrary, the maintenance of conditions under which each American can work for his own living with the right and the duty to provide for his own needs. Let us reserve charity for those unfortunates who need help and not force it on all, under the guise of social welfare.

I spoke a moment ago of home ownership and its deeper meaning. It is a meaning which must be defined in economic, in political, and in social terms. Economically, a high ratio of home owners means stable local business. Politically, it means a greater interest in local government. The government of a home-owning community is much less susceptible to machine politics. Socially, a community of home owners assures a healthy atmosphere with a minimum of agitators and crackpots.

Last year we added more than a million units to our total of homes. It was a good year for construction generally and for residential building in particular. A fair estimate at the end of 1949 shows that this country has 47,000,000 homes. More than half of these were owned by the occupants. Among the nations of the world America ranks high as a nation of home owners.

This means much more than a desire on the part of people to live under their own roofs. It means that those who struggle and save and work for the right to call their homes their own have faith in themselves. Still more important—it means that they have faith in their Government.

When a young couple assumes the grave responsibility of owning a home, with the heavy financial obligations which such ownership entails, it means that they have not only confidence in their own future but also faith in Uncle Sam. Faith that he will not change the rules of the game. Faith that he will maintain the terms of financial contracts so that in the future those terms will not become burdensome to the owner on the one hand or defraud the lender on the other.

The ownership of a home, with its usual lien on the future earning power of the owner, is a tangible, concrete pledge of confidence in the Government. It strongly implies a conviction on the part of that owner that Uncle Sam will not tamper with the currency, that he will not limit the freedom of the owner to find the best job he can fill; that Government will not tax him so heavily that he cannot meet his obligations. If the commitment to buy a home is a personal hostage for industry and thrift on the part of the home owner, it is also—and I wish to emphasize this in the most solemn terms—an unmistakable mandate to Government to keep faith with the individual.

Let me be more specific. G. I. Jones is a typical American. He is a war veteran, married, has one youngster and hopes to have more. He is a garage mechanic in a medium-sized city in the Middle West and earns $75 a week. He works for an intelligent and successful employer who helps him set up a personal old-age pension system. It will enable Jones at the age of 65 to retire with a monthly income, counting social security, of $125. The boss pays half the cost.

By the time Jones has paid his income taxes and met the charges for social security and old-age pension, his weekly pay envelope has shrunk to $66. I am using approximate dollar figures.

Being a prudent family man, he carries a modest life-insurance policy which nicks his weekly pay for another $3. As a practical person, Jones knows that illness and accident might touch him or his family. It would be well to carry a personal reserve for contingencies in the form of a savings account. This takes another $3 a week. By the time all these charges, prudent and necessary in the mind of Jones, are made against his pay he has $60 left from his week's earnings.

This man and his wife now decide to buy a home. He has saved his veteran's bonus, some bonds he bought out of his Army pay as a sergeant, and his insurance refund. This adds up to a tidy down payment on the home and leaves a mortgage of $6,000. Its amortization over a 20-year period, plus taxes and insurance, involves a further charge of $13 against his weekly earnings. This leaves approximately $47 for all other living expenses.

Now Jones realizes that he is taking a risk. However, this is constructive risk-taking. It is a form of personal venture which is characteristic of all Americans. It is a kind of risk which millions of Americans have cheerfully assumed in the past. The willingness to take such risks has made this country outstanding among the nations of the world.

Jones and his wife did not make this commitment for a home without a great deal of careful thinking. Both are high school graduates. They read the local paper, a weekly magazine of current events, and listen to the radio. Jones is not an economist. He is not a financial expert. He uses plain, homespun common sense in getting at conclusions.

He knows that the future on which he is now wagering, with so many claims against his income, is subject to two major risks.

The first deals with his job. This does not worry him too much. He is a good mechanic and knows it. He is willing to work hard, and as long as people drive cars they will have to use him.

The second major risk involves the kind of money in which he will be paid and which, in turn, he will have to use to meet his own obligations. Will he continue to be paid in the same kind of dollars that he is getting today, or will they be different dollars? How will this affect his position as a wage earner, a home owner, a bank depositor, an insurance policyholder?

Jones sometimes reads the speeches of the President. He recently read a speech in which Mr. Truman predicted a total national production of one thousand billion dollars by the year 2000. What this meant was quite beyond Jones. It is indeed beyond a lot of people who have advantages of education which Jones does not have. Was the President discussing the future or discoursing upon the hereafter? Jones hasn't the slightest idea what the President really meant, and I share his bewilderment.

The President also spoke of an average family income of $12,000 a year. Here was a figure that was down to earth. It sounded more like personal income than astronomy. Jones knew some men who were already making that much. Yet it was about three times as much as Jones was now making and he wondered how anything the Government could do could raise his pay 200 percent.

To be sure, with all the faith that he had in himself he knew that someday he might become foreman of the shop or have his own garage. This might give him a higher income; maybe as much as the $12,000 in question.

What bothered Jones was his failure to find anything in the President's speech which dealt with the kind of money in which this future $12,000-a-year family income was to be paid. He knew that the dollars which he received for pay today were only about half as good as the dollars which he earned before the war. Could it be that the President had in mind some other kind of a dollar—a dollar which was worth only a third as much as the present dollar?

Jones had seen the result of inflation in France. He had been told by some older Frenchmen that it now took a hundred francs to buy as much as 1 franc bought in 1914. After his outfit had crossed the Rhine he had a chance to talk to some Germans. They described the great inflation in Germany after the First World War.

One German told him that his father had bought a 30-year insurance policy in 1892 with a maturity value of 50,000 marks. He explained that this was roughly the equivalent of $12,500 in American money. When the policy came due in 1922, after 30 years of frugal savings, the insurance company sent his father a single postage stamp. That was all the 50,000 marks would buy.

Jones had just read a newspaper story about Formosa. The correspondent had paid a taxi driver $7,000,000 and given him a tip of a million dollars. Did the President, in promising a future family income of $12,000 a year, have this kind of goldbricking in mind? What was being done to protect him, G. I. Jones and his family, from this kind of chiseling and cheating.

Although he was no Ph. D. in economics, he knew that inflation was the result of financial monkey business and that the Government was usually responsible for it. He could find nothing in the President's speech which assured him that the value of the dollar would be protected.

Jones tried in his limited way to get at the bottom of this problem. He tried to find out what caused money to go on the skids as it did in France, in Germany, and in China. He thought he made two discoveries.

Money becomes worth less and less when the Government issues more and more of it. It's like wheat. When there is too much of it, it drops in value. "Now," Jones asked, "what causes too much money to be around?"

One cause, it seemed to him, was the failure of the Government to live within its income. When he, a garage mechanic, spent more than he earned, he quickly got into a jam. Uncle Sam, he found, could do something which he, a worker, could not do. Uncle Sam could print money and pay his bills.

To be sure, this meant that the dollars which other people had, dollars which were honestly acquired as the result of work, would lose their value. It meant, in other words, that Uncle Sam could go on a financial spree while the people who had honestly earned dollars would pay the cost by losing some of the value stored in their money. It was a form of subtle filching.

It was odd that he could find no mention of this in the President's speech. In fact, what disturbed him most was to find in the President's speech a statement which seemed to say that the Government should spend more than its income, that this was a good thing.

Could it be that the President had in mind phony dollars when he was talking about a thousand billion national product and a $12,000 family income? Did he mean a $12,000 income in dollars that had lost so much of their value through inflation that the $12,000 was actually worth less than the amount he was now making? The ugly thought occurred to Jones that the rosy future painted by the President was paved with Chinese dollars. The same thought has occurred to many other citizens.

In his inexpert and nonprofessional probing for the truth in this problem, Jones made his second discovery. As long as money could be printed there was no limit to the total amount which the Government could get to pay its bills. If this continued long enough, the dollar would be worth no more than the paper on which it was printed. It could reach the point where it would be cheaper to light a cigarette with a dollar bill than to scratch a match.

Since this was the case, the only way to limit the supply of money, the only way to be sure that its value would not go the way of the German mark or the Chinese dollar, was to use something for money which could not be multiplied by a printing press.

It suddenly dawned on our mechanic that gold was the answer. He knew that the total amount of gold in the world was limited, that the amount added each year was a small percentage of the existing supply.

If the number of dollars in the country was limited by the supply of gold, then Uncle Sam could not spend more money each year than he collected in taxes. He would have to live within his income in precisely the same way as Jones himself had to live within his income.

If Uncle Sam had to live within his income, he might be less likely to buy potatoes at $16 a ton to be sold at a penny a ton. Uncle Sam might be less interested in raising the living standards of Zulus or building dams on the Euphrates. With the supply of money limited by gold, Uncle Sam might pay a little more attention to his problems at home and a little less attention to Fair Deals in other parts of the world.

This horse-sense thinking of our ex-G. I. is down to earth. We have explored his reasoning and weighed his position. While some of the responsibility for the failure to protect the buying power of the dollar properly falls upon the Government, I do not wish to leave the impression that all the blame should be placed there.

If the Government has operated in the red for 17 of the last 19 years, if it has disregarded the solemn duty to preserve the integrity of our money, the blame for this must be shared by the public.

In particular, it must be shared by those institutions which solicit confidence of the citizen and assume obligations toward that citizen payable in the future. I refer particularly to our banks and great insurance companies.

There are more than 14,000 banks in this country. They have more than 104,000,000 individual deposit accounts. These banks are the debtors and the depositors are the creditors. The depositors give the banks money today which must be paid back at some time in the future. In legal terms the banks discharge their legal responsibility if they return to their depositors the same number of dollars which they originally accepted.

However, if, in the interval, the buying power, or the real value of the dollar is cut in half, the depositor in the end of the period finds himself the loser. This is obviously not fraud in any premeditated sense but the effect is unfortunately though precisely the same. Too many of our Nation's banks, in their preoccupation with the narrow terms of the agreement between themselves and their depositors, have had an eye almost solely for the legal discharge of their obligations. They have been, too many of them, completely indifferent to the real substance of their obligations.

I say "completely indifferent" advisedly and only after carefully weighing my words. Ten years of my life were spent in the private American banking system when I was employed by an outstanding commercial and trust institution. This experience provided me with respect for what our banking system has contributed to the growth and development of America, and a real hope for what its leadership can contribute to the stability and health of our future. I am, therefore, not an enemy but a friend of our banking fraternity. I simply want it to live up to its potential rather than to continue to drag its feet and remain quiet when the prevailing national need for its leadership and council is so imperatively pressing. I have now been a Member of the upper House in your Congress for several months more than 3 years. In that time, and bear in mind what has happened in that period to the real value of our currency, I state as a simple fact that not a single banker has ever come to me and urged the need for protecting the integrity of the dollar because he, the banker, feels any deep sense of responsibility for the depositor.

I know of no State banking association which has appealed to Congress to protect the dollar in order that its members might, in real terms, discharge fairly and fully the obligations to their depositors.

Probably the primary responsibility for urging honest money rests upon the American Bankers Association. This body has consistently, so far as I know, remained silent on the great issue of currency. I have never seen the association become indignant or express any articulate opposition to what is happening to our American dollar. In my view their silence implies a bypassing of their moral responsibility to the millions of Americans who are their average depositors.

Here is a body whose members presumably understand money. They know full well what the ultimate, inevitable effect of paper currency with no bond to gold must be.

The American Bankers Association has besieged Congress with appeals to reduce their FDIC assessments. It has urged us in the House and in the Senate to restrain and curtail the competition of Government credit agencies.

These requests are legitimate and possessed of merit. But the point I make is that a great association is callously indifferent over the discharge of their own obligations to depositors. All banks, is seems to me, have a moral duty to insure the value content of the dollars they repay. This they have strikingly failed to recognize and in their failure they reveal a disappointing lack of stature which fortunately they can regain if they only will and must do.

Actually, the American Bankers Association at its last annual meeting at San Francisco extended the courtesy of its platform and the great prestige of the occasion to a noted guest who lectured them on the virtues of a managed currency. This is the kind of currency that England has today. It is the kind that France has and China, and Russia.

Instead of coming to the Congress and urging us to restore gold on some practical basis the American Bankers Association entertains and flatters a planner who would leave the currency to the loose limitations of the printing press and the discretion of so-called "competent and responsible men." As an American, as a Senator, and as one who learned about thrift and honesty and consumer purchasing power from his years in the banking system, I can only say that I have been looking for greater perception and more courageous leadership among bankers of this day. I am sorely grieved to say that I have been sadly disappointed.

What I have said sincerely and consideredly about the bankers goes with equal force and conviction for the great life-insurance companies of America. They carry 191,000,000 insurance policies aggregating more than $213,000,000,000. They collect money today in the form of premiums at the annual rate of $6,800,000,000. This they will return to their policyholders at some time in the future.

Again, as in the case of the bankers, there is a narrow concern over the details of dollar obligations and a disquieting complacence regarding the substance of the ultimate payments to their policyholders. The managers of these great aggregates of capital are concerned too much with the literal letter of their obligations and consistently, flagrantly ignore the meat.

It is small wonder that capitalism is under furious assault by the forces of chaos and disorder. The men who should be fighting to preserve all that is good and useful in capitalism are silent in the face of mortal danger. Every well-trained Communist, getting his instructions from the Kremlin, knows that the easiest way to destroy and wreck and undermine capitalism is to debauch the currency. In the face of this truism I want you to point out to me the prominent or leading bankers or insurance presidents who have publicly urged your Congress to return our currency to gold.

If we in the Congress are to take any constructive action on this most fundamental and vital issue, it is necessary for us to have substantial support—particularly from men and institutions dealing with money.

Rightly or wrongly, the public presumption is that the leadership of our banking and insurance fields understand the subject. Their failure to speak up implies approval of a paper currency completely unhinged from gold. I can understand their reluctance to stand up and be counted but I can't condone it. They are doing only what their counterparts did in Italy and Germany in the decades of the 1930's. In a big way all of them grew to be frightened of their Government. They didn't and don't want to rock the boat. They lulled themselves into a sense of false security by assuming that everything will somehow come out all right in the end. They are afraid that if they speak their minds, reprisals or higher tax rates will be imposed or taken against them. They want to avoid being made a "whipping boy" of the administration. As their reluctance to be themselves, within the confines of their vast accumulation of knowledge, brought gigantic ruin to Germany and Italy the present-day disposition of the banking and insurance fraternities of our Nation to let the administration have its own way in money matters will bring the same sort of tragedy and ruin to all of us in due time.

Leadership is a demanding taskmaster. It calls for conviction and self-sacrifice and placing the future good of the country above self. A leader must take some risks. He must expect some abuse and even venomous attack and criticism. The country looks for leadership to those who are authorities in different fields of endeavor. America has a right to expect that the acknowledged authorities about money, the banking and life-insurance leaders, will publicly present and offer their views about sound money and fight for their adoption.

If our Nation continues down the foolhardy and evil path of inflation, the responsibility must be laid partly on the doorstep of the administration but partly on the consciences of our financial leaders who are guilty too because they remain mute while the cause of honest money cries out of the pain of agony for American defenders.

There are men and women in Congress willing and able to take up the cudgels for real money I am among those who believe that the return to a gold standard is a reasonable, early, and practicable possibility.

There are three approaches.

The first is a return to the fictitious base established by Treasury regulations under authority of the Gold Reserve Act of 1934. They call for a dollar defined as one thirty-fifth of an ounce of pure gold. This base has been a monetary fiction and has never been tested.

There is much evidence, persuasive to me, that any return to gold on the basis of an ounce of gold for $35 would result in a run on our gold stocks and invite their early dissipation. This might prove a fatal blow to gold as a standard.

A price for gold must be established which, in the light of prevailing conditions, constitutes a fair, a tenable equation between gold and goods. That price must be set at a level which will not expose our gold reserve to the danger of dissipation.

What is such a price for gold? How can it be determined?

The technicians within our official monetary and financial agencies—I mean the Treasury, the Federal Reserve Board, and the International Monetary Fund—hold that any change in the price of gold must be made by Executive decision. In other words, they want the right to change the base for our currency. They mean well. They have the faith in their own infallibility which is the hallmark of all planners and all dictators. Without in any sense reflecting on their capacity or probity, I do not trust them.

There is a better way. We have passed through the ordeal of a great war. Our economy has suffered unprecedented distortions. Not the least of these is the great increase in the public debt and the prodigious growth in our money supply. These cannot be restored to prewar levels without deflationary pressures so rigorous as to undermine our economy. The operation could be successful but the patient in the process might also die. It is not necessary to run this risk.

Let gold for a period of time be traded freely in an open market. Let buyers and sellers from all parts of the world match values. Over a period of time a price for gold will emerge which has stood the test of market action. Let Congress take such a price for gold and use it to reestablish the dollar on a firm base of gold.

We must keep faith with GI Jones. He represents America. He is the real strength and hope of America. His home-building instinct, his industry, his willingness to take a calculated risk, his wary concern for the future—these are qualities that have made this country great.

If his financial leaders, both in and out of government, and by their silence, have defaulted on their solemn, moral obligations, it is by no means too late to compensate for this failure. The Congress, I am sure, with or without White House cooperation, is ready and willing to play its part. But I must, and want to, warn you that the high lord of monetary justice and economic stability will help only those who help themselves. Your Congress is an instrument through which our American way can be restored and preserved or dissipated and destroyed. Your Congress looks to America for advice and assistance concerning what you want done. If you want money which is hard, reliable, and honest I would urge you to give your very lives if necessary to attain it. If you are satisfied to let things and dollars drift and slide aimlessly as they have done for years, there is nothing my kind of people can do about it.

Sound American homes and sound American dollars are inseparable. If you lose one you are certain to lose the other. I came along this afternoon in hopes that together we might work and fight a little harder to save them both.

Polish Freedom

EXTENSION OF REMARKS
OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Friday, March 3 (legislative day of Wednesday, February 22), 1950

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able address by the senior Senator from New York [Mr. IVES] which was recently delivered on the Justice for Poland program, a program which is sponsored by the Polish-American Congress, western Massachusetts branch, the president of which is Dr. Karol Smolczynski, of Chicopee, Mass.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

POLISH FREEDOM

Much has been written and much has been said of the Polish people's long and glorious struggle to establish and preserve an independent Polish nation. Perhaps, however, insufficient credit has been given to an equally lustrous aspect of Polish history—the age-old and honorable fight waged by the Polish people for the recognition of the dignity of the individual and his God-given right to live and work and die a free man.

The record of the Poles' passionate attachment to the human freedoms is an ancient and enviable one. Long before our forefathers founded the United States of America and dedicated it to the proposition that all men are created equal, there was flourishing

in Poland a strong tradition of democracy and social justice.

This democratic tradition found early and eloquent expression in 1543, when Frye-Modrzewski, protesting the general practice of forbidding the peasant to move from the soil he tilled, dared to voice the radical thought that before God all men are equal.

Far ahead of their time, the words of Frye-Modrzewski went largely unheeded in his day. But his cry echoed down through the decades of Polish history to be raised again and again, in different forms, by other great Polish liberals. The pages of Polish history are bright with the famous names of these pioneers of political democracy who demanded social and economic reforms and compassion for the exploited masses of Poland.

During the sixteenth and seventeenth centuries this early Polish tradition of liberalism and democracy was inspired largely by religious motives. What had been primarily a religious and humanitarian movement was transformed into a political force by the impact of the revolutionary ideas of liberty, equality, and fraternity which in the eighteenth century swept the breadth of the continent of Europe and shook society to its very core.

Spearheading this force in Poland was the redoubtable Stanislas Staszic, the great Polish patriot who has been called the patriarch of Polish democracy. Staszic tirelessly and selflessly devoted his life to the service of the Polish people and the cause of Polish democracy. For 40 years he strove ceaselessly and magnificently to abolish serfdom, to secure private rights, and to establish the principle of the freedom of movement for the peasant.

The writing and preachings of Staszic, and other renovators of Polish political thought were shortly translated into concrete political action designed to advance the democratization of Poland.

Aroused by the tragedy of the first partition in 1772, the Polish people launched a 20-year program of sweeping social and political reforms which culminated in 1791, in the constitution of the 3d of May—that great, independent product of Polish democracy-in-action which evoked the spontaneous acclaim of humanitarians everywhere.

Ranked among such peerless documents in the history of human progress as the Magna Carta and the American Declaration of Independence, the Constitution of the 3d of May nevertheless precipitated the extinction of Poland as a political entity. For this magnificent milestone in the march of democracy raised so high the torch of human liberty and enlightened liberalism that the tyrannical monarchs of Poland's neighbors, alarmed at this latest menace to the perpetuation of their own despotic rule, were impelled to dismember Poland in the partitions of 1793 and 1795. It is, however, to the everlasting glory of the Poles that Poland fell, not because she could not live, but because, inspired and strengthened by her democratic ideals, she chose to live only as a nation in which her citizens would be free.

Although Poland was no longer to be found on the map of Europe by 1800, the flames of democracy and liberalism which had consumed her political independence continued to burn brightly in the hearts of her people. Events in Poland's history from the last decade of the eighteenth century to the restoration of Poland as an independent European state after World War I provide ample evidence that, far from losing their faith in democracy, the Polish people cherished and were sustained by that faith in the long years of the fearful ordeal of foreign rule.

The nineteenth century witnessed many heroic attempts by the Polish people to win their liberation—the insurrection of 1830, the rebellions of 1846 and 1848, the rising of 1863, and others. All of these failed and were cruelly disappointing. But out of the bitterness of defeat two facts emerged with crystal clarity.

The first of these was that, in the debates in the Diet, in the columns of the press, in the thousands of political pamphlets which were flooding the country, there was reflected a new and invincible force in Poland life—general and genuine concern for the destiny of the common man. The Poles knew by now what human rights were; they were prepared to defend these rights with their lives, if necessary.

The other fact now apparent was that, in the defense of these basic human rights, the Polish people for the first time were acting together. Irrespective of class interests, they were working in partnership in a common cause—the essence of democracy at its best.

The result was inevitable. When World War I ended and the long-awaited restoration of an independent Poland was finally achieved, it was as a democracy that the Polish state was reconstituted. And, although soon surrounded by the totalitarian ideologies of communism and nazism, it was as a democracy—a free and proud and resolute democracy—that Poland lived until the infamous Stalin-Hitler aggression of 1939.

The years since 1939 have been a tragic and trying period for Poland. But it is one of the strongest characteristics of the Polish people that they are at their noblest in times of adversity. The great Stanislas Staszic once uttered these challenging and immortal words: "Even a great nation may fall, but only a worthless one can perish." Poland, as a free nation, has fallen now. But, recalling these words of Staszic, I am supremely confident that a free Polish nation will rise again.

And when that happy time comes, Poland, true to her time-honored tradition of honoring the inviolability of the freedom of the individual, once more will be a democracy, a free and proud and resolute democracy.

Address by Hon. Edward Martin, of Pennsylvania, Before Dinner of Somerset County Chamber of Commerce

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, March 3 (legislative day of Wednesday, February 22), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by me before the annual dinner of the Somerset County Chamber of Commerce at Somerset, Pa., on February 27, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I shall always have the highest admiration for the fine people of Somerset County. Here in your beautiful hills and valleys, you have built a solid structure of real Americanism.

You are the inheritors of a rich and historic tradition. The story of Somerset is an inspiring record of courage, self-reliance, patriotism, and love of liberty.

Across the soil of Somerset passed the first pioneer and military trails to the West.

George Washington, Gen. John Forbes, and Col. Henry Bouquet are outstanding among the leaders who made history in the wilderness of Somerset.

Their heroic exploits pushed forward the western frontier for peaceful settlement and advancing civilization.

The memory of Somerset's first permanent settler, Harmon Husband, is honored as a pioneer of America's struggle for independence.

He and others who followed him came here in order that they might enjoy political and religious liberty. They had a great part in the building of America.

With its magnificent historic background and its splendid progress, Somerset is an appropriate place to discuss Americanism and the problems confronting our Nation.

The course taken by government in recent years has brought us to a time when we must take our bearings as a Nation and as a people.

We have reached a time when we must again evaluate the principles which have guided our Nation to greatness in the past.

We have reached a time when we must ask ourselves whether we are to adhere to those time-honored and time-tested principles or whether we are to follow the socialistic philosophy to which so many of our people have been attracted.

The decisions we reach and the direction we take—now—will shape the course of the United States and the world for generations to come.

I do not hesitate to say that the survival of America as a land of liberty and opportunity depends upon how we meet the grave problems now confronting us.

The paramount issue before us is this:

Shall we fight for the principles which have made America the last remaining hope of freedom in the world or shall we be led into a socialistic pattern of government which has brought disaster to every nation where it gained control?

That issue has been forced upon us by policies and programs of the administration at Washington. They invite national bankruptcy.

The most powerful business corporation in the United States would go broke within a year if it were so wretchedly managed as our Federal Government is being managed today.

We are asked to accept the alien teaching that the concentration of all government power and authority in a gigantic Federal bureaucracy will provide security and prosperity for all the people.

We are told that the more we spend the better off we will be, even though the people are shouldered with taxes that grow more oppressive year after year, with an ever-increasing burden of debt and with inflated prices for food, clothing, housing, and all the other necessities of life.

We are told by President Truman that he must have a budget for the next fiscal year of forty-two and a half billion dollars and that we must go $5,100,000,000 in the red just to pay the cost of government.

When we consider that we are burdened with a national debt in excess of a quarter of a trillion dollars it is not surprising that more and more people are becoming alarmed.

It is not surprising that more and more people are asking how long can we keep it up and retain our solvency as a Nation.

But that's not all. President Truman proposes that we place education under Federal control; that we socialize the practice of medicine and place agriculture under political dictatorship through the Brannan plan.

No one has been able to estimate how much these dangerous proposals would cost. But we do know that they would add billions of dollars to the already swollen cost of government. They would place an additional back-breaking burden upon every home, every worker, every farmer, every businessman, and every other taxpayer.

My fellow Americans, that philosophy of government is the economic road to socialistic ruin and the destruction of American liberty.

To be free we must be solvent. To remain solvent we must be free.

To me it is immoral and dishonest for a President of the United States to assure the people of this country that it is perfectly all right for the National Government to go into debt year after year, even in the years of record-breaking national income.

And how did the President justify his action? Well, he said that, if we followed his policy of bigger spending and bigger debt, the Nation would become so prosperous some time in the future that the Government would then be able to balance its books.

But I would like to make a suggestion for the solvency of our Nation. It is this: Instead of gambling upon the unpredictable events of the future, I suggest that we start balancing our budget now—today.

I suggest that the only way to balance the budget is to cut down the high cost of government. By spending less than we take in there would be a surplus to be applied to the reduction of the national debt.

That may not be as romantic and colorful as waiting to see what the year 2000 will bring.

But, my friends, we know that this old-fashioned, traditionally American formula will work.

Down in Washington the administration defends its actions by declaring that 70 percent of the spending goes for wars of the past, national defense, interest on the public debt, foreign aid, and care of the veterans.

The administration says these items cannot be cut by an inflationary nickel, and that anyone who says otherwise is unpatriotic and a reactionary.

Well, I don't have to defend my patriotism. I'll let the record speak for itself. If a firm belief that my country will be stronger to face the perils of communism by living within its means is a sign of reaction, then I must plead guilty.

But the same charge could be made against George Washington and Thomas Jefferson and Abraham Lincoln and a host of other Americans whose words and deeds and principles I have faithfully tried to follow.

It is not true that the 70 percent of the budget cannot be cut. National defense spending has already been cut deeply and many are of the opinion that it can be cut again without danger to the national security.

Foreign aid can be cut through more economical administration. I voted for this aid to get the nations of western Europe back to a stable economy. But I want to see it used the way we were promised it would be used. I want the countries of western Europe to keep their promise to work together and to help each other.

Let's turn to something else in the budget—public works. There is another big item of expense the administration makes no effort to curb.

Public works should be expanded when there is deflation and unemployment. They should be curtailed when business and agriculture are enjoying good times. No public works projects should be undertaken now except those that add to the national wealth.

Nevertheless, last year recorded an all-time high for public works, despite the peak business. This year the administration went out and broke last year's record.

Might I suggest that in a sincere program of economy this is one place where deep cuts can be made

And I assure you there are many other places where the knife of economy can cut expenses without in any way impairing the efficiency of the Government to serve the people.

I cannot take your time to discuss the extent to which spending taxes and debt have been increased by the other levels of Government. But the figures show that the infection has spread from the Federal level to State and local governments.

We've seen some tragic examples in Europe of the fool's gold that waits at the end of the false rainbow we have been following.

In Germany, the philosophy called itself national socialism. The all-powerful supergovernment grew into Nazi tyranny. It forced the whole world into the hell fire of war and ended by dragging its own country down to disastrous defeat.

In Russia, there is another kind of socialism—Red socialism. This government calls itself a dictatorship of the proletariat, the common people. But it enslaves the poor and humble just as it does everyone else in the country. In fact, Soviet communism has dragged all the Russian people down to the poverty level.

And in Britain today there is a third kind of socialism. It is a kind of middle-class socialism. At least it started out that way, but gradually it is becoming a socialism of the poor, because it is making all the English people poor.

One thing they all have in common. The people have lost their independence. They have lost initiative and all incentive. They lean on their government. Their lives are controlled by the bureaucrats.

My friends, I don't want to see those things happen in the United States. I want our country to follow the path which carried it upward in a little over 150 years from a newly born nation on the edge of a wilderness to the greatest, richest, most powerful Nation in world history.

I want us to follow the path of independence, not the path of dependence.

In our own country dependence upon the Government has spread to an alarming degree.

At a meeting in New York in December of last year, I made the statement that 19,000,000 Americans are now receiving regular checks from government of some kind.

A short time later the distinguished Senator from Virginia, HARRY F. BYRD, declared that there were 23,000,000 receiving such checks. This caused us to compare our figures and we now feel that almost 25,000,000 Americans are receiving checks of some kind from government.

This includes, of course, all the employees of local and State governments in addition to the Federal Government. It also includes those getting retirement payments and those getting checks for subsidies of various kinds.

There are 37,000,000 families in the United States. Of course, there may be some families in which two people are receiving checks, or one person may receive more than one check. It does mean, however, that more than half of the families of America are receiving regular payments from government.

This cannot continue much longer or there will be no one on the paying side of the fence. We then must become a completely socialized government.

Now, let me turn to another great issue, that of loyalty, undivided loyalty, from all on the Federal pay roll.

All of you remember how the President sneered "red herring" back in 1948 when we tried to tell the people that the administration was riddled with Communists—that disloyal men entrusted with our country's innermost secrets were traitors and spies for a foreign country—Red Russia.

Across the Nation, in thousands of villages and towns, clean, decent Americans found those charges hard to believe. Because the administration sneered at our warnings many people felt that it just could not be true.

But unless the administration leaders were deaf, dumb, and blind, they could not help knowing what so many in Washington knew. The stories of Communists in many departments and agencies were no secret in official Washington circles. They were talked about freely. Information was turned over to the departments. The facts were there, but they were locked up in secret files and the President issued an order refusing to open the records to congressional investigating committees. The administration ignored Congress and the American people completely and answered, "red herring."

Finally the President was forced by public clamor to order a security probe by the FBI. The people who supported the battle against communism at that time forced the administration to order an investigation.

You know what happened. Scores of Federal workers quit rather than have their records looked into. Most of them were Communists. Some others were quietly forced out. To have made too much fuss about it would have discredited the "red herring" cries which still came from the administration.

And then, thanks to the work of the House Committee on Un-American Activities in the Republican Eightieth Congress, the story of Alger Hiss and of many other Reds in high places became known. Those disclosures have been fully confirmed in the Federal court. I believe that most of the Reds have been ousted.

But when I study some of our foreign policies, including the tragic failure in China, I wonder whether they are all gone. I wonder whether some of these men or their fellow-travelers are not still in key places, influencing the thinking and decisions of our top officials.

And I think it is the duty of every American to make his voice heard on the issue of loyalty. We must let the Government know that we want policy made and directed by men with a single loyalty—loyalty to this land, our free institutions, and to the political system that made our country the mighty power it is today.

We hear a great deal about the cold war in which we are now engaged. But here on the home front another great conflict is in progress. The outcome will decide whether we are to continue as a Nation of individual freedom and self-reliance or whether American liberty is to be destroyed by the evils of socialism.

The opposing forces in this struggle represent two widely separated philosophies. One proclaims that America can achieve greater progress through an all-powerful Government supported by high taxes and the unlimited expenditure of public funds.

The other army is composed of those who advocate prudent and economical government within the framework of the Constitution.

The battlefield is the political arena.

As Americans and as leaders in your community, your place is in the front line. Your manifest duty is to protect and safeguard freedom of the individual and all that has been built up through generations of toil, thrift, and sacrifice.

The United States was established on a dream of liberty. Let us fight against turning that dream into a nightmare of socialistic slavery.

Cooperative Housing Legislation

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, March 3 (legislative day of Wednesday, February 22), 1950

Mr. IVES. Mr. President, on February 3, 1950, my distinguished colleague, the junior Senator from New York [Mr. LEHMAN], referred to a public statement made by Herman T. Stichman, the New

York State Commissioner of Housing, in which Mr. Stichman criticized certain provisions of S. 2246.

The junior Senator from New York then inserted in the RECORD a communication addressed by him to the distinguished senior Senator from South Carolina [Mr. MAYBANK], the chairman of the Senate Committee on Banking and Currency, commenting upon the New York State Housing Commissioner's remarks.

In view of the foregoing facts, I believe it might be of interest to the Members of the Congress to have before them a release from the Division of Housing, State of New York, by Commissioner Herman T. Stichman, dated March 2, 1950, commenting upon the criticism of the junior Senator from New York of the commissioner's address at the meeting of the executive council of the American Federation of Labor at Miami Beach, Fla.

I therefore ask unanimous consent to have printed in the Appendix of the RECORD the statement of Commissioner Stichman to which I refer.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NEW YORK, March 2, 1950.—New York State Housing Commissioner Herman T. Stichman asserted today that United States Senator HERBERT H. LEHMAN'S criticisms of the commissioner's recent address at the meeting of the Executive Council of the American Federation of Labor at Miami Beach, in which Commissioner Stichman pointed out deficiencies in the Maybank-Sparkman cooperative housing bills pending in Congress, must have been music to the ears of speculative builders.

"These Federal bills will milk cooperators out of almost a double amount of interest and prove to be a $2,000,000,000 boon to some speculative builders who have been responsible for the $25 to $35 per room and more monthly rentals demanded in new housing, rather than a benefit to lower middle income families. They are the forgotten families with incomes just too high for public housing and too low to be able to afford the demands of speculative builders current since the end of hostilities. Any Federal cooperative housing program should be made into an open laboratory to determine true building costs, with inefficiencies and the excessive demands of speculative builders eliminated and profits held to a fair and reasonable amount, just as the State of New York has done in its nonpromotion cooperative housing program," Commissioner Stichman stated.

Commissioner Stichman said the Maybank-Sparkman cooperative housing bills have no effective provisions for determining what true building costs should be and for limiting excessive speculative demands, in contrast with the cooperative housing program of the State of New York, which requires efficient building methods and limits builders' profits to a fair amount, 5½ percent to 7½ percent. New York State's program, the Commissioner stated, is providing cooperative home ownership with carrying charges of a little over $14 per room monthly, and down payments of about $240 per room, and will provide rental housing at less than $15 per room monthly. This will help to stabilize the home building economy, since the people can afford housing at such costs even in so-called lean times.

"Instead of following our leadership in eliminating inefficiency and waste in building methods, and preventing excessive demands," Commissioner Stichman pointed out, "the Federal bills seek to reduce carrying charges by providing for the lending of mortgage money by the Federal Government through the device of a Federal guarantee, with an anual interest rate which it appears may be 2½ or 3 percent, and lengthening the mortgage period to 50 years, or in the event of refinancing, to 60 years, with provisions for extending these periods three more years. This will not cut total actual costs; it will make them still higher so far as the man paying the bill is concerned.

"Increasing the mortgage period from 34½ years to 60 years, which would undoubtedly be availed of under the refinancing provisions of the Maybank-Sparkman bills, would increase total interest payments by 90.9 percent, almost double; i. e., by $5,510.62 on a loan in the principal amount of $10,000 at a 3 percent interest rate, and would effect only a 22.8 percent reduction in the amount of carrying charges. Total interest payments over a 60-year period on such a loan would amount to $11,574.21, so that the borrower would be paying $21,574.21 to pay off a $10,000 loan. Whom would that help? Is that cutting costs? Increasing the mortgage period to 50 years would increase the aggregate of interest payments by 53.7 percent, i. e., by $3,255.07 on a similar loan, and reduce monthly carrying charges only 17 percent.

"There is room for Federal aid in this essential field of cooperative housing and reducing home buildings costs, but the present Federal bills give no real help; they do not cut costs. Instead, they would increase the aggregate of carrying charges and merely spread the heavier burden over a longer period of years. So far as supposed savings are concerned, there is shadow through the device of a Government guarantee, which would bring a lower annual interest rate but would carry with it greater aggregate outlay, and obvious inflationary possibilities today. But there is no substance. There is no effort to cut real costs by spurring technological advances, encouraging efficient building practices and definitely and specifically limiting builders' profits, in return for the benefits, which would aid builders, of the low interest rate and Government guarantee. This would eliminate a continuation of the unfair and excessive speculative builders' demands which we have witnessed in the FHA and VA housing programs.

"It is as though the clothing or the radio, television, or automobile industries, instead of introducing efficient mass-production methods to lower true costs and meet competition, had asked that the Government provide purchasers with direct long-term Government loans or long-term Government-guaranteed loans at a similarly devised lower interest rate to enable such consumers to buy their products, and then offered the result as an example of cost savings. The price would not be cut; the monthly payments would be lowered, but the purchaser would be paying more in the long run because of the higher aggregate of interest over a longer period of years. That would be a subsidization of inefficient methods, just as the present Federal bills would subsidize present-day builders' inefficiencies and excessive demands. They are equally fallacious.

"The Federal bills would demonstrate nothing to the country at large; the only people who would receive the 'benefits,' questionable as they are in view of the increase in total carrying charges, would be those living in housing built under the Federal program. What we need instead is an open laboratory, just as we have in New York, to demonstrate how all building costs can be reduced—whether built with Federal financing or private financing, unless it is proposed to have the Federal Government finance all the housing needed now and in the future.

"New York State's cooperative housing program does demonstrate how efficient building methods can reduce building costs; it proves that the responsibility for present-day high costs has been that of certain speculative builders and not that of labor, because at Bell Park Gardens, our first pilot project for 800 veterans' families now completed in the Borough of Queens, we have used the same workingmen, the same materials, paid the same prices for land, and used the same private lenders, but we have been watchful and efficient and limited the profits to a reasonable amount.

"The bankers have been so enthusiastic about our laboratory housing program and the hope it offers of stabilizing the home-building economy that they reduced the interest rate to 3½ percent. So productive was labor at Bell Park Gardens, and so efficient the contractors, that there will be a dividend of about $400,000, which we have provided will go to the cooperators, in connection with building construction of about $7,500,000. This is equivalent to a reduction of about $100 in individual down payments per room, reducing them to about $140 per room, or to an appreciable reduction in monthly carrying charges. Those monthly carrying charges leading to mutual home ownership are now only a little over $14 per room, including amortization of the mortgage, interest, heat, repairs, and maintenance. That is housing that the forgotten family can really afford. The contractors are making a good but reasonable profit, and are sufficiently satisfied that they are looking for more business.

"Under the Maybank-Sparkman bills, which Senator LEHMAN approves, the contractors would get the additional $400,000 which has been saved under our plan, instead of the cooperators, and the cooperators would have the privilege of paying almost double the amount of interest for 60 years, the remainder of their lives, that is, if they came from long-lived families.

"We have found that most builders are willing to accept limitations of their profits to reasonable figures, under our program, because of the hope it offers of stabilizing the home-building industry and eliminating booms and busts. They are anxious to participate.

"Senator LEHMAN would do well to espouse a program similar to that of New York. We would then have a true laboratory of home-building costs in every State of the Union."

Under the State's plan the new housing, but not the land, is exempt from municipal taxes for about 30 years. Commissioner Stichman said that such tax exemption will be sought only for a limited number of pilot projects in the State's program to demonstrate true building costs, and that all those who need homes would benefit by proof that rentals and prices for new housing demanded since the end of hostilities have been excessive.

Housing Legislation

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Friday, March 3 (legislative day of Wednesday, February 22), 1950

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Middle Income Group Housing Help Decried," written by George Ericson, and published in the Christian Science Monitor of February 25, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MIDDLE-INCOME GROUP HOUSING HELP DECRIED

(By George Ericson, editor of the financial pages of the Christian Science Monitor)

Are more laws needed to bring adequate housing to the American people? The administration thinks so. Two weeks ago it introduced the Maybank and Spence bills, designed to provide new aids to cooperative housing and to extend the FHA mortgage loan insurance authority. This week the Senate Banking Committee reported out the middle-income bill, setting up a new Federal lending agency with authority to use $1,000,000,000 in low interest rate loans to housing cooperatives. With an obeisance toward moderation, the Senators cut the $2,000,000,000 sought by President Truman in half and reduced the $2,750,000,000 requested by the administration for additional lending power of the Federal Housing Administration to $1,750,000,000.

It is not surprising that various features of this proposed legislation have excited controversy. There is considerable basis for the charge that it is another rather thinly disguised subsidy, calculated to elicit support from that large portion of the electorate which is held to be the backbone of the economy, the middle-income group. The question naturally arises why this group, which may be presumed to earn between $4,000 and $8,000 a year, and which pays such a heavy proportion of the taxes, should get what amounts to a subsidy paid for largely by themselves.

MEASURE SEEN AS CARRYING SPECIAL FAVORS

Let us see what is the basis for the charge that the administration is offering another subsidy. First of all, it is not a public-housing program in the true meaning of the word. It is not aimed to remedy a serious shortage of housing, or to aid those incapable of providing their own housing, or to do away with slums. Rather, it lays itself open to the characterization of this legislation as offering special favors to the veteran groups and labor organizations which are supporting the bill.

No one probably is better qualified to evaluate the financial implications of this measure than Thomas B. McCabe, Federal Reserve Board Chairman, who condemned the cheap-money provisions of the bill. His criticism is all the more pertinent since he has long been an administration supporter.

That advancing loans to various nonprofit groups at extremely low rates would have a marked effect on private credit is hardly to be denied. The new agency would float its own bonds to get the capital at 3 to 3½ percent, with the loans to run for half a century or more. "We know of no mortgage credit currently available in this country on amortization terms of 50 to 60 years or at interest rates such as are contemplated here," Mr. McCabe told the Senate committee.

M'CABE OFFERS FOUR REASONS FOR OPPOSITION

The Reserve Board Chairman criticized the bill as inflationary, as a factor in boosting the volume of public debt, as a measure that would add to the Federal budget deficit and as a likely overstimulus to building which might contribute later to deflation in the housing industry. Mr. McCabe held strictly to the economic factors involved but he might also have asked why cooperatives should get terms so much better than other home owners. These groups would not only get money at rates only slightly above those paid by the Federal Government on its borrowings and would be able to get a 10-year extension beyond the original 50-year loan, but would be allowed to put off payment for 3 years during the life of the loan on both principal and interest.

FHA loans by contrast cost 4½ percent over a 30-year period.

The only limitation on the help to be offered by this National Mortgage Corporation of Housing Cooperative (NMCHC) is that it is to go to moderate-income families. The general interpretation of the foregoing phrase or that of a middle-class group gives it an earning power of from $4,000 to $8,000. The middle-income group comprises persons earning up to $6,000 a year, according to the Internal Revenue Bureau. This looks to private building organizations like a step toward socialism. A free-enterprise system, they assert, has no obligation to house its citizens.

Opponents of the legislation are asking whether there is now a housing shortage which demands further participation of Government in this field. The building industry in 1949 broke all records in the erection of new houses, making available over 1,000,000 additional homes—houses and flats—compared with the previous peak of 937,000 in 1925. This high pace is continuing in 1950 with January starts 60 percent above the 1949 month.

IS THE HOUSING SHORTAGE ENDED?

The builders are concentrating on low-price homes, largely below the $8,000 figure and embodying many cost-saving features.

The fact that apartments-to-let signs are to be seen in some new developments, that the Federal Housing Expediter has decontrolled a number of areas, that many rent increases have been permitted raises the thought that the housing shortage is coming to an end. Those who doubt the necessity for calling forth a flood of cheap money may, therefore, be forgiven if they question the wisdom of the program and see in it the fostering of a political issue useful in the coming presidential campaign.

It is evident that though building is steadily catching up with minimum demand, the administration is unwilling to let the competitive element determine what is fair and reasonable in prices and rents. The sponsors of cheap money and other privileges for cooperatives say that lack of experience with housing co-ops makes lenders reluctant to put up capital. However, it should be noted that such co-ops, which are generally heavily mortgaged, have their troubles in bad times. Private builders point out that more than 75 percent of these co-ops in New York and Chicago went insolvent in the 1930's. The Senate committee reporting the Sparkman bill last year nevertheless said the Federal Government should advance the funds needed where private financing is not available.

Of course, the new bill would be a help to the private building of rental housing, which is to lose one prop when section 608 of the National Housing Act expires on March 1. That section allowed a mortgage up to 90 percent of estimated cost. The new bill would raise insurance limits to 90 percent of value on projects costing $7,000 or less per apartment, after which insurance would be 60 percent of the next $3,000. But as Senator DOUGLAS, of Illinois, says: Why give loans to a middle-class cooperative at 3 percent when GI programs must pay 4 to 4½ percent?

Surplus Potatoes

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Friday, March 3 (legislative day of Wednesday, February 22), 1950

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Bigger Hole," which appeared in the Wall Street Journal of Tuesday, February 28, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A BIGGER HOLE

Senator THOMAS, who is chairman of the Senate Agriculture Committee, has remarked that "the Republicans have got us Democrats in a hole on this surplus-potato mess."

Now politics being what it is, there's no surprise in the fact that a Democrat should be worried that the spectacle of rotting spuds in Government storage might prove a painful political weapon. Nor will we be surprised if the Republicans—the brighter ones, anyway—make use of this weapon.

But it does seem to us that Senator THOMAS doesn't realize how big this hole is. It isn't just the Democratic politicians who are in it. The taxpayers who foot the bill for this mess are in it much deeper. And that includes just about everybody.

Douglass Burnett, of Sparks, Baltimore County, Md.

EXTENSION OF REMARKS

OF

HON. MILLARD E. TYDINGS

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Friday, March 3 (legislative day of Wednesday, February 22), 1950

Mr. TYDINGS. Mr. President, in the Towson (Md.) Jeffersonian of February 24, 1950, there appeared an article about a very fine and well-known citizen of Maryland who has recently been elected president of the Edison Pioneers. I refer to Mr. Douglass Burnett, of Sparks, Md., whose interesting career is outlined in the article. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FATHER OF OUTSIDE ILLUMINATED CHRISTMAS TREE CHOSEN PRESIDENT OF EDISON PIONEERS—SPARKS MAN CREDITED WITH TAKING ELECTRIC LIGHT FROM LUXURY BRACKET

Members of one of the Nation's most exclusive organizations, the men who knew Thomas Alva Edison intimately and were associated with him in his scientific work, have elected Douglass Burnett, a Baltimore countian, as their president for the coming year.

There are only a handful left of these original Edison Pioneers, as the group is called. Thomas A. Edison would have been more than 100 if alive today and his son, Charles Edison, former Governor of New Jersey, is in his sixties.

Mr. Burnett retired in 1939 after some 45 years of utilities work during which he became recognized as one of the country's leading engineers in the fields of gas and electricity.

He is also known as the father of a Christmas practice now almost as familiar as the carols and holly, lighting Christmas trees on lawns. Mr. Burnett has lived about 7 years in Sparks and earlier lived more than 20 years at Cockeysville and Riderwood.

Probably more than anyone in Maryland, Mr. Burnett is responsible for the general household use of electricity today. Much of his long career was spent in work to take electricity out of the luxury bracket and

make electric lights a convenience now taken for granted by nearly everyone.

A native of Brooklyn, N. Y., where his father, Samuel Oliver Burnett, was in the hardware and household furnishings business, Mr. Burnett obtained his bachelor of science degree at the Brooklyn Polytechnic and Collegiate Institute in 1899.

After some postgraduate work and teaching at the same institution, he taught for 5 years at Brooklyn's Pratt Institute as professor of applied physics. When not teaching in the daytime, he was busy at night making apparatus to be used in the classroom.

Through his scientific studies he became interested in Edison's work, which was beginning to receive wider attention, and about 1895 he convinced New York Edison Co. officials they should give him a job.

One of his first assignments was to sell electric lights to the New York Times, which didn't have them and didn't much want them. Mr. Burnett used some of his most persuasive argument.

"You've got to take them," he told the business managers of the Nation's best-known newspaper. "If you do, everyone will, because they say the Times is never wrong." He got the contract.

He also was given the job of reorganizing the New York Edison Co.'s applications for electric service. These records he later described as confusion, confounded by confusion. Many of the largest users of electric power had no meters, and many of the meters in use weren't working.

He began restoring order to the system, and eventually had seen to it that meters were installed everywhere and that every meter in the system had been carefully inspected.

Mr. Burnett superintended the annual surveys for the New York Edison Co. He was responsible for so much of the extension of the system that a great deal of the present system in the Borough of Manhattan was originally established under his supervision.

His work also resulted in the development of electric elevator service which speeded the construction of New York's skyscrapers instead of the four- or five-story buildings previously in use.

As new business came in, Mr. Burnett's salary and prestige increased, but he felt there was much yet to be done. Electricity still was a rare service, used mainly by the wealthy, and he believed it could be within the reach of all.

He started a house-to-house canvass, explaining electrical benefits, and then went to work on the New York Electric Show held about the turn of the century, where tens of thousands of persons for the first time became aware of what electricity was doing to revolutionize living.

One of the most convincing exhibits, Mr. Burnett has said, was demonstrated by a young woman named Miss Jane Elting Young, who went to the show and, using an electric stove, baked thousands of cookies which were distributed free to the public.

In 1903 Miss Young became Mrs. Burnett.

For the 1914 Christmas holiday, 10 years after they had come from New York to Maryland, Mrs. Burnett got her husband to decorate two trees in front of their home on Falls Road Terrace with electric lights.

The idea was such a quick and great success that the old United Railways ran three special cars each night just to take people on a sightseeing trip past the Burnett home. Mrs. Burnett died in 1939, a few weeks after her husband's retirement as manager of rate structures for the gas and electric company, where he had served 35 years.

When Mr. Burnett came to Baltimore to take an executive position with the firm then named the United Electric & Power Co., he found conditions in many ways the same as when he had started out with the New York firm.

Along Charles Street the only lights in business establishments were the small bulbs hanging over the safe. "A good way to show a burglar how to get in," Mr. Burnett used to say.

He had only time to get an impression of the volume of work ahead when the downtown section of the city was wiped out by the great fire of 1904. Mr. Burnett had been in town about a week.

Immediately, he directed the printing and mailing of penny postcards to all customers announcing the company would be ready to serve them at 8 a. m. the following day at new offices on South Eutaw Street.

As the city began to rebuild, Mr. Burnett helped install many reforms in the power set-up, and in the field of customer relations began to convince businessmen of the advertising value of the electric light. Lights came into the windows of the establishments along Charles Street and nighttime window shopping began and has never stopped.

The electric company merged with the Consolidated Gas Co. and Mr. Burnett helped establish the differentials in rates for domestic and industrial services, another phase of utilities management in which he pioneered.

Because of his early work with household gas heating, it was possible to pipe manufactured gas into many homes in this area years before it was done in many other parts of the country.

One of his principal contributions was made soon after he came to Maryland. He brought about the national standardization of lamp voltage at 3 instead of the previous 32. This made possible, among other things, the manufacture and sale of a higher quality incandescent lamp.

The rapid extension of electric service in rural areas of Baltimore County and the nearby county areas was one of the main factors that led to the establishment of the national rural electrification project. Mr. Burnett served as chairman for Maryland.

He was always interested in young men who wanted a better education and was greatly disturbed by the fact that many had no chance here for advanced technical study.

He happened one day to meet Dr. Frank J. Goodnow, who had been elected president of the Johns Hopkins University, and thought here was the chance he had been waiting for. He broached the subject of night engineering and technical courses to Dr. Goodnow. The latter was favorable to the project but said it would have to be underwritten for about $10,000.

Fortunately, a businessman friend of Mr. Burnett believed in the idea strongly. He pledged he would guarantee the $10,000 and the school was going within a few months. Later, Mr. Burnett is glad to say, the underwriters only needed to contribute $237. That was all they ever had to pay.

Mr. Burnett also was instrumental in moving the Baltimore Manual Training School from the old Carroll Mansion on Lombard Street to Howard and Centre Streets, former location of the Baltimore City College, where it became the city's first real vocational school.

For many years Mr. Burnett has been active in civic affairs. In New York he was vice president of the New York Electrical Society. Since becoming a Marylander he has served as chairman of the Baltimore section of the American Institute of Electrical Engineers and as president of the Engineers Club of Baltimore, the St. Andrews Society, and the Rotary Club of Baltimore. He has also been an active supporter of the Maryland Academy of Sciences and the Baltimore Symphony Orchestra.

He has three sons, Douglass Burnett, Jr., of Philadelphia; Robert Elting Burnett, of Schenectady, N. Y., and Thomas Douglass Burnett, the eldest, with whom he lives at Sparks. There are four grandchildren. All are grandsons except 11-year-old Happy Burnett, of Sparks, who is Mr. Burnett's shadow and, in his opinion, can do little wrong. Happy is the only girl born in the immediate family in three generations.

Mr. Burnett has been an enthusiastic motorist since the early days of automobiles and was one of the first persons in the East known to have taken his family on a vacation trip by car. It was a 2-week junket to Long Island, played up by newspapers of several States with both stories and pictures.

For about 50 years now Mr. Burnett has spent his summer vacations in New England—at Nantucket, where he is among the oldest summer residents and, in fact, is pictured on a resort souvenir postcard.

Since he retired in 1939 he has adopted a gentle masquerade that is peculiarly appropriate to the Nantucket background. He grew a set of white chin whiskers and acquired a sou'wester cap which together give him the appearance of a typical New England sea captain who might have just stepped off a whaling ship. His whiskers and cap were at first vacation items, and mostly a joke, but he had so much fun about them he decided to make them permanent. He gets a big kick when an old acquaintance sees him in the new guise and doesn't even recognize him.

It's not a 100-percent joke, however. The sea is in the Burnett family blood. His grandfather and other members of the family followed it.

Except for the summer vacations, Mr. Burnett spends most of his time quietly in the country, reading scientific books and amusing and instructing his granddaughter. But he always makes at least one expedition of some distance a year.

The Job Ahead

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, March 3, 1950

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address at the annual dinner, National Small Businessmen's Association, March 2, 1950, Hotel Statler, Washington, D. C., by Franklyn B. Snyder, president emeritus, Northwestern University, and president, the Presbyterian Hospital of city of Chicago:

Mr. President, ladies and gentlemen, it is a pleasure and an honor for me to be here this evening. This association, completely nonpolitical, national in its scope, and concerned with the welfare of the country, has already accomplished much of which it can be proud. The future will see it doing even more to bring happiness to the citizens of the United States, and through them to the people of many lands. It is an association which anyone should be proud to join. I thank you for letting me be with you on this occasion.

I have never been a businessman, but I have spent my life enjoying the fruits of that freedom of opportunity and action in which you as businessmen believe. I have lived many years on the campus of a privately endowed and controlled university. I am today happily busy in a great American hospital, also privately controlled and endowed. These two notable products of our American way of life, the private university and the voluntary hospital, are dedicated to public service, to the welfare of men and women without regard to race,

creed, or color. They receive generous support from those who realize that freedom has its obligations as well as its privileges. They give back to the public many times the value of what they receive, and illustrate perhaps the finest flowering of the free-enterprise system operating in the service of humanity.

You, as businessmen, believe in what we call the profit motive, but you know well enough that your fellow citizens, as well as your stockholders, must profit from your activities. You know too that only under a political and economic system which recognizes the validity of this motive can you find happiness for yourselves or extend it to others. The private university and the voluntary hospital, though they never operate for profit, also believe in the profit motive as a stimulus to intelligent and successful business activity. Hence we have much in common—you of the business world, and we of the educational and philanthropic world.

I have read with care your four legislative recommendations for the Eighty-first Congress, and wish they might be laid before all the voters in the land. I join you in the hope that the Congress will act promptly and vigorously to check the rising tide of national debt. I hope the Congress will institute drastic economies here at home, and will sharply reduce the amount of money being given to foreign countries. I have no fear that slavery can ever be imposed upon this Nation by outside force; but I am not at all sure we may not enslave ourselves in the shackles of an ever-mounting national debt. To check this tendency, to balance the Federal budget, and to retire some billions of our outstanding bonds—what a tonic effect such action would have upon our national life.

Apropos of debt, I am glad to recognize the debt which private universities and voluntary hospitals owe to American business. Businessmen have founded many of our most distinguished universities, investing their capital in the future welfare of young Americans. They have given generously to support our hospitals and our universities, for they know that these privately controlled institutions make larger contributions to human welfare per dollar received than Government institutions have yet been able to make. Businessmen serve as trustees and curators of private institutions and foundations dedicated to public welfare. For all these services we of the universities and hospitals are grateful—sincerely grateful—to you of the business world.

There are many things, ladies and gentlemen, which American business and American education have done together in the past, and which I hope they will continue to do together in the future. And just at present they have one great task in common; a task so important and so difficult that all minor obligations are insignificant. That task is to combat the insidious but steady encroachments of socialism upon our national life. That is the job ahead; to preserve freedom in the United States.

Socialism is like old age: it creeps upon one unawares. Old age never overtook a man overnight. Quite the contrary, his powers fail, but only little by little, and painlessly at first. Slowly his arteries harden, his eyesight grows dim, his hearing is impaired. If he recognizes the symptoms and consults his physician early enough a good deal can be done to postpone the final decay. But if he waits too long his case is hopeless, for no physician can cure old age, once it has really taken hold of a man.

Socialism lays its chilling hand on a nation the way old age overtakes us human beings. No nation, so far as I know, ever said "Go to now; after next Thursday we will all be Socialists." No, the affliction comes gradually, and usually without discomfort in the early stages. But the ultimate result is unhappiness, national destitution, and slavery. The only way to fend it off is to be alert to the symptoms, and take proper measures to eliminate them. In this way socialism can be kept at bay, for though old age is inevitable, socialism is not.

I say socialism works slowly, and by doing so lulls its victims into apathy. It took two or three centuries for the poison to destroy Rome. At first the citizens merely allowed their rulers to keep themselves in power through gifts of cheap food and of treasure. Then the vicious idea that "the government will do it" gradually poisoned the thinking of the hardiest race that Europe had yet produced. Little by little integrity and thrift and industry gave place to corruption and waste and indolence. Before long, and probably without realizing it, the people had bartered their ancient heritage of freedom for the specious ease and false security offered them by politicians. And then Rome fell, not because it was beaten down by superior physical force, but because it had collapsed spiritually. The Roman new deal, which was to have made every man happy, sold the nation into slavery.

Many centuries later another nation was to have a similar experience. It was suffering from the aftermath of war, with all that that implies, and came under the leadership of a self-confident idealist. He was intolerant of criticism, willing to manipulate facts to suit his own purposes, but smart enough to limit his early activities to combatting a financial depression. He regulated business, established new rules to govern commerce and finance, and dismissed from the government men who did not approve of the new ideas.

The new leader saw that under the old system of free enterprise merchants and landlords could make money. So he levied new taxes to take away their profits and destroy what he called the monopoly of capital. To please the laborers, he controlled prices but not wages. To win the favor of the farmers he gave them loans and subsidies, which worked first to their advantage, but ultimately to their ruin. And when the national debt mounted alarmingly, he pooh-poohed his critics by saying that earlier leaders had not understood government finance.

That is the story of China under Su Tungpo in the eleventh century as told by the distinguished present-day historian Lin Yutang. Ultimately, of course, this experiment collapsed miserably and brought the nation to financial ruin—with the loss of the rich northern provinces. The attempt to establish state socialism, though made by a very clever man, all but ruined the country.

If eleventh-century China seems too far away to be significant, look at contemporary England. When the British, too worn by their sacrifices during the war to be able even to think clearly, turned the government over to the Socialists, they took a long step toward disaster. The nationalization of one industry after another, with the resulting inefficiency of management and steady increase in costs, was bad enough, in all conscience. But far worse was the concentration of power in a central government which blundered more often than it succeeded.

Fortunately for England, and for the cause of freedom everywhere, the recent election proved that there is still hope of a change—yes, there is now the certainty of a change. Despite their disheartenment, their regimentation, their willingness to stand patiently in queues, the English have not lost their belief that liberty is worth all that it costs, or their willingness to fight for that in which they believe. Before long they will be free again.

Anthony Eden put the case against socialism well when he said last summer, "The Socialist Party is far too much given to control for the love of control. * * * In restricting liberty in small matters, they are playing into the hands of those who would suppress liberty in the greater things of life. The more we are conditioned to control, the weaker becomes that sense of personal responsibility that in the past has been our strength as a nation."

That, ladies and gentlemen, is the real tragedy of socialism, of the all-powerful state, no matter what you call it or where you find it; that is the real reason we should oppose it. Not that it is wasteful and stupid and inefficient; not that it attracts third-rate men to its councils; not that it blunders tragically in its attempts to plan your lives and mine; but that it undermines the sense of personal responsibility and destroys normal, laudable, human ambition. Of course it attacks my pocketbook; but—far worse—it also poisons my soul. Ultimately its victims cease struggling. "Why worry" they say, "we can't do anything about it. The government controls us—we no longer control the government—to hell with it."

"But," you say, "this is the United States; we are still free; let's not worry about what happened in England." I agree that worry is of no use whatever. But I add that unless we resolutely and promptly do something vigorous about it, we may well find ourselves where England was before the election. And that, as I said not long ago, is the job ahead—to check the development here in the United States of the socialized state.

Already too many Americans are working to bring it into being. Honest but stupid visionaries, undercover friends of communism, and some who merely lust for power for its own sake, are actively busy promoting the destruction of free enterprise. Certain religious and political groups are openly advocating the elimination of the profit-motive from our national life, and the establishment in its place of a total planned economy.

No one can object when these radicals air their opinions. They are merely exercising the right of free speech. But I wish that intelligent conservatives would exercise the same right. I wish they would proclaim from the housetops that a program of Nation-wide planned economy, carried to its logical conclusion, is really a program of national slavery. We of the center and the right, ladies and gentlemen, are far too complacent, too lethargic. Our opponents never sleep.

A second indication of the trend of the times is the alarming growth of the administrative departments of the Federal Government, in size and in power. Well intrenched Federal bureaucracies are dictating the rules of the game in many phases of our national life, and are ceaselessly alert for more worlds to conquer. Even if the bureaucrats were skillful managers and planners, their increasing numbers and authority would be a menace to our national freedom. But they are not skillful; they are bunglers. See what they have done with potatoes and eggs, or think for a moment about that monstrous thing called the Brannan plan.

Few people who advocate—or acquiesce in—increasing the power of the Federal Government realize that in doing so they are working for socialism. But they are. For the submergence of the individual in the state is the very heart and soul of socialism. So long as we are free to protest, to assert our own independence, to enjoy our liberties as Americans, there will be no Socialist state. But once we are shackled by debt and taxes and hemmed in by administrative regulations we lose the power of effective resistance; ultimately we lose the will to resist. And then the whole battle is lost.

As we all know, the Constitution provides for a tripartite Government: executive, legislative and judicial branches all performing their proper functions, and acting as checks and balances on one another. During the past 20 years we have seen the execu-

tive department usurp many of the powers of the legislative, and attempt, through a "packing" process, to bring the judicial to heel. From this situation it is no long step to government by a single party, a single bureau, or perhaps by a single individual. The bare mention of such a possibility is repulsive. But that is no reason for burying our heads in the sand.

The bait offered us by those who favor an all-powerful socialistic state is attractive. For example, we are all interested in the education of our children and in their health. When either of these matters is mentioned, we become sentimental. Of course we want better schools, better hospitals, better medical service in small towns. And since we are already taxed to exhaustion we agree to "let the Government do it"—forgetting that the Government can pay the bills only out of our own depleted pocketbooks. We also forget that as soon as it is paying the bills it will inevitably control, no matter what safeguards may be attempted.

What about Federal aid to education; do we really think that in the long run it would be good for the country? I for one do not. Our American educational system, imperfect, but still the best in the world, has been built on the basic principles of local autonomy and local responsibility. There is no emergency which can possibly justify abandoning these time-tested principles. If my State of Illinois really wants better schools it can have better schools, by eliminating waste in the administration, or by increasing State taxes on liquor and cosmetics. We will gain nothing by sending our money to Washington to have half of it returned to us for our educational budget.

But, you say, not all States are as wealthy as Illinois. Should not the Federal Government help those who cannot help themselves? Mr. Frank Holman, president of the American Bar Association in 1949, recently discussed this question. He pointed out that the State most commonly cited as in need of such aid had increased teachers' salaries 156 percent in 8 years, had a surplus in its treasury greater than its total debt, and through the process of investing this surplus in United States bonds was actually lending money to the Federal Government. The same situation would probably be found in other places, if the real facts were brought to light. I say again no educational emergency exists which can justify abandoning our well-established principles of local autonomy and local responsibility, and allowing our schools, through subsidization, to come under the control of the Federal Government.

An even more attractive lure dangled before us is the promise of free medical and hospital care through a system of compulsory health insurance paid for out of Federal money.

It is commonly stated that millions of low-income families are without competent medical care; that the profession is unable or unwilling to give them this care; that hospital and nursing costs are prohibitive, and that the only way to solve this problem is to turn it over to the Federal Government.

No intelligent person doubts that illness sometimes lays a heavy burden on persons with middle-range incomes, that the United States needs more physicians than it has, or that the distribution of these physicians leaves many areas inadequately cared for. The war interrupted the work of our medical schools, stripped them of their youngest and most vigorous teachers, filled their classrooms with poorly prepared students, and sent into uniform hurriedly graduated medical officers who had had about half the training we expect our physicians to receive. Our medical schools and teaching hospitals are only now slowly recovering from this devastating experience.

But even so American medicine is doing a notable job in the cause of private and public health. There are few cities in America where virtually free medical care is not available to anyone who really requires it; few hospitals which ever close their doors to charity patients. In the city I know best no one is ever more than an hour's ride by streetcar from a clinic where the highest type of medical aid is available without cost to the patient. And for the middle-income group voluntary hospital and health insurance—the Blue Cross, Blue Shield plans, and many offered by insurance companies—spreads the cost of any illness over some 60,000,000 participants, and greatly lessens the danger that illness will have catastrophic financial results.

That I believe to be the American way and the best way of solving this problem—by voluntary cooperation between the medical profession and the people that profession serves; by voluntary and local support of hospitals and clinics; by efficient administration of these institutions; by generous private assistance to medical schools.

I am glad this Congress has laid aside the bills for compulsory health insurance; I hope they will not be resurrected. I say this, not because they would give the country socialized medicine, but because they would almost certainly give it poor medicine; not because they would be costly—the voluntary system we all believe in is costly—but because they would inevitably be inefficient; not because they would put the physician on the Federal pay roll, but because sooner or later they would enslave him.

Even more alluring than the proposal for compulsory health insurance is the administration's recommendation of a greatly extended social-security program. House Resolution 2893, and its somewhat more moderate substitute, House Resolution 6000, are intended to establish such a system of old-age, survivor, and disability payments as will give generous aid to virtually everyone over age 65, and to many younger persons.

The complexity of the program is so bewildering that I do not pretend to understand it in detail. But, of three things I am sure: First, the program would be a powerful deterrent to any gainful activity by a person over 65, and would make drones out of many who are now happily employed. Second, the cost, as estimated by the Social Security Administration itself, would be fantastic; not less than $4,500,000,000 in 1960, and rising in 4 decades to a possible $20,500,000,000. Third, a vast new army of Government employees would be required to administer the program. Their salaries have not been included in the figures I have just quoted; nor can their possible political influence be estimated.

In each of these three respects the program seems to many people to be contrary to good public policy.

These objectors to the administration's proposals believe that we should encourage our older citizens to work instead of to loaf, and point out that medical science has made retirement at 65 a luxury and not in any sense a necessity. They believe that we should reduce and not increase Federal expenditure, and should fight shy of any plan which promises to become increasingly costly as the years pass. They believe we should lessen and not increase the number of Federal employees, and I add that if either of these resolutions should become law, this country would at one step have gone far towards a completely socialized State. I hope this proposal, like that of compulsory health insurance, will be definitely laid aside by the Congress.

I said a few minutes ago that, unlike old age, socialism is not inevitable. Whether or not it is to overwhelm us depends in large measure on people like ourselves, who believe that freedom is essential to the happiness of the individual as well as of the Nation. The battle has just been joined, ladies and gentlemen, and if you and I and all the other right-thinking Americans do our part, the victory will be ours.

What can we do? First—and I cannot say this too emphatically—educate young America; tell the students in high schools and colleges what this capitalistic system of ours really does to keep the national standard of living higher than that of any other nation; to make America the land to which the unfortunate of every other nation would gladly come if they could. These young people are alert, intelligent, trustworthy. They will be in control of things before long. It is important that they know the truth before they take over the driver's seat. The radical, who would overthrow the present order of things, is constantly busy on college campuses. The conservative should be busy, too.

Second, can we not make it quite clear to our Representatives in Congress that the needless harassment of business, big or little, can do only harm to the country; that thrift is a national as well as a personal virtue; that the organizing and administrative skill which distinguishes American industry should be used to make our Federal Government more efficient and less costly; that the States are quite competent to handle their own educational and medical problems; and, above all, that we wish less rather than more power in the hands of the Federal Government.

Is there anything hopelessly reactionary about these suggestions? I think not. I am merely asking Congress to preserve for our children the basic freedoms and opportunities which we have enjoyed. Is there anything narrowly partisan? I think not. Neither Democrat nor Republican wishes the individual to be submerged in the State, or hopes by his action to bring socialism into power. Is there anything in these suggestions to which you as businessmen should object? Again, I think not. You have already advocated them, directly or by implication, in your published platform. If you and your friends will really work to implement your own proposals, we of the educational world will gladly help, as we can, and between us we shall banish the spectre of socialism from our land.

Heroes of Iwo Jima

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1950

Mr. MULTER. Mr. Speaker, the following editorial is so eloquent that any words by me can only spoil it. I give it to you exactly as it appeared on February 23, 1950, in newspapers throughout the country and in the Journal American in New York City:

HEROES OF IWO JIMA

(By Harry H. Schlacht)

It was 5 years ago today that United States Marines stormed Mount Suribachi on the tiny Pacific island of Iwo Jima, during which five of their number planted the American flag in its volcanic dust.

What a soul-stirring spectacle. What a soul-stirring story.

Like rolling billows it swept across the pulsating heart of the Nation.

The marines who raised our flag symbolized the unsurpassed gallantry of all our fighting

men. The marines who raised our flag epitomized the sacrifice of all our fighting forces.

Yes, she's up there—Old Glory. How bright the stars beam. And the stripes like red signals of liberty gleam.

We have stormed the darkness of night. We have set in the darkness a light.

It is the flag of Trenton, Gettysburg, Chateau Thierry, and Iwo Jima.

They hold deeds that shine like stars above our blessed shrines.

Behold our flag—it was born of the sun, the stars, and the sky.

It was baptized by American patriots. It was dedicated in freedom's holy light.

Its stripes are as red as a patriot's blood could paint them; as white as a mother's tears could wash them. Its field of heaven's own arch that bends o'er us and set with a galaxy of 48 brilliant stars glittering together for the glory of God's country.

It is the flag of our Nation. It is the flag of liberation. It is the flag of humanity. It is the flag of destiny.

Wherever it has been unfurled to the breeze, its noble and inspiring message has been: Here men shall be free.

On this day dedicated to the glory of Iwo Jima—let us honor those who died under the flag to keep it free. Let us weave a wreath of prayers. Let us weave a bouquet of spiritual flowers, whose sweet fragrance will be carried to the throne of God in memory of our heroic souls.

Because of them our lives are free. Because of them our Nation lives. Because of them our civilization is blessed.

Let us pause today in tribute to the heroes of Iwo Jima. All is quiet on the hill—but in the distance we can see the snow-white crosses covering the ground like morning dew, for there sleeps the flower of our American youth.

The Stars and Stripes flutter leisurely. Not a sound is heard—except a silent sentinel keeping vigil on the sacred soil.

Yet One walks there among the crosses. He lifts His holy voice in benevolent benediction: "My peace I give unto you. Well done, good and faithful servants."

So shall they rest in peace.

The Chinese Situation

REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1950

Mr. JUDD. Mr. Speaker, a recent issue of Newsweek says that Mr. Trygve Lie, Director-General of the United Nations, is carrying on secret maneuverings and negotiations designed to get the majority of the members of that organization to withdraw recognition from the legitimate government of China, thus opening the way for installing in its place in the United Nations the Communist regime now established in Peiping which calls itself by the attractive name, Peoples Republic, but officially describes itself as a "peoples democratic dictatorship."

Mr. Speaker, I hope this report is not true and that Mr. Trygve Lie will disavow it. The United Nations is badly shaken already as far as public confidence is concerned and if it turns out that it is being used or can be used as an agency for carrying on maneuverings and manipulations on behalf of the Soviet Union and its satellites, that would be almost a fatal blow to the United Nations, and perhaps to man's best hope for peace.

Veterans' Administration

REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 3, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, the papers carried a story this morning and the service organizations have been talking with me about the Veterans' Administration dismissal of 7,800 employees because they do not have enough money to pay them. Approximately 3,000 employees in hospitals and 4,800 other employees are included, the Veterans' Administration says. Hospital beds will be taken away as a result. Already there is a shortage of 1,600 beds for veterans.

Mr. Speaker, it seems to me that with the closing of the Army and the Navy hospitals, and the Veterans' Administration hospitals, this administration is not mindful of illness or disability, particularly of our disabled veterans. It seems to be there is more interest in potatoes and things like that than there is in disabled men. It is like the old Japan that drowned weak people they did not want, or let suffer and die.

That should not be the American way. It is not America.

The following article by Jerry Kluttz appeared in the Washington Post today:

VA To Lay Off 7,500 by April 10

(By Jerry Kluttz)

The Veterans' Administration is rushing plans to fire between 7,500 and 8,000 of its employees by April 10, the Washington Post learned last night.

Several hundred VA employees here and nearby will get the ax in the major shake-up.

VA Administrator Carl Gray disclosed plans for the big reduction in messages sent yesterday to key agency employees here and in the field. He instructed them to give out 30-day discharge notices a week from today to become effective on April 10.

VA's department of medicine and surgery will be hard hit by the pending lay-off, the first it has had to take. It has been ordered to fire 3,000 hospital employees, from attendants to doctors, and 1,800 employees from the medical sections in the regional offices.

A total of 4,800 employees would have to be fired from the medical program. But the program has 117,000 of the 187,000 VA employees, and percentagewise the claims, insurance, and other administrative sections would suffer.

ADMINISTRATIVE FORCE HIT

Approximately 3,000 employees would be laid off from the 70,000-man administrative force.

Among the employees here to be fired will be most of the remaining temporary staff that was recruited to pay the GI insurance dividends as well as cuts "here and there" among the regular employees at headquarters, the regional office, and Mount Alto Hospital. Officials explained it would be another week before the exact number to be cut here would be known.

The reduction was ordered, officials pointed out, for a combination of reasons but it all added up to lack of funds to maintain the present staff.

"We must get in line now," an official explained, "with our 1951 budget. The longer we wait the more people we must fire."

MISCALCULATION IS HINTED

There was also a hint that VA officials had miscalculated 1950 operating costs a year ago in preparing the budget. It was recalled that Congress, the day before it adjourned last fall, okayed a deficiency appropriation for VA—money which was intended to prevent the firing of about 8,000 employees at that time.

Although no definite decision has been made, officials confided that they expected the sharp cutback to result in the closing of from 300 to 400 contact offices throughout the country, and the closing and merger of half a dozen regional offices.

In addition, the eventual closing of some hospital beds is a clear possibility. A VA spokesman explained that additional hospitals were being constructed and several thousand additional beds would become available within the next year.

The Case for Home Rule for Washington

REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 3, 1950

Mr. KENNEDY. Mr. Speaker, I am placing in the RECORD today a memorandum on "the case for home rule for Washington." It begins with a quote from James Madison that appeared in the Federalist paper:

The inhabitants of the Federal District will have had their voice in the election of the government which is to exercise authority over them.

And he assured them that—

A municipal legislature for local purposes, derived from their own suffrage, will, of course, be allowed them.

The memorandum traces the history of local self-government in the District. I urge you to read it.

The petition to discharge the Kefauver bill from the Committee on the District of Columbia now has over 165 signatures. We need more. I hope that those Members who have not yet taken action on the petition will sign it.

The memorandum follows:

THE CASE FOR HOME RULE FOR WASHINGTON

1. The founding fathers promised local self-government.

(a) In one of his Federalist essays, James Madison wrote that "the inhabitants of the Federal district will have had their voice in the election of the Government which is to exercise authority over them," and he assured them that "a municipal legislature for local purposes, derived from their own suffrages, will, of course, be allowed them."

2. Washington had local self-government from 1802 to 1874.

(a) Elected mayors and town councils from 1802 to 1871.

(b) Elected House of Delegates (25) and Delegate in Congress from 1871 to 1874.

3. The people of Washington are capable of local self-government.

(a) They have an occupational acquaintance with public affairs.

(b) District residents are the best educated of any American city.

4. Taxation without representation is incompatible with our traditions.

(a) District residents pay local income, property, and sales taxes amounting to almost $100,000,000 a year, but they have no control over how their tax money is spent.

5. The people of Washington want home rule.

(a) They voted 8 to 1 for local suffrage in 1938.

(b) They voted 7 to 3 for it in 1946.

(c) Seventy percent favored home rule in Washington Post poll in May 1948.

6. The Nation wants the District to have home rule.

(a) A Gallup poll in 1948 showed that 77 percent of the country favored it.

(b) Many leading American newspapers have supported it editorially.

7. President Truman endorsed the Kefauver bill and urged its passage in a letter to the Speaker of the House on July 25, 1949.

8. Home rule would relieve Congress of an onerous councilmanic burden.

(a) All District legislation must now pass through both Houses of Congress.

(b) There are 28 stages in the passage of a bill through Congress.

(c) Elsewhere local policies are made by single act of city council.

(d) It takes an act of Congress to change street names, establish daylight-saving time, destroy starlings, cut weeds, etc., in Washington.

(e) It isn't fair to Congress; it isn't fair to Washington; our needs are neglected.

9. Both political parties have promised suffrage rights to the people of the District of Columbia.

(a) Since 1892 Democratic platforms have contained District of Columbia home rule planks.

(b) The 1948 Democratic platform states: "We favor the extension of the right of suffrage to the people of the District of Columbia."

(c) The 1948 Republican platform contained a similar plank.

10. The constitutionality of home rule has been upheld by the Attorney General of the United States; House and Senate Legislative Counsel; several eminent constitutional lawyers.

(a) Exercise of rights of local self-government from 1802 to 1874 was a practical construction of the Constitution.

11. All other cities in the United States enjoy local self-government.

12. All other capital cities in the world outside of the iron curtain have it except Canberra.

13. Lack of local self-government in capital city of world's greatest democracy embarrasses conduct of our foreign relations.

(a) Washington should have a model system of self-government.

14. Under present form of government here, we have no control over acts of city officials.

(a) If school facilities are inadequate—if crime rate is high—if municipal services are unsatisfactory—we cannot dismiss the responsible officials.

15. Lack of home rule dulls the edge of democracy—weakens the citizen's sense of civic responsibility—atrophies our political faculties for sheer lack of expression.

16. With home rule, the administrative structure of our local government would long since have been modernized.

(a) It has just growed like Topsy since 1878 and is a tangled jungle of overlapping, duplicating, and uncoordinated agencies set up through years in piecemeal response to local needs.

17. Under present system, Washington has nine bosses: District Commissioners; Bureau of the Budget; House Appropriations Commitee, 45 members; Senate Appropriations Committee, 21 members; House District Committee, 25 members; Senate District Committee, 13 members; conference committees on District of Columbia appropriation bills; Congress; President of the United States.

18. Under the Auchincloss-Kefauver bill, it would have one boss—a city manager—who would be responsible to an elected District Council which would be the governing body of the city.

19. Federal interests would be safeguarded under home rule:

(a) Via constant oversight of District affairs by the District committees.

(b) Via the power of Congress to disapprove District legislation.

(c) Via the power of the President to veto District legislation.

(d) Via the right of Congress to amend or annul the charter at any time.

20. The home-rule charter would become effective only after approval by a majority of District voters in a popular referendum.

21. Voting rights of District residents in their native States would not be jeopardized—100,000 local residents maintain legal domicile in the States.

22. The proposed qualifications for voting in District elections are the same as those which prevail throughout the country: citizenship, age, residence.

23. Nonpartisan local elections will prevent any national political organization from capturing control of the local government.

24. Home rule will restore local self-government here after lapse of 75 years.

25. The Auchincloss-Kefauver bill is not perfect, but it grants as much home rule as the Constitution permits.

Mr. RANKIN. Mr. Speaker, will the gentleman yield?

Mr. KENNEDY. I yield.

Mr. RANKIN. The overwhelming majority of the people of the District of Columbia do not want this so-called home rule.

The SPEAKER. The time of the gentleman from Massachusetts [Mr. KENNEDY] has expired.

Resolution on Genocide

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. MULTER. Mr. Speaker, I am pleased to call the attention of the House to the following resolution on genocide, adopted by the executive council of the American Federation of Labor, on February 3, 1950, at its Miami, Fla., session. I sincerely hope that our colleagues in the other body of this Congress will lose no time in ratifying the Genocide Convention of the United Nations.

RESOLUTION ON GENOCIDE ADOPTED BY THE EXECUTIVE COUNCIL OF THE A. F. OF L.

The crime of genocide, which is the intentional destruction of national, racial, and religious groups, is a blot on our civilization and a serious threat to social security and international peace. It not only destroys life, but it also prevents life. Further toleration of this crime is a grave threat to our civilization.

The American Federation of Labor realizes that because of the required two-thirds majority in the United Nations Assembly it was impossible to include the destruction of political groups in the convention. However, the text of the convention as it now stands does not limit the scope of motivations on the part of the offender and, even if the crime were committed for political or economic reasons, it would be punishable under the convention.

International treaties are a result of negotiations, and, therefore, this treaty can be considered as a necessary instrument for establishing standards of human decency in the world. Article II of the convention, which speaks of the creation of conditions of life calculated to destroy national, racial, and religious groups, covers the problems of enslavement of members of these groups in concentration and slave-labor camps. In these camps labor has been transformed into an instrumentality of death. The American Federation of Labor, which took the initiative in placing the slave-labor problem before the United Nations, considers this convention as an important first step toward providing international sanctions against the destruction of life through slave labor.

Though the crime of genocide has in recent years been most gruesomely perpetrated by the Nazis, it is not limited to any particular country or nation. It is a criminal menace of world-wide implications. It has been committed in the mountains of Greece, in the Balkans, in Siberia, and in the Baltic lands. More recently mankind has witnessed a new form of this monstrous crime. We are now face to face with tragic extension and a frightening innovation in this crime of mass murder. This development only puts into painful relief the growing menace to humanity and the extreme urgency to take effective action against it.

Behind the iron curtain—and particularly in Soviet Russia—governmental authorities have developed a fiendish plan based on cultural grounds and have launched a terrific compaign to wipe out entire groups of their population. The new drive to make impossible the continued existence of Jews in Russia and in its satellite areas is going on under the flag of a savage war against so-called cosmopolitanism. Their crime is that they have, or might develop, a culture different from the ultranationalist and imperialist brand supported by the ruling party, by the totalitarian dictatorship, in Russia.

A vicious campaign is afoot to chase out all Jews from employment in occupations entailing contact with the mass of people in the U. S. S. R. or with the people of other countries. All citizens of Jewish origin have been eliminated from the Soviet occupation administration in Austria and Germany. Jews are no longer permitted to be members of Soviet delegations and foreign missions or to undergo training for diplomatic service. The door to employment in the Soviet Ministry of Foreign Trade has been slammed hard in the face of Russia's Jews—on cultural grounds. The same process of elimination of Jews continues ruthlessly in the ranks of the ruling Communist Party and its government apparatus.

We must keep in mind that in countries where one party has a monopoly of all political power and where the government dictatorship is the sole employer, such cultural pogroms against intellectuals and their followers mean virtually the sentencing of these individual human beings to death—by enforcing conditions which make life impossible, by ostracizing them and depriving them of all means of livelihood.

Here is terrifying confirmation of the fact that prompt international action to check the spread and stop the perpetration of this heinous crime is most urgent. Otherwise, humanity is likely to be confronted by still

more new manifestations and variants of genocide in various parts of the world.

In the light of the above tragic developments and urgent considerations, the American Federation of Labor appeals to the United States Senate to ratify promptly the Genocide Convention.

The Congress and the Nation's Health

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, March 3 (legislative day of Wednesday, February 22), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an address which I delivered at the legislative conference of the Democratic-Farmer-Labor Party in Minneapolis, Minn., on February 18, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CONGRESS AND THE NATION'S HEALTH—HEALTH LEGISLATION IN THE EIGHTY-FIRST CONGRESS

I should like to take this opportunity to tell you about what's going on in Washington with respect to the one thing that is more important to you than anything else in the world—your health and that of your family, of your neighbors, and of your community.

It's a subject as big as it is important. But, fortunately for your patience and my very well known dislike of speaking at length, there are a few short cuts we can take.

For one thing, I know I need not spend much time talking about why the Federal Government is active in the field of health. Some 20 years ago, perhaps, there would have been people insisting that it was entirely the business of the States and of local communities. Today, Republicans as well as Democrats—even Dixiecrats—are agreed that the Nation's health is very much the business of our Nation's Government.

We have learned that we Americans are a highly mobile people. With no iron curtains or immigration bars between the States, our people by the hundreds of thousands move from place to place throughout the country each year hunting better jobs, seeking greater opportunity, carrying on their business or just looking for rest and relaxation.

We have learned, too, that just as our people move about freely and in great numbers, so too, does disease disregard community borders and State boundaries. We know that the great cities of the country draw their people from the farms and rural areas of the Nation. We know that the health of city workers in large measure determines their ability to earn enough to buy the products of our farms. We know that the Nation's wealth depends on its people's health—that, in fact, our health is the basic source of all our wealth.

We know these things and we've learned, that, while the job of protecting our health must be carried out at the local level—in the States and in the local community—the States and their local governments cannot themselves finance necessary health measures. Their taxing powers are far too limited. Not even in the case of very wealthy States, can they effectively carry on separate and uncoordinated programs.

We know, that just as disease recognizes no boundaries, recognizes neither State lines nor differences between rich and poor, so too must the battle against illness and disease and against the wrecked hopes and broken homes they leave in their wake, be national in scope. Our country's strength is in the health of our people.

We are all agreed that the Congress should concern itself with health problems. The fact that today such conservative Republican stalwarts as TAFT, of Ohio, and DONNELL, of Missouri, as well as the so-called liberal Republicans like MORSE, of Oregon, and AIKEN, of Vermont, all sponsor national health bills proves the point. It's true that, as usual, they were some 10 years behind the Democrats in learning about the country's needs. But I'm glad they have learned, glad that now we have bipartisan recognition of the fact that we have health problems, that these problems are national in scope, that they call for action on the national level.

To a great extent, we are also agreed as to what those problems are. Briefly put, they involve problems of preventing disease as well as curing it. Problems of getting enough doctors and dentists and nurses and other health personnel to meet the needs of our people. Problems of having the hospitals and clinics in the places where they're needed. And, given enough doctors, nurses, hospitals, and clinics, the great big problem of seeing to it that people are able to use them—are able to afford their services. Those are the problems. Throughout the Nation and in the Congress there's pretty general agreement on them.

But after we've stated the problems, we've got to agree on solutions for them; we've got to do something about them. And it's at this point that you'd expect to find the Congress torn by conflict and argument—much talk and very little action.

Well—let me surprise you—and I'm sure I will surprise you: insofar as I've seen newspapers and magazines writing about the Eighty-first Congress and health legislation, it's been in terms of conflict. There have been headlines and full-page spreads telling about how Republicans have damned the Truman health program as socialized medicine. There have been others about how Democrats label the Taft health bill, charity medical care, and state medicine on the Russian model. And those headlines have been true.

But have you seen any headlines telling you that the Senate in the Eighty-first Congress has worked a miracle when it comes to health legislation? Do you know that four parts of the seven-point Truman health program have already passed the Senate? Have you been told that in one session of this Democratic Eighty-first Congress we have passed not one but five major health bills?

I'm sure you haven't. In earlier Congresses, any one of these bills would have meant impassioned argument and much oratory. Its passage would have been looked upon as a major accomplishment. In the Eighty-first Congress not only did we pass five bills of major importance to the health of the Nation, but each one passed the Senate unanimously, without a single dissenting vote.

That's what should have been in the headlines. Those bills, if they pass the House of Representatives, are going to mean the difference between life and death to tens of thousands of Americans. Because they are important in themselves; because the manner in which we reached agreement on them has an important bearing on the argument over health insurance, and because I am very proud of the fact that I had something to do with the passage by the Senate of those five bills, I want to tell you about them—about what they are, what they can mean to America, and about what they will cost.

One of these bills—the school health services bill—will make it possible for every State to assure all needed health services to its school children. A second bill—the Public Health Units Act—makes possible public health services everywhere in the Nation. The third bill extends the Hospital Construction Act for 5 years and doubles its funds so that every community in need of hospital facilities can have them built if it can support them. The fourth bill creates two great institutes of research into the causes of and cures for arthritis and rheumatism, blindness, multiple sclerosis, palsy, and epilepsy. It is based on the fact that spending millions year after year to halt the spread of disease, to care for its victims and to provide relief for stricken families, without at the same time trying to find out what causes these diseases and how they can be cured, is completely illogical. Yet that is just what we as a Nation have been doing. Arthritis and rheumatism alone cost our people $100,000,000 a year for medical care, $120,000,000 a year for relief, and about $500,000,000 a year in wages lost. Yet we have been spending less than 3 cents per case of illness to find its cause and cure. That's why we want to add these institutes of research to those now operating in the fields of polio and cancer and mental illness.

The fifth bill we passed—and again I remind you that each of them passed the Senate without a single dissenting vote—was for urgently needed financial aid to medical, dental, public health, and nursing schools. A bill which, after the most thorough investigation, the Senate found was essential if we are to keep in existence the schools on which the entire Nation relies to provide us with the skilled men and women to whom we turn for aid in times of illness.

What do these five bills already passed by the Senate in the Democratically controlled Eighty-first Congress mean? Taken together and assuming that they will be passed by the House of Representatives, these bills can mean an America none of whose children need grow into adult life with physical or mental defects which could have been prevented or corrected. They can mean that every community in the land can have those protective and preventive public health services which have wiped out some diseases, halted the spread of others, and added years to the span of life. They can mean that people in rural areas and people living in the less wealthy sections of the country can have available that same network of related hospital services which in wealthier places has often meant the difference between life and death. These bills can mean an end to the financial disaster now threatening to overtake many of the schools on which we rely to turn out physicians and surgeons, dentists and nurses for the country—a danger which is nonetheless real even though few people now know about it. Finally, these bills can mean the establishment by the Congress of a definite and badly needed policy in the field of health; a policy under which we shall no longer think our work done when we provide relief and medical care and makeshift jobs for the millions maimed by blindness and palsy, by sclerosis, epilepsy, arthritis, rheumatism and other diseases; a policy under which, while we continue to care for those struck down, we shall also do that which is much more important—we shall mobilize the best brains in the country, provide them with the laboratories and the clinics they need, and put them to work to find the causes and cures for these dread diseases.

WHAT WILL THEY COST?

Those are the things the five major health bills we've passed in the Senate can mean to you and me and this country of ours.

But what will they cost? That's not a question which will be asked by anyone suffering from the diseases I've mentioned. It won't be asked by a mother whose child has died because there wasn't an adequate hos-

pital nearby. Nor will it be asked by a young husband whose wife has been taken from him and from their children because doctors didn't know what caused her disease or how to cure it. Those people won't ask what this kind of legislation costs—and don't forget that sooner or later you and you and you and I will be one of those who will want the hospital, need the doctors, and pray that they have the answers. We won't worry about the cost either then.

But right now some people want to know—particularly one of our Minnesota editors who gets great pleasure out of adding up the total costs of the bills HUBERT HUMPHREY sponsors and implying that I'm out to bankrupt the country.

Well, in all seriousness, it's a good question. It's an honest one and one that calls for an answer. What will it cost to provide the health services in these five bills which the Senate has unanimously decided the Nation needs and can afford?

As a serious answer to a serious question I'm going to give you an answer that may sound contradictory at first. But it's not. And you'll see why. Those five bills will call for an expenditure of slightly over $300,000,000 a year, but I'm convinced that they won't cost us a penny.

Our editor friend would say they will cost $300,000,000 a year. In his terms he's right and $300,000,000 is a figure not to be taken lightly—even though it breaks down to $2 for each of us.

But these are millions we cannot afford not to spend. We have spent and we are planning to spend billions—billions not millions—to create one single instrument of death and destruction to be used in a war which we hope will not come. These health millions—millions not billions—are needed to fight a war which is already upon us—a war against disease and illness which is regularly killing and maiming millions of our people.

Now let's talk about costs in my terms rather than the editor's. When I put out a dollar and get back two—which doesn't happen very often—I don't say the transaction costs me a dollar. I say I've made a dollar. Similarly I say that these health bills won't cost us a cent—that if we spend two dollars apiece on them we'll be making money.

The spread of hospital services and of preventive medicine, the presence of doctors and nurses when and where they are needed, the emphasis on prevention rather than treatment of illness means lives saved. And that means greater productivity. It means we can cut down some of the 600,000,000 man-days lost to industry every year through illness. And that means greater wealth. It means thousands and thousands of families remaining sturdy, productive, wealth-making units of our economy instead of becoming relief-receiving burdens on local taxpayers for many years. It means saving, Mr. Editor, not spending—saving dollars if that's your concern—but saving lives and families and human happiness as well—and that's my concern. After all that's what this Government was set up for, "Life, liberty, and the pursuit of happiness," Mr. Editor—not the pursuit of the almighty dollar.

Well, now you've heard what we've done about health legislation in the Eighty-first Congress. And I know you're interested in what's been left undone—in the unfinished business before the Senate—particularly in what's supposed to be the great battle over national health insurance. Certainly the doctors of Minnesota are interested. But there really isn't any great battle. Republicans and Democrats aren't really at each other's throats. They're not really spending all their time in the Senate shouting socialized medicine at one another. Let me tell you how the Senate passed these other important health bills unanimously; how it happened that Senators TAFT of Ohio and HUMPHREY of Minnesota who disagree completely on so many other things were both able to put their names on these five bills along with such other political enemies as Republican Senators DONNELL, SMITH, MORSE, and AIKEN and Democratic Senators THOMAS of Utah, MURRAY, PEPPER, HILL, WITHERS, and DOUGLAS. Those are the Senators all of whose names appear as joint sponsors of the five health bills. That is the entire membership of the Committee on Labor and Public Welfare of the United States Senate—the committee which handles health legislation.

You've all been taught that when the lion and the lamb lie down together the millenium will have arrived. Well, let me tell you, that when Senator TAFT is found lying down in the same legislative bed as Senator HUMPHREY and Senator MURRAY, it is not one whit less significant.

In effect what this means is that health legislation which used to be highly controversial in every aspect has in large measure been lifted out of the realm of politics. Credit for this achievement belongs for the most part to the voters of America. They have made it very clear that they regard health as a very important subject and they have in no uncertain terms insisted that something be done about it. Even the Republican elephant with one ear tuned to Wall Street and the other to Colonel McCormick and the Chicago Tribune could not remain deaf. And when that happens in a particular field, statesmanship eventually replaces politics. But the American people must give a great deal of credit for expediting the process to Senator THOMAS of Utah, chairman of the Committee on Labor and Public Welfare, to Senator MURRAY of Montana, chairman of its subcommittee on health, and to all those older members of the committee who laid aside their profound differences of opinion on other matters when they took up health legislation. These men devoted long hours, day after day for many months to working out the details of these bills even though they knew that by working together on a bipartisan basis, their work would lack the glamor and spice which means headlines and political prominence. After they had heard representatives of the public and of the professions, they closed the doors to newspapermen, called in professional and technical experts and buckled down to work. By keeping at it and by keeping their initial differences of opinion out of the papers, they found that those differences represented either misunderstandings which disappeared of themselves or minor differences which in an atmosphere of mutual respect could easily be compromised. The result was that each of these health bills was brought out on the floor of the Senate and when it was seen that they were sponsored by every member of the committee, Senators knew that each bill represented a real need for action, that it was soundly drawn and economically planned, and that it would work well in action. Consequently, each bill passed the Senate without a single dissenting vote.

That's the way your Senate Committee on Labor and Public Welfare has worked in the last year. That's the way it's working now, and that is the way we intend to keep on working on the problems of the Nation's health. It doesn't make for headlines but it does mean lives.

Now I've said all those fine things about that particular committee even though I'm a member of it myself and it could be embarrassing. I said it partly because you and I know that I'm a new member and that, while I'm proud to be on that team and to have helped write and pass those bills, the credit goes primarily to those Senators who, because of their seniority, made the decisions as to how it would work. I said it mostly because when we talk about the big unsolved problems of medical care it's very important that the doctors of Minnesota and of the Nation realize how far along we've come and the atmosphere in which we're working. Now let's turn our attention to those unsolved problems.

When the Eighty-first Congress got under way there were eight fields of health which presented serious problems. In five of these the Senate can consider its work done and done well. But there are three other fields in which action should be taken if we are to round out our program for the Nation's health. One of these is in the field of rural health. It's true, of course, that the bills we've already talked about are going to mean a great deal to farming communities. But conditions in rural areas are such that special action must be taken to make it possible for doctors to make a good living in isolated areas and for farming communities to afford the kinds of medical centers and laboratory facilities that modern medicine demands. That's another one of the seven points in the Truman health program—one of the seven titles in the administration's health bill and one on which I've introduced a separate bill worked out with our Minnesota cooperatives and designed to help them create the farmer's health cooperatives which we think may solve the problem. Since in this field, too, members of the committee are working in harmony, there is an excellent chance that we will have worked out and sent to the Senate before the close of this session a rural health bill on which we can all agree.

Another field on which we anticipate action involves special programs for maternal and child care. We don't like the fact that three times as many mothers die in childbirth in some States as in others. We don't like the fact that 60 percent of the doctors specially trained to take care of infants and children live in places where only 4 percent of the children are found. We don't think the American people like these things either and we hope to find a way to do something about them.

PAYING FOR MEDICAL CARE

The last and the greatest of the problems in health legislation on which the Senate has still to act is the one that is probably of greatest interest to everyone here—the problem of paying for medical care. It is around this point that all the sound and fury has centered—around this question that the argument over health insurance has raged for years. But as I said before and as I now repeat, in Washington the great battle over national health insurance is all over. The battle has been won. The American people have won. The Democratic Party has won. There is no longer any question as to whether or not we're going to have a national health insurance program in these United States. We are going to. The only questions that remain involve details as to how far we should go, how fast we shall go, and along what lines we shall proceed.

Let me explain by briefly reviewing the history of the battle which I insist is now over.

To all intents and purposes the battle began when the Committee on the Costs of Medical Care brought out its report back in the early 1930's. That committee composed of distinguished leaders in American life and headed by Dr. Ray Lyman Wilbur—a former president of the American Medical Association and Secretary of Commerce in President Hoover's Cabinet—studied the problem for some 5 years. It found that while American medical care was among the best in the world, most Americans could not afford it. It found that doctors quite naturally concentrated in areas of greatest wealth while sick people naturally were somewhere else. It found that whereas the wealthy got the greatest amount of medical care, the middle classes and the poor needed it most. It found that the root of the problem lay in the facts that with each advance

in the science of medicine medical care grew more expensive and that since sickness was unpredictable none but the wealthiest families could budget the cost of illness. And having proved what the average family had always known, it recommended health insurance as the answer. Not compulsory health insurance, not national health insurance. Just local voluntary health insurance plans.

The storm broke immediately. Dr. Fishbein, speaking for the American Medical Association, denounced the idea. He insisted that it would lower the quality of medical care, that it would regiment the doctors, and he proclaimed that advocacy of voluntary health insurance was—I quote—"communistic, socialistic, and inciting to revolution."

The AMA's Bureau of Medical Economics actually studied the problem instead of frothing at the mouth. It concluded that it did not want either voluntary or compulsory health insurance. But it said that if we were to have either we might as well avoid the mistakes European countries had made in trying voluntary plans and establish a compulsory system immediately. Here's what the AMA's Bureau said of voluntary plans—again I quote—"without some sort of compulsion, voluntary insurance fails of its objective. The young and healthy will not join and the aged and sickly, if accepted, will raise the cost to a prohibitive point and, if rejected, remove protection from those most in need"—unquote.

Well, despite the AMA, facts were facts. With hospital beds going empty and hospital treasuries going broke while lots of people needed their services, the hospitals risked inciting to revolution and set up the Blue Cross system.

The results proved that the AMA was mostly wrong and partly right. Dr. Fishbein was completely wrong. The quality of hospital care was improved rather than lessened. Instead of being regimented, doctors had greater freedom than before—for any patient who had Blue Cross insurance the doctor was free to prescribe hospitalization when it was needed instead of having his treatment regimented by the size of the patient's pocketbook. And I don't think even Dr. Fishbein any longer believes that the men who run our Blue Cross plans are Communists or Socialists.

But the AMA's bureau of economics was partly right. In order to stay on a sound financial basis, to keep from being swamped with poor risks the voluntary plans had to protect themselves. The old and the sick could join—if at all—only if they were members of large and healthy groups, contracts had to be limited and charges had to be high enough to pay the bills. Perhaps the greatest drawback was and is the fact that they have to charge all members at the same rate. If it costs a $100 a year for a family to belong to a fairly comprehensive voluntary plan that means that a family with $5,000 pays 2 percent of its income, but a family with only $1,000 has to pay 10 percent; just the opposite of what the doctors, the hospitals and the people want.

As a result of all these factors our voluntary hospital plans while they have done an excellent job within their limitations, cost too much and can give too little. Our Blue Cross plans which are excellently managed and run still reach only 40,000,000 people—over a 100,000,000 Americans do not have or cannot afford Blue Cross protection even though it is sold at cost and only covers about 20 percent of the average family's medical care bill. And the great bulk of those members are concentrated in a few industrial States. The Blue Shield plans for physicians' care set up by medical societies after they got religion, are far more limited both in the services they offer and in the number of people they reach. In fact all the figures available in Washington show that no more than 3,500,000 of our people are enrolled in the kind of comprehensive health insurance plans that pay for almost all of their care and that includes the preventive medical care which aims at keeping people well instead of treating them only after they are seriously ill. In this connection I wonder how many of my doctor friends have ever asked themselves why it is that the plans which are run by lay, cooperative groups like Group Health in Washington or by industrialists like Henry Kaiser give really comprehensive care and keep a check on the quality of service rendered while the plans run by medical societies offer very limited service and no controls whatever of the quality of the care rendered?

In our own State of Minnesota which is far from being one of the poorer States of the Nation, our Blue Cross plan is one of the best in the country—both in terms of the service it offers and in terms of efficient operation. Even here, however, while it does not pay the entire bill for hospital services and does not permit people over 65 to enroll it costs a family $48 a year for its best coverage and according to the latest figures I have available hasn't yet enrolled 35 percent of our people.

Those are the highlights of the health-insurance picture as it has developed here in America. You'll notice that somewhere along the line the big fight by the AMA against voluntary health-insurance plans disappeared. The AMA suddenly decided that they were not communistic, but were fine things—so long as they were completely controlled by the medical societies, of course. You won't be surprised when I tell you that the AMA's change of heart coincided with the introduction of a national health bill in the Congress in 1939.

It was Senator Wagner who took the lead. Strangely enough his first bill was very similar to the one now being urged by Senator TAFT—but then the Republican elephant usually lurches along more than 10 years behind the times. In 1943, the first Wagner-Murary-Dingell bill calling for a national health-insurance plan was introduced and the fight really grew hot. The AMA and the Republican Party insisted that everything was fine; that all Americans could get all they needed; that if anything at all should be done it should be done by the States. But the American people recognized that stalling tactic. It's 40 years since workmen's compensation got under way in this country and we still don't have it in all 48 States. Year after year public hearings on national health insurance were held and testimony taken from people in all walks of life. The AMA continued its opposition, refused to cooperate in framing acceptable legislation, and persuaded doctors to contribute millions to a viciously un-American outfit called the National Physicians' Committee, run by a couple of high-powered press agents whose tactics were so low that the AMA itself was finally forced to repudiate them. But the people whose health and whose money was at stake, made themselves heard. Bill Green, speaking for the AFL's 7,000,000 members, insisted on national health insurance as the answer and suggested improvements in the bill. Jim Carey spoke for the CIO's more than 6,000,000 and their 18,000,000 dependents. Great capitalists like Albert Lasker—one of America's richest men and a director of many corporations argued for it is the democratic way and as a barrier against communism. So too did the president of the Radio Corporation of America and Gerald Swope of General Electric Co.

Jim Patton argued for the Farmers Union and our own Cooperative Health Federation of America testified.

After each set of hearings, the bill was improved and the tide of public support swelled even further. Then when Senator TAFT, in the Republican Eightieth Congress, introduced his own National Health Act—even though it was a sorry substitute and was opposed by every single lay citizen's organization testifying—it became obvious that the fight was all but won. Even Senator TAFT and his colleagues, Republican Senators DONNELL and SMITH, had finally agreed that as regards paying for medical care (1) it is a real problem; (2) it is national in scope; and, (3) it demands action by the Federal Government.

Finally, when Harry Truman was reelected and the Eighty-first Congress met, the rush to put national health bills into the hopper proved that the fight was all over—the battle has been won.

(Incidentally, even the AMA now favors compulsory insurance, something which it always claimed was un-American. The AMA has agreed with us that when a group believes something is necessary for its welfare but that something is too expensive for one member to bear the burden and voluntary participation doesn't bring in enough funds, participation should be made compulsory. Therefore the AMA has made it compulsory that all members pay a premium of $25 a year into an insurance fund out of which it will pay $100,000 a year to two high-pressure salesmen and give them $3,000,000 to spend in fighting these health bills. The AMA advocates compulsory insurance to fight compulsory health insurance. And I want it understood that I think they have a perfect right to do so. I suggest though that if the principle is all right for the AMA, it's O. K. for the American people too, and I don't expect to hear the AMA ever again say that it isn't.)

We now have five national health bills before us in the Senate; there are still others in the House. All five of the Republican members of the committee which is responsible for health legislation are sponsors of one or another bill. Two other Republicans—FLANDERS of Vermont and IVES of New York—are sponsoring a bill. Seven of the eight Democrats on the committee are sponsoring national health bills and the eighth is busy drafting his own. Moreover, just within the last few weeks Senator HUNT, of Wyoming, a conservative Democrat and a dentist himself, has publicly stated that the Federal Government must do something to enable the American people to cope with the costs of medical care and has introduced his own national health insurance bill.

To all but the willfully blind these developments mean but one thing, we are—and in a very short time—going to have a national health program. And since every one of these bills looks upon health insurance as the answer to the problem, we are going to have a national health insurance program of one sort or another. That's not prophecy, it's fact, and it's a very important fact to my many friends in the medical profession who are here today.

What sort of program? That does call for prophecy. We have five bills before us in the Senate. At one end of the line there's the Taft bill. Very briefly put, it would give grants from the Federal Treasury to the States to provide care for all who cannot themselves pay in full for their care. I find it completely unacceptable and so did all the representatives of the public. First, because it pretends to solve a problem affecting 80 percent of our people but provides only enough for about 10 percent. Secondly, because it depends entirely on funds from the Treasury and permits the exclusive use of State employed doctors in State clinics.

I could give many other objections, but my third is conclusive enough for me—the Taft bill would help solve the problems only of those American families so desperate that they would be willing to publicly ask for charity. Charity is one of the heavenly virtues, it is true, but to ask 80 percent of the American people to depend on public charity

as a solution to their problems is as repugnant to them as it is to me.

A second bill—S. 1456—is sponsored by three Republicans and three Democrats. It is much better than the first but follows the same lines and puts no limit on the amount of tax funds which might be used. Moreover, it would turn public funds over to private, professionally controlled, monopolistic groups to the exclusion of other groups.

A third bill—the so-called Flanders-Ives bill—represents a long step forward. It would use voluntary plans and supplement them by using Federal funds to make up the difference between what they cost and what participants can afford to pay. It rejects the charity principle and accepts the insurance principle of the President's plan. It rightly insists that no local plan would be eligible unless control was vested in the hands of the public. But while this bill does represent a long step forward, I do not believe it goes far enough to solve the problem, and, in addition, it contains several very serious flaws which, if unchanged, would make its operation very risky.

The fourth bill—Senator HUNT'S—has been introduced too recently for extended comment. All I can say about it now is that it is the only one of the five which seems to make no provision for the continuance of voluntary plans and that it is written in such general terms that I am not at all clear on how it is supposed to work.

The fifth bill is, of course, the administration's national health insurance bill. It is, as you know, S. 1679, and it contains seven titles, four of which have already passed the Senate. Since to my mind it goes much further toward meeting our national problem and does it in such a way as to advance the interests of all concerned, I am proud to have had the opportunity to join in sponsoring it. I am sure that most of you here know its provisions at least in general terms, and since it is not my purpose tonight to debate these bills I shall not attempt to review it.

What I want to do is to ask your help—particularly that of the professional people who are here—and if the rest of my friends will bear with me, I should like for the next few minutes to talk directly to the physicians and the dentists and the nurses of Minnesota.

I want to say again that the Congress of the United States is going to pass a national health plan in the near future. We have five bills before us now and I've tried to explain what that means. I've told you how the members of our committee have worked together on other bills and I want you to know that we are now working in the same way on these bills. We know the people want an answer and we are determined to make it as sound an answer as possible. Right now, in Washington, our staff is studying all the voluntary health plans in the Nation. We want to find out if they should play a role in a national health program; and if so, what kind of plans and to what extent. We want the answers to this and a host of other problems in order that we may draft a bill which means as much to you as to the people who seek your services. We've had the advice and assistance of farm organizations, of cooperatives, of labor groups of social workers, statisticians, and public-health people. They've consulted with us and we know they will again. But from the organizations of professional people who have so much at stake in this legislation we have received nothing constructive at all—nothing but opposition. I learned in Washington that early in 1946 Senator MURRAY had written the AMA—had asked its representatives to come to Washington, to go over his bill, and to point out anything in it that could possibly do damage to you, either professionally, politically, or economically. He had not asked support—only for constructive criticism. I cannot tell you how shocked I was to learn that your officers did not even have the courtesy to reply. They waited until the election of 1946 showed a Republican Congress elected and decided that the medical-care problems of the American people had disappeared and that even courtesy was no longer necessary.

I want to tell you that the time for that sort of blindness is past. The American people need and want, and are going to have, a national health program. If when that program goes into effect there is anything in it which hurts you in any way, it will be because of criminal negligence on the part of your organizations. It will not be the fault of the American people or of the men who draft the law. We do not believe we can have a sound health program unless it is as sound for you as it is for us.

I believe the American people want a plan that will enable them to purchase health care on a decent, self-respecting, pay-as-you-go basis. They want a plan that will enable them to use your services when and as needed—at your discretion. They want to pay in proportion to their incomes and they want the Government to add enough so that you get paid well and with plenty of incentive. They're thinking of you as well as of themselves because they and we, your representatives in Congress, know that we want the best medical care possible and that we can get it only from people who are free and happy in their professions.

Without your help we have tried painstakingly to protect your interests in drafting the administration's bill. We've not only guaranteed the patient complete freedom to choose or change his doctor but we've guaranteed you complete freedom too. It's spelled out in the bill. You are free to enter the plan or not, or to enter it on a part-time basis if you so choose. If you do enter you are free to accept or reject patients just as now. In each community doctors can decide for themselves on what basis they would like to be paid. You can engage in group or solo practice as you will. You are represented on all local plans and at the State and National level by men of your own choosing. And the bill guarantees that professional matters shall be decided upon only by professional men.

Without your assistance we have tried to give you every just and equitable assurance. But we should have your help. I don't mean the sponsors of S. 1679 alone and I don't mean help in passing a bill. I do mean that since one of the bills before us or a variation of one is going to pass, your officers owe an obligation to you and to the Nation to see to it that should a bill pass even over their objections, it protects your interests as well as is humanly possible.

I am asking you—pleading with you—to recognize your obligations to the future of your professions and of the Nation of which you are citizens. As individuals I know you do, but when your organizations speak for you, they do not—and they are your organizations.

The American people have granted you your licenses to practice.

The American people have said that no one shall compete with you.

The American people have invested $40,000 of their money for every one of you doctors in order that you might have hospitals in which to work without cost to you.

The American people have invested thousands more in the professional training each of you receive.

Having done these things and more, the American people with all their respect for you as men and women of science and as friends, are not going to permit your organizations to tell them that they have nothing to say about the manner in which they shall pay your bills.

That's why I am asking that before it's too late you stop listening to those venal men who make their fortunes by urging you to fight every proposal and charging you for the privilege of carrying on the fight. Forget the scare words like "socialism" and "welfare state." Use the same scientific approach to economic and political problems as you would in investigating a purportedly new remedy for disease. This Government which the firm of Whitaker & Baxter and the AMA want you always to fight—which they want you to fear—is your Government. It belongs to and is run by you and your neighbors. It's the Government of the United States of America and of its people. That's the Government the Journal of the AMA is talking about when it says the Government wants to regiment you, to destroy your livelihood, to ruin your profession. That sort of talk is nonsense and right now for you it's dangerous nonsense.

Those of us who serve your Government in the Congress are not ogres. We're elected by you and your neighbors. We want to work for and with you—not against you. And in the field of health this is particularly true. The people tell us what their needs are—we should have your help in getting it for them.

Read the health bills in the Congress. Don't let anyone tell you glibly what they would mean or do to you. Read them. Put your finger on any line or lines you think bad or harmful. Call them to our attention. Either we can explain why they are there and how they are good, rather than bad, or we'll change them. No one of the sponsors of the national health insurance bill thinks he has a perfect bill. Not a single Senator sponsoring any of the other bills thinks his is perfect—I know I can speak for them all.

We do think that American medical care is among the best in the world. But we know that too many Americans can't afford it under our present system of payment. We want to change not the practice of medicine, but only the way in which we pay for it. The people of this country are demanding a change and, with or without your help, we're going to give it to them. Without your help we won't do as well and you may inadvertently and unnecessarily suffer. With your help we should have no problem reaching a solution satisfactory to all.

For myself, for the Congress, and for the people of your country, I ask that help. I can pledge you our good faith—completely. Will you extend to us a little?

Unification of Ireland

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1950

Mr. JAVITS. Mr. Speaker, the following is the text of a resolution endorsing House Resolution 463, to encourage a peaceful, prosperous, and united Ireland, but without imposing any particular form of political or economic association upon its people, which I have introduced and which is receiving widespread support from many Americans.

NEW YORK SOCIETY FOR THE
CITY OF NEW YORK, INC.,
New York, February 28, 1950.

Hon. JACOB K. JAVITS,
House of Representatives,
Washington, D. C.

HONORABLE SIR: At a duly organized regular meeting of the New York Society for the

City of New York, Inc., held at the Hotel Edison, Floral Room, on February 14, 1950, a short business session was held to provide time for our featured guest speaker, Hon. John J. Fitzsimmons, chairman of our board of governors, who gave to the body a minute description of his recent trip to Ireland, which must have left on his memory a lasting impression, since no notes were in evidence.

Also read to the body was a copy of the resolution, House Resolution 463, Eighty-first Congress, second session, as presented in the House of Representatives by Congressman JAVITS, February 7, 1950, and referred to Committee on Foreign Affairs, a resolution to encourage a peaceful, prosperous and united Ireland, but without imposing any particular form of political or economic association upon its people.

On motion duly seconded the body resolved to adopt unanimously, and endorse said resolution as part of its minutes and incorporate same therein. Further resolved that a copy of this endorsement be filed with the Congress of the United States.

Respectfully yours,

JOHN J. FLANAGAN, *Secretary.*

Blind Legal Stupidity Rides to a Fall

EXTENSION OF REMARKS

OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1950

Mr. O'SULLIVAN. Mr. Speaker, as the days pass by many reports are being made of acute coal shortages in different parts of the Nation. One segment of reactionaries seek to blame President Truman because the miners and mine owners cannot agree upon a settlement of their wage disputes, while another segment of the same political brood put the blame upon John L. Lewis and the United Mine Workers Union. Never once have I heard the mine owners and operators and their organizations and other hand and glove cohorts of this type of big business blamed in the slightest for the present shortage of coal.

Those who speak out so boldly in the Congress against our President and his administration, and John L. Lewis and the coal miners, in their loud and demanding way, for the putting into execution of the Taft-Hartley law, whether that law can be presently applied or not, have reached almost the fanatical stage.

Today a United States district court judge, Richmond B. Keech, in Washington, by his decision brought forth a very self-evident legal truth known to everyone but these reactionaries, that the fact that you have the Taft-Hartley law is not all that you need to get the desired results, but you also need evidence to support the charge brought under that law. To start either a civil or a criminal action without sufficient evidence is about as unavailing as the irresponsible conversation of these clamorers reduced to writing and presented to a court to take action upon.

As soon as the decision of this court became known today a stunning silence came over these lusty critics, but they were quick on the recovery and in an effort to save face blamed the Department of Justice for not getting the necessary evidence, and presenting it to the court. May I ask these men what evidence do they know of which was not presented? Their perplexed ingenuity may prompt them to furnish an answer to the question which neither they nor anyone else could or should believe.

President Truman was right that this was a case which required that the Government should proceed with caution, and be sure of its ground and not go off prematurely or half-cocked like these men always seem to me to do. Nothing hurts a cause worse than to end up on the losing side, and that generally is what always happens when you have the short end of the stick.

When you shoot at a mark and miss it, do not blame the mark but blame yourself. My father stated it correctly when he said that he never heard of a poor shoveler having a good shovel. These poor shovelers think that the public will believe their ill-conceived excuse, but the public just is not that gullible yet.

What kind of a case could the prosecution present? Just a case based solely on circumstantial evidence. The high lights of that proof were these: The men who refused to work belonged to a union. John L. Lewis was the head of that union. Heretofore these men had always refused to work without a contract, but for months in an effort to settle their differences they did work without a contract. When all of their efforts to secure a contract seemed to be futile they worked 3 days a week for quite a long time. The individual tempers of John L. Lewis and his United Mine Workers became so aroused that they ceased all work. The squeeze was upon the public. The President was forced to consent to court action and two restraining orders issued. John L. Lewis gave the greatest circulation to two telegrams and one letter urging the men for their sake and the sake of their union to obey the restraining orders and go back to work. These individually infuriated men refused to obey their leader and their union. A grave legal question arises as to whether or not men acting spontaneously and individually can be forced into involuntary servitude in the light of our Constitution and its pertinent amendments, and the legal law of the land, but there was no need of a court to decide that question if the evidence presented was insufficient.

It is a very well established rule of law in our country and that rule of law applies to civil as well as criminal cases, that proof made by circumstantial evidence alone in order to be legally sufficient must be so strong, clear and convincing as to exclude every reasonable hypothesis other than guilt. In a proper case circumstantial evidence may be just as good evidence as direct testimony but it must be so strong, clear, and convincing that every reasonable theory other than that sought to be proved by the prosecution must have been eliminated.

No the case was dangerously weak and its trial has done much harm. It will encourage rather than discourage the miners to stop digging coal. The blame for the situation with which we are confronted today rests squarely upon the legally awkward shoulders of men who can make loud noisy demands for action when a working brain would bide the time until a case could be proved legally in court.

The only thing left for the Congress to do now is to pass legislation to seize the coal mines, and to repeal the Taft-Hartley law, and put in its place a law which will be fair to both labor and management—a law which will make today's cruel and smug management bargain in good faith again collectively with labor. I know of no greater way to drive this country into communism than to have these selfish, cruel, extreme right wingers sit ala Taft-Hartley-like across the table from the real producers of the Nation. They have had their day, and their day is over, and they had better realize it now before it is too late for them, and for all of us who believe in the Golden Rule instead of the Rule of Gold.

Everyone I am sure is anxious to know the real condition over the United States as far as coal shortage is concerned. As to conditions in Nebraska I submit the following United Press news item which appeared in the Lincoln (Nebr.) Journal, on Tuesday, February 28, last:

NO REAL COAL EMERGENCY YET IN STATE

Nebraska scraped the bottom of the coal bin Monday, but a survey of principal cities showed no real emergency yet.

State officials said the situation was critical. They urged Nebraskans to economize on use of coal.

Spot checks around the State Monday morning indicated many cities and towns had only a few days' supply on hand.

Dealers, city and State officials believe the State will "get by" if the weather continues mild and nonunion coal mines in the South and West maintain the present "trickle of coal."

Substitution of gas and oil during the last few years for heating and industrial purposes staved off emergencies in many communities.

At Norfolk, the fuel dealers association secretary, Clarence Isaacson, reported dealers "don't know what they are going to do." He said conditions there were "critical."

At Alliance, city officials said they had just over a 2-week supply on hand and were considering a "brown-out" to relieve the critical situation at industrial plants.

Numerous cites reported a "hand-to-mouth" situation with dealers trading coal and consumers buying in basket quantities.

Here is a city-by-city report at 10 a. m. Monday:

Lincoln: Situation getting "rougher by the day" but no emergency. Stoker coal nonexistent. Some coal coming in from Oklahoma and Missouri mines.

Omaha: Dealer supplies very low but still adequate to take care of demand on limited scale. With favorable weather, city can get by if small shipments continue.

McCook: Coal almost gone; schools and other large buildings have converted to gas. Dealers report only small nut-type coal for small stoves in stock. Sustained cold weather would cause residence hardships.

Grand Island: Half city schools use coal and report enough for few days' operation. Cold snap could deplete school supply as well as many home supplies. Industries switching to gas.

Norfolk: School officials report 2 weeks' supply on hand if weather mild. Few cars of coal arrive every week from western mines

but only a drop in the bucket compared to need.

Hastings: Dealer supply ranges from few days to few weeks; many businesses and residents converted to gas past year. Most schools using gas.

Nebraska City: Not serious; most homes heat with gas. One dealer completely out of coal, others' small supplies believed sufficient for winter. The State blind school has a 2-week supply, public schools 1-month supply.

Falls City: "A week of cold weather and there's going to be some real suffering in Falls City," said the City Fuel Co. owner, Jake Norris. "If I let people have all they wanted, supply would go out in 3 or 4 days." Situation very serious, with school supply about 1 week, city generally, week or two.

Kearney: Serious, but heavy shift to gas since 1947 keeps major industries from being affected seriously. City schools and Kearney State College using gas; dealers cracking lump coal by hand for stoker use. Best estimate of city supply, 1 week.

Fairbury: Dealers able to supply emergency demand, but stocks running low and using stand-by supplies of stoker coal at city power plant.

Broken Bow: Natural and bottled gas available keeping situation from becoming serious. Two-week supply coal reported on hand by one dealer, others very short.

Alliance: City officials report 15-day supply on hand, "much shorter than our supply should be." One more week of shortage might force brown-out. City schools have less than week supply.

York: A York College spokesman said the school had only 3 or 4 days' supply of coal on hand with no immediate prospects of further deliveries.

Beatrice: Dealers report stocks 50 percent normal, stoker coal unavailable but otherwise city in pretty good shape, if mild weather continues. Schools use stoker coal and have little bit on hand.

Columbus: Situation not serious here. City schools received carload Friday and mild weather preserving school and community stocks.

Fremont: Utility officials estimate enough coal to last about 20 days if mild weather continues. The power company has turned over 250 tons to local dealers. One dealer has been bringing coal from Omaha, but reports he can get no more there. He reported Fremont could carry on normally about week or 10 days.

RFC Mining Loans

EXTENSION OF REMARKS

OF

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1950

Mr. BARING. Mr. Speaker, prior to the Eightieth Congress there was in the RFC Act the so-called Mine Loan Section. In their haste to shrink the RFC and cover large amounts of its funds into the Treasury a number of changes were made in the act. One of the most ill-advised, to my way of thinking, was the repeal of section 14 which was done, I am sorry to say, with the collusion and consent of Mr. John Goodloe, then Chairman of the RFC.

Prior to 1940, section 14 covered only loans to producers of gold, silver, and tin. Realizing the trend of the times, Congress in 1940 expanded the loaning authority of all strategic and critical minerals and metals and this bit of foresight, Mr. Speaker, proved to be of incalculable value to the war effort. Millions of pounds of vital metals and minerals were made available to our country because of these mine loans and some important mines are still working which would never otherwise have been developed. Even though some of these loans could not be entirely repayed, the over-all net gain to the country must show a substantial profit from the operations so financed. This was realized by former Senator Charles B. Henderson, who for a long time headed the RFC. A Nevadan with a true feeling for mining, and especially for the small miner, he encouraged his mine loan divison to extend every possible help under the law and even resorted to the general wartime loan authority to expand the mine-loan activities.

Since the chairmanship of Mr. Henderson, the Corporation has looked with disfavor upon mine loans and curtailed its activities in every possible way. After successfully getting section 14 repealed on the assurance of RFC officials that mine loans could just as readily be granted under the regular business loan authority—that is, since 1948, mining men have found that assurance to have been a snare and a delusion. A few loans to coal mines have been granted and two or three to metal mines where hundreds used to be in process all the time. Practically no applications are received as mining men have found it a waste of time even to fill out the forms.

Before section 14 was repealed, there were several bills introduced to amend the language to liberalize the law and make the section more workable for post-war loans. I am reliably informed that strong representations were made by several Democratic Senators to the Republican chairman of the subcommittee of the Senate Banking and Currency Committee that was handling RFC legislation in an attempt to get section 14 strengthened rather than repealed. In the face of hostile—perhaps the word is too strong, Mr. Speaker, and I should say in the face of an unsympathetic atmosphere in the RFC itself, the committee left out section 14 or any substitute therefor when it reported the committee bill and the mining industry has suffered ever since.

Mr. Speaker, I do not want to take the time to tabulate here all the metals and minerals produced under RFC loans, but I do want to mention a few, covering the period from January 1, 1942, to March 31, 1949. Copper produced by development loan and general mining loan borrowers during the stated period reached the incredible figure of approximately 88,000,000 pounds, of which a million and a half pounds was produced in my State of Nevada. Lead amounted to nearly 83,000,000 pounds of which 2,500,000 pounds was produced in Nevada and zinc production under these loans was 150,500,000 pounds of which about 6,000,000 pounds came from Nevada. A score of other minerals participated in the program.

Mr. Speaker, much of this metal never would have seen the light of day had Congress not been foresighted enough to provide this program and had the RFC not been under a Chairman wise enough to see that it was properly implemented. Under the present set-up there still is a remnant of the old Mine Loan Section personnel supervising the liquidation of past loans and waiting hopefully for a new application to study. I understand that the gentlemen who service the RFC business loans confer with these mining men when there is occasion to do so, but the final decision is now in the hands of those who make the usual business loans under the general loan authority of the RFC.

Mining is a highly specialized business. It is too much to expect that the average man will be sympathetically inclined to mining loans, as the men who are used to examining the ordinary business-loan application simply do not understand and fit the miner into a straitjacket of impossible terms and demands. That is why special legislation was necessary.

Mr. Speaker, the administration continually is voicing the necessity for expanding our mineral resources, although it frowns upon every attempt of the Congress to aid private enterprise to do this very thing. As a western Democrat from a natural resource State, this, I must admit, puzzles me no end. I cannot understand why, for example, the RFC is not enthusiastic about the several mine-loan bills such as S. 497, which rest in the Banking and Currency Committees and gather dust there along with the adverse reports from the RFC, written by lawyers who know nothing about the problems involved, and signed by a chairman who has been beguiled into blindly following the precedent set by Goodloe. I would introduce a bill to amend the RFC Act to authorize mining loans, Mr. Speaker, but for two things—the bill would fall into the hands of the Banking and Currency Committee and be clipped to those already moldering there and it might put the Corporation to the trouble of thinking up still another excuse to recommend no action when I gather from the daily press their excuse is their department is already overworked in other directions.

I may, before long, ask the Mining Subcommittee of Public Lands, of which I have the honor to be a member, to look into this RFC mine-loan situation in some detail. At the very least I can request any committee which we may empower to investigate the RFC to make this one of their points of investigation. My mining people need encouragement, Mr. Speaker, as do miners all over this country. The Eighty-first Congress should repair the damage done by the Republican Eightieth Congress when it revised the RFC Act, and the chairman of that Corporation should make himself personally familiar with the situation instead of blindly following advisors who still are tainted with the prejudices of departed, but not forgotten predecessors.

Mr. Speaker, at the risk of being repetitious, I will persist in driving home

to my esteemed colleagues here that the national security, as well as the preservation of the economic balance of our country, demands that steps be taken to preserve, expand, and reinvigorate our domestic mining industry. The resumption of RFC loans to strategic and critical metal and mineral producers should be one of these steps.

Loan Value on Gum Naval Stores

EXTENSION OF REMARKS
OF
HON. W. M. (DON) WHEELER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. WHEELER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including a resolution passed by the Senate of the State of Georgia in which it is asked that the loan value on gum naval stores be raised to 90 percent of parity.

Mr. Speaker, it is impossible under existing law for the Commodity Credit Corporation to support naval stores at 90 percent of parity. It is possible, however, for the support to be raised from its present 60-percent figure to 71 percent. A large group of Members of the House and Senate has met with the Secretary of Agriculture and other members of the Commodity Credit Corporation and asked that 71 percent of parity be announced as the loan-guaranty figure. As yet we have been unsuccessful in getting this done.

The following resolution accurately describes the situation existing in the naval stores belt:

Whereas the State of Georgia produces 65 percent of all gum naval-stores products of the entire world; and

Whereas the gum naval-stores workers and farmers of Georgia are facing bankruptcy and ruin because of action of the United States Department of Agriculture, which has set Government support of gum naval stores at 60 percent of parity for the year 1950; and

Whereas such action is unreasonable and arbitrary for the reason that in 1947 and 1948 Government support of gum naval stores was set at 90 percent of parity and during 1949 the same was set at 80 percent of parity; and

Whereas during the year 1950 the cost of production of gum naval stores will be from 20 to 35 percent higher than during the years 1947, 1948, and 1949; and

Whereas the Members of the Georgia delegation in Congress, and Congressmen from the naval-stores belt arranged a meeting some weeks ago with the Honorable Charles Brannan, Secretary of Agriculture of the United States, for the purpose of protesting the action of the United States Department of Agriculture, which set the Government's support of gum naval stores at 60 percent of parity, and to urge upon him the grave necessity for overruling this disastrous decision, and to fix the percentage of parity at 90 where it rightfully belongs; and

Whereas the turpentine farmers of this State and of the naval-stores belt will be unable to operate their business at the 60 percent of parity and compete with the increase in minimum wages recently put into effect, and continue to produce gum naval stores, which is vital to the defense of this country, and such a condition will cause hundreds of thousands of workers in this grave and vital industry to be thrown out of employment; and

Whereas such condition will seriously reduce the value of timberlands in this State and in the naval-stores belt and bring chaos to general business throughout this area, from which it will take years to recover; and

Whereas the continued well being of the gum naval-stores business is vital, not only to the workers and property owners of our own great State, but to the people and government of the entire world: Now, therefore, be it

Resolved by the Senate of the State of Georgia, That the Honorable Charles Brannan, Secretary of Agriculture of the United States, is hereby urgently requested to take such action as will alleviate an intolerable condition now faced by a large percentage of the people of Georgia and the naval-stores belt, and that he exercise the discretionary powers granted him by the Congress of the United States and fix Government support of gum naval stores at 90 percent of parity for the year 1950; be it further

Resolved by the Senate of the State of Georgia, That the Honorable Charles Brannan, Secretary of Agriculture of the United States, is hereby urgently requested to immediately fix this percentage of parity for gum naval stores, so as to save the taxpayers of the United States approximately $8,000,000, and at the same time build up the stock pile of vital and strategic war materials for any emergency which may face this country, and which will save the turpentine farmers of Georgia and the naval-stores belt from releasing hundreds of thousands of workers and suffering great loss in the value of timberlands; and be it further

Resolved by the Senate of the State of Georgia, That the Members of the Georgia delegation in Congress immediately exert their utmost efforts in bringing this pending condition to the attention of the Secretary of Agriculture of the United States, and urging his immediate acceptance and approval of this matter which is of such grave importance to the people of this State, and other States in the naval-stores belt; be it further

Resolved, That copies of this resolution be mailed to the President of the United States and to each Member of the Georgia delegation in Congress, and to Hon. Charles Brannan, Secretary of Agriculture of the United States.

S. MARVIN GRIFFIN,
President of the Senate.
GEORGE D. STEWART,
Secretary of the Senate.

John C. Calhoun

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article on John C. Calhoun, which was written by Miss Margaret L. Coit, West Newbury, Mass., and reviewed by Claude M. Fuess, retired headmaster of Phillips Academy, Andover, Mass. This article appeared in the Evening Tribune, Lawrence, Mass., on Tuesday, February 28, 1950.

JOHN C. CALHOUN—SLAVERY WAS HIS CONTRADICTION

Miss Margaret L. Coit, now resident in West Newbury, has written what is certain to be one of the outstanding biographies of 1950—John C. Calhoun, American Portrait, published today by Houghton Mifflin Co.

Almost exactly 100 years ago Senator John C. Calhoun, of South Carolina, worn out by "that long diseases, my life," died at the age of 68 in a pitifully bare room in Hill's boarding house, on the site of the present Supreme Court Building, in Washington. On March 4, 1850, he had dragged himself across the park to the Capitol and taken his place in the Senate Chamber while Senator Mason, of Virginia, read Calhoun's carefully prepared valedictory, described by Miss Coit as "the most powerful warning delivered by a southern leader before the Civil War." He was carried to his seat 3 days later to listen to Webster's magnificent Seventh of March Speech, which probably postponed the conflict by 10 years, thus ensuring the success of the North. Calhoun felt that the effect of Webster's words would be only temporary, and with this conviction he died early on the morning of Sunday, March 31, 1850, his eyes retaining their brightness till his last breath.

Miss Coit's biography is thus a very timely book, culminating in the debate over the omnibus bill of just a century ago. Furthermore, she has accomplished an amazing feat of revivification by presenting Calhoun as a human being. The earlier lives of the South Carolina statesman had treated him almost as an abstraction, a political philosopher without blood or vital organs, the embodiment of an idea to which everything else was sacrificed. Von Holst, writing in 1882, said of Calhoun: "We hear that he was a just and kind master to his slaves, that he was possessed of an uncommon conversational talent, and that he exercised an especial fascination upon young men. This is about all." Miss Coit, who is a literary artist, has removed this misconception. Now at last we feel that he was not a mummy but a man, as full of vitality and perversity as Andrew Jackson or Daniel Webster.

Calhoun married at 29 his cousin, Floride, 10 years younger, who brought him a modest fortune. "From almost her wedding night," says Miss Coit, "she was pregnant," and she bore her husband nine children. Unfortunately he was often away from home; indeed, of their 39 years of marriage he spent nearly 15 separated from his wife. While he was in Monroe's Cabinet, from 1817 to 1824, and later as Vice President he lived with her in Washington on the famous estate of Dumbarton Oaks, entertaining on a lavish scale. Later, however, he found himself in financial difficulties and was obliged to leave Floride on their plantation, Fort Hill, where she was lonely and dissatisfied.

Says Miss Coit, "with the one exception of Mary Todd Lincoln, there is no more baffling or stormy figure among all the historical American wives than Floride Calhoun." With a woman's perception and intuition, Miss Coit has explained how the rift widened between husband and wife. The reader will enjoy her analysis of Floride Calhoun and her feminine psychology.

When we have finished this book, we know the little things which help to elucidate a man's personality—what he ate, how he dressed, his habits of work, his moods and vanities, the obscure motives which often actuated his changes of opinion. Introspective, repressed, self-disciplined, living in a state of intellectual solitude, he was very different from the southern plantation owner of tradition. He was really a Puritan in temperament, just as Webster, the Yankee, was in many respects a cavalier.

The volume is a fine example of the best modern biographical technique. So far as I

can see, Miss Coit has explored every available source of information. She has consulted the important private papers preserved at Clemson College; she has studied the proceedings of the State legislature; she has talked with members of the Calhoun family, including the last grandson. She has used newspapers effectively by excerpting brief, salient passages for quotation. She has neglected none of the existing diaries and journals, and has even found little known manuscript reminiscences, like those of Crallé and Anna Maria Clemson. But she has been the mistress, not the slave, of her material. She has known how to separate the essential from the irrelevant, the picturesque from the commonplace. For this reason alone her book is far superior to any previous biography of Calhoun, and it is unlikely that it will be superseded.

With all its readability, this is no fictionized biography, padded with imaginary conversations of the type which has been the bane of seekers for historical truth. Miss Coit is a genuine scholar, as thorough as Nevins or Schlesinger, with a passion for accuracy; but she has not thought it necessary to be dull in order to be authoritative. Moreover she has not been content with uncritical eulogy. Although she has given Calhoun fair play, she has not attempted to extenuate his blunders or to use him to support a thesis, as some other writers on the period have done. Calhoun has been, and will always be, a highly controversial subject, but Miss Coit has appraised him without malice or prejudice. I have seldom read a book dealing with political issues which is so free from partisanship.

Calhoun's career as Congressman, Secretary of War, Vice President, United States Senator, Secretary of State, and then Senator again is familiar to students of American history. He entered national politics in 1811 as one of the Warhawks, who followed Henry Clay and has been described as "the young Hercules who carried the war with England on his shoulders." He was then a Unionist and was soon to be a supporter of the protective tariff. As the efficient Secretary of War in Monroe's Cabinet, he gained influence rapidly, and in 1824, only a little over 40 years old, he was the young men's candidate for the Presidency, supported by the great Daniel Webster, who was his exact contemporary. During this campaign he was the victim of scurrilous attacks and when he failed to gain the support of Pennsylvania, he left the field. The election was thrown into the House of Representatives, where John Quincy Adams was chosen President, with Calhoun as Vice President. In 1828, he espoused the cause of Jackson and was again elected Vice President, with every expectation that he would be Old Hickory's successor in the White House after the latter had served his two terms. So far his rise had been quick and not too much obstructed.

It was Andrew Jackson, the turbulent, obstinate, and unforgiving autocrat, who was Calhoun's nemesis. At the inaugural ball in 1829 the aristocratic Floride Calhoun ignored "Peggy" O'Neil Eaton, the former barmaid who had married Secretary of War Eaton and whose social ostracism had evoked all Jackson's frontier chivalry. According to Calhoun family tradition, the President told the South Carolina Senator that his wife must return Mrs. Eaton's call. When Calhoun refused to intervene, Jackson called on Mrs. Calhoun and laid down the law. Floride listened to his tongue lashing and then, calling the butler said, "Show this gentleman to the door."

Whether or not this incident really happened, Martin Van Buren, the bachelor in the Cabinet, had no scruples about calling on "Peggy," thus earning Jackson's gratitude. The President's resentment against Calhoun was aggravated when William H. Crawford betrayed the fact that, as Secretary of War in 1818, Calhoun had censured Jackson's seizure of Florida territory. The testy old general, who made every issue personal, turned against Calhoun. Meanwhile the latter had made himself politically vulnerable by opposing "the tariff abominations" and writing for the South Carolina Legislature his notorious exposition, outlining the doctrine which was to become known as nullification.

At the Jefferson Day dinner in 1830, President Jackson repudiated nullification in his toast. "Our Union—it must be preserved." The Vice President, in a scene which nobody has described more vividly than Miss Coit, slowly drank his wine and then white-faced, his eyes blazing, rose and uttered the words, "The Union. Next to our liberties, most dear." "That night," comments Miss Coit, "in that room the lines of Appomattox had been drawn."

The breach was now complete, and from that moment Calhoun was a tortured man, his ambition thwarted. It is unnecessary to tell again here how South Carolina in 1832, under Calhoun's leadership, passed a formal ordinance of nullification, how the administration responded with the force bill, and how Henry Clay, the Great Compromiser, finally succeeded in modifying the tariff measure, thus averting disaster. The crisis was over for the moment, but Calhoun was no longer a Nationalist but the spokesman for the isolated South. He resigned as Vice President to become Senator, and from his seat reiterated his protests against the rising dominance of the North. For the remainder of his career he was a tragic figure, disappointed and disillusioned.

As the years went on, Calhoun became the symbol of a lost cause—a cause which was lost almost from the beginning. All the finespun logic of his speeches could not alter the inexorable course of events. Northern industry flourished; southern agriculture languished. Immigrants poured in at northern ports from Ireland and Germany. The discrepancy in population and wealth between the two sections widened, and Calhoun could do nothing to stop the trend. He was driven finally to the point where he became the bigot who defended human slavery. As Miss Coit puts it, "To rest the cause of the South upon the crumbling foundation of human slavery was the tragic contradiction of Calhoun's career." His error brought ruin to his political aspirations and disaster to the South.

For a brief period Calhoun was again in a position of power, as Secretary of State under President Tyler. He accepted the office primarily to secure the annexation of Texas; and when a treaty for that purpose failed to get the necessary two-thirds vote in the Senate, he resorted to the device of a congressional joint resolution. A day before the Tyler administration ended, he sent off a dispatch inviting Texas to enter the Union. It was his last triumph as a statesman. He had hoped to be the Democratic candidate for the Presidency in 1844 and even was the principal author of a campaign autobiography of himself, published anonymously. But his views were too radical for all except southern extremists and the dark horse, James K. Polk, was preferred.

Miss Coit reproduces the daguerreotype of Calhoun taken by Matthew Brady in 1849, showing him with all the appearance of great age but proud, defiant, unbroken, his cloak swept dramatically about him, the shaggy hair hanging loose about his bent shoulders, a tortured prophet, who sees nothing in the future but the defeat of all he fights for and holds dear. When Clay and Webster, the other two of the great triumvirate in the Senate, tried to save the Union in 1850 through the omnibus bill, Calhoun was too feeble to help very much. He was buried in the cemetery of St. Philip's church in Charleston, under a huge slab of white marble on which is cut the one word, Calhoun. Miss Coit tells the story of the bitter Yankee soldier, standing triumphantly in the churchyard in April 1865, in the midst of Charleston's shattered ruins, and saying, "The whole South is the grave of Calhoun."

Through her enthusiasm and skill Miss Coit has made John C. Calhoun seem almost a contemporary personage, as real as if he belonged in a present-day news magazine. Swept along by her narrative, we live ourselves through the controversy over nullification, the quarrels over abolitionist petitions, the disputes over Texas and Oregon, and the drama of the Compromise of 1850. She has written a first-rate book, one which holds the attention and provokes thought. In my judgment it will stand comparison with any political biography of recent years.

Pope Pius XII, Living Symbol of Peace

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. ROONEY. Mr. Speaker, under the permission heretofore granted me by the House, I include with these remarks the following editorial entitled "Pope Pius XII, Living Symbol of Peace," by Harry H. Schlacht, which was published in the New York Journal-American of March 2, 1950:

POPE PIUS XII, LIVING SYMBOL OF PEACE
(By Harry H. Schlacht)

O, Father, grant us the blessings of Thy peace.

Today America salutes Pope Pius XII on the anniversary of his seventy-fourth birthday.

Many, many happy returns of this blessed day.

Today pilgrims are welcomed to Rome to worship at the shrine of the Catholic Church.

It is a true incentive to piety.

It is a spiritual banquet.

The pilgrims will unite in commemoration of the three glorious and blessed celebrations.

His Holiness' fiftieth year as priest. His Holiness' twentieth year as cardinal. His Holiness' tenth year as Pope.

He is the vicar of the church of Christ. He is the apostle of peace. He is the living symbol of peace.

He is a simple man of God.

He is praying that God will come to the world's salvation, will quicken men with charity and faith, will inspire men with truth and justice.

He is armed with God's grace and a martyr's will. He is standing at the ramparts of man's battle for liberty.

His armaments are the weapons of wisdom. His armies are God's loving people everywhere.

His Holiness stands ready to shed his heart's blood to become the seed for the rebirth of enslaved nations.

Pope Pius XII is one of the great statesmen of our times. He is the best equipped personage in the world to lead us in the blessed cause of peace.

He is a man of his time.

No nation is strong except in the strength of God.

No power on earth can equal the power of God's truth. No dictator on earth can control man's thought.

God's truths have their roots in the policy of humble folks whose minds no tyrant can reach, and whose hearts no bond of servitude can fetter.

The arm of the Lord is gloriously made bare for the overthrow of communism, for the upbuilding of righteousness.

God's truths will pierce the iron curtain.

Before His power the forces of tyranny must tremble. Their mortal coils will be shaken off. Their governments will collapse. Their empires will dissolve. Their despotisms will sink into dust.

The church came forth from the dark catacombs, and upon the ruins of paganism there arose the glory that is the Roman Catholic Church.

It has endured through every persecution. It has endured through every revolution. It has endured through every century.

It is immortal in its nature. It is standing firm. It will endure forever.

So on this blessed day of his holiness' birthday, let God-loving people everywhere unite in this heavenly prayer.

May the Holy Father ever stand forth as a champion of oppressed humanity.

May the Holy Father ever stand forth as a protector of the godly in mankind.

May he persevere for many years in the faith of goodness, in the faith of justice, in the faith of peace.

God grant us this prayer.

Abraham Lincoln, Great Friend of Agriculture

EXTENSION OF REMARKS
OF
HON. JAMES I. DOLLIVER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. DOLLIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio talk by R. K. Bliss:

ABRAHAM LINCOLN—GREAT FRIEND OF AGRICULTURE

On Sunday, February 12, we commemorate the birthday of Abraham Lincoln. As the years pass the stature of Lincoln grows on us. He is now with common accord considered the greatest exponent of individual liberty and democracy of the nineteenth century.

We think of him as the leader who preserved the Union of the States that Washington and his associates created. We think of him as the great statesman, the emancipator of the slaves, the friend of humanity, and the foe of intolerance.

These were the great achievements of his career with which all are familiar. But there was another side of Lincoln's services that is not so well known and understood. It is of this other side that I wish to speak of principally today.

During the stress of the Civil War Lincoln signed three legislative acts into law, two of which have had a tremendous influence on the internal development of the United States. One of these was the Land Grant College Act providing for a Federal- and State-supported institution of higher learning in each State.

Prior to this time higher education had been principally for doctors, lawyers, and clergymen. It reached only a few people. Henceforth higher education was also to be for those who made their living principally through manual labor, management, and the sciences.

The passage of the Land Grant College Act was one of the results of a long continued effort to raise the status of agriculture and give greater opportunity to farm people. The Federal law as passed, however, also provided for the mechanic arts and laid the basis for our great colleges in engineering.

A somewhat similar land grant bill had been passed by the Congress preceding Lincoln's administration, but was vetoed by President Buchanan. One of the principal advocates of the Land Grant Act was Professor Turner, of Illinois. Turner was a friend of Lincoln's and Lincoln was certainly familiar with his arguments for the land grant bill. He and Lincoln were discussing the Buchanan veto at the time Lincoln was a candidate for President when Lincoln remarked, "Turner, get me elected President. Then put your bill through Congress and I will sign it."

The passage of the Land Grant College Act virtually democratized higher education. Almost anyone with grit and determination can go to college. Out of it has come as a new feature of education our Statewide cooperative extension services, designed to carry the immediately usable phases of higher education and experimentation to all farmers. This special effort to make agricultural science available to all is the distinguishing difference between agricultural colleges in this and other countries, and accounts in no small degree for the agricultural progress made in the United States.

Lincoln also signed the bill creating the United States Department of Agriculture, which now reaches into every community and farm home in the country. The Department of Agriculture also safeguards the quality of the food supply, and thus serves city homes as well. The two laws creating the United States Department of Agriculture and the land-grant colleges, which also included the development of engineering and science, have had a profound constructive influence on the agricultural and industrial development of this country.

Another act signed by Lincoln was the Homestead Act. The purpose of this act was to divide the public domain into homesteads large enough to support a farm family. The purpose of the act, too, was to remove public land from speculation. It opened the land to actual farmers. Lincoln's name is, therefore, associated with important fundamental steps in the internal development of this country. These acts alone raise his administration to a high place in our industrial and agricultural development. No other President has his name attached to more important and constructive internal legislation.

Abraham Lincoln was truly a pioneer, both in his creative thinking, and in his upbringing. He was truly a product of the American pioneer tradition and environment. Because of this fact, the life of Lincoln is a fascinating story. Born of pioneer parents in poverty, on what we would call a subsistence farm, Lincoln's opportunities in the world were anything but bright. His father was, according to all accounts, a good man but not much interested in progress, who took life easy and was something of a ne'er-do-well. He complained about his son, Abe, trying to get so much book "larnin" and considered it a waste of time.

But, if Lincoln's father was something of a failure as a provider for the family, he at least showed remarkably good judgment in selecting Lincoln's mother and stepmother. Nancy Hanks, the mother of Lincoln, must have been a very intelligent person. Brought up in a community without schools, she nevertheless learned to read. She was religious, and read much to Abe out of the Bible. She encouraged him to go to school. He had to walk 4 miles to his first school, and 9 miles to school in southern Indiana. Lincoln's mother died when he was 8 years old, in an epidemic that swept southern Indiana. Lincoln always had a profound reverence and respect for his mother, and once said "All that I am and all that I ever hope to be I owe to my angel mother."

Lincoln's father's second wife brought love, affection, help, and encouragement to young Lincoln. There could scarcely have been a better choice for him. She championed his efforts to get an education and gave him encouragement when his father objected and grumbled. To the credit of his father it must be recorded that he gave in to his wife on this point.

There was one thing in Lincoln's upbringing that seems perfectly clear. He had the help, love, sympathy, and support of two unschooled but remarkably intelligent women. A home of poverty with one or two rooms and no conveniences where love and intelligent understanding holds sway is better for child development, I am convinced, than a palace where indifference prevails.

It would seem that Abraham Lincoln's physical comforts were pretty well cared for, too. He must have had plenty to eat for he had a wide reputation as a rail splitter and wrestling champion, both of which require great strength.

He must have been highly thought of. While still a boy of 19 he was sent in charge of a raft loaded with produce down the Mississippi to New Orleans. This was no small undertaking. It was on this trip that he got his first impressions of slavery. Some years later he made a second trip. These were great opportunities for an observing and reflective youth. He undoubtedly had much more travel and responsibility than other boys of that day.

Lincoln had an insatiable desire for knowledge and information. He would walk miles to get a book and read it, if necessary, by the light of a pine knot after the day's work was done.

Lincoln was unschooled but not uneducated. Without formal training in grammar, rhetoric, and literature he came to use some of the best English and sentence construction that can be found in the English language. Much of his writings and sayings are immortal in the sense that they will never grow old. They will last as long as men cherish freedom and individual liberty.

A good way to commemorate Lincoln's birthday would be to again read some of his addresses. I suggest the Gettysburg Address as one of the best on democracy of any literature in any country. In this address he expresses the hope that "government of the people, by the people, for the people shall not perish from the earth." These words are especially important in the light of present world events.

The second inaugural was a masterly objective statement made in the midst of war which concludes with the admonition that "with malice toward none, with charity toward all, with firmness in the right as God gives us to see the right, let us finish the work we are in." In view of the name calling and bickering that goes on in high places between nations these days, it would be refreshing to have someone now express such noble sentiments.

If you want to study magnificent logic, reasoning and good use of the English language read Lincoln's Cooper Union speech in New York where the unschooled but not uneducated frontier lawyer from Illinois spoke to the highly trained intelligentsia of that great intellectual center and won them over to his way of thinking. This speech helped to make him President.

Of if you want to read a perfect letter of compassion and sympathy, read the one to Mrs. Bixby who had lost five sons on the field of battle.

Lincoln's sayings were unique, interesting, and easily remembered. He is credited as saying, "You can fool all of the people some of the time and some of the people all of the time but you can't fool all of the people all of the time."

Lincoln's logical mind was evident in a conversation with a group of ministers who came to see him during the war. As they were leaving they expressed the hope that the Lord was on his side. Lincoln surprised them by saying he was not so much concerned about whether the Lord was on his side but he was deeply concerned that he should always be on the Lord's side.

The work and teachings of Abraham Lincoln have special significance and value in these present days when dictatorship with its attendant slavery of thought and mind threatens democracy and the freedom of the individual. All who value freedom can draw much inspiration and courage from the life and acts of the great commoner.

Records Management Service

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. BOLLING. Mr. Speaker, I am today introducing legislation to provide for a Records Management Service in the Federal Government. The proposed legislation is to amend the Federal Property and Administrative Services Act of 1949 by inserting a new title therein, for the purpose of defining the duties and functions of the Administrator of General Services and the Archivist of the United States with respect to records management.

A Federal Records Service is to be established and implemented by law as a constituent unit of the General Services Administration to serve the twofold purpose of planning and developing, in cooperation with the various departments and agencies of the Federal Government, a records-management program, and of exercising custody and care of the existing records of the Federal Government, its several branches, departments, and agencies.

The Hoover Commission report made clear, perhaps, for the first time, the enormous proportions of the records management job in the Federal Government. The task-force report showed that—

With regard to staff and salaries:

In 1940, an estimate was made of 340,000 employees, with annual salaries of $680,000,000, engaged in handling records then accumulated or being created at that time. A much greater figure would apply were employees engaged primarily in record making added to these in record keeping. No actual count being available, an estimate of over $1,000,000,000 is justifiable. Salaries of no other housekeeping or service function including Government accounting or personnel management remotely approaches this figure.

With regard to space requirements:

Approximately 18,500,000 cubic feet of Federal records occupy more than 18,000,000 square feet of Federal space. This is equivalent to six Pentagons. Space costs are not less than $27,000,000 annually. Actual surveys and official estimates carry this volume of records up to 17,000,000; 18,500,000 cubic feet is a weighted current estimate for the purposes of the task-force study.

With regard to operation and maintenance:

Space occupied by records is operated and maintained consistently at a cost close to the actual rental paid. Annual expenditures for this purpose are not less than $20,000,000.

With regard to equipment:

Records in such a quantity are equivalent to 3,080,000 standard four-drawer filing cabinets costing $154,000,000 at current prices.

The major problems involved in the area are both economic and administrative. The economic problem is obviously one of costs; which, in view of the size of the record-keeping operations of the Government, is considerable. Exactly how much can be saved, it is difficult to estimate with any degree of accuracy, but the amount should be sizable. By exercising some restraining influence over the creation of new records, by encouraging proper disposition of records no longer needed, and by the use of the most suitable and economical methods with regard to those records which are to be retained on a more or less permanent basis, it is obvious that substantial amounts that would otherwise be spent can be saved.

Administratively, the present situation is chaotic. The National Archives has fairly clearly defined duties with regard to the custody of records, their preservation and use by the public, but little else. It is important that there be developed under competent professional leadership, Government-wide policies with regard to the size of records, methods of filing and storage, the creation of records centers, and many other problems in this field.

The legislation which is now proposed has been drafted with very great care and in close cooperation with the executive agencies concerned. Its provisions represent a sincere attempt to carry out the recommendations of the Hoover Commission; they are submitted at this time, not only in response to a vital need for some action by the Congress in this important field, but also in accord with the previously expressed intentions of the Subcommittee on Executive and Legislative Reorganization to proceed at an early date to round out the Federal Property and Administrative Services Act of 1949 by the inclusion of new titles on this and other related subjects. I hasten to add that the size of this bill is due not to a great quantity of new statutory provisions but to the assembling under this title of all existing and scattered pieces of legislation relating to this subject. All of these earlier enactments would be repealed to be superseded by the provisions of this act, which, when enacted, will in effect provide a code in the field of records management.

In short, I believe that the provisions of this bill are in accord with the principles of good management as practiced in many large private organizations, and as recommended in the report of the Hoover Commission. It will register the intent of the Congress in a field which has suffered from the lack of any clearly defined over-all policy, and from a multiplicity of scattered bits of legislation relating to portions of the field. Its enactment will do much to clarify and unify legislation on records management to make possible improved administration, and to effect substantial savings.

Industrial Development in the South

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. BRYSON. Mr. Speaker, under date of January 18, this year, I spoke at length to the House on the subject, The South Attracts Industry. Some unbelievable facts were revealed at that time regarding unprecedented industrial development all through the South; particularly in South Carolina and more especially in the Fourth Congressional District.

Under leave to extend my remarks in the Appendix of the RECORD, I insert herewith two articles from the Christian Science Monitor, Monday, February 27, 1950, pointing out further facts regarding industrial, agricultural, and livestock development in the South:

WAVE OF INDUSTRIALIZATION SWEEPS SOUTH—LIVESTOCK SHOWS NEW PROMISE—NEW ERA HAILED

(By Henry Lesesne)

COLUMBIA, S. C.—Probably no other period in the South's history compares with 1945–49 for industrialization—not even the 1880's, when so many little towns in the Piedmont with available water power began organizing cotton mills as community affairs, the shares being paid for by the people on the installment plan.

At present, there seems no end to the trend in sight. The industrial expansion in the South has been a part of the general industrial expansion which has been going on all over the country. Economists say the new factories in the South largely represent a net addition to the Nation's industrial system.

With the industrial change and expansion have come, too, great changes in the region's agricultural economy. Through the Cotton Belt it is much the same story—smaller cotton fields, more grain, more hogs, more cattle, more poultry. Many areas of the South are concentrating on quality production of cotton.

COTTON MOVES WESTWARD

The culture of cotton has been moving westward to an extent not generally realized. Counting Texas as the West, production has so increased in the stretch from Louisiana to the Pacific coast that, this year, almost half the cotton crop is claimed by that area.

Mechanization has been a great factor in enabling California cotton planters to pick the biggest income crop in the State in the last 3 years. Of course, great cotton-growing areas of the South like the Mississippi Delta

are mechanizing on a large scale, too; but for much of the hilly South, mechanization is hardly adaptable as yet, if ever.

Thanks to research, the South in the last two decades has been able to produce about the same amount of cotton on half the acreage as formerly. At the same time, some parts of the South have turned dramatically to a new type of agriculture, or industry, putting cotton into the background.

PEACHES IN SPARTANBURG

For instance, Spartanburg County, S. C., is a great textile manufacturing county. Twenty years ago, cotton was the main—one might say the only—cash crop. But in the short time since, the county has become the Nation's biggest peach producer. Peach growing is the foremost agricultural pursuit.

Nearly every part of the South has its own dramatic story to tell, whether it be agricultural or industrial. Peculiar to a rather small area in north Georgia, for instance, is the chenille bedspread industry, which began as the hobby of a Georgia farm girl and soon developed into a $120,000,000-a-year business.

In about the same time, a great pulp and paper industry has arisen in the coastal plains, until southern production now accounts for about half the national total. A number of large new pulp and paper mills have gone up in the South in recent years. The region, too, is becoming more conscious of developing and conserving its woodlands, a serious problem.

MORE PURCHASING POWER

But the main thing is that industry, generally, has expanded and become more diversified in the South. The explanation, according to Dr. B. U. Ratchford, professor of economics at Duke University, lies in growing purchasing power, an ample labor supply, plus vast material resources.

Dr. Ratchford is a former Marshall plan adviser and was coauthor with Dr. C. B. Hoover, also of Duke, of the recent report by the National Planning Association's committee on the South, which analyzed the southern economy from the standpoint of the impact of Federal policies.

According to Dr. Ratchford, the rapid rise in southern purchasing power has created an expanding southern market, especially in the purchase of manufactured goods. And, as sales have risen, manufacturers have established plants or factories to make such goods in the South to supply the demands of the region.

INCOME INCREASES

Per capita income in the South has jumped 236 percent since 1939, compared with an increase of 183 percent for the rest of the country. Industry has raised income. So have high farm prices and a shift to a more diversified agriculture. Fifteen percent of southern income today comes from manufacturing, compared with 12½ percent in 1929.

Another factor is that the South pays less than 20 percent of all Federal taxes, and gets back nearly 30 percent of all Federal disbursements. Dr. Ratchford considers abundance of southern resources, especially an abundant supply of water, as second only to the South's increased purchasing power as a cause of the southern industrial boom.

The third most important factor, he says, is that the labor supply is being increased by a growing population and the greatly accelerated mechanization of farms. He says that inducements, such as land gifts and tax exemptions have had little influence upon location of industry in the South.

RURAL POPULATION

North Carolina, probably the most industrial of all southern States, has never had tax exemptions for new industry. Though relatively highly industrialized, North Carolina, like the rest of the South, is a State of many small towns and few cities. Nearly 70 percent of its population is rural. As elsewhere in the South, many families combine the advantages of industrial employment with the security of small farm ownership.

In the postwar years there has been a great expansion and modernization of the textile industry, which has brought supplier industries, such as the synthetic fiber industry. The South's textile industry in recent years has also become greatly diversified, with expansion in finer yarns, in finishing, and in the woolen and worsted branches. Scores of new mills and finishing plants have been built, and others are in the blueprint stage.

MILLS MODERNIZED

These plants are windowless, air-conditioned, and architecturally stimulating to the southern scene. While they may not appear as much out of this world as the new multimillion-dollar plants going up, the existing southern mills have modernized, both in building and equipment, to an extent which was hardly considered within the realm of possibility a decade ago. The mills, often termed a "prince or pauper industry," have plowed back a large part of postwar earnings into equipment and machinery to improve their competitive position.

Some of the most spectacular postwar industrialization in the South has occurred in South Carolina. A new $40,000,000 Celanese Corporation of America plant near Rock Hill has revitalized that college town. The historic resort town of Camden is booming because du Pont is building a big plant near there to make the new synthetic fiber, orlon.

PENDLETON EXPERIMENT WATCHED

PENDLETON, S. C.—Volumes could be written to tell of the amazing changes in the South's economy, industry, and agriculture in the postwar period. The National Planning Association's Committee on the South has dug up a barrel of facts and studies which tend to show many things, not the least of which is that the great number of industrial plants the region has gained represents a net addition to the country's industrial system rather than capacity which has been taken from other regions.

Essentially, the southern story today is one of industrial and agricultural growth, and of industrial and agricultural diversification. The New South—a term more significant today than ever before—is full of exciting scenes, and each part of the region has its own story to tell. But one might look a long time and never find a picture more symbolic of the changing South than can be seen near this little South Carolina up-country town.

Pendleton is a comparatively old town at the foothills of the Blue Ridge, and it hadn't changed a great deal until recent years. It is a historic town; a farmer's society organized in 1815 is still in existence, and the town boasts the oldest farmer's hall in the United States.

NEW PENDLETON VISITOR

Today you can take a main highway out of Pendleton and, on the edge of town, even if it's a bleak winter day, see something like 160 white-faced Hereford steers grazing in the lush front yard of an ultramodern, windowless, air-conditioned rayon twisting and weaving mill. The grass on that immense lawn or pasture, green the year round, which is amazingly high in protein content and reseeds itself, is all that the steers eat and grow fat upon.

This is a relatively new scene in the South even agriculturally; but it's not nearly all of the farm part of the story. But let's consider the industrial side. The mill in the center of the many acres of meadow, the Gerrish-Milliken rayon plant, is one of the scores of new textile mills and finishing plants which have been, and are being, built in the textile South in the postwar period. They are windowless, totally enclosed, air-conditioned buildings of the most modern design, glazed tile interiors, and newest machinery with straight-line continuous production.

PROMISING EXPERIMENT

The project, known as the Deering-Milliken farm operation, is in the nature of an experiment, an experiment which agronomists believe will make a great contribution to the livestock industry of the rolling Piedmont, a part of the Old South that is hardly adaptable to the mechanized culture of cotton. The great green lawn, kept "mowed" by the steers, is a contribution of alta fescue grass, providing year-round grazing, and Ladino clover, which provides grazing plus legumes.

This combination, developed by the Department of Agriculture, has been tried out in other parts of the country—in Oregon and in Pennsylvania—but nowhere has it seemed to thrive better than in the rolling hills of the Carolina Piedmont.

ECONOMICAL CROPS

The South is undoing the damage of generations of a one-crop system. Thousands of acres are being planted in winter pasturage. Kudzu, a deep-rooted, leguminous vine from Japan which has a prodigious summer growth, not only checks erosion but furnishes pasture and forage. In much of the South, agronomists say, year-round pasturage would eliminate the investment in barns and equipment to house livestock and store forage.

Let's Mine Some Coal

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1950

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Detroit Free Press of March 1, 1950:

THE COAL EMERGENCY—AN IMPASSE

Detroit's plight in the current coal emergency is no worse than that of many other communities in the United States, but it will serve as an example of how close to catastrophe we are approaching.

Public resentment is high, as indeed it should be, at the callous disregard for the general welfare which the coal miners and the operators are showing.

The thought of cold, heatless homes has gone beyond the scare stage and become reality. Schools in this city are to be closed unless relief, not now anticipated, is forthcoming within the next few hours.

Conditions have progressed by now to such a point that no relief can be expected for 2 or 3 weeks, even if the dispute were to be settled as this is written.

It is no exaggeration to say that the full responsibility for this deplorable and inexcusable situation lies full on the doorstep of President Harry S. Truman.

He played politics with the individual health and security of the people of the United States until matters deteriorated beyond his powers to control them.

Seldom if ever in the history of this Nation have we witnessed as callous and stubborn disregard for the rights of the people by a Chief Executive.

Ample warning was given him, and the means of averting disaster were in his hands.

He refused to use them, because Congress failed to give him his way and abolish the Taft-Hartley law so that he could win votes as the champion of labor.

Had he acted when the impending crisis became apparent, it is more than possible that the coal dispute would have been settled by this time.

Now it is too late for him to apply either his legal powers, or the implied powers which he so blithely claimed as one of his prerogatives.

The outcome of the legal action against the United Mine Workers holds no promise that the union members will go back to work.

If they choose to remain idle in the face of a Federal court order, who is to force them, as individuals, to comply?

There are nearly 400,000 strikers, and not enough jail cells to hold them all.

What if the Government seizes the mines? Who will dig the coal if the miners refuse to do so? Neither the Army, the Navy, nor the Marine Corps can do it.

The only thing now is an appeal to the patriotism and conscience of the miners.

Speaking in Atlantic City, Walter P. Reuther, president of the UAW (CIO) declared that both labor and management have a responsibility to the public that is above the interests of their special economic groups.

Those words ought to be shown to both the miners and the mine operators.

Only by an acceptance of that precept, based on the understanding that by their actions they are forcing millions of Americans toward cruel hardships, possible disease and economic distress, can the coal emergency quickly be resolved.

Whether the coal miners and the operators are beyond an appeal to patriotic duty remains to be seen.

But Mr. Truman at least should make the gesture of trying.

There is no other discernible immediate hope.

Representative John B. Sullivan and Federal Gas Rates Regulation

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. BOLLING. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the St. Louis Post-Dispatch of February 24, 1950, which calls attention to a small but important part of the fine work my colleague from Missouri, the Honorable JOHN B. SULLIVAN, has been doing to protect the interests of his constituents:

KERR'S HELPING HAND

When a special-interest group sets out through Congress to relieve the consumer of some of his money, it's customary to offer a high-sounding explanation. Senator KERR, wealthy Oklahoma oil man, has done this for a bill which passed the House and is before the Senate. He explains that his bill would help the independent natural-gas producer.

The Kerr bill would help independent producers, all right. It would help them to millions of dollars by exempting them from rate regulation by the Federal Power Commission. As for their independence, all that means is that these producers don't own gas pipe lines. Most of them are big oil companies and they represent about 70 percent of the gas industry.

For years the gas lobby has been busy in Congress. They have made a case at least for clarification of Federal powers. But if the Federal Power Commission were forbidden to figure gas production prices into a rate formula, the producers would have utilities and consumers virtually at their mercy.

Representative SULLIVAN has pointed out what Federal rate supervision means to St. Louis. Before the Commission stepped in, a southwestern company that indirectly supplied gas for this city charged $8.31 per 1,000 cubic feet. Rate regulation brought that down to $4.66. This benefited local consumers and still left the producer with a good profit.

Supporters of the Kerr bill offer one other happy thought for bilking consumers. That is States' rights. They say the States should regulate gas prices. But when gas is produced in Texas and sold in Missouri, how would regulation by Texas help St. Louis?

The gas industry has grown to the position of an interstate utility, whatever its component parts may be. Millions of Americans and much of their industry depend on it now, and more are turning to gas because of the coal situation. If the Kerr bill passes, these millions will have to pay for it.

Eat, Drink, and Be American

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. JOHNSON. Mr. Speaker, under leave to extend my remarks I include an editorial of the Washington Times-Herald of March 2, 1950, which bears the above title.

The article accurately points out that in the United States we now make some very excellent wine. It happens that I represent a district that contains two very famous wine districts—the Napa Valley and the Lodi District. There are many other areas in California which also manufacture good wine. For some reason, some people have the impression that to obtain good wine one must buy wine which has been made abroad. I do not criticize the wine from foreign countries. But I do say emphatically that if one knows how to select the proper brands and types of wine made in the United States he can be assured that it will be equal to the quality of any similar types made in foreign countries. In California we have been engaged in the making of wines for almost a century. During that time, through scientific research, both public and private, and by the combined efforts of the wine industry represented by the Wine Institute, we are continually and have continually improved the quality of our wine. When one realizes that the production of wine in the United States is 140,000,000 gallons annually one can realize that the wine industry is no small industry. Furthermore, in California we produce 2,857,000 tons of grapes per year. There are probably over a hundred different varieties of these grapes. This insures that we have a great diversity in the type and taste of our wine. California manufactures approximately 90 percent of the total wine production of the United States.

I commend to the reading of my colleagues the article referred to which reads as follows:

EAT, DRINK, AND BE AMERICAN

Maj. Philip Harrison, who supervised management of wine cellars in occupied Rome and who is an expert on matters wine-y, made a good little speech in Balitimore the other day. Harrison said we should all drink more wine—which seems sensible; the Bible says "Use a little wine for thy stomach's sake"—and he further said that we should all drink more American wine.

HOME PRODUCT JUST AS GOOD

"I am sick and tired," said the good major, "of the poseurs and pretenders who delude people on the subject of wine * * * label-snobs who buy wines for the sake of the names on the bottles. Good wines are made in the United States as well as abroad," he said.

How right you are, Major? Our American wines, particularly those California and New York varieties, are every bit as good as the average bit of juice you can get from the sunny slopes of France, and they are improving all the time.

A man isn't only kidding himself when he spends $6.95 for a reed-wrapped cobwebby jug of Old d'Artagnan S'il Vous Plait Extraordinaire from A Bas Le Tourniquet just so he can murmur, "Aaaah—1928—the only good French vintage, y'know," to his friends—he is also wasteful. For that $6.95 he can get a jug and a half of much better American champagne and a box of crackers to boot.

An Honest Deal To Replace the "Raw Deal" on Excise Taxes

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. VELDE. Mr. Speaker, during the last 2 weeks I have received from an aroused constituency in my home district roughly 15,000 signed statements of protest against the 20-percent Federal amusement tax. The larger part of these protests have come from the average American citizen—the fellow who after pay deductions of income tax, social security tax, insurance, and union dues, has very little left for entertainment. Yes, and these protests bring to mind the numerous cases of those average people who must cut corners and save all week in order to take their wives and families to the movies on Saturday night.

The unfortunate thing about these cases is not so much the fact that the average person has to scrimp and save in order to have enough for a little entertainment, but rather the cold, hard fact that the Federal Government, while purporting to give the low-wage earner a break, taxes him to the extent of 20 percent on every amusement admission ticket he buys whether it be the movies, the circus, a rodeo, or sporting event. And these are only a few of the "open taxes" masquerading under the name of "luxury taxes." We still have a 20-percent excise or luxury tax on light

bulbs, jewelry, cosmetics, toilet preparations, luggage, fur coats, and even certain baby necessities.

Figures available for the last complete fiscal year show that the American people paid in excise taxes alone a total of $7,500,000,000. On the basis of 150,000,000 population this breaks down to around $50 per person or $200 for a family of four.

According to the January report of the Joint Committee on Internal Revenue Taxation, the Federal Government in the coming fiscal year will extract from the American taxpayer in the form of excise taxes approximately $6,000,000,000. Besides paying the various tobacco, liquor, stamp, and miscellaneous excise taxes included in the foregoing figures, the consumer will eventually be required to pay more than $1,500,000,000 in manufacturer's excise taxes, passed along to him on any number of household goods he buys during the course of the year.

There is no way to escape paying these taxes either, for, when you try to get away, you pay a 15 percent tax on train, plane, and steamship fares, an average of 6 cents on every gallon of gas consumed by your automobile and another 15 to 25 percent tax on any telegrams sent or phone calls made.

There seems to be no end to the taxes we are required to pay. The darkness below the surface of American economic life is alive with hidden taxes too. They teem and multiply. They mean increased costs for virtually every item of living.

The American people today have every right in the world to grumble and express their anger over the excessive tax burden they are asked to bear. The average American is becoming more and more tax conscious and is fast learning to realize the full implications of the Federal Government's present chronic tax program based on the ill-conceived New Deal and Fair Deal theories of deficit financing.

I firmly believe that the majority of the American people at this point are fed up with the "raw deals" foisted upon them by the New Deal and Fair Deal and want simply an honest deal.

This "honest deal" can be given to the people, in part, by repealing excise taxes outright, lowering taxes generally, and then operating the Federal Government within the confines of a "pared down" budget geared to a peacetime economy.

"How," you may ask, "can we do this and still live up to the obligations to which we have already committed ourselves?"

This question can best be answered by comparing the records of the Republican-controlled Eightieth Congress and this Democratic-controlled Eighty-first Congress.

In the fiscal year 1948, during the Republican-controlled Eightieth Congress, total expenditures amounted to $33,800,000,000 and the Treasury's balance sheet showed a surplus of revenues over expenditures in excess of $8,000,000,000.

In the fiscal year 1949, during the first session of this Democratic-controlled Congress, total expenditures amounted to more than $40,000,000,000 and the Treasury's balance sheet showed a deficit of nearly $2,000,000,000.

One need only compare these two figures of total expenditures and ask himself this question: "What additional services or benefits have I received from this $6,300,000,000 increase in Government expenditures?" I dare say the average citizen hasn't received one thing more than was given him by the Eightieth Congress for $6,300,000,000 less money. In fact it took that Republican-controlled Congress to lower everybody's individual income tax from the confiscatory wartime rate to the one presently in effect.

This year the President has asked for expenditures totaling some $42,000,000,000 and latest figures indicate that a deficit of $5,000,000,000 will be written in red come June 30.

The Republican Party has proved that it can set a peacetime budget, live within it, give the Treasury a surplus, and still give the people all the services ordinarily expected of a government that claims to be one "of the people, by the people, and for the people."

The Democratic Party, on the other hand, has during every 1 of its last 16 years in power operated in the red.

With that record in mind, I am becoming more firmly convinced that as long as the present administration is in power the only way we can ever cut the gigantic cost of government is to cut the taxes first and then see to it that the Federal Government lives within its income, just as you and I must do.

Repeal of all excise taxes at this time would be a boon to the little fellow who could enrich his living with the many items now taxed beyond his reach. The removal of all these taxes would certainly give business a "shot in the arm." While their removal would cost the Treasury a loss of an estimated $6,000,000,000 in revenue for the next fiscal year, many believe more than half this loss would be made up in an increase of corporation-tax revenue resulting from a greatly increased volume of business.

There is no reason why we, as representatives of the people, should not start the ball rolling now on a tax-reduction program as I have outlined. These more than 15,000 signed protests received from the Eighteenth District of Illinois clearly indicate to me that the American public is fed up with the administration's grandiose schemes that purport to give them something for nothing. These clear-thinking individuals are not interested in "fandangled" legislation that in the end will take even more money out of their pockets than is now being taken in every conceivable kind of tax.

They want simply relief from the excessive tax burden which they have had to bear for the last 10 years. The entire Congress would do well to take note of this public opinion poll which I feel certain will make itself felt this coming November.

Omnibus Appropriation Bill

EXTENSION OF REMARKS
OF
HON. J. PERCY PRIEST
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. PRIEST. Mr. Speaker, the Honorable CLARENCE CANNON, of Missouri, distinguished chairman of the House Appropriations Committee, has written an interesting article for the Tax Review on the purposes of the omnibus appropriation bill, which this body will consider after the middle of April. I think this excellent article is of great importance to Members of Congress and the general public, and, under leave to extend my remarks I include the article here:

A UNIQUE OPPORTUNITY—IMPROVED FISCAL CONTROL THROUGH OMNIBUS APPROPRIATION BILL

(By Hon. CLARENCE CANNON, chairman, Committee on Appropriations, United States House of Representatives)

For the first time since the early days of the Republic, the Congress of the United States and the tax-paying public this year will be offered a unique opportunity to understand the entire financial program of the Federal Government.

With the demands of a cold war falling upon a Government whose fiscal situation is worse than ever before in its peacetime history—with Federal spending totaling almost 20 percent of the Nation's entire national product and exerting a tremendous influence on the operation of the national economy—with the war-created deficit at hitherto unbelievable heights—now more than ever it is necessary for the Congress to exercise its important power of the purse with care and wisdom.

The opportunity that is being afforded this year for effective and intelligent fiscal management lies in the consolidated appropriation bill procedure, a technique that is new to the Congress although it has been tried and proven in France, England, Sweden, and other countries from the inception of parliamentary government. The objective of the new procedure is simple; instead of nine or more appropriation bills being considered individually over a period of 6 or more months, without relation to each other, to the total of appropriations, or to the total of Government receipts from which the obligations must be met, the House Appropriations Committee will consolidate all appropriations into one omnibus bill and will report the consolidated bill to the House, together with an estimate of Government receipts and expenditures for the fiscal year to which the appropriations apply.

This simple technique is the culmination of many years of legislative efforts to keep pace with the increasingly large and complicated Federal fiscal structure. Starting in 1796, when a Committee on Ways and Means was first appointed in the House of Representatives, the need for effective congressional fiscal control has become more apparent and more urgent as the size and scope of Federal programs has mushroomed through the years. In the last three decades particularly, the history of fiscal legislation has been marked by an insistent demand from the country, and by a consistent effort on the part of the Congress, to perfect a more efficient and effective system of handling the annual appropriation bills.

In the years preceding 1920 the appropriating functions of Congress were exercised by many committees, which at various times reported appropriations with little or no relation to any definite centralized plan or system. For some years Congress worked intermittently but assiduously in an effort to devise a plan under which we could consolidate and coordinate the appropriation functions, thereby achieving a more scientific and economical handling of national finances.

Finally, in 1921, Congress enacted the Budget and Accounting Act, under which for the first time we were able to segregate the funds for each department and agency of the Government in one place, in the same bill. It was a decided step forward.

NEED FOR EXPENDITURE CEILING

However, it became immediately apparent that there was a further defect in the system in the lack of a ceiling or other means of correlating expenditure with revenues—of adjusting outgo to income. Many men in these intervening years, including Swagar Shirley, of Kentucky, John Fitzgerald, of New York, and Martin B. Madden, of Illinois, with the able cooperation of talented career men like Marc Shield and John Pugh, have sought the philosophers' stone in a correlated consolidated budget submitted to the Congress simultaneously with authoritative estimates on the national income, but were thwarted largely by an obsolete and antiquated organization of the subcommittees.

Eventually, after long study, the Congress passed the Legislative Reorganization Act of 1946, including section 138, which provided for a legislative budget under which a joint committee of the two Houses was required to submit not later than February 15 of each year a legislative budget, including a ceiling of expenditure and estimated over-all Federal receipts for the next year. It was hoped at that time that this provision would solve the problem, that it would bring into such strong relief the outgo and the income of the Federal Government as to retrench the amount of money appropriated and bring it into a reasonable relation with the national income.

But from the beginning the plan was singularly unsuccessful. The requirement that a ceiling of expenditure be fixed before hearings could be held rendered it wholly impracticable. It was in effect a requirement for a court verdict before witnesses could be examined and testimony submitted. On the other hand, if desired until after hearings had been completed and bills reported, its application came too late to affect the totals.

Section 138 of the Reorganization Act of 1946 is now a dead letter. But the need which it sought to serve, the problem which gave rise to its enactment are still with us and growing more insistent with the increasing size and complexity of national finance. Some practical method had to be found of presenting in one proposal the entire expenditure program for the fiscal year in connection with an authoritative forecast of the national income for that period.

We believe we have now developed such a method. Through a reorganization of its subcommittees, restricting each member to one subcommittee and each subcommittee to one annual supply bill, and through a corresponding readjustment of our committee staff and reporting system, permitting all subcommittees to sit simultaneously, the House Committee on Appropriations during the first session of this Congress reported to the House and sent to the Senate for the first time in the history of the Congress all annual appropriation bills within approximately 10 weeks from the beginning of the hearings. This was the first step. We had to wait until its practicability could be demonstrated.

During the present second session of the Eighty-first Congress the Committee on Appropriations will discontinue the practice which has been in effect since the earliest days of the Congress of reporting appropriations piecemeal in separate, unconnected and uncorrelated individual bills, and will submit the annual appropriations in one consolidated omnibus appropriation bill.

EFFECT OF CONSOLIDATED BILL

The bill will be reported not later than April 15 of each year. By that time an authoritative forecast of the national income will be available. The prime question before the House when the appropriation bill comes to a vote will be whether to hold expenditures within the national income or vote to exceed the national income and increase the already stupendous national debt.

In the fierce light of publicity which will be concentrated on that final vote there will be no escape from responsibility. A clear unequivocal record must be made. And public opinion will do the rest. The embodiment of all annual expenditures in one compact bill, with all duplications and conflicts eliminated and with its impact on national credit clearly outlined, will serve to offset the pleas of pressure groups and high-powered lobbies and should save vast sums of money and reduce waste and prodigality to a minimum.

The advantages of the one-package bill are obvious. Appropriations will be more carefully processed; duplications, overlapping and conflicts will be reconciled; legislative items will be eliminated; logrolling will be impracticable as all the cards will be on the table at one time and any attempted trades will be too apparent to withstand the light of publicity; the entire expenditures for the year will be submitted in one figure simultaneously with an authoritative estimate of the national income; deficit financing will be discouraged, as a last opportunity will be afforded for reconsideration in the subcommittees of the entire bill with a view of bringing annual expenditures within the annual revenues of the Government; the bill will have been passed and all annual appropriations enacted before the end of the fiscal year, obviating the need for the usual continuing resolutions and permitting adjournment of Congress much earlier than heretofore.

HOW CONSOLIDATION WORKS

No special enactments or changes in the rules are necesary in order to provide for the consolidated budget or its consideration in either House. The House Committee on Appropriations is authorized to determine, without conference, the number and form and jurisdiction of the annual appropriation bills.

For example, at the beginning of the first session of the Eighty-first Congress two subcommittees of the House Committee on Appropriations had for many years been reporting the military appropriation bill and the naval appropriation bill respectively. Under the authority vested in the committee we combined the two subcommittees which now report out one bill, the armed services appropriation bill. Likewise at the beginning of the last session we combined the Subcommittee on Independent Offices and the Subcommittee on Government Corporations. From the consolidation of four bills into two bills it is only a step to the consolidation of all bills into one general bill.

The mechanics of drafting the omnibus appropriation bill will center on an executive committee within the House Appropriations Committee. The executive committee, whose five majority and three minority members will be rotated each session, will receive and hold the reports of the subcommittees assigned to particular chapters of the appropriation bill. If revision or amendment is deemed warranted, the chapter is returned to the subcommittee for further consideration. Each subcommittee report will be accompanied by a statement of total expenditures projected in the budget for the particular chapter, plus an itemized report of any changes in the expenditure total that would ensue from subcommittee action. When all reports have reached the executive committee and been approved, all chapters and reports will be submitted to the whole Appropriations Committee simultaneously, and will then be reported to the House in an omnibus measure.

OMNIBUS BILL NO CURE-ALL

Of course, the omnibus bill of itself will not be a panacea for all of the ills which prompt its inauguration. There is no substitute for laborious and searching inquiries for analyses and studies, by members of the Appropriation Committees of the two Houses, or for selfless interest and courage exercised by them and other members of the two bodies when the bill is before them for consideration or when legislative bills are under consideration, whether in committee or on the floor, which would impose new and additional drafts upon the Federal Treasury. These are requisites to the attainment of proper and effective congressional budgeting, and their importance cannot be too heavily stressed. We cannot have economy in Government under any system without patriotic interest and courage on the part of those charged with the duties of raising and spending revenue in providing for the support of the Government.

In this regard, it is necessary to remember that one of the many untoward effects of any war, and to an unprecedented degree in the last war, is the development in both the legislative and executive branches of the Government of an expenditure complex, a spending psychology. In the stress of war and the imminent necessity of providing for adequate national defense at all costs, we appropriate and spend with little regard for the sources of income or the possibility of securing results at less expense.

Now that the war is over it is difficult to get back to normal conditions and the exercise of prudent economy. It is hard to begin thinking again in terms of prewar expenditures and to drop from billions down to millions and from millions down to thousands—from dollars down to pennies. And in the present emergency in which we find ourselves, with a national debt which approximates a very substantial percentage of our national wealth, and with increasing budget estimates and decreasing revenues, we must begin to count even the pennies. Under present circumstances no economy is so small as to be disregarded.

INCENTIVE TO RETRENCHMENT

The consolidated bill considered in juxtaposition with the available incomes offers an incentive to retrenchment. As a matter of fact, it is the only practical method available at this time that offers hope for a reduction of appropriations to the smallest amounts consistent with sound business and good government.

Attainment of that goal will not be easy. The national defense situation is such as to require consideration of major policy matters which must be permitted—to some extent at least—to outweigh cold budgetary requirements. That is, there must be some consideration other than merely the number of dollars on hand at the particular time to determine the amount of national defense we will purchase. On the other hand there is no occasion to so close our eyes to budgetary restrictions as to purchase national defense on a basis which will in a few years result in our having nothing left to defend,

by reason of having exhausted our resources so completely in an all-out defense effort as to have destroyed our economy.

Veterans' benefits cannot be reduced by the Committee on Appropriations materially as such benefits are provided by law and whatever amounts are due must be paid. If any change is to be made in this area it will have to be made by the legislative committee.

In the foreign field we have certain commitments which must be honored in order to maintain our standing among nations. Regardless of how any member may feel about the policy or about whether we should originally have made commitments, the fact remains that we are committed and, whatever the cost, we must pay. Of course the committee will scrutinize such requests carefully to be certain no more is provided than is necessary to meet obligations incurred and to insure continuation of those programs, which have so far proven effective in maintaining the peace of the world and in preventing the spread of ideologies which have for their purpose the destruction of democratic principles.

However, in view of these facts, this is no time to talk about new charges against the general revenues. Before we embark on new programs we must go back and survey the old ones and find what we can do about eliminating those which have outlived their usefulness and reducing the cost of others. Presentation of all proposed expenditures simultaneously in one bill will contribute materially to that end.

Thus, the initial use of the consolidated appropriation bill procedure during the present session of the Eighty-first Congress will achieve two major ends: First, it will provide the Congress with a new and much-needed tool to be used in the construction of the Federal fiscal structure; and second, it will magnify the responsibility of each Member of the Congress to achieve the sound national economy on which America's growth must be based.

Democracy Beats Communism Week

EXTENSION OF REMARKS

OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, March 3, 1950

Mr. BOLLING. Mr. Speaker, my attention has been called to an item in the CONGRESSIONAL RECORD under date of October 11, 1949, entitled "The Gladewater Plan—Democracy Beats Communism Week." It was introduced by my distinguished colleague, the gentleman from Texas, Hon. LINDLEY BECKWORTH. It includes the statement that the idea for Democracy Beats Communism Week was originated by John Ben Shepperd, former president of the United States Junior Chamber of Commerce, and that it was conducted at Gladewater the week of March 20 to 26, 1949.

I recall participating in Democracy Beats Communism Week in Kansas City, Mo., during the week of September 20 to 26, 1948, when it was sponsored and carried out by the Kansas City Junior Chamber of Commerce. The idea was, in fact, originated by my friend, Clint W. Kanaga, Jr., a prominent young Kansas City insurance executive, who offered the plan to the Executive Committee of the United States Junior Chamber of Commerce for adoption for national action in January 1949, after it had been so successfully carried on and splendidly received the previous September in Kansas City.

The Kansas City Jaycees sent speakers before countless civic, church, labor, veterans' and other groups, as well as to almost every school in the community. The people of Kansas City were privileged to hear these men in earnest discussion of the fundamental issues between our way of life and that under the world's harshest dictatorship. The subject was not approached from the point of view of bitter denunciation on one side and flag-waving on the other. Instead, the Jaycees, who had spent many hours in study, presented hard facts of a historical, economic, social, and political nature and tried to give their audiences all the facts on both sides. It was seldom necessary to draw conclusions for the listeners. The Jaycees knew that when both sides of this question are clearly and dispassionately presented, Democracy invariably wins out. The whole community profited from this project and similar plans were subsequently undertaken in other communities.

I believe that the Kansas City Junior Chamber of Commerce deserves high credit for being the first to organize Democracy Beats Communism Week and for having one of its members as the originator of this plan.

Train Radio Might Have Helped

EXTENSION OF REMARKS

OF

HON. JOHN B. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, March 3, 1950

Mr. SULLIVAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to call attention to an editorial of the St. Louis Star-Times of February 20, 1950, entitled "Train Radio Might Have Helped," which discusses the recent shocking collision of two trains of the Long Island Railroad, resulting in a great loss of life and injuries to passengers.

While the railroad unions and some Members of Congress are supporting a bill, H. R. 378, to provide greater safety for passengers and employees, in the face of blind opposition, it is worth noting that the Long Island Railroad, after 29 or 30 passengers have been killed and more than 100 seriously injured, has announced the installation of "trippers" which would automatically halt trains on that particular section of a double track where trains running in opposite directions could not pass. The railroad announces that the "trippers" would be in operation within 24 hours, showing how easily they could have been installed. Why must the railroads delay installation of obvious and existing safety devices until disasters overtake them or legislation forces safety measures? The editorial entitled "Train Radio Might Have Helped" from the St. Louis Star-Times follows:

TRAIN RADIO MIGHT HAVE HELPED

Apparently the grisly collision of 2 trains on Long Island, in which 29 were killed and 100 hurt, was caused by a simple human failure. The tracks are normally double but were temporarily overlapped. It seems that one of the engineers, forgetting about the makeshift arrangement, was not watching the signals. He ran through a stop light. The right side of the west-bound train and the left side of the east-bound sheered each other open.

No gadgets in the world will ever erase the possibility of human error. But the techniques of science can make human error less likely. In this situation the Long Island Railroad was using old-fashioned signal equipment.

Here was a tragedy that radio communications between trains and between trains and stations might have averted. A radioed warning might have reminded the inattentive motorman of the overlapping stretch. The averting of a single tragedy such as this one would justify the relatively slight cost of installing the newest type of safety systems in the railroads that are lagging behind.

John H. Geisse Receives Deserved Award for Outstanding Contribution to Aviation

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 3, 1950

Mr. ENGLE of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include a copy of a citation accompanying the gold medal presented by the Department of Commerce to John H. Geisse, who is a consultant with the Civil Aeronautics Administration, for his outstanding contribution to aviation in developing the cross-wind landing gear. The citation, which indicates the importance of this contribution to aviation, is as follows:

Mr. Geisse receives the Department's gold medal for his outstanding contributions to civil aviation, including the development of the famed cross-wind landing gear. Over a period of 25 years Mr. Geisse has labored constantly and tirelessly to bring the personal aircraft to the point where it would appeal to a wide segment of the American public. From his efforts to develop a personal plane have come the first nonspinning airplane, the safety airplane with tricycle undercarriage, and the proof that cheaper power plants and accessories for aircraft are possible.

His most recent success is the development of the cross-wind landing gear, which contributes materially to safety and economy in flying. Millions of dollars will be saved in airport construction on the basis of a recently announced CAA policy to build only one strip or runway on existing or improved class I airports, and to build no intersecting runways on larger airports. This policy was made possible only through the cross-wind landing gear, and Mr. Geisse was the prime mover in its development and adoption. Records already are available showing that both skilled and unskilled pilots have

avoided accidents resulting in possible injury or death because their planes were equipped with the castered gear, thus indicating that it represents a major contribution to the technology of flying.

John Geisse has been a crusader in the aviation field. It is with considerable satisfaction, therefore, that the Department has awarded its exceptional service medal to him on this occasion.

Potato Problem

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Globe of February 28, 1950:

POTATO PROBLEM

The importance of the potato problem is that it offers perfect illustration of the economic absurdity of subsidy without control. To its lesson we might pay close heed, lest we find ourselves shortly immersed in the quicksand of our own good intentions, up to our fiscal neck.

Basically the problem is simple. We grow more potatoes than we can use. In 1909 we consumed 193 pounds per year per person. Today we use only about 100 pounds. Yet farmers each year raise more potatoes; for although acreage has been cut by about 25 percent in the last 4 years, new insecticides and modern fertilizers cause 10 potatoes to grow where 1 grew previously.

Left to find their own level in an open market, potatoes today would sell at not much more than 60 cents a bushel, a price that would bankrupt producers. To avoid such a contingency, the Government has established price supports that have cost the taxpayers of this country just $495,169,000 in the last 7 years.

This price support has been available only in those areas where the farmers have agreed to voluntary acreage reduction. In Aroostook County in Maine, for instance, this reduction has cut plantings from 220,000 acres in 1946 to around 140,000 in 1949. But, obviously, a still further Nation-wide restriction is needed, and it was to this purpose that Senator LUCAS sought last week to amend a House bill with a provision that would suspend all price support for potatoes until some form of production control could be established by Congress.

The Senator's proposal was killed, however, by a coalition of 28 Republicans and 15 Democrats. In its place the Senate approved a plan which would continue price support as at present in all areas where growers agree to go along with marketing orders.

This plan admittedly will not cure the potato surplus. It was defended on the score that growers had already bought seed and fertilizer for the coming planting season under a gentleman's agreement with the Government that the price this year would be supported, which is true enough, and by the less tenable argument that in the present uncomfortable situation the growers themselves are without blame.

This is not to say that the potato farmers have been more eager of subsidy than others, or that they have not been cooperative. Indeed, it was the Maine farmers themselves who, taking the lead in efforts to cure the situation, first urged that the support price be lowered from 90 percent of parity to its present ratio of 60 percent. They have cut acreage heavily, switching to other crops, particularly dairy farming; as between 1947 and 1949, for instance, there was an increase of 10 percent in the number of farmers shipping milk to the Boston market from the State of Maine.

Furthermore, under our present agrarian policy, potato growers are entitled to protection against the ruin that awaits them in a free market under the laws of supply and demand. But they are hardly entitled to such protection through means that have already proved their inequity by saddling the taxpayers with a $500,000,000 expense in this one crop in 7 years.

No one likes Government controls such as the Lucas proposal envisaged, and the opposition of the potato farmers is understandable. Yet the fact remains that to guarantee price without at the same time controlling production, is to flirt with economic disaster by encouraging ever-increasing production.

As of today the Government has $3,600,000,000 tied up in crop surpluses. The figure might easily pass $6,000,000,000 in another year.

Under such conditions to insist that voluntary acreage reduction and marketing controls are sufficient, is like insisting on the pleasantness of the weather in the teeth of a northeast gale.

Potatoes at present occupy the news spotlight, but other crops press forward: the grain crops, cotton, pork, wool, eggs, butter, peanuts, and linseed oil. Are these products to follow in the way of the potato?

Are we to continue to give tight support to prices, while insisting on only the loosest of production controls?

If so, our entire farm program faces eventual collapse.

UNCLE DUDLEY.

Fear of Semisocialism Here Factor in Concern Over Britain

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. LeFEVRE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include an article by Mark Sullivan and an editorial, both appearing in today's New York Herald Tribune:

FEAR OF SEMISOCIALISM HERE FACTOR IN CONCERN OVER BRITAIN—MARK SULLIVAN SAYS REMEDY FOR UNEASINESS AT HOME LIES IN ELECTION NEXT NOVEMBER

(By Mark Sullivan)

The effect of the recent British election on relations between that country and ourselves will not be clear until we learn what course the Labor government is going to attempt in the light of its extremely reduced strength. The government's program is expected to become known when the House of Commons meets next week with the Labor Party's majority reduced to almost nothing. Soon thereafter one aspect of our relations with Britain will come up in our own Congress, when that body considers further aid to Britain (and other European countries) under the Marshall plan. On every occasion when aid to Britain has been discussed in Congress some Members have raised the point that our aid was helping a Socialist government remain in power.

The point is true, and the many implications of it that have been raised are true or tenable. It is a fact that our aid to Britain has enabled the Socialist government to remain in power. In a phrase of Winston Churchill's, Britain has lived "from day to day and hand to mouth" on help from the United States: cessation of our aid would have been followed by economic collapse that would have unseated the party in power. And the existence of a Socialist government in Britain has been a detriment and threat to the United States, for if a country so important in world trade as Britain should become completely and permanently Socialist it would be difficult for us to continue as a country practicing free enterprise.

HANDICAP TO AID POLICY

These and other points raised by Americans who have questioned our aid to Britain are valid. They have been a handicap to the Truman administration's Marshall plan policy, and especially to Republicans who have supported the policy in a bi-partisan spirit. While votes in Congress for Marshall plan aid have always been overwhelming, uneasiness in that body has been larger than vocal expression of it. Members have been silent for the sake of maintaining a united front for a vital foreign policy. And feeling among the people has been more extensive than public expression of it. Spokesmen of public thought have practiced restraint, in the spirit of amity toward Britain and mutuality between the two peoples. Public feeling, however, has tended to grow, and public expression of it may be appropriate and less harmful at a time when apparently the British people are receding from socialism.

The queries raised about aid to Britain are true or tenable. But another thing is true, and is paramount absolutely. We are engaged in, and are the spearheads of, world resistance to communism. In that resistance, Britain is our partner. The British resistance to communism is as wholehearted as our own—in the recent election no Communist candidate was successful, and the total vote for all Communist candidates in the country was a minute fraction of the whole.

Britain's partnership with us in world resistance to communism has been imperatively indispensable. If at any time during the past 5 years the British Government in power should have fallen, whatever party it belonged to, or economic system it practiced, the effect on world resistance to communism would have been an extreme calamity. We have been abundantly justified in giving aid to Britain to keep its economy working and its Government stable.

What we have here is not infrequent in many situations, public and private. We are under an imperative necessity to help Britain for a purpose paramount above everything else. At the same time this necessity is accompanied by an awkward condition. If for the sake of the necessity we do not take account of the awkward condition, there is no reason for not recognizing it intellectually.

PART OF CAUSE DOMESTIC

In the present world chaos are three ideologies—communism, practiced by Russia, socialism, practiced by Britain, free enterprise and capitalism, practiced by the United States. While Socialist Britain and capitalist United States are united against Communist Russia, there is a subordinate and latent difference between them.

The uneasiness we feel about this difference may not be caused solely by the fact that Britain is Socialist; part of the cause may be domestic. It may arise obscurely from the feeling of many that the administration in power in our own country is not as wholeheartedly free enterprise and capitalist as the

British Government is wholeheartedly Socialist. Our uneasiness may arise not exclusively from socialism in England, but partly from apprehension about semisocialism in the United States. The remedy for our own condition is not an election in Britain, but an election in the United States, such as will take place next November.

THE LAST WEAPON

Whatever the legal basis for Judge Keech's refusal to find the United Mine Workers guilty of contempt, however closely it may fit into or widely diverge from the precedents established by Judge Goldsborough and the courts which have reviewed his opinions, the hard fact remains that the miners have found a means of nullifying the injunctive proceedings established by the Taft-Hartley law—for the time being. And since time is of the essence in this national emergency, this victory for the miners, however temporary it may prove to be, has confronted the American people with extremely grave alternatives.

The union and the operators offer no hope of a settlement. The American economy is being strangled at an accelerating pace by continuance of the strike. Mr. Henry Ford has predicted that a mass shut-down of industry would be precipitated in 2 weeks unless coal supplies are forthcoming. To sit idly by while the Nation rushes toward catastrophe is unthinkable.

The last weapon remaining in the Government's hands is that of seizing and operating the mines. It is of uncertain value; in itself, it settles nothing, and may not even bring the men back to the pits. It places a heavy strain upon the American system by injecting the Government into the position of assuming the responsibility for the functioning of a vast field of private enterprise, and raises many questions, both of principle and detail. Some have advocated that the Government employ the opportunity afforded by seizure to force a contract upon the parties, or arbitration of the dispute. Others have urged that any profits from the operation of the mines be impounded during the seizure. If the Government is to act impartially under the circumstances—indeed, if it is to act at all—it will be plagued by many similar demands. The miners, the operators, the administration, the public must all regard seizure as a confession of common failure, a last resort.

Yet the prospect must be faced. The attitude of the administration toward the Taft-Hartley Act, consistently undermining its moral basis, refusing to invoke its provisions until time had nearly run out, affords almost no opportunity for further negotiation, or exploration of other legal remedies. The sole hope of averting the need for this expedient lies in a last-minute change of atmosphere around the bargaining table. Hitherto public pressure and legal pressure to that end has been unavailing; possibly the imminence of Government operation can still bring the bargainers to agreement. But the decision must come immediately, or the Government must step in.

Republican and Democratic Dinners

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to revise and extend my remarks, I include a letter from a friend and constituent of mine:

GOSHEN, N. Y., *March 2, 1950.*

Hon. KATHARINE B. ST. GEORGE,
Member of Congress,
Washington, D. C.

DEAR MRS. ST. GEORGE: I have just read your News Letter No. 56 and see that you mentioned the Republican box supper and also the Democratic Jefferson-day dinner.

To demonstrate the ethics of the party in power in Washington, I submit that it might be mentioned in one of your news letters that the Republicans had 12,000 diners at $1 each and paid the regular Federal admission tax of 20 percent on each admission, or a total of $240. In contrast, the Jefferson Day dinner had 5,300 diners at $100 each, upon which they paid toward the unusually heavy expenses of running the Government—nothing. They evaded the regular 20-percent Federal tax of $106,000 on these admissions by adopting the subterfuge of accepting contributions and then issuing complimentary passes to that dinner. No doubt it is a state of mind, but it certainly does not inspire confidence among the people.

The source of this is Time, February 27, 1950, page 20.

Yours sincerely,

JOSEPH W. R. DALLY.

Serious Unemployment Conditions in Lawrence, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following letter which stresses the fact that unemployment in Lawrence, Mass., is still in a very serious condition with thousands of the unemployed unable to collect benefits, due to the fact that their payments are exhausted. I sincerely hope that some relief will be accorded to these unfortunates by the Federal Government.

CITY OF LAWRENCE, MASS.,
City Clerk's Office, March 1, 1950.

Congressman THOMAS J. LANE,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN LANE: It has come to the attention of the City Council of Lawrence that Mr. Arthur W. Brown, area director of the Textile Workers Union of America, CIO, recently wrote to you and to Senators LODGE and SALTONSTALL, requesting you to take such action as you could to have an immediate survey undertaken of the unemployment situation in our city with a view of providing work relief to assist our unemployed workers in their present plight. Our city council desires to give this request its strongest support and to add its voice to that of Mr. Brown to urge the necessity for positive action to relieve unemployment conditions in our city.

As Mr. Brown has told you, conditions in our city today are worse in some respects and are causing more hardship than they were a year ago when unemployment reached its peak here with more than 20,000 unemployed at that time. At present there are probably still 17,000 to 18,000 unemployed but conditions are worse because more than 13,000 have exhausted their unemployment compensation benefits and are receiving no income today, while last year they were still eligible and were receiving unemployment benefits. Consequently the present plight of thousands of our workers is worse than it was a year ago.

This condition has been reflected in a most revealing manner in the demands upon our municipal welfare departments for assistance. During the month of January, 1950 our city disbursed more than $30,000 in direct welfare relief and an additional $20,000 for veterans' benefits, making a total disbursement of more than $50,000 in one month, or at the rate of more than $600,000 per year. By comparison, the total amount disbursed for public welfare and veterans' benefits in 1949 was $324,000 so that the demands for assistance have doubled in the past few months with every prospect of reaching higher levels unless employment in our mills increases or a relief program is provided.

We feel that conditions brought about by unemployment in Lawrence are more serious than ever before and that every effort should be made by the Federal Government to alleviate this situation either by channeling Government orders for textiles to our mills as we suggested a year ago, or by a direct work relief program.

The people of our city and the members of our city council believe that if only a small part of the billions of dollars being expended by our Government to rehabilitate western Europe and to subsidize farmers so as to maintain their income at the highest wartime levels were spent to purchase textiles from our mills, it would go far to relieve the distress which is so prevalent among our unemployed workers.

We know that you expressed keen interest in our unemployment problem last year and we trust that you will continue to do all in your power to have our Federal Government take effective and immediate action to relieve prevailing conditions in Lawrence and other textile centers of Massachusetts.

Most sincerely yours,

GORDON E. GAFFNEY,
City Clerk.

Federal Deposit Insurance Corporation Has Succeeded Because of Sound Management

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wall Street Journal of Thursday, January 19, 1950:

DEPOSIT INSURANCE

The joint Senate-House committee which recently reported on its study of Federal credit, monetary and fiscal policies, included an informative discussion of Federal deposit insurance.

Under present law the FDIC insures bank deposits up to a maximum of $5,000. This covers 96 percent of all accounts, but 54 percent of the total volume of deposits remain uncovered.

In case of a bank failure the deposits uncovered would seriously cripple a community. The large depositors are generally those establishments which have large pay rolls

which a failure would render them incapable of meeting.

However, the $5,000 limit has been almost purely academic and actually all deposits have been protected. This happens because the FDIC instead of waiting for banks to fail has anticipated matters and in case of a weak bank has brought about a merger with another institution. In doing that it has committed itself to financially supporting the merged institution to some extent but this has proved cheaper than the cumbersome process of receivership.

It is conceivable, of course, that if anything like the banking experience of the early thirties were to be repeated such operations would be beyond the capacity of the FDIC. If so, the $5,000 maximum would be the limit of the Corporation's power to pay off depositors. Then the disturbance to business life, resulting from the loss to larger depositors, would have its serious effect.

The committee suggests that Congress study thoroughly the advantages and disadvantages of increasing the coverage of deposits insurance and that no change be made in deposit insurance rates until after that study is completed. In brief the committee seems to raise the question as to whether it is better to lower the rates, a move often suggested, or raise the coverage.

We suggest that the amount covered by insurance will not be the determining factor in establishing the continued success of Federal insurance of bank deposits. That will be determined by the administration of the act.

When deposit insurance was suggested in 1933, there were many opponents, including the then Secretary of the Treasury, Mr. William Woodin. That opposition was based on the disastrous experience of State experiments in insurance of deposits.

After a decade and a half none of the bad consequences that the opponents foresaw have come to pass. But the reason they have not is that FDIC was soundly administered. It has not let weak situations accumulate but has taken care of them as they arose.

The earlier State insurance schemes failed because the administrators imagined there was some magic in the word insurance; that just insuring something was a guaranty against loss. The Federal administrators have realized that you cannot make a strong situation by lumping together a lot of weak units; that the strength of the whole structure depended on cleaning up weakness or on preventing it from developing.

The continued success of deposit insurance depends on the continuance of sound management. Changing the figure for covered deposits will not do much for it either way.

Clarification of the Purpose of House Joint Resolution 419—Alternate Capital

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 3, 1950

Mr. HOLIFIELD. Mr. Speaker, President Truman in his atomic-energy message to Congress October 3, 1945, said: "The release of atomic energy constitutes a new force too revolutionary to consider in the framework of old ideas."

It is in the spirit and meaning of the President's statement that I have tried to consider the problem of continuity of Federal leadership in the face of possible catastrophic obliteration of our National Capital by an atomic blitz.

The nerve center of Federal leadership is concentrated in Washington, D. C., or immediately adjacent to its boundaries. There is no doubt in my mind that Washington, D. C., would be target No. 1 for enemy attack. Paralysis of the nerve center for directing military and civilian movement in times of crisis is possible at the present moment on the basis of two undeniable facts:

(a) Concentration of the executive, legislative, and judicial functions of the Federal Government in one small area.

(b) Possession by a potential enemy nation of scientific weapons of mass destruction capable of destroying the Capital area.

I believe that it is imperative that Congress take cognizance of the problem which could be posed by possible enemy action. This is the problem: How can continuity of Federal leadership be guaranteed in the face of possible catastrophic obliteration of Capital facilities and key Federal personnel in the executive, legislative, and judicial departments of Government?

I am confident that calm consideration of the problem will produce a practical and workable solution.

I am also confident that the proper way to find the solution is to establish a commission composed of qualified Members to study the problem thoroughly and make suitable recommendations to the President and the Congress.

On February 20 I introduced a resolution—House Joint Resolution 419—proposing that a commission be created to investigate the measures which can be taken to insure the continuous operation of the United States Government in the event of attack by a foreign power. The commission would have two main fields of inquiry:

First. The feasibility of an alternate seat for the Government; and

Second. Appropriate procedures for selecting the successor of any President, Vice President, or Member of Congress who might become unable to perform his duties as the result of attack.

This resolution is receiving serious and careful attention by the departments and agencies of Government vested with responsibilities for the defense and security of the country. Many letters have come to me from persons who are thinking about the future of our country in the age of atomic science and the hydrogen bomb. Outstanding citizens within and outside the Government have responded favorably to the resolution. Newspaper editorial writers and radio commentators on the whole have been fair and intelligent in their analysis of the problems within the purview of the proposal I have made.

Understandably there have arisen a few misconceptions regarding this matter. Therefore, I lend my voice to those who plead for common sense and calm reasoning in these troublous times. I am not one who panders to panic. Nothing is more ill gotten than the publicity that plays on unreasoning fear.

My resolution does not contemplate removal of the Nation's Capital from its present site.

It does not advocate the relocation and dispersion of industry.

I am not suggesting that key executives and Members of Congress take flight from Washington, D. C., anymore than I am suggesting that the populace take flight from reason.

The burden of my resolution is a precautionary one. What measures are necessary to make sure that the machinery of government will not be paralyzed by a single knock-out blow? I propose that a small commission of responsible and informed citizens investigate and recommend to the President and the Congress the precautionary measures that must be taken.

An alternative seat of government to be used in the event of attack by a foreign power does not mean giving up our present Capital; it means simply that we must be prepared to carry on the operations of government from another place or other places in the event of sudden and drastic emergency.

To me it appears the essence of wisdom to take such preparatory steps. Unless we are genuinely concerned about the ways and means of maintaining continuity in the process of government, at some dark moment in the future we may be faced with complete and utter breakdown, our leaders gone, and our people panicked. Democracy then would disappear in the rubble. The greatest challenge of our times is the preservation of democratic government and institutions amid the awful and demanding pressures of the atomic age.

From a purely military standpoint, no doubt, the near-perfect defense would be the wholesale dispersion of industry and population, remaking the face of America on strategic defense lines without regard to the staggering economic costs involved or the devastating impact upon the lives and fortunes of its inhabitants. That is not the practical way, in fact, we would have to adopt the methods of dictatorship to attain this objective. For one thing is certain above all else; namely, that no foolproof defense can be devised against attack by the offensive weapons of our age. The most sensible thing we can do is to take vigorous defensive measures within the limits of our resources and our democratic institutions.

In stressing these limitations on defense, I do not for a moment imply that our case is hopeless; neither have I lost faith in the ultimate value of international organization for permanent peace.

What I do wish to convey—and this is the thought behind my resolution—is that we cannot shut our eyes to hard and dangerous facts; we must take the realistic measures for safeguarding the machinery of democratic government in the event of attack, even as we bend every effort to rendering such attack unlikely.

Civil Defense

EXTENSION OF REMARKS
OF
HON. EDWARD H. JENISON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. JENISON. Mr. Speaker, yesterday Mr. Paul J. Larsen became director of the Nation's civil-defense program. In this connection, under leave to extend my remarks, I wish to include a letter written by Mr. Edward I. Farley, of New York, a former naval officer, to the editor of the New York Times. Mr. Farley was at Pearl Harbor and was one of the very first Americans to fire a shot in World War II. An officer, he raced to an antiaircraft battery on his destroyer and fired at attacking Japanese bombers. There are many unsung war heroes. Mr. Farley is one of them.

The letter follows:

LACK OF CIVIL DEFENSE—EFFECTIVE PROGRAM FOR DEFENSE AND INTERNAL SECURITY CONSIDERED VITAL

TO THE EDITOR OF THE NEW YORK TIMES:

There is a serious—perhaps critical—gap in our national defense program. It is the absence of an adequate stand-by civil defense and internal security program. It is possible that a $7,000,000,000 military expenditure combined with an effective civil-defense plan could give us greater national security than we have now with an appropriation twice that size. Tragically little is being done to organize our civilian resources to meet the crisis that would result from surprise attack by Russia.

The Russians could deliver us, under the present circumstances of our civilian unpreparedness, a series of quick, paralyzing, and perhaps decisive body blows. They know that we are not prepared to meet such an attack and that it would be tremendously successful. This unnecessary exposure may not only someday induce Russian attack, but it aborts the security our national defense program is supposed to purchase.

Without proper civil defense, surprise attack would critically impair our ability to mobilize in time to help our allies. With the United States neutralized for even a few months, Russia would gain and consolidate her military objectives in Europe and Asia, with enormously enhanced chances of success. Our ability or our failure to weather succesfully the initial shock of surprise attack may easily be a decisive factor in the next war.

TIME FOR ORGANIZATION

Then why do we not have an effective civil-defense program? It is apparently felt in Washington that Russia does not want war and that we are not now in danger. Therefore, it is also apparently reasoned, civil defense is not necessary. Yet it would probably take 3 years to organize a civil-defense program to meet the kind of attack that Russia is now capable of delivering.

Many of our military leaders feel that civil defense is a civilian responsibility; many of our political and civilian leaders feel that it is a military responsibility. Obviously, effective civil defense must be the shared responsibility of our military and civilian authorities. The present administrative responsibility lies in the National Security Resources Board. This Board is responsible to the President, and for political reasons has long been without a chairman. The Board has only a small civil-defense staff and has not been able to adequately provide the civil-defense leadership nor to assume the responsibility in this matter that belongs to it.

Failure to give civil defense the part it should have in the over-all defense program is clearly largely the President's fault. He has ignored the one comprehensive study made on this subject, the so-called Hopley report prepared by a staff of experts under the late Russel J. Hopley, of the Office of Civil Defense Planning in the Secretary of Defense's office in 1948. He also ignored Bernard M. Baruch's suggested stand-by civil and industrial mobilization plan. Mr. Truman's views on civil defense are probably based on the hope that our $14,000,000,000 defense program will deter Russia from attacking us, and the view that civil defense does not make good political grist.

FEDERAL LEADERSHIP

A few States, such as California, New Jersey, New York, and Maine, are taking measures to provide civil-defense programs. However, an effective program requires that leadership originate and flow from Washington because of the required uniformity, flexibility, and coordination. The actual implementation and administration of the over-all specifications can and should be accomplished by the individual States.

The larger problem is how to awaken the President and the other responsible Washington authorities to the fact that we are wide open, and inviting trouble. As we now go, we are certainly not fooling Russia. We must not take false refuge in our inflated military budget, atomic bomb, B–36, guided missile, and all. We must recognize in our thinking and planning that the civilian and his family, the factory and its workers—the Nation itself—are exposed to direct and furious attack. Therefore, to deter Russia from war, to give us a better chance of winning if war should come, to get value received for every dollar spent on national defense—these things require without further delay an effective civil defense and internal-security program. It could be much later than any of us realize.

EDWARD I. FARLEY.

NEW YORK, *January 5, 1950.*

Danger in the Middle East

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1950

Mr. KLEIN. Mr. Speaker, a terrible danger to world peace is boiling and bubbling in the Middle East. The Arab states, particularly Egypt, spurred on by serious misjudgments by the British Government, devoted to humanity at home and to the exploitation of humanity abroad, are showing every sign of preparing to renew their war of annihilation against the Republic of Israel, while the cold war in Europe engages the attention of most Americans.

Under leave, I am inserting in the RECORD, first, an editorial from the New York Herald Tribune dated February 28, 1950, headed "Arms and the Middle East"; second, a letter addressed to me by Mr. Elihu D. Stone, national vice president, Zionist Organization of America; and third, a résumé of reports on the supply of arms by Great Britain to Arab states. In another place will be found the full text of the memorandum referred to by Mr. Stone.

I ask your particular attention, Mr. Speaker, to Mr. Stone's assertion that, indirectly, the United States is supplying arms to the Arab states.

[From the New York Herald Tribune of February 28, 1950]

ARMS AND THE NEAR EAST

The latest Israeli request for permission for export of arms from the United States and Great Britain illuminates the stark fact that there is no peace in the Near East. Britain, under her old treaties, has resumed the shipment of weapons to the Arab states; the United States has lifted its embargo on such exports in accordance with the UN decision, and has licensed some sales to Israel. An arms race is on in the wake of the Palestine war.

But as in all similar situations it is not the arms that constitute the real danger of war—rather it is the will to use them. Peace certainly would not be insured by continuing British military aid to the Arabs, while the Israelis were debarred from obtaining weapons from the west. It would not be forwarded if the United States and Great Britain were to enter into a competition to see which nation could supply the greatest amount of arms to the contending parties. Even a new embargo by the western powers, although it might reduce some of the tension in the Palestine region, would not necessarily remove the fundamental threat. Both sides would seek other sources of supply, and if they found them in the Communist bloc of states the situation would be worsened all around.

The real answer to the problem does not lie in any juggling of arms shipments but in the conclusion of peace treaties among the nations involved in the Palestine imbroglio. The present armistice must be replaced by a genuine agreement which will permit the necessarily slow growth of mutual trust and cooperation. A workable solution of the question of Jerusalem must be found, and the United Nations as a body, the United States and Great Britain as interested powers, must exert their influence to bring the parties to terms.

The armistice agreements give a practical basis for a settlement; there have been substantial advances toward resolving disputes over boundaries, the refugees, and the like. Both Israel and the Arab states have domestic problems which clamor for undivided attention, and make heavy demands upon all the resources of skill, energy, and wealth that are available. Neither side can hope to obtain more, in terms of national prosperity and stability, from war than it would achieve by peaceful methods; indeed, war promises only disaster. If peace, a real peace, were made the first objective on the agenda of Israel, the Arab states, the United States and Britain, the arms race would be relegated to a subsidiary importance, and would die away of inanition.

AMERICAN ZIONIST COUNCIL,
Washington, D. C., March 1, 1950.

Hon. ARTHUR G. KLEIN,
House Office Building,
Washington, D. C.

DEAR MR. KLEIN: I beg to be allowed the privilege of soliciting the exercise of your kind offices with reference to a problem in which American Jewry is deeply concerned—a problem of maintaining peace in the Near East—on behalf of the American Zionist Council, which consists of all Zionist parties and groups. The council includes the Zionist Organization of America, the Hadassah, Women's Zionist Organization of America,

the Labor Zionist Organization of America, and the Mizrachi Organization of America (Orthodox).

Through the United Jewish Appeal, of which the Honorable Henry J. Morgenthau, Jr., is general chairman, American citizens of the Jewish faith are contributing millions of dollars to the Jewish Agency in Israel for the work of immigration and rehabilitation of tens of thousands of homeless Jews from Europe, known as the DP's, and from other countries.

However, it is distressing to learn from authoritative and reliable sources that peace in that part of the world is being threatened by the unprecedented rearmament of the Arab nations, particularly Egypt and Iraq, and that the source of the supply of arms is Great Britain.

I am enclosing herewith a memorandum which recites reliable facts relative to the Arab rearmament and the part played in it by England, as well as its accompanying threat of war based on authentic information coming from official and semiofficial Arab sources.

A study of the memorandum reveals warlike intentions of the neighboring Arab states against the State of Israel. They are energetically preparing themselves for what the Arab press describes as a second round. The tremendous military appropriations in their budgets conclusively establishes extravagant military preparations on the part of the Arabs for action, and that action is intended against Israel, a fact which the Arabs do not conceal. The volume and the kind of arms purchased by the Arabs from England and other European nations cannot be said by any stretch of the imagination to be merely for the purpose of maintaining internal domestic tranquillity.

Our own country, the United States of America, is deeply concerned in the maintenance of peace throughout the world, including the Near East. It is recognized that peace is indivisible; an aggressive military act anywhere is a disturbance of the peace everywhere.

The United States, under the Atlantic Pact, is supplying arms and ammunition to the western European nations, including England, which constitutes, in effect, a replacement of the arms shipped by England to the Arab nations. In fact, we have reason to believe that a part of the surplus of American arms left in England is today in the possession of Egypt and other Arab states. Thus, in effect, the arms are being paid for by the American taxpayer and, indirectly, the United States is contributing toward the rearmament of the Arab nations. As a direct result, Israel is compelled to divert a large part of its financial resources for armaments in order to meet the terrible threat of war. Thus, an armament race between Israel and the Arab countries is in full swing.

I sincerely hope that, consistent with your official position, you will deem it proper to communicate with the Secretary of State, the Honorable Dean Acheson, to the end that this terrible armament race of the Near East, which broods no good for mankind, shall be stopped, and that you will be good enough to insert your statement to the Secretary of State in the CONGRESSIONAL RECORD.

Indeed, the Department of State is possessed of the appropriate means for the purpose of impressing England, and the other countries in western Europe, with the evil consequences of the delivering of arms to the Arab countries whose warlike designs against Israel are a matter of public record.

If it is the policy of the Department of State, for reason of security resulting from the cold war, to rearm the countries of the Middle East, then certainly Israel should be included. Indeed, Israel may well be regarded as a faithful and cooperative ally of the west. Surely, Israel is no less worthy of confidence than its neighboring Arab countries, whose record in World War II is a rather dubious one. Israel is the bastion of democracy in the Near East. The establishment of a balance of armaments between Israel and the neighboring Arab states would eliminate fear and restlessness, and help to bring about the execution of peace treaties between Israel and its Arab neighbors, as a substitution for the present armistice treaties.

Perhaps you may be interested in a speech which Senator HERBERT H. LEHMAN delivered on the subject of the rearmament of the Arab States, in the Senate, which appeared in the CONGRESSIONAL RECORD of February 27, 1950. You may also be interested to know that William Green, president of the AFL, and Philip Murray, president of the CIO, recently visited the President of the United States, protesting against the rearmament of the Arabs and requesting that Israel be supplied with arms so that it be placed on a par with the Arab States, who are being supplied with arms by England.

I respectfully suggest the advisability of making a statement on the floor of the House, in addition to the insertion of any communication that you may deem proper to forward to the Secretary of State, in accordance with your judgment.

We would be grateful to you if you will be kind enough to send us a copy of your communication to the Department of State.

I would be glad to come to see you personally if you find it necessary and if you let me hear from you.

Please accept our deep appreciation for your kind cooperation.

Respectfully,

ELIHU D. STONE,
National Vice President,
Zionist Organization of America.

REPORTS ON SUPPLY OF ARMS BY GREAT BRITAIN TO ARAB STATES

1. On June 9, 1949, a United Press dispatch stated that England had decided to lift the embargo on the supply of arms to the Arab countries.

2. Manchester Guardian wrote on June 18, 1949: "The decision of the British Government to renew her supply of arms to the Arab countries, while Lausanne talks are carried out, sounds like a threat."

3. Beirut broadcasting station (Lebanon) announced on September 4, 1949: "During the Palestinian War an arrangement had been made to purchase several warships. The embargo detained the sending of the ships. Now, the embargo being lifted, the ships are due in Egypt. One ship is harbored in Malta and is ready to leave for Egypt. Three other ships are still in British ports and will be leaving for Egypt soon."

4. Reuters quotes the Lebanese Defense Minister, Emir Arselan, as saying on September 6, 1949, that Lebanon has recently received from England 5 to 10 training planes. Another shipment is expected by the end of the month.

5. The Middle East broadcasting station announced on October 6, 1949: "The Syrian Government is contacting British aircraft manufacturers in order to buy airplanes from them. The Syrian Government also intends to send to England Syrian pilots to learn to pilot the jet airplanes."

6. El Misri (Cairo newspaper) correspondent in London wrote on October 17, 1949: "A British source indicates the arms purchase of Egypt in Britain to be worth the sum of £15,000,000."

7. The Daily Telegraph on October 27, 1949, said: "It was announced here today that the Egyptian Government has approved the purchase from Britain of 61 military aircraft. This total is stated to comprise 40 Spitfire models, 9 Halifaxes, and 12 DH-113 night fighters which were regarded here as a new type and hardly considered yet in the production stage. Egypt has a military mission at present in Britain. Spitfires are already in extensive use in the Egyptian Air Force which is cooperating today with the RAF in a major exercise for the defense of the Suez Canal. The prospective purchases from Britain are part of a plan approved in May to spend about £53,000,000 sterling on military equipment, including an armored division and an auxiliary air force. The Egyptian Government's intention to establish a factory in Egypt for the manufacture of 'fighter or Spitfire' planes and the agreement for this having been reached with a foreign government were announced in the senate here in July by the Minister of War and Marine Haydar Pasha. The proportion of the cost of the aircraft from Britain that may be assigned against Egypt's sterling balances is not mentioned."

8. The New York Times correspondent in London wrote on November 15, 1949: "The Egyptian Delegate in England has ordered a big order of jet planes of the latest types. The aircraft will be purchased from the DeHaviland Co. with the agreement of the British Government."

Retirement of Timothy W. Regan

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. TAURIELLO. Mr. Speaker, much has been said in recent years about the problem of juvenile delinquency. So often we label a young lad delinquent because he gives the normal response to an abnormal situation. Then he is thrown into a reformatory which is probably the most abnormal of all abnormal situations in the world and, while there, he learns to perfect his technique of giving natural responses to abnormal conditions. Then we wonder why it is so difficult for him to readjust himself to a new and different society after his release.

What needs to undergo reforming is not the boy, but the social, spiritual, and physical environment in which he finds himself. In my opinion, it is the parents who oftentimes need reforming.

On March 1, in my home town of Buffalo, Timothy W. Regan retired as deputy director of the City Court Division of the Erie County Probation Department.

He has been one of Buffalo's outstanding citizens and has rendered almost 40 years of service to his community and his country. He was among the first in Buffalo to realize that the best and cheapest way to cure juvenile delinquency is not to let it happen. He knew that by providing a wide variety of proper group experiences in wholesome circumstances and under proper supervision much of the so-called "juvenile delinquency" could be prevented. He was a pioneer in establishing youth organizations to provide wholesome recreation for the youth of our town.

He knew that the cure for juvenile delinquency lay in individual diagnosis and treatment, and in the thousands of cases that passed through his hands in

his everyday work he used that individual approach, and found it highly successful. He knew that unless properly handled, a boy's natural reactions may be the forerunner of a serious behavior pattern.

It has been a real pleasure and privilege to have known and been associated with Timothy Regan, and I hope that, even though age has forced him to retire from active duty, he will be kept on an advisory basis because his knowledge and experience would indeed be a great loss to our community.

I want to take this opportunity to extend to him my heartiest congratulations on his seventieth birthday and my very best wishes for his continued success and good health.

Under leave to extend my remarks, I am herewith including an article from the Buffalo Courier-Express in this connection:

REGAN RETIRING MARCH 1 FROM PROBATION POST—COUNSELOR OF 150,000 IN 36-YEAR CAREER

(By Wes Johns)

A man who has counseled an estimated 150,000 persons in their hour of need during the last 36 years will retire March 1 from public life.

He is Timothy W. Regan, deputy director of the City Court Division of the Erie County Probation Department, who reached his seventieth birthday February 12. Regan's long experience as a humanitarian and probation officer has earned him the title of "Buffalo's trouble shooter."

Casting a retrospective eye over the past during an interview yesterday, the veteran probation chief drew a comparison between the problems facing youth today and 3 decades ago. He also cited what he believed to be the four most important factors contributing to crime among the younger element today.

INFLUENCES TO CRIME

There, he asserted, are:

1. Environment: America has undergone great changes in 50 years, in many cases for the worse. Careless fathers and mothers who allow their children to roam the streets at night, broken homes and overindulgent parents contribute to crime.

2. Bad companions: This is an outside the home influence which may contribute to crime. Under bad companions may be listed both persons and books.

3. Neglect of religion: This may be followed by a total disregard for other sacred things and for the law. I have found the boy or girl who observes God's law is seldom charged with disobeying man-made law.

4. A general indifference by the community to the welfare of young persons: Members of the community will sit by and see questionable resorts spring up and not question them. Failure to wipe out vicious entertainment and failure to provide proper recreational facilities. We might better spend $5,000 for a playground than many times that sum for reform institutions.

NO CHANGE IN PREVENTIVES

In drawing a comparison between crime today and 36 years ago, Regan observed that most law breakers three decades ago were full-grown men of 21 and over.

Now conditions have changed so that it is not uncommon to see youths from 16 to 22 years old involved in felonies and serious crimes. While the age has lowered, there has been no change in the main preventive feature in crime.

"Proper parental supervision is the arch of youthful character for which no substitute has ever been found," Regan observed.

Boys and girls today, however, are pretty much the same as several decades ago, Regan believes.

During retirement, Regan plans to live an active life, in which fishing, walking, gardening and travel will be the principal ingredients.

"I'll see America first, then Europe," he said.

One of the city's wittiest and most polished speakers, Regan also will continue to make platform appearances.

INTERESTED IN SPORTS

Regan also expects to continue his interest in sports, which began when he pulled an oar on the 1914 West Side Rowing Club crew.

Regan was appointed probation officer November 14, 1913. By the unanimous choice of ten city court judges, he was made deputy chief probation officer December 20, 1927. He was appointed chief probation officer on the death of his predecessor, William E. Wiley, March 9, 1928.

Regan was the first Italian-speaking probation officer appointed here, and for 15 years he worked with the Italian people of the city.

Regan instituted many reforms including a prevention clinic. This has now become a fixed feature and the clinic, largely through Regan's effort, has been a means of saving many young folks from crime. It has also been the means of settling family disputes and keeping homes intact.

Regan has always emphasized that unclean literature has been a great factor in wrongdoing by young persons.

SERVES MANY ASSOCIATIONS

In 1944, Regan was voted a frontiersman by the Buffalo Chamber of Commerce. He has also been an honorary citizen of Boys Town for more than 20 years, also a sponsor of the Catholic Youth Organization of the Buffalo diocese, and a member of the Buffalo Boy Scout Council and Advancement Committee and his parish committee of the Nativity, Albany and Herkimer.

During the time Regan has been the head of the City Court Probation Division, approximately 97,000 persons have passed through his department, and $10,000,000 has been collected in fines, restitution and nonsupport.

The Medical Treatment Supplied by the Veterans' Administration for Veterans of the Seventh Congressional District of Alabama

---

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. ELLIOTT. Mr. Speaker, in these remarks, I desire to discuss the medical, dental, and hospital services presently being furnished to Alabama veterans by the Veterans' Administration. My emphasis will be on these services as they relate to veterans living in Blount, Cullman, Fayette, Franklin, Lamar, Marion, Pickens, Walker, and Winston Counties which make up the Seventh Congressional District of Alabama, which I have the honor to represent here.

VETERANS' HOSPITALS

There are presently three veterans' hospitals in Alabama, located at Tuscaloosa, Montgomery, and Tuskegee. A fourth Veterans' Administration hospital is under construction at Birmingham.

The hospital at Tuscaloosa, Ala., is primarily for neuropsychiatric cases but has an allotment of beds for general medical cases.

The hospital at Montgomery is for general medical cases only, but will in real emergencies accept other types of cases.

The hospital at Tuskegee, Ala., is maintained altogether for colored veterans. It accepts general medical cases and neuropsychiatric cases as well.

APPLICATIONS FOR HOSPITALIZATION

A. ROUTINE CASES

In a routine case—where an emergency does not exist—an application for hospitalization should be sent to the regional office, of the Veterans' Administration at Montgomery, Ala. There, the eligibility of the applicant for hospitalization will be determined, and his application sent to the proper one of the three hospitals. When a bed is available the hospital notifies the veteran to report.

B. EMERGENCY CASES

In an emergency case the veteran or his representative should telephone the hospital nearest to him. This may be done by the veteran himself, by his doctor, or by a service organization representative such as the representative of the State Department of Veterans' Affairs, the American Red Cross, the American Legion, the Veterans of Foreign Wars, the Disabled American Veterans, the AMVETS, and others. If possible, it is highly desirable that a doctor call the hospital so that he may professionally explain to the admitting officer of the hospital the nature of the emergency condition of the veteran.

OUT-PATIENT MEDICAL TREATMENT FOR VETERANS

The Veterans' Administration may authorize out-patient treatment for a veteran if:

First. The veteran has a condition which carries a service-connected rating. This condition does not have to be one that the veteran necessarily receives compensation for. The condition must be service-connected, but it may be a condition that has been rated as not disabling to a compensable degree.

Second. The veteran has a condition which may tend to aggravate a service-connected condition.

Third. The veteran is enrolled in training under the provisions of Public Law 16, Seventy-eighth Congress, and has a condition that would cause his training to be interrupted.

APPLICATIONS FOR OUT-PATIENT MEDICAL TREATMENT

The Veterans' Administration through its Montgomery, Ala., regional office, maintains suboffices at Decatur, Birmingham, and Montgomery. Veterans desiring out-patient treatment should contact the chief medical officer of the office serving his area. If the veteran lives in Franklin or Cullman Counties he would contact the Decatur, Ala., office. If he lives in Pickens County, he would

contact the Montgomery, Ala., office. If he lives in Marion, Walker, Winston, Blount, Fayette, or Lamar Counties he would contact the Birmingham office.

WHO GIVES OUT-PATIENT MEDICAL OR DENTAL TREATMENT

When a veteran has been approved for out-patient treatment he will be treated by either:

First. One of the subregional offices at Decatur, Birmingham, or Montgomery, each of which has medical and administrative personnel with which to handle out-patient treatments.

Second. Fee-basis doctors or dentists. Any doctor or dentist licensed to practice in Alabama may get his or her name on the approved list of fee-basis doctors and dentists by making application to the Veterans' Administration.

Third. Other doctors. If the veteran who is approved for out-patient treatment prefers that his treatment be given him by his family or home-town physician or dentist, he should make such request to the chief medical officer of the subregional Veterans' Administration office—at Decatur, Birmingham, or Montgomery—serving his area.

I am inserting as a part of my remarks a list of the fee-basis physicians and dentists living in the Seventh Congressional District of Alabama who have heretofore made application and been appointed as fee-basis physicians and dentists of the Veterans' Administration:

FEE-BASIS PHYSICIANS

Blount County: Dr. Vernon E. Whitehead, Blountsville, Ala.; Dr. J. S. Wittemeir, Cleveland, Ala.; Dr. M. Denton, Oneonta, Ala.

Cullman County: Dr. E. B. Barnes, Dr. Thomas D. Beatty, Dr. J. C. Chambliss, Dr. R. B. Dodson, Dr. C. E. Herrin, Dr. V. P. Hughes, Dr. Frank C. Stitt, Dr. Roy W. Williams, Dr. Robert F. Williford, all located in Cullman, Ala.; Dr. George T. Rowe, Hanceville, Ala.

Fayette County: Dr. B. W. McNease, Dr. J. Banks Robertson, Fayette, Ala.; Dr. J. D. Scrivner, Berry, Ala.

Franklin County: Dr. J. D. Burns, Dr. Clarence D. Prichard, Dr. J. S. Snoddy, Dr. Wm. H. Spruell, Dr. W. E. Wilson, all in Russellville, Ala.; Dr. Zadoc L. Weatherford, Red Bay, Ala.

Lamar County: Dr. Charles A. Davis, Kennedy, Ala.; Dr. John M. Robert, Vernon, Ala.

Marion County: Dr. J. O. Brooks, Hamilton, Ala.; Dr. Robert L. Hill, Dr. M. C. Hollis, Winfield, Ala.; Dr. M. S. White, Hamilton, Ala.

Pickens County: Dr. V. L. Ashcraft, Reform, Ala.; Dr. Lewis C. Davis, Gordo, Ala.; Dr. Hugh W. Hill, Carrollton, Ala.; Dr. Robert K. Wilson, Aliceville, Ala.

Walker County: Dr. James Andrew, Cordova, Ala.; Dr. Frank Blanton, Saragossa, Ala.; Dr. J. C. Gladney, Jasper, Ala.; Dr. Clarke E. Ginther, Gorgas, Ala.; Dr. A. C. Jackson, Jasper, Ala.; Dr. Bruce Johnson, Flat Creek, Ala.; Dr. Giles W. Jones, Parrish, Ala.; Dr. Giles W. Jones, Goodsprings, Ala.; Dr. Gaines W. Keith, Carbon Hill, Ala.; Dr. Karl E. Maneval, Parrish, Ala.; Dr. T. J. Payne, Jr., Jasper, Ala.; Dr. H. J. Sankey, Nauvoo, Ala.; Dr. John T. Simmons, Dr. William T. Snoddy, Dr. J. K. Taggert, Dr. L. M. Walker, Jasper, Ala.; Dr. H. S. Watkins, Oakman, Ala.

Winston County: Dr. Robert F. Blake, Dr. W. M. Godsey, Dr. R. Lee Hill, Dr. W. E. Howell, Dr. Hobson Manasco, Dr. Charles A. Oliver, Dr. William K. Wilson, all in Haleyville, Ala.

FEE BASIS DENTISTS

Blount County: Dr. John P. Brittain, Dr. Robert E. Brittain, Oneonta, Ala.

Cullman County: Dr. George W. Bledsoe, Dr. Leroy C. Bledsoe, Dr. Sidney H. Morrow, Dr. Elmer G. Plunkett, all in Cullman, Ala.

Fayette County: Dr. Horace E. Berry, Fayette, Ala.

Franklin County: Dr. Julius Y. Blake, Dr. Thomas S. Jones, Jr., Dr. Alonzo L. Owens, all in Russellville, Ala.

Lamar County: Dr. John L. Davis, Sulligent, Ala.

Marion County: Dr. Franklin M. Shirey, Winfield, Ala.; Dr. Henry H. Sizemore, Guin, Ala.

Pickens County: Dr. Lon Alexander, Gordo, Ala.; Dr. William H. Comerford, Reform, Ala.; Dr. James V. Sullivan, Aliceville, Ala.

Walker County: Dr. Doyce G. Briscoe, Dr. Dan M. Christopher, Dr. Malvern B. Cooper, Dr. Thomas D. Rice, Dr. Orland L. Rice, all in Jasper, Ala.; Dr. Samuel E. Knox, Carbon Hill, Ala.

Winston County: Dr. W. Stewart Brock, Dr. Fred Robinson, Dr. John W. Robinson, all in Haleyville, Ala.

MEDICAL EXAMINATIONS FOR RATING PURPOSES

All examinations for rating purposes are conducted either at a Veterans' Administration office, by a Veterans' Administration physician, or by doctors selected by the Veterans' Administration from the approved fee-basis list. The veteran is not allowed to select the doctor who examines him for rating purposes.

Mr. Speaker, as a part of my remarks I insert at this point a letter from Hon. Harley A. Smith, manager, the Veterans' Administration Regional Office, Montgomery, Ala., which deals exclusively with the subject matter of these remarks:

VETERANS' ADMINISTRATION,
REGIONAL OFFICE,
Montgomery, Ala., January 26, 1950.

Hon. CARL ELLIOTT,
House of Representatives,
Washington, D. C.

DEAR MR. ELLIOTT: I have delayed a few days in replying to your letter of January 18, but believe that I now have the information that you want.

In this letter I shall explain first the set-up for handling out-patient treatment and examination, and in the second portion a few comments about the VA hospital set-up within the State. Under both sections of the letter I shall refer principally to your congressional district, but will also give you a picture of the organization for the entire State.

I am sending along with this letter a map that shows the location of the Montgomery regional office and three VA offices under the jurisdiction of this office. In each of these VA offices we have a chief medical officer and other professional and administrative personnel to handle out-patient treatment and examinations for rating purposes and examinations to determine the need for hospitalization. The footnotes on this map explain the routing of requests for emergency medical treatment, as well as requests for hospitalization. I note that your congressional district falls into three different areas as far as out-patient medical service is concerned. The chief medical officers located at Decatur, Birmingham, and Montgomery will give prompt attention to requests received from any areas of the State. For purposes of administration and control, however, it is desirable to contact the chief medical officer serving counties within each subarea. For example, veterans living in Franklin and Cullman Counties will contact the Decatur office; those in Pickens County, the Montgomery office, and the remainder of the counties in your area will contact the Birmingham office.

It might be well to point out in this letter that out-patient treatment can be authorized only under certain circumstances. These circumstances are as follows:

(a) Treatment of any condition which carries a service-connected rating—whether it be a compensable rating or not.

(b) Any condition that may tend to aggravate a service-connected condition.

(c) For veterans who are enrolled in training under the provisions of Public Law 16, Seventy-eighth Congress, treatment may be authorized for any condition that would cause the veteran's training to be interrupted.

The coverage for handling out-patient treatment includes fee-basis and home-town doctors as well as VA medical offices located on the map. I shall explain briefly the set-up on fee-basis doctors and treatment by hometown doctors who are not on the approved list of fee-basis physicians.

(a) Fee-basis doctors: Any doctor or dentist who is licensed to practice in the State of Alabama is approved as far as the VA is concerned. To be on the approved list of fee-basis doctors and dentists, however, it is necessary that the doctors make application to the VA and be appointed as a fee-basis doctor. I am sending along with this letter a list of fee-basis doctors and dentists located in your congressional district. This list contains only the names of doctors who have made application and been appointed on a fee-basis.

(b) Other doctors: Doctors other than those listed on the fee-basis list may render out-patient treatment on request of the veteran concerned. If a veteran is eligible for treatment he may indicate to the VA that he desires the treatments to be rendered by his family or hometown physician. These requests should be made to the chief medical officers of the respective VA offices. The chief medical officer will then authorize treatments to be rendered.

In your letter you did not refer to medical examinations for rating purposes, but I would like to point out that a veteran may not select the doctor to perform this type medical examination. All examinations for rating purposes are conducted either at a VA office, by a VA physician, or by doctors selected from the approved fee-basis list.

With regard to the hospital set-up, there are three VA hospitals in the State. They are located at Tuscaloosa, Montgomery, and Tuskegee. The hospital at Tuscaloosa is primarily for NP cases, but has a certain allotment of beds for general medical cases. The Montgomery hospital is for general medical cases only, except, in real emergencies, other types of cases will be accepted. The hospital at Tuskegee is entirely for colored veterans—both general medical and NP-type cases.

Applications for hospitalization in routine cases where an emergency does not exist, should be sent to the VA regional office in Montgomery. At the regional office eligibility is determined and the application routed to the appropriate hospital. When a bed is available, the hospital then advises the veteran to report. In cases where an emergency medical condition exists, the nearest VA hospital should be contacted. The veteran himself, local doctors, or service organization representatives may call the hospital. It is more desirable, however, that a doctor call so that the nature of the emergency condition can be professionally described to the admitting officer at the hospital.

It is a pleasure to pass this information along to you. If I have failed to mention anything in this letter that you had in mind, please let me know.

Sincerely yours,

HARLEY A. SMITH,
Manager.

Revision of the Tax Laws

EXTENSION OF REMARKS
OF
HON. JAMES G. POLK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. POLK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the House Ways and Means Committee:

Mr. Chairman and members of the committee, I appreciate the opportunity of appearing before the House Committee on Ways and Means to urge favorable consideration of the proposal that certain wartime excise taxes should be completely removed or drastically reduced.

The excise taxes on such articles as ladies' handbags, luggage, cosmetics, baby oil, electric light blubs, electric and gas cooking appliances and water heaters, photographic equipment, furs, jewelry, and on such services as local and long distance telephone calls, telegrams, passenger travel, freight shipments and movie admission tickets were imposed as a wartime emergency measure to raise revenue and discourage sales to civilians of scarce articles and the civilian use of over-burdened public services, such as telephones, telegraph and railroads. It was not the intent of Congress at the time these war taxes were imposed that they be made permanent taxes on the American people. They were special emergency taxes for these two special purposes.

Section 1650 of the Internal Revenue Code (war tax rates of certain miscellaneous taxes) would have expired 6 months after the date of the termination of hostilities of the war.

I think it should be mentioned that our people would not now be burdened with these taxes had it not been for the action of the Eightieth Congress which passed H. R. 1030, a bill to continue in effect certain war excise tax rates. This bill passed the House of Representatives on January 29, 1947, as is recorded on page 727 of the CONGRESSIONAL RECORD for that date.

H. R. 1030, passed by the Eightieth Congress, amended section 1650 of the Internal Revenue Code, relating to war-tax rates of certain miscellaneous taxes, by striking out the provision that such taxes would expire 6 months after the date of termination of hostilities, thus continuing these taxes indefinitely.

Likewise, H. R. 1030 amended section 1654, the retail tax on luggage, etc., and section 1659, relating to the tax on billiard and pool tables and bowling alleys. This bill also amended section 3469 of the Internal Revenue Code (relating to the tax on transportation of persons).

Because of the action of the Eightieth Congress in continuing these wartime excise taxes on a permanent basis, it is necessary that we take action at this time to repeal them. They bear most heavily on that portion of our population least able to pay heavy taxes. These taxes have an adverse effect on retail business. They discourage sales of many important commodities and are imposed on many items that are necessities, not luxuries. I should like to point out the great injustice of levying a 20-percent tax on electric-light bulbs, on baby oil, and on movie tickets, to mention only three of the many unjust taxes that were continued by the Eightieth Congress.

There is another phase of this tax problem that I would like to discuss briefly—the tax on charity funds of fraternal orders. If you will pardon a personal reference, the Elks Lodge, of which I am a member, each year holds a charity ball to raise funds solely for the purpose of relieving distress and furnishing Christmas baskets to some of the less fortunate families of the community. I believe the present tax on charity funds is not in the public interest and should be repealed. I strongly urge your committee to relieve fraternal orders from this unjust burden of taxation.

In conclusion, I want to tell you that I shall support this committee's efforts in carrying out the President's recommendations and suggestions concerning the elimination of the tax loopholes which now permit some groups to escape their fair share of taxation. I fully agree with the President's statement that "The continued escape of privileged groups from taxation violates the fundamental democratic principle of fair treatment for all, and undermines public confidence in the tax system."

I hope you will succeed in your endeavor to plug all these loopholes.

Protect Those Jobs

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. SADLAK. Mr. Speaker, there is pending legislation before both Houses of the Congress which, if enacted into law, would continue to have the alarming effect that is stressed in an editorial from the Bridgeport, Conn., Post of February 28. I am one of those who is completely in accord with the provision of necessary protection to the industrial workers of Connecticut and New England whose jobs might be jeopardized because of the fact that our money sent abroad put into manufacture of products like those produced in our great Northeast could be sold in the United States at a much lesser price. This lesser price would be possible because the goods could be manufactured at a greatly reduced cost and imported into our markets with little limitation on the volume since our reciprocal trade agreements include no peril clauses; devalued currency in the foreign countries further lessens the cost of production as compared with our costs of manufacture.

Under leave to extend my remarks to include this editorial, I also take this opportunity, Mr. Speaker, to commend the Senator from Massachusetts for his stand in this matter, and I trust that he and many others will continue to be on the alert for statements of administrators and proponents of legislation in which they reveal the actual intent of the proposals which, unchallenged, would be the authorized purpose of appropriations when they became approved acts, and, as such, a detriment to jobs that presently have some semblance of security. The editorial follows:

PROTECT THOSE JOBS

Workers in New England factories have some cause to be grateful, we think, to Senator CABOT LODGE, of Massachusetts—brother of Congressman JOHN DAVIS LODGE, of Fairfield County—for the prompt and decisive manner in which he challenged the statement of ECA Director Hoffman that we must import floods of European-manufactured articles into this country to enable the nations of Europe to repay us some of the millions which we are pouring across the Atlantic.

Senator LODGE pointed out at once that this meant a sharp loss of jobs in our own country. If the European articles to be imported are similar to the ones which we make ourselves, their importation means an equal decline in the sale of American-made goods with a consequent loss of jobs in American factories. We all know what has happened already to the watch industry of Waltham, Mass., because of the flood of Swiss watches pouring into this country.

Instead of being refuted, Senator LODGE's charge was practically admitted by those on the other side of the debate when they suggested that the situation might be met by special provision for unemployment insurance on jobs lost because of imports and also for a Government plan to retrain the jobless for other lines of work. The Senator from Massachusetts at once retorted that our workers want jobs not doles.

As for retraining them now, why should they alone be forced to bear this dislocation? For that matter, why should the cost of financing Europe be borne, indirectly through loss of jobs and business, by one section of the United States—the industrial section? Perhaps the agricultural South and West are not particularly concerned, but they ought to be. A loss of purchasing power in New England would mean a loss of the market for other American products from other sections of the country.

It is encouraging to note from the tone of the debate which followed Senator LODGE's declaration, that his point sank home. Members of Congress as a group are not ready to sacrifice employment here for the sake of carrying out these world-wide schemes which always seem to begin by robbing American taxpayers, to pour their money all over the globe.

A Rational Approach to a Difficult Problem

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1950

Mr. KLEIN. Mr. Speaker, under leave I am inserting in the CONGRESSIONAL RECORD a communication I have received from Mr. Raymond M. Hilliard, chairman of the mayor's advisory committee on Puerto Rican affairs in New York City. I include the covering letter to me only to make clear the main part of the communication, which is a copy of a letter addressed to Secretary of Labor Maurice Tobin by Mr. Hilliard. To save space, I am omitting the list of members of the mayor's committee, except that I wish to mention that Mr. Manuel Cabranes, Director of the New York Office of Government of Puerto Rico Department of Labor, Employment and Migration Bureau, 1881 Broadway, is vice chairman; the membership is widely representative of New York's responsible public leaders.

To those of us who believe in an open door immigration policy, it is profoundly disturbing to be forced to advocate any kind of restrictions; and I present this

communication to the House as an example of a rational approach, devoid of hysteria and emotion, toward a most difficult problem of readjustment of underprivileged American citizens.

CITY OF NEW YORK,
DEPARTMENT OF WELFARE,
New York, N. Y., February 23, 1950.

The Honorable ARTHUR G. KLEIN,
The House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN KLEIN: The undersigned Committee on Puerto Rican Affairs was appointed by Mayor William O'Dwyer to advise him on all matters affecting the integration of Puerto Rican immigrants in New York City.

In matters requiring Federal legislative or administrative consideration, it is our intention to inform you, from time to time, of the findings and recommendations of this committee. A list of the membership of the committee is enclosed for your information.

At the present time we wish to call your attention to the enclosed letter to Secretary of Labor Maurice J. Tobin. In this letter we have set forth a strong representation to the Secretary on the Department of Labor's policies for the admission of migrant agricultural workers from foreign countries.

We are especially concerned that the Department's policies shall be modified to exclude workers from the British West Indies, unless it can be definitely established that no American citizens are available for this kind of employment.

We hope that you will agree with us on this matter which so vitally affects the interests of the people of New York City and Puerto Rico and that you will take appropriate action to support our position on it.

Very truly yours,
RAYMOND M. HILLIARD,
Chairman, Mayor's Advisory Committee on Puerto Rican Affairs in New York City.

CITY OF NEW YORK,
DEPARTMENT OF WELFARE,
New York, N. Y., February 15, 1950.

The Honorable MAURICE J. TOBIN,
Secretary of Labor,
Washington, D. C.

DEAR SECRETARY TOBIN: The undersigned committee has been appointed by Honorable William O'Dwyer, mayor of the city of New York, to look into the problems of the city occasioned by the concentration of Puerto Rican migrants, past and prospective.

In connection with our work, we have learned that large numbers of British subjects from the British West Indies have been admitted to this country for the past several years to perform seasonal agricultural work. Among the unemployed in New York are many Puerto Ricans and probably others who have had prior agricultural experience and who are readily available for the work performed by these British subjects. In addition, we are advised that unemployed agricultural workers in Puerto Rico are also available for this work. Aside from constituting a constant drain on Puerto Rico's economy, these unemployed United States citizens are the prospective migrants most of whom, if they decide to migrate, will settle in New York City.

The city of New York is not in any way attempting to discourage the free migration of American citizens. Those who desire to come will be welcome, as were their predecessors. But it is senseless to foster such migration by perpetuating a continued state of unemployment in Puerto Rico. This unemployment results from affording to foreign workers work which could be performed by capable and willing Americans.

We understand that you, as Secretary of Labor, have the ultimate determination of whether foreign workers are permitted to enter the country. You have publicly stated your position to be:

"The labor requirements of the agricultural industry are of such complex nature that it is not possible at this time to end our present arrangements for the use of foreign agricultural workers. This is not possible because it is necessary, as a part of our national economy, to have the necessary manpower available where and when it is needed to handle agricultural products."

Insofar as the above statement applies to Mexican and Canadian citizens, there may be special governing considerations. We strenuously urge that you reconsider your position concerning the British West Indians and, until it is affirmatively established that American citizens are unavailable in sufficient numbers to do the work required, we urge that British subjects be excluded.

The fact that 90 percent of migrating Puerto Ricans locate in the city of New York compels our interest in this matter.

We are communicating our point of view to all New York City Congressmen.

Very truly yours,
RAYMOND M. HILLIARD,
Chairman, Mayor's Advisory Committee on Puerto Rican Affairs in New York City.

Operators Used Taft-Hartley Club To Prolong Coal Strike

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial by Hon. James O. Monroe, which appeared in the Collinsville (Ill.) Herald, of which he is the publisher, on February 10, 1950:

HUNGER MAY FORCE THE MINERS BACK TO WORK, BUT THE TAFT-HARTLEY LAW WILL NEVER DO IT

For the first time in the history of the infamous Taft-Hartley law, a show-down on its power to compel men to work against their will is near—and it will fail.

On Monday, after months of unsuccessful negotiations with coal mine operators for a new contract embodying new demands, more than 400,000 soft coal miners of the United Mine Workers quit work, saying they would not return until a new contract was signed. Hunger may force them back to the pits, but the Taft-Hartley law never will do it.

President Truman reluctantly invoked the hated law Monday by appointing a board of inquiry, which is to report back to him within a week. The report may afford the basis for the President to ask a court injunction as provided in the Taft-Hartley law. The law was invoked against the miners nearly two years ago, and Federal Judge Goldsborough fined both the union and its president, John L. Lewis, heavily. Lewis ordered the men back to work, and they complied with the order. I predict that Lewis will not again order the men to return to work, and should he do so, I predict they will not heed the order. The die, I repeat, is cast for a show-down as to the force of the law, and the miners, I am convinced, will not heed it so long as there is a crumb of bread in the cupboard.

While Lewis can be fined, or jailed, and while the union treasury can be stripped bare under a Federal court order, there is no penalty in the law for the men who refuse to respect either the order of the court or the order of the union officials. Therein lies its fatal weakness. The law, as I have said before, amounts only to intimidation, not to coercion. Congressmen who framed the law, being more bent on breaking the unions than in the public welfare, had not the courage to put penalties upon the men who dig the coal, and even if they had imposed penalties, no coal would have been mined. Coal miners are rugged, and, while they might endure prison, they will not be slaves.

I discussed this eventuality in some detail—and prophetically—in the statement I made to the House Labor Committee in Washington last March.

"I do not want to be taken as an inciter to strikes or to defiance of the Government," I told the committee, "but I predict that under the present law there will be strikes where the men will not follow the orders of the officials who give them under court injunction."

"And," I added, "I suggest to you that in such event you will have left the Nation helpless."

A few minutes previously, I had said to the committee:

"The practical question, it seems to me, is whether or not members of a union are under any responsibility to, and therefore will respect, the orders of the union, particularly when the union orders are in contravention of the union's policy and are, moreover, delivered under duress of a court order. Neither the union laws, nor the statute, nor the court order suggests any such eventuality. So far as I can discern any inhibition in the law, the men can strike as quickly and as long as they please. And no matter how crippling a court order may be to the union, nothing is achieved for industrial resumption unless the men go back to work. One may say that the men have some responsibility to obey the orders of the officers, but the law does not say so, and Judge Goldsborough did not say so, and even if both said so, there is no penalty on the men if they refuse—which makes the law well nigh a nullity."

When I put this proposition to Senator C. Wayland Brooks, of Illinois, a Taft-Hartley champion, at a breakfast at Alton in October 1948 he admitted that I was correct, and when I said to him that the law which he had been touting to the voters was mostly bluff he did not dissent.

The miners appear prepared to call the Taft-Hartley bluff. They called Brooks' bluff in November 1948.

I lament as much as anyone else the distress of the Nation which will be created by this strike, but I applaud the courage of the coal miners in demonstrating the futility of the vaunted Taft-Hartley law.

Coal-mine operators last Thursday walked out of a final conference with the UMWA officials in Washington, hoping that this break-down of negotiations over the contract issues would lead the President to invoke the Taft-Hartley law 80-day "waiting period." This, if the men had respected it, would have given the operators the advantage of having the men continue to work for nearly 3 months more under the conditions of the old contract which has expired. That is the fundamental wrong of the Taft-Hartley law, that it continues the status quo which suits the operators and ignores the demands of the workers.

In my address to the House Committee I made a suggestion on this score, which the Taft-Hartley law supporters did not heed, but which now may get some attention. The suggestion was this:

"If you should be so enamored of the waiting-period idea, and whether you enforce it by injunction or by explicit statute, this suggestion comes to me as being worth tendering to you: It would be extremely soothing to men who have to work under threat of a penalty against their union for refusing,

if you would provide that whatever benefits they may eventually secure, through the negotiations which may ensue during the waiting period or after it, should be retroactive to the date on which the coerced period began. That matter of simple justice would appeal to the men, would allay their feeling of injustice and would, I think, facilitate settlement of disputes."

The coal miners by their strike are not likely to create any immediate sentiment for just treatment, either by the coal operators or by the Congress. Rather, they will be blamed entirely for the distress which a prolonged strike is bound to cause. Nobody ever seems to think of suggesting some coercion upon the operators, who only have to stand pat and let the miners take all the blame.

But the miners are willing to endure this censure, along with their personal distress. The only question now is whether their cash in hand or their credit at the neighborhood grocery will last as long as the Nation's coal piles.

Out of all the suffering, I think, will come a realization that industrial peace cannot be achieved by court orders. At least it will be seen that the present law, harsh as it is, is no stay against industrial paralysis. And the Nation then will face the choice of adopting Government controls which will encompass both employers and employees—the only controls that can be either effective or fair—or of undertaking to achieve conciliation with retroactive benefit provisions to make the settlement efforts more sincere.

Proposed Cuts in the Veterans' Administration Budget

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorandums sent out by the national rehabilitation commission of the American Legion regarding proposed cuts in the Veterans' Administration budget:

1951 VETERANS' ADMINISTRATION BUDGET

Submitted herewith is copy of a release being put out by the Veterans' Administration today announcing drastic personnel reductions throughout the VA system. This comes as a sudden blow since the VA budget request for 1951 as submitted to Congress does not reveal the necessity for such action. Apparently negotiations for additional funds have been going on which probably ended with a disapproval by the Budget Bureau. We interpret that the effect of this reduction will be the creation of examination backlogs in the regional offices and reduction in the scope of services rendered in hospitals. Another effect will be a demoralizing one upon the VA personnel; with consequent impairment of quality and output of work:

"VA today announced that a reduction in force of approximately 7,800 jobs will be made primarily in order to bring personnel within the provisions of the VA budget as submitted to the Congress for fiscal year 1951. The reduction in force also is prompted at this time to offset in part a shortage in salary funds for the balance of fiscal year 1950.

"The reduction will be Nation-wide and will include all activities of the VA. Some 3,000 employees in hospitals and homes, and 4,000 in other activities will be included.

"Managers of VA field stations Monday will be notified of their new personnel ceilings and notices of separation will be in the hands of employees by March 10, 1950, which will permit customary 30-day notice of separation. The reduction in force will be made under civil-service regulations.

"The VA explained that immediate action must be taken. Otherwise employment levels during the early months of fiscal year 1951, which begins July 1, 1950, would be above those for which funds would be available on an annual basis. Unless this step is taken now, more drastic curtailment would be necessary during fiscal year 1951.

"This reduction will not affect the VA new hospital construction program or plans for staffing these hospitals."

It will be recalled that 2 years ago a similar situation occurred which alerted the American Legion to go into action before the House Committee on Veterans' Affairs. Later the legislative and rehabilitation directors were heard by a subcommittee of the House Appropriations Committee. A deficiency appropriation was eventually approved which permitted a more gradual reduction and less impairment of services to veterans and less hardship in making necessary adjustments.

This office will appreciate getting full information about the effect of this drastic cut-back on the essential services to veterans in both regional offices and hospitals. The national commander has been notified and everything possible will be done to see that these essential services are maintained at a level traditionally supported by this organization.

T. O. KRAABEL,
National Director.

Here is text of statement being released by VA today with reference to personnel reduction. It is worse than we thought last night when I sent you the preliminary report:

"VA today announced that a reduction in force of approximately 7,800 jobs will be made primarily in order to bring personnel within the provisions of the VA budget as submitted to the Congress for fiscal year 1951. The reduction in force also is prompted at this time to offset in part a shortage in salary funds for the balance of fiscal year 1950.

"The reduction will be Nation-wide and will include all activities of the VA. Some 3,000 employees in hospitals and homes, and 4,000 in other activities will be included.

"Managers of VA field stations Monday will be notified of their new personnel ceilings and notices of separation will be in the hands of employees by March 10, 1950, which will permit customary 30-day notice of separation. The reduction in force will be made under civil-service regulations.

"The VA explained that immediate action must be taken. Otherwise employment levels during the early months of fiscal year 1951, which begins July 1, 1950, would be above those for which funds would be available on an annual basis. Unless this step is taken now more drastic curtailment would be necessary during fiscal year 1951.

"This reduction will not affect the VA new hospital-construction program or plans for staffing these hospitals."

In my best judgment this should become an objective of primary importance with the American Legion, especially after we have received reports from coworkers in the field as to the effect of these reductions upon the essential services to veterans.

We are preparing a bulletin which is being sent out to our regular mailing list asking them to keep us advised of the consequences they observe in the regional offices and hospitals in their respective areas. Another factor we have to look forward to is the demoralizing effect upon the employees with a consequent lowering of both the quality and quantity of work. We can definitely look forward to mounting backlogs of examinations, claims adjudication, waiting lists and even a shrinkage in the coverage of medical and hospital care, especially in the outpatient services.

T. O. KRAABEL.

A Cry of Despair From China

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. KLEIN. Mr. Speaker, under leave I am inserting in the CONGRESSIONAL RECORD a cry of despair from a desolate group of refugees from Nazi horror, now faced with Communist terror, huddled forsaken in Shanghai.

These are people who fled from central Europe, from one hell to another, hungry, bedraggled, but clinging to their faith in God and man, more than a decade ago, and still have found no haven—except for those who have found the final haven of death.

This message, presented in the quaint language of the original, was sent to the World Jewish Congress by the Migration Committee of Central European DP's in Shanghai, a last despairing cry for help.

If the undersigned committee hereby takes the liberty to approach you, it is primarily because we have learned from many a public utterance and action of yours in which high-minded way you have repeatedly taken concern in the needs and worries of your fellowmen.

We represent a group of approximately 900 central European refugees, all of which are eligible for UN-IRO assistance, that now here, due to circumstances, have gotten into severe economical as well as physical difficulties—if they are not indeed in great danger.

For years these people have had only one desire: To find a new home in the United States of America. They have so far failed in doing so, mainly on account of the quota system. For example, not a single Rumanian, Hungarian quota has been allocated to this refugee center and for the last 2 years not one person under the Czechoslovakian and Austrian quota has been processed.

During the Pacific war interned by the Japanese into a ghetto, their existences, hardly just and so painstakingly build up only, were destroyed again. Throughout this period actually the only hope that kept them up was the possibility to be given a chance at the end of the war for resettlement and rehabilitation in the land of their longing, the United States of America.

However, it was to come differently. Tragedies that can hardly be described resulted out of this quota system. Parents from their children, married couples, relatives, friends were separated or, after many years of separation, still are unable to achieve reuniting. But the law had to be abided by "Summum ius, summa iniuria."

American policy and law-making parties realized the cruelty of this system, and in a special DP bill in 1948 it was attempted

to eliminate its hardness. How abyssmal was our consternation, however, when we found out that our emigration center here had not been given any consideration whatsoever by said bill.

New hope arose, when we learned that a new bill (H. R. 4567), by an amendment, was to be extended, thereby also to become applicable to us, the forgotten ones here. There hardly are words suitable enough to describe our disappointment, when we realized a few weeks ago that the Eighty-first Congress again during its last session had deferred passing of the bill and that perhaps a decision would only be met during the next one. And this just at a time, when prospects to reach the United States of America by following the already above described—so difficult a routine procedure—had become still more remote inasmuch as the United States Consulate here discontinued to consider and deal with our applications for immigration visas, except for a very few special cases.

We fail to understand, just why this our small remnant group of approximately 900 people here, should deserve so severe a fate, especially so since this group in its composition in no respect is better or worse than those more fortunate ones that already found a new home in your country. Under halfway favorable and peaceful economic conditions, they would be able to support themselves, and the more so if their relatives and friends could lend them helping hands, as only parents, children, relatives, and best friends can do, who already got firmly settled in the United States of America.

The desire of our people here, to go to the United States of America, is however not only based upon ties of kin—and friendship, but on that security which is the natural result of such ties is making emigration to the United States of America so very desirable. We already branch out into the United States of America, and only there we shall be able to deeply root again, last not least also in ideological respect.

Considering general conditions here, our problem of emigration to the United States of America has now become more urgent. As a matter of fact, conditions, under which we now have to live, should justify special treatment of our group. Our people here, on account of prevailing economic conditions, are losing ground daily.

In this desolate situation, help only can come to us, if the United States consulate here would be instructed to further resume consideration of applications for immigration and processing of immigration visa cases. However, if furthermore sufficient quota numbers according to registration requirements could be made available for us, the whole problem could be solved easily and entirely, even without the earlier quoted bill and its amendments. Should our suggestion not be feasible it would be necessary that the State Department should instruct the consulate here to process our cases most expeditiously.

It is the time factor now, which is of such great importance for us. We are much afraid that the bill in question will only be brought up again toward the end of the coming session of the Senate, whereby we would have to wait for another indefinite period; and this waiting may be deadly.

We do not know to what extent you will be kind enough to help us with the many possibilities at your disposal. Please do consider this letter, in which we have rather elaborately outlined our situation, as an outcry for help. It is indeed much like a very last S O S of a shipwrecked crew, as we cannot believe that the Coast Guard would disregard any S O S just because its sender is not lawfully eligible to the Coast Guard's help. We can and will not believe that you and the American people will be unwilling to help us to reach the goal of our hopes for so many years and therewith be saved. On the contrary, believing in the high doctrines of America and in humanity and human rights, we have dared to write to you asking you for your so influential and valuable assistance.

In anticipation permit us to express our most heartfelt gratitude and to remain,

Yours very respectfully,

MIGRATION COMMITTEE OF CENTRAL EUROPEAN DP'S IN SHANGHAI-HONGKEW,
Dr. GEORG LOWENSTEIN, *Chairman*.

The Crusade for Peace Will Achieve World Government

EXTENSION OF REMARKS
OF
HON. CHARLES R. HOWELL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. HOWELL. Mr. Speaker, I ask unanimous consent to insert in the Appendix of the RECORD a copy of a radio address which I prepared for broadcast over radio station WCAU in Philadelphia on March 4, entitled "The Crusade for Peace Will Achieve World Government." The address follows:

The common people of the world, and of this country, today are banding together, some consciously, some unknowingly, in a crusade for peace. With every report of new and more horrible weapons of war, bigger and more devastating bombs, deadlier methods of destruction, the longing for peace grows stronger in the hearts of people everywhere. A striking indication of this was given last week in Britain, where political analysts credit a large portion of the high vote achieved by Winston Churchill's Conservatives to Mr. Churchill's proposal for new talks with the Russians, in a new bid for accord between the East and the West.

In this country Senators MCMAHON, of Connecticut, and TYDINGS, of Maryland, rejected the defeatist attitude that war is inevitable. Senator MCMAHON'S proposal, which aroused a great response, was relatively simple. He suggests a world-wide Marshall plan, with Russia included, in return for an atomic disarmament agreement. The Congress of the United States has been giving serious consideration at committee level to various proposals for strengthening the United Nations and creating an effective limited world government.

It is this last phase which I want to discuss at this time. Recently 105 or more members of the House of Representatives and a proportionately large number of Senators joined in introducing to the Congress a resolution which has become known as the world government resolution and which expresses as the sense of the Congress that it should be a fundamental objective of the foreign policy of the United States to support and strengthen the United Nations and to seek its development into a federation open to all nations with defined and limited powers adequate to preserve peace and prevent aggression through the enactment, interpretation, and enforcement of world law.

I joined in sponsoring this resolution because I believe world government would be a practical solution to the outstanding problems facing the world today. World government is practical because people have formed governments and federations of governments before and can do it again. To say, as opponents of the idea of world government have been saying with increasing frequency, that nations must learn to get along together before we try world government, is not practical. If peoples or nations could get along together voluntarily, there would be no need for government. Government provides the vehicle, the laws and their enforcement, that enables people to get along together. As I see it, the nations of the world are faced with the necessity of banding together or being destroyed or at least witnessing the collapse of the remains of democracy or free enterprise.

Extreme opponents of the idea of world federation contend that a world union must ultimately result in the abandonment of national sovereignty. This of course is not true, except in a very limited sense. In a world government each nation would retain complete control over its own internal institutions, governments, and policies. Only those things affecting the international relations of the federation would be subjected to international control. In other words, a little sovereignty would be sacrificed for a great deal of freedom—primarily, the freedom from fear. This would be achieved by laws to enable the world federation to deal effectively with the control of arms and aggression, and the enforcement of international law in these fields by a world court and a world police force, and no more.

Efforts have been made on the part of neo-Fascists and supernationalists to insinuate that the world government movement is composed of leftists who are bent on the destruction of the United States. The strongest rebuttal to this ridiculous charge is found in the names of the sponsors of the world government movement. Besides the Members of Congress who sponsored the world government resolution, which includes men of both parties and various degrees of conservatism and liberalism—excluding the extreme left—the theory of world government has been espoused by the American Legion, Kiwanis International, the Young Republican National Federation, the United States Junior Chamber of Commerce, the National Grange, and the legislatures of many States, to mention but a few.

Among the false charges which have been leveled at the world government movement are these: It would result in the reduction of American standards of living, curtailment of the liberties of our people, destruction of our free institutions, scrapping of the Constitution, abolishing the Army and the Navy, world taxation, free immigration and common currency. All of these charges are deliberately, or at best carelessly, false, with perhaps the exception of the contention that our Army and Navy would

be abolished. While they would not be abolished, they would eventually be reduced to a small force, adequate to deal with internal policing and similar problems. The prime purpose of world government is to promote international peace and harmony, and the only practical means of achieving this is by a central organization backed up by an international police force and a world court.

With the progress the world has made in the science of destruction, the peoples of the world are faced with this terrible alternative—amalgamation on a limited basis or annihilation. I, for one, favor at least a serious effort toward building the United Nations into a world federation.

Secretary Louis Johnson Reports That Without Impairing Our Defense He Has Already Reduced Civilian Employees by 151,542 Instead of the 135,000 Promised—He Now Advises That We Shall Soon See 100,000 Less Men in Uniform and Yet More in Combat Service

---

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 3, 1950

Mr. BOYKIN. Mr. Speaker, with such a record already established, the Members of this Congress—Democrats as well as Republicans—can well understand why the National Committee on President Hoover's Report on Reorganization of the Departments of Government has bestowed an award of merit and honorable citation upon Secretary Johnson.

Mr. Speaker, the Honorable John Steelman, assistant to the President of the United States, as well as the Honorable Lamar Caudle, United States Assistant Attorney General, both told me of a great speech made by Louis Johnson during a recent conference in the Department of Justice attended by the United States district attorneys. Both of these distinguished gentlemen were of one mind in stating that they had never witnessed an audience of lawyers more greatly impressed by any talk than was the group addressed by our great Secretary of Defense.

Lamar Caudle said Louis Johnson's talk moved him so deeply that, immediately upon returning to his desk he addressed a note of appreciation to the Secretary.

In his discussion with me he said: "Frank, please do not think me fanciful or extravagant in the use of language when I say that I shall remember that talk by Louis Johnson until the day I die."

Mr. Speaker, Lamar Caudle's remarks warmed my heart for I hold that America has no greater citizen, patriot, or public official than Louis Johnson.

Because of the esteem in which I hold him, I determined to get that talk and to read it to learn even more about my good friend and I want to tell you, the Members of this House, that it was an address that was not tongued but rather a talk that came right out of the heart of a great man.

I told my colleagues in this House about a year ago that there was no rabbit blood in Louis Johnson. I further stated that so long as the blood of life was in him he would fight for what he deemed was right and do so in the light that God gave him to see the right.

Mr. Speaker, Louis Johnson's first allegiance is to his country and then to his own conscience. Self-made, vigorous, it is inherent in him never to compromise—his opinions, yes—the principles of a life, never.

On many occasions when my good wife and myself sit alone in the evening reading of the day's happenings in the press, we have come upon things that have caused us to speak of the merits of our good friend.

More than once we have discussed the barrage of unfair criticism that has been directed at him because in his economy drive to attain a dollar's worth of value for every dollar expended it is well known to all that he has stepped upon the toes of certain self-seeking men who, without thought of the Nation's benefit, are concerned solely with their own personal preferment and well-being.

The multiplicity of caustic comments in the press has sometimes caused me to think that his critics have concluded they could obtain their objectives merely by creating a great product of repetition and of emphasis.

I often ponder on just what I would do were I to find wave after wave of attrition and vituperation hurled against me in an endeavor to turn me from what I held in my heart and conscience to be my bounden duty.

I remember only too well the manner in which Louis Johnson, as Assistant Secretary of War, fought with his back to the wall to mobilize the industries of this Nation against the day of inevitable attack from the gathering thunder of the Nazi hordes being mobilized for the conquest of Europe, if not the world.

The God in heaven alone knows how many American lives and billions of dollars were saved in World War II because of the action programs for preparedness that were launched and brought to fruition by Louis Johnson personally and unfortunately oftentimes fighting alone—for a preparedness program.

I was one among that great circle of friends the day he took his oath of office in the courtyard of that huge Pentagon. I remember that he that day pledged himself and the American people that when he assumed his office he would not alone achieve the unification of the armed services, strengthen the national defenses, but annually save a billion dollars by a more provident and judicious expenditure of the tax moneys entrusted to his spending.

Mr. Speaker, devotion to public trust and to public office will never die in these United States as long as men like Louis Johnson live and serve this Nation.

The talk that was made by the Secretary of Defense to the assembly of United States district attorneys was a great talk—homely, simple, truthful.

The world has enough men who are skilled in oratory and in rhetoric. It needs more men like Louis Johnson and his Army, Navy, and Air Force teammates—of innate character and abilities—simple men who have the courage of their convictions, the guts to do their duty as they see it, and who speak the truth.

Every promise of Louis Johnson to the American people has been more than fulfilled. Knowing of his growth in popularity among the common and the little people of this Nation, his critics in the future will not be unmindful of the fact that what Louis Johnson promises to accomplish, will be accomplished by him, and on time.

Mr. Speaker, I ask the unanimous consent of my colleagues to insert into the RECORD a copy of a letter sent to my good friend, the great Secretary of Defense by the Honorable Lamar Caudle on the occasion of his recent talk to the conference of United States district attorneys, together with Secretary Johnson's address on that occasion.

Secretary Johnson's speech was as follows:

Mr. President, Mr. Attorney General, distinguished guests, members of the Federal bar, and particularly you United States district attorneys, all of whom I understand are present, I am a little overcome by the kind words spoken by my friend the Attorney General. There was one thing I surely wanted to talk about today, and that was to tell you who work with him in the Department of Justice—the men who carry the burden for justice in the field—what I thought of Howard McGrath.

Won't you discount, more than just a little, the kind things he said about me because he's my friend and looks at me through rose-colored glasses? He looks at me with memory of the days from September 15 to November 2, last year, when the two of us worked closely together as men seldom ever do at what first seemed a hopeless and impossible task. But when I thought of the strength of the man in the White House and the courage of Howard McGrath, I myself acquired the courage and the strength to go ahead and do my part in that great campaign.

I know of no man for whom I have a deeper affection than for Howard McGrath. I know no man who is a better American. I thank God for what Howard McGrath accomplished as national chairman of the Democratic Party. I thank God that he now sits as the Attorney General, and I even forgive him for serving us a Republican box lunch here today instead of the meal I expected. I'm hoping that the people in the gallery weren't omitted on the box luncheons, as I understand some were at a recent one served here in Washington.

I should particularly like to talk to you lawyers about some phase of the law, but that's not what you expect of me here today.

I think I should first tell you that the defenses of the United States, as of today, are, in the opinion of the President of the United States, of the Joint Chiefs of Staff, and of myself, sufficient unto the needs of the hour.

May I take a little liberty with Shakespeare, the kind of liberty the New York Times takes on a quotation and say that "Time is out of joint. Oh cursed spite, that we are untimely born to set it right." I have had that sort of a feeling at times about the job of Secretary of Defense.

As the Attorney General indicated, criticism has been rough. I think the book, all the books, not alone the lawbooks, have been thrown at me since I have had this job. If there are any charges that could have been brought, false as they all have been, that haven't been brought, I don't know what they could be.

I see a number of you I've known a long time. I think to you in this room I can say that those charges, those investigations and those trials and tribulations haven't caused us to lose a single stride in the job which we were sworn to do on March 28 of last year. They might have but for one thing: and that is my experience in the period of 1937 to 1940 when I was serving as the Assistant Secretary of War. I was then charged by statute—with responsibility for current procurement and for industrial mobilization of the Ground and Air Forces. In my efforts to create an air force, and in my efforts to prepare the country for what I then thought was inevitable war, there were some real book-throwers and some real name-callers around. I lost sleep. I worried. Time, however, showed that we were not too far wrong in trying to build an air force, and in fighting for industrial mobilization.

In that period of 1937 to 1940, Howard McGrath, John Steelman, and I got vaccinated or inoculated, or something of the sort. Criticism has therefore not interfered with our doing the job some 16 or 18 hours a day and to the best of our ability. Moreover, we propose to continue to do so regardless of charges or criticism.

I want to report to you today—and the time is limited—as I said a minute ago, that we are ready to defend America.

I stated in a speech made in New York, I believe on December 7, that the first attack by the United States would be a counterattack. Someone else would have to commit the first attack upon us. That was said because you and I as Americans feel that way, because we seek no foreign soil or acquisitions and we want to make the maximum contribution to the peace of the world.

My title is that of Secretary of Defense. When George Washington asked for the first appropriation for the militia of the United States in his message to Congress, he said he wanted to create not a War Department or Defense Department; he said he wanted to create a peace establishment. So while we of the Defense Department talk about war preparation and readiness for war and defense, through it all we seek a plan to secure the peace—the peace of this country and the peace of the world.

In this seeking we know how certain of the world's nations feel about us. They do not seem to pull any punches in what they say in their unfriendly attitude to us and our way of life. Even if such countries had the will to make war upon these United States, I feel that today they do not have the capacity to do so.

Nevertheless, it is our job in the Defense Department to be so ready to return the first possible blow, if a blow must come to America in the form of aggression, that it will serve to make him who delivers it stop and look, think twice and not move.

In other words, our establishment of defense must first be so strong—in the conception of the President, the Joint Chiefs of Staff, and myself—that it will deter anyone who wants to start trouble in this world; and second, it must be so strong that if somebody does start trouble, there will be no question about America being the victor in the final outcome of that fracas. I want to put in the record of this distinguished gathering that the plans for the defense of America are so drawn and they have the unanimous approval of the President, the Chairman and the members of the Joint Chiefs of Staff, the Secretaries, and of myself.

We read in the paper that that isn't so, but it is, and as a matter of record, I declare it to be so.

Moreover, I want to say to you it is a balanced plan. It isn't a plan drawn by the Army, or a plan drawn by the Navy, or a plan drawn by the Air Force; it is a plan drawn by all three services which are ready to go at 5 o'clock in the morning.

May I say that the scale of that plan is one of defense, the defense of America, and further say to the assistant to the President of the United States, my long-time friend, you, John Steelman, that if the program of America were one of offense and conquest—we would need a larger Military Establishment than we need for defense and security.

Let us now turn to unification. I heard from about half of you, it seemed to me, in the unification fight before Congress last fall. Now let me tell you why you and I must have unification.

First, Pearl Harbor could never have happened if there had been unification. Unity of command and unity of purpose are needed for defense.

Second, we need unification to gain time. We have had months, a year and a half or two years before each of the preceding wars in which to work out our fighting plans and our joint programs. The would-be aggressor of the world would not be deterred one moment if he thought it would take America 3 months, 6 months, or a year after it struck for us to work out unification. There could be no readiness of the Defense Establishment if the three services were not united and agreed upon one plan ready for action at 5 o'clock or at 4 o'clock in the morning.

Third, we need unification to get greater value out of every defense dollar. A year ago in drawing the budget for the fiscal year ending June 30, 1950, the three services, after whittling each of their respective separate budgets down to what they thought was the minimum, asked for thirty billions of dollars for the defense establishment. For the fiscal year 1951 that starts July 1 the figures of the three services, when they came up to me, were for something over twenty billions of dollars. And those figures came up despite the fact that the three services were given but fifteen billion this year. Those figures had to be carefully scrutinized.

We of the defense establishment are convinced it does not do any good to have the best defense and the most efficient defense establishment in the world if in its building we use so much money as to wreck the economy and make fertile soil for the Communists to move in without fighting.

That is a basic reason why there must be unification.

Frank Pace, as Director of the Budget, knows that of about $15,000,000,000 over-all allotted to us this year, that we shall finish this year spending, I believe, in the neighborhood of a hundred million less than thirteen billion dollars, and because of that fact, for the year beginning July 1 we have asked for but $13,000,000,000.

Although we have talked extensively of economy, as I did myself but a moment ago, although the newspapers have made much reference to economy, I want to assure you that in our operations economy is of secondary import in the Defense Department. The first thing—the controlling thing—the impelling thing—is the security of the United States and the peace of the world.

Secondary to these comes economy.

When we made an announcement that we were going to let out a hundred and thirty-five thousand civilians—whom we did not need, the newspapers, some of them in your districts, said it was political—it would never be done.

As I came into the hall today, shortly after I left the White House, I received from my office the figures sent to me from the Pentagon on the number of civilians let out since this economy drive started. Instead of the 135,000 we promised, I am happy to tell you this morning that without injustice to anyone, without vacating a place where a man was needed for a job, we have, as of January 31 * * * let out 157,542 civilians, and the end has not yet been reached.

I want you to believe I hate to fire a man. I hate to see a man put out of a job. The defense of the United States is supposed to be ready and alert and those not needed for defense are of no help. We have found that in units where we have cut out 30 or 50 percent of the civilian employees, that unit now is doing more work and better work.

We have taken soldiers away from desks and put them in regiments with fighting troops where they belong.

For the fiscal year 1950–51 we plan to have 100,000 less men in uniform in our armed forces. We are able to effect such a reduction by improving our organization and our operations under unification. But here is the most significant feature. Despite these reductions we will have more men in combat units than we had before we decided we could lop off 100,000 without hurting defense.

Let me explain that to you—and while I have talked 25 minutes, may I not take 5 more?

I believe you would want me to talk frankly about this situation. Let me tell you really what the shooting is all about. The shooting doesn't worry us. We don't like it, but it doesn't worry us. We have but one potential enemy and I want to concentrate on our readiness to deal with him if we have to.

Let the newspapers say of whom they are speaking when they quote my remarks. I mention no names, but you all know of whom I speak.

Before unification each of the services would get dollars to do with what it pleased, even if they did exactly the same thing. In that way there was a surplus of some items and a shortage of others. The planning in one service was not made with reference to the other nor in reference to the potential enemy.

Long before I became the Secretary of Defense—under the wise guidance of my friend, Jim Forrestal, it was decided that we should measure the enemy, the one who might cause trouble, and then look at the defense of the United States in the light of that potential enemy and not on the basis of a scatter-gun defense everywhere against every country in the world.

In explaining what we discovered, imagine that well over there to the left divided into three panels.

Let me say, the first panel represents what you have to do at 4 o'clock in the morning if that enemy starts anything. That was something unanimously agreed upon long before I came to the Defense Establishment.

The second panel, and logically, you lawyers will agree, depicts what it would take to do it. That, too, was unanimously agreed upon, in one of the celebrated conferences, long before I came to the Defense Establishment.

Now we have two panels: (1) What you have to do; and, (2) what it takes to do it.

The thing depicted on the third panel down there was all but agreed upon when I came. Mr. Forrestal, who was to leave on May 1 instead of March 28, had hoped to stay to see that panel finished. Health, however, did not permit. That panel depicted who does it. That third panel was likewise unanimously agreed upon and signed up while Jim Forrestal was yet alive. I had the pleasure of reporting to him in the hospital that it was

agreed upon as he wanted, and I know that made it happier for him in his latter days.

That I submit to you as leaders of opinion throughout America, constitutes the intelligent defense of America. I submit to you, Mr. Budget Director, the observation that all of the money for national defense ought to go into the planning exhibited and depicted within these three panels.

We now have three panels: (1) What you have to do; (2) what it takes to do it; (3) who does it.

First General Eisenhower and then General Bradley, as acting chairman, and now chairman of the Joint Chiefs of Staff, contributed mightily to those conclusions, and both approve of them completely.

I get into trouble when I get over on the other side of the wall to a still fourth panel. It is so big that it might be said to cover the whole side of the wall.

That fourth panel includes things like we discovered at Sandy Hook—thousands of acres of land which we will never use again, together with coastal defenses. In that panel are depicted the forts of revolutionary days now in the hearts of big cities where they contribute neither to defense nor the tax rolls of the country.

In that panel are depicted two ranges in the West, one consisting of three or four thousand acres—both off the tax books. Either one of the ranges could satisfy the needs of both services operating them, and the other range with all of its personnel, could and should be eliminated.

Panel four further discloses two or three billions of dollars a year of cost that does not contribute one nickel to the defense of America.

My fellow lawyers, before you all, I renew my pledge—bring what it will, in criticism or in health, first to tend alertly and fully to the defenses of America; and, second, though it takes my dying breath, we are going to whittle out this wastage, this fat, this throwing away of the taxpayer's money, so that the defense of America will be obtained with simon-pure dollars.

In doing that, I serve my country. I serve my conscience, and no man, save the President, is going to stop that work and he won't because it has his approval.

Included in that fourth panel are the 18 hospitals that we closed or shut down in part at the beginning of last week. We are told that that saves twenty-five million. Actually, it is much more. How much more, I cannot tell you, but I will tell you why parenthetically: I asked for a report when I first went into the defense establishment as to the cost of the medical services and hospitals. I have it now in writing that they cost $126,000,000 a year.

With the present performance budget, Senator McCARRAN—which with the help of Herbert Hoover and Frank Pace—we got through the Congress (as part of the unification law), we now know that that figure isn't a hundred and twenty-six million— it's nearly five hundred million. Cutting out the 18 hospitals we do not need still leaves us 50 percent more beds than we need. (We will continue taking care of veterans—and adequately.)

At the same time it relieves between 450 and 500 doctors to take care of our shortage in doctors elsewhere in the armed services. I am looking at this staff of mine over here who are now wiggling around, and I want to say that in addition thereto, and they don't want me to say it; it lets out 11,000 more civilians, nurses, and other personnel that America needs and we don't need in the Military Establishment.

This is the sort of a job we are in and but a few illustrations of the many things we are doing in one element of this fourth panel.

Mr. Attorney General, there are those who say that America has reached its meridian. I am one of those that believe that with public servants like you and Frank Pace, and may I include myself somewhere in the rear guard of the group, that America is not at the meridian but, as Ralph Waldo Emerson said, "We are yet only at the cock-crowing and the morning star."

I think the getting rid of the wastage and the throwing away of defense dollars will long postpone our reaching that meridian.

I believe that America is but in its infancy. I believe that America, the greatest country in the world, has the responsibility which we are assuming in the Atlantic Pact, the military assistance, and what not, and for all those calculated risks we stand, but we stand also with adequate defense with simon pure defense dollars.

Please do not regard this as a speech. It is merely a talk to lawyers out of the heart of a harassed lawyer, but by one who here declares he is determined to do a good job. With the backing of the President, with the help of the Cabinet, the help of Frank Pace, the help of Congress and the support of the American people, I pledge anew that job is going to be done.

God bless you everyone.

Mr. Speaker, what follows is the letter from United States Assistant District Attorney Lamar Caudle, to the Secretary of Defense:

ASSISTANT ATTORNEY GENERAL,
Washington, D. C.

Hon. LOUIS JOHNSON,
Secretary of Defense,
Washington, D. C.

MY DEAR LOUIS: I cannot resist the urge to tell you how much I enjoyed the talk you finished but a few minutes ago. What the Attorney General spoke about you, I feel is reflected in the minds and hearts of a great preponderance of the American people.

Your equally splendid response clarifying so many important accomplishments already achieved in the Department of Defense—exhibits the splendid record that is being established in unifying the armed services of our country—coupled with an economy program never before equaled in Government administration.

It seems to me that the general consensus of opinion of those I have met from over the country is that President Truman could not have picked a finer, more capable, and determined citizen—to carry out the declared policies of the President and our Congress—than your own good self.

The common weal has tremendous confidence in your ability to secure the peace and security of our country.

The task now being finally nailed down has been a colossal undertaking.

I just wanted to pass these thoughts along to you. They have been in my heart for a long, long time. I do so in the belief that such things should be made known to one's friends because it adds encouragement as well as appreciation of work well done.

Good luck, and with fondest wishes always.

Sincerely and affectionately your friend,

LAMAR.

ECA Appropriations

EXTENSION OF REMARKS
OF
HON. HERBERT A. MEYER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. MEYER. Mr. Speaker, while we are monkeying around with socialistic schemes in this country and getting ready to vote more of the taxpayers' money for ECA spending in support of Britain's socialistic government, it is well to note what Winston Churchill said about that government just before the recent election. He stated:

They seek the dollars, they beg the dollars, they bluster for the dollars, they gobble the dollars, but in the whole of their 8,000-word manifesto (election platform) they cannot say "thank you" for the dollars. All of them said there would be anything up to 2,000,000 unemployed if it had not been for the American loan. Fancy the Socialist Government in England keeping itself alive economically and politically by those large, annual dollops of dollars from capitalistic America.

Yes, Mr. Speaker, and fancy the international "do-gooders" over here still persisting that we continue these "dollops of dollars" to keep socialism going over there.

Recently a letter came to my attention which, I believe, should have the consideration of all my congressional colleagues in connection with further ECA appropriations. It was written shortly before the British election by a Conservative member of Parliament to a taxpayer in this country. Under leave to extend my remarks in the RECORD, I quote an extract from the letter herewith:

LONDON, *January 13, 1950.*

I am contesting the Southampton test constituency, part of Southampton which has been divided since the election of 1945 into two constituencies; you will remember I represented the whole of Southampton in Parliament for 14 years. The chances I do not regard as being very hopeful for this reason: In spite of what Sir Stafford Cripps says, the financial position of this country is not improving. Last week he had a good deal to say about the gold and dollar reserves, but I see no chance whatsoever of these reaching what is regarded as the minimum reserve for safety between now and when Marshall aid ends—which I pray to God will not be renewed, as I blame America for financing socialism as it has done. Had it not been for this we would have had two million unemployed, and it is the opinion of many people that such a situation must arise before the country as a whole is brought to its senses.

Quite apart from the financial position, some of the principal unions—and, quite rightly so—are refusing to fall into line on the proposal for freezing wages, and I think this decision of the unions which was made this week, has been the deciding factor in having an early election. The Socialists want to get this over before the apex of the crisis comes upon them, which may not be until about June, and if the election took place then there would be no doubt that the Socialists would be heavily defeated but, coming on February 23, I am afraid the Socialists will be returned with a small majority—quite unworkable—and another election will follow in about 12 months' time. However, they can do an awful lot of damage in 12 months if they proceed with their further threats of nationalization.

America's generosity, which is unquestioned and undoubted, is going to prove to be a boomerang. I have always disapproved of American foreign policy, and it is now possible within the foreseeable future to appreciate the serious consequences of this and I cannot perceive any hope of a change or an escape from these so long as the Truman regime exists. You will remember that I said in more than one speech that it was necessary for America to take off her coat, roll up her sleeves and fight socialism now, not waiting until it had got a greater hold on the life of

the American people. Yet, little appears to have been done other than a spate of literature recently put into circulation. I would say that this anti-Socialist propaganda is at least 6 months too late.

I advised a meeting of bankers, financiers and economists that private enterprise would have to reorganize itself to meet the new world threat. Nothing seems to be being done in this connection. After all, what does the workingman want? He wants security and a decent standard of living which gives him a sufficient surplus to enjoy himself in quite a modest way, and if only private enterprise had appreciated its responsibility there was no reason why they could not have met these, what I regard as quite justifiable, demands and strengthened the capitalist free enterprise system. But no, someone is afraid of moving. Who is it? The money interests are strong, all powerful, but a united private enterprise effort I am certain could defeat this master control.

Relationships throughout the world are such that conditions now are worse than they were when Britain issued an ultimatum to Germany in September 1939—and the only reason that I attribute to there not having been several further ultimatums is providence. We are being given time to endeavor to realize our weaknesses but, instead of doing something about it, the diplomats' activities are, in my opinion, worsening conditions: Providence will not stand by us indefinitely.

Cold Wars Can Be Won

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Stewart Alsop:

[From the Washington Post of March 3, 1950]

MATTER OF FACT

(By Stewart Alsop)

COLD WARS CAN BE WON

At this dark turning point in the cold war, a sense of defeatism and impotence is spreading like a fungus throughout the Government, the Congress, and the country. Yet this is the richest and most powerful Nation on earth, standing at the head of a confederation of free and brave peoples. We need not be impotent, if we choose to use our strength.

George Kennan, the brilliant State Department planner, has written that, as a basic requirement for peace, we must create "a situation of fact" which will cause the Kremlin to reverse its policy and abandon its dream of world domination. It is absolutely clear that this "situation of fact" is not now being created. If it is to be created, how must our strength be used? To what ends must our efforts be directed? How much of our resources must be mobilized? The answers to these questions lie in the following program, which represents in rough dollar terms a sort of crude, simplified consensus of those experts who must now remain publicly silent.

The first essential is to meet the challenge of Soviet rearmament. The defeatists would have it that the military problem is insoluble. It is not.

In November 1948 the late Secretary of Defense James V. Forrestal presented to the President a military budget of $16,900,000,000. In the judgment of Forrestal, whose wisdom becomes more apparent with every passing day of folly, this sum was sufficient to give reasonable security to the United States. A further sum will be needed to help give our Allies that "sense of their own military security" which Kennan also postulates as essential to continued resistance to Soviet pressure. Over-all, in dollar terms, what is necessary is an increase in the annual military budget of five to seven billion dollars, tapering off as our Allies are rearmed.

The doctrine that this will lead to war is demonstrable folly. What will invite Soviet aggression—what has already invited Soviet aggression wherever it has existed—is weakness. This outlay will not provide the western confederation with aggressive strength, nor will it begin to match the military effort of the Soviet Union, whose whole economy is now dedicated to preparing for war.

Yet the aggressor, by one of the oldest and best military rules, requires a ratio of strength of 3 to 1, and the proposed outlay should thus be enough decisively to deter any aggressive Soviet adventures. Less than this, surely, the wealthiest, the most populous, the most productive nations on earth, cannot do.

In the political and economic sphere, the western confederation is quite as directly threatened as in the sphere of strategy and simple power. The economic insecurity of the British Commonwealth; the resulting British reluctance to participate in the organization of Europe; the consequent impossibility of building a structure into which Germany can be safely fitted—all these are problems as acute as they are vast.

Yet again, these problems can be dealt with. In the case of Britain, for example, it will cost this country 10 to 16 billion dollars annually to fill the power vacuum that will be created, if economic crisis forces Britain to go out of business as a world power. We have not got this capability. Yet the annual deficiency which is driving Britain toward this disaster for the whole confederation of the west amounts to no more than $1,000,000,000.

The contrast speaks for itself. But the essential point is that dealing with all these problems will mean, at least temporarily, further drafts on American resources. The time for half measures is past. The whole job, of building a solid structure in the west and dealing with Soviet expansion in Asia, must now be done, even if it adds a further burden of $2,000,000,000 or a little more per year, which is about the outside figure.

These measures, both military and economic, are essentially defensive. If Kennan's situation of fact is to be created, it is also necessary for us to take the offensive in the cold war, as the Soviet Union has consistently done since before the last war ended. The way to take the offensive is by a massive propaganda effort, combined with those clandestine methods which the Soviets are already using on a gigantic scale. If we enter this field of effort with energy governed by prudence, gradual but vital changes may be confidently expected in many different and crucial situations all over the world. For this purpose, something like $500,000,000 should suffice.

Stated in rough dollar terms, such is the hard program which the wisest of the experts privately but unanimously agree is required if we are to make a serious effort to win the cold war and thus secure a dependable settlement with the Soviet Union. If economies are not made elsewhere, as they certainly should be, the total effort would increase the budgetary imbalance between 8 and 10 billion dollars. But cold wars, like hot wars, cannot be successfully waged with one eye on the budget.

During the last war, the budget was unbalanced by $50,000,000,000 annually, yet we ended the war with our national income tripled, and our wealth increased. This is the correct perspective in which to see the problem. And just to make the perspective a little clearer, it may also be remembered that the penalty for losing the cold war will be slavery or death.

Outstanding Mining Leader, Harry Sears, Speaks on Gold as a Commodity

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. ENGLE of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an address delivered at the annual convention of the Colorado Mining Association in Denver on February 2.

The speaker, Harry Sears, of Angels Camp, Calif., is director of the California Gold Committee and president and general manager of Calaveras Central Gold Mining Co., Ltd. He is a recognized leader among mining men and is actively working to assist the gold-mining industry which has suffered greatly at the hands of our Government.

GOLD IS A COMMODITY

In opening this discussion of gold, we should first define what gold producers talk about. Gold, to us, is a commodity, just as wheat or corn or wool are commodities.

Gold did not grow valuable because it was a currency base; it became the backing for currency because it was valuable.

Because of its former use in coinage, and its present use as a reserve behind paper currency, great confusion has arisen as to the rights and powers of the Government with regard to gold, also as to the rights and privileges of gold producers. It has been the practice of the Government to broaden such rights as they had, and through opportunism and propaganda, to build up belief in the minds of economists, bankers, the general public, and even gold producers themselves, that the price and sale of their gold was limited by the absolute power of the Government, as expressed in the gold regulations of the Treasury Department.

Many economists, sympathetic to the present Treasury viewpoint, try to forget that gold is basically a commodity, with a continuous and expanding use in private enterprise. They also forget that all gold deposits are limited in commercial content. Once exhausted, the mine is permanently out of business.

The Government jealously guards its custom to supply this gold to industry at a prewar commodity price. Statistics on this use in industry are published in the annual reports of the Secretary of the Treasury.

In the 11 years 1919 to 1930 we find the industrial use of gold in the United States was 131 percent of the total United States gold production. During the years 1941 to 1949 we find that the industrial use of gold in the United States was 139 percent of the total United States gold production.

There is a statement in the report for 1930 which says:

"Gold produced from mines in the United States, unless exported or consumed in the

industrial arts, obviously adds to the gold monetary stock of the country."

Therefore, on the official admission of the Secretary of the Treasury, no gold produced in this country during these 20 years was added to the monetary stock.

There is, therefore, no question as to the status of gold as a commodity. What, then, about its price?

I attended the meetings of the International Monetary Fund, in Washington, last September, together with J. C. Kempvanee and George Nugent, of the California gold committee, we were present when Hon. N. C. Havenga, Finance Minister of South Africa, addressed his fellow governors. He stressed the importance of gold as a commodity. He was talking the same language which must be stressed by gold producers in this country. Our position is identical with his. He said:

"I do not think anybody can deny that gold is today the cheapest commodity in world trade. One searches in vain for one other commodity entering prominently into world trade which can still be purchased at prewar prices. The bulk of the world trade in gold is carried on in 1939 prices. * * * South Africa cannot continue to be the bargain basement of the world in order to maintain exchange stability for the benefit of all."

That statement reflects the position held by the gold producers in the United States.

GOLD PRODUCERS VICTIMS OF UNCONSTITUTIONAL TREASURY REGULATIONS

In an address here in Denver last January I presented some facts with regard to newly mined gold. We can better appreciate further development on the subject if I repeat several passages from that address:

"Gold producers are hampered by regulations dating back to that era when Congress was told to pass laws in spite of doubts as to their validity or constitutionality. If the law did not give the New Deal planners the desired freedom of action, this was achieved by a Department order, rule or practice, under pretense of authority.

"There is a vast legal difference between newly mined gold, a commodity, and government gold stocks for monetary use. Gold mines are held by their owners by direct grants from the government. Whether as claim location or as patented ground these grants are valid contracts, specifically conveying the gold, and they are property. Rights acquired against the United States, arising out of a contract with it, are protected by the fifth amendment of the Constitution which holds that no person—shall be deprived of property without due process of law, nor shall private property be taken for public use without just compensation.

GOLD IS PRIVATE PROPERTY

"All gold mines contain gold in its natural state: that is the condition in which the Government granted it to the owners, and that is the condition in which the gold producers find it. In or out of the ground it still remains the private property of the owners. Some gold may be retained in its natural state but usually gold must be processed to insure its recovery and avoid losses.

"When a producer is compelled to yield up any of this processed gold at a price fixed by the government, and is denied the right to seek another purchaser and receive a higher price, it is clearly a violation of his property rights guaranteed under the fifth amendment.

"There is now a steadily increasing market in this country for newly mined gold in its natural state. So far as the industry as a whole is concerned this is little direct help, for only a small part of the total gold production is in this form."

When gold producers are denied access to this market for their processed gold, because of arbitrary Treasury regulations, they are forced to take less money on their production. It is this loss which will now permit a gold producer to bring an action against the Government to collect and to change the gold regulations.

Consider the Gold Act of 1934 and its regulations. We are told that they are the rules under which we must operate today, but the validity of any law or statute must be determined not only from its words and phrases, but also from the intent of those who made it and likewise upon the basis of their legal power to write the law.

It, therefore, becomes important to review what happened in that period between the Presidential gold embargo, on April 20, 1933, and January 30, 1934, when the present Gold Reserve Act was approved.

When the embargo was first made there was a storm of protest from the mining industry, for here was an order to sell their product to the Mint at $20.67 an ounce when there were higher prices for gold in world markets abroad.

A BANKING, NOT A MINING ORDER

In construing the word "gold," in the first Executive order of 1933, the Attorney General held that this meant "gold coin," "gold bullion," and "gold certificates." It was, therefore, a banking and not a mining order.

On August 2 new regulations were made permitting sale and shipment abroad of "gold in its natural state."

Then on August 28 the President issued an order making it an offense with $10,000 fine or 10 years' imprisonment for exporting, hoarding, melting gold coin, bullion, or currency, all of which had to be turned into the Treasury at $20.67 an ounce.

But on August 29, the President issued an order that the Secretary of the Treasury was authorized to receive gold recovered from natural deposits in the United States, on consignment for sale, and that "such sales shall be made at a price which the Secretary shall determine to be equal to the best price obtainable in the free gold markets of the world."

As this was issued after the criminal order of August 28, it clearly shows that transactions in gold from natural deposits were recognized as private property, entitling gold producers to "just compensation" and a fair price.

On October 25, the President issued another order substituting the Reconstruction Finance Corporation as buyer. There was an opinion on October 22, by the Attorney General approving this, in which he said:

"Whereas there is no free market in the United States for gold newly mined in the United States; and

"Whereas it will aid in the creation of such a market if such gold be purchased in the United States; and

"Whereas it will further aid such market if gold, whether newly mined or not, be purchased abroad; and

"Whereas the public problem arising from the absence of a free market in the United States for gold newly mined therein, warrant action."

This was the status therefore, up to January of 1934, when there was some debate on the Gold Reserve Act in the Senate, practically all of which was on the subject of the $2,000,000,000 stabilization fund and its control by Secretary Morgenthau. There was no mention of mines or newly mined gold except references made to the special and privileged position of this newly mined gold, which was then being sold at world market prices, while the Government demanded that all other gold be surrendered at $20.67 an ounce.

In view of present higher prices for gold in other parts of the world and because of the growing market here for gold in its natural state, it seemed most logical that producers could get relief from the pressure of high production costs, which prevents most of them from operating, and that the Government would act, if these facts were brought before them.

During the months since that last Denver meeting there was earnest effort on behalf of gold producers and responsible banking and business leaders, devoted to presenting the case for a free market for newly mined gold before the Senate Committee on Banking and Currency. These hearings developed the opposition and brought it out into the open. It was expected that the Treasury would oppose the bills, also the State Department and the Federal Reserve Board. But there was an almost hysterical attack upon the bills and gold producers by a group of misguided economists and businessmen who are seeking to have paper money made convertible into gold at the present $35 price.

Members of this group still harp on the old threadbare formula that gold producers were granted a great gift of extra profits when the price of gold was set at $35. They have completely ignored the fact that the gold-producing industry, at that time, was in the doldrums because the old price had failed to keep pace with rising costs.

Let us examine the gold price in light of historical statistics. There seems to be little doubt that in a century the purchasing power of the dollar has dropped 77 percent. Assuming, therefore, that in 1850, its purchasing power was 100, the figure now is 23. In plain words the dollar today is worth 23 cents in terms of the 1850 dollar.

THE PRICE OF GOLD IN SHRIVELED DOLLARS

The price of gold was fixed at $20.67 in 1834. If the same dollar shrinkage existed before 1850, as afterwards, it had depreciated quite a bit by 1850, but assuming that it was 100 then, we find that gold which in terms of dollar value was $20.67 in 1850 had shrunk to $17.52 per ounce in 1870, that it was $14.37 an ounce in 1890, that in 1910 it was $11.22 and that by 1934 it had dropped to $7.47 and if the old gold price had continued it would have been $4.75 per ounce by 1950.

However, 1934 was the great year for gold producers, according to the crackpot economists. Gold went to $35 per ounce, although in purchasing power of depreciated dollars, it really only went to $12.64 and by 1950 that new price has become $8.04.

It's a strange thing that in discussing gold many people only think of its price and completely ignore its cost.

Let's go back along the line and look at some costs, gold mining labor in 1890 was $2.50 per day, for a 10-hour shift, in 1934 it was $4 to $5 for an 8-hour shift and today it is $10 to $12. Supplies now are generally 100 percent to 200 percent higher than they were in 1934, transportation costs are up almost 300 percent, necessary clerical work is up 500 percent and taxes have been raised 7,600 percent in the past 50 years.

To speak of convertibility of gold for paper money today, at $35 gold is a waste of words. A study of the basic thinking of our money masters in Government should show anyone supplied with normal intelligence, that this would be the last thing that they would consent to. They have sought to control gold for the purpose of centralizing their power and if the pressure for conversion gets too heavy it will certainly be at a higher dollar parity or a higher gold price.

GOVERNMENT DETERMINED TO HAVE MANAGED CURRENCY

At the recent convention of the American Banking Association in San Francisco, Allen Sproul, president of the Federal Reserve Bank of New York, stood on a platform backed by a large mural depicting the early California pioneers, boasted of being a native San Franciscan and of it

being the one hundredth anniversary of the discovery of gold in California, then proceeded to castigate gold money as something inferior to the brand of managed currency now forced on the public by the Government and the Federal Reserve. Sproul put emphasis on his complete determination that the people must have managed currency and that they were not to be trusted with gold. He spoke frequently of laws without apparent realization that his conception of the gold question was completely lawless. He calmly supported confiscation of gold.

The next exhibit in our collection of horrors is a statement by Thomas B. McCabe, Chairman of the Board of Governors of the Federal Reserve System. He recently replied to the Joint Congressional Committee on the Economic Report and said as to gold; "Proposals have been freely forthcoming from world gold-producing interests to raise the dollar price of gold. The dollar price of gold, however, is still higher relative to the general level of commodity prices, than it was in the 1920's and gold production remains above the level of that period."

Mr. McCabe's statement is false. In the 1920's the commodity level of gold was lower than other commodities, by comparison of the time its price was fixed, it had been static since 1834. As to present gold production in the United States, it is only 72 percent of the 1920's instead of being above the level of that period.

I believe the latest pronouncement from the Government on this subject is the report of this Joint Committee on the Economic Report, issued in Washington on January 23. In this they have adopted one of Mr. McCabe's statements, swallowing it hook, line, and sinker. They definitely turn thumbs down on gold convertibility but the words used are not an evidence of strength but of weakness. I will quote them:

"An overriding reason against making gold coin freely available is that no government should make promises to its citizens and to the world which it would not be able to keep if the demand should arise. * * * Return to the gold-coin standard would clearly expose the economy to the risk of a drastic and undesirable deflation at times of high speculative demand for gold for hoarding, or else the government would have to withdraw its promise of gold convertibility."

In short, they admit that they could not face a public accounting of their money stewardship.

These points illustrate the spirit of our money managers toward gold and the interests of gold producers. It would be idle to expect any help or justice from them. They have appropriated our private property for their own use and nothing but force will dislodge their grip on gold.

Fortunately for us, gold producers have that force available, and if we will demonstrate a percentage of the old-time guts which formed the background of this industry, we should get out of this mess. Our industry has been completely socialized. We were the guinea pigs and what happened to us yesterday may happen to any other industry tomorrow.

We are producers and wholesalers of a valuable commodity, at present being forcefully taken at an inadequate price. We have the right to seek protection against the unlawful seizure of this private property.

NO BASIS FOR TREASURY POWER OVER NEWLY MINED GOLD

It is a long established legal principle that neither Congress nor any agency of Government has the right or the power to fix the price at which the Government buys. Maintenance of this principle is fundamental to our free economy.

The gold regulations are a product of the Treasury Department and express the manner in which they wish to have things done. They have no legal force or effect if they overstep the power conveyed by the Gold Reserve Act.

The regulations fix the price and they also fix the compulsion to sell to the Government. They deny gold producers the right to sell their gold, processed in its extraction, to anyone but a mint, or one of their licensed buyers which makes him merely a branch of the mint for the purposes of a compulsory sale.

The fixing of the price plus the compulsion to sell amounts to the taking of property without just compensation. A definite violation of the fifth amendment of the Constitution.

The fixing of a proper price, at which the Government may purchase, is a judicial function and cannot be legally accomplished by Congress, which is the legislative branch, or by the Treasury, which is only an administrative branch. Neither of these possesses judicial power for such price fixing.

If we compare the basic world conditions now and as they were in 1933, there are both parallels and contrasts. World currencies are again devalued ahead of ours. The price of gold abroad is higher than in this country, but the rights of gold producers to receive world prices are not now conceded by the Government. In fact they are violently denied to us and such slight freedom as we have in the markets for gold in its natural state is clouded by Treasury propaganda and threats to change these regulations at any time.

JUSTICE FOR GOLD PRODUCERS

There are two solutions to our problem.

Step 1: Proceed against the Government in the courts, with several distinct cases each having a different set of circumstances. We would thus seek a clear-cut decision defining the property rights of gold producers to mine and sell their product. The precise questions we are raising have never been before the courts. There are no legal decisions against the gold mining industry. We have accepted the power of Government without question, like a lot of sheep. How much longer will we submit to this?

Step 2: Cooperate, under a new and honest set of regulations with the Treasury Department, and sell our product to them provided they pay us the current world price. They could do this now, at any time. They have ample authority under section 3700 of the Gold Reserve Act of 1934. With the approval of the President the Secretary of the Treasury is authorized to purchase gold in any amounts, at home or abroad * * * at such rates and upon such terms as he may deem most advantageous to the public interest * * * any provisions of law as to parity, to the contrary, notwithstanding.

The Government did this in 1933 under the Presidential order of August 29 and their legal right to do this was confirmed by the opinion of the Attorney General which I have quoted.

The Government may not yet be ready to grant us the benefit of step 2, but they may be willing to do so if we proceed diligently under step 1.

The California Gold Committee is a group representing diverse gold producers' interests. Its functions are to coordinate the efforts of the industry so that they may be more effective through group action than by the efforts of a single producer.

We charge no fees, we are not a membership organization in competition with other groups. We seek no profits.

We have made research regarding the soundness of our program, have provided competent legal counsel in Washington and we have developed avenues for practical relief for the gold mining industry, along two lines.

The first being to get redress through court action against the Government for the loss and damages caused by the closing down of gold mines under L208, an illegal order, which was a studied crime against gold producers.

Two claims have already been filed in the Court of Claims of the United States, under this heading and others are being processed.

The committee would be glad to have inquiries and suggestions from those interested in this subject. Gold producers who have suffered money or property losses are invited to submit an outline of their cases to us. We would thus be able to give advice as to the most effective procedure.

Our address is, California Gold Committee, Auburn, Calif.

Gold mining has had a particularly raw deal but it is not the only branch of the mining industry that is in trouble. Seventy-three percent of all metal mines operating in 11 Western States in 1940, are now closed down. This shut-down is due to world and sectional politics. Much of this could have been avoided if mining people had been more alert but we have been too much engaged in the details of our own affairs and have been inclined to avoid politics.

That must be changed. Whether we like it or not, we must get into politics and the thousands of people in our communities must be enlisted to support us. Likewise, the thousands of stockholders in our enterprises, who now suffer with us, must be alerted to the end that we become articulate.

We must recognize and support our friends and root out of office those politicians in whom we trusted, but who have helped or permitted the mining industry to be brought down to the desperate level it now holds.

Education for Freedom

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, March 2 (legislative day of Wednesday, February 22), 1950

Mr. MARTIN. Mr. President, in behalf of the senior and junior Senators from Kansas [Mr. SCHOEPPEL and Mr. DARBY], the senior Senator from Pennsylvania [Mr. MYERS], and myself, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Education for Freedom," delivered by Dr. Milton S. Eisenhower, president of the Pennsylvania State College, at the forty-first annual dinner meeting of the Pennsylvania Manufacturers' Association, in Philadelphia, on February 28, 1950.

I am informed by the Public Printer that this manuscript is estimated to make approximately two and one-half pages of the CONGRESSIONAL RECORD, at a cost of $205. Owing to the importance of the address, it being a discussion of the objectives of a liberal arts college, I believe the Members of the Senate will be very much interested in reading it. It is for this reason that I am asking that the address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EDUCATION FOR FREEDOM

I am deeply grateful for the honor you do me tonight, and for this demonstration of the friendly spirit of Pennsylvania. It is

more reassuring to me than perhaps you envisaged when you invited me here.

The Kansas from which I come retains many of the attitudes and characteristics of the frontier. I've grown accustomed there to a candor and a relaxed friendliness which might easily be lacking in an older society with deeply rooted traditions. If I had any misgivings about moving from Kansas to Pennsylvania they were that I might, temporarily at least, feel a stranger to the more formal atmosphere and conservative demeanor of this great Commonwealth.

You have convinced me of my error. You have done so not only by the cordiality of your welcome but by the fact that, tonight, you are proving yourselves to be as casually irreverent of tradition as any western pioneer could desire.

For you are shattering one of the most cherished traditions of American higher education. A newly elected college president is supposed to slip quietly into office and spend several months in seclusion on the campus, after which he is formally inaugurated with pomp and ceremony. Only then does he announce his educational philosophy and aims. What you are doing tonight is so lacking in precedent that I'm hard put to find a name for it. Certainly this occasion is not an inaugural; that, I suppose, will occur for me a good many months hence. Perhaps it can best be characterized as a preinaugural, similar to the orientation and testing program to which we modern educators subject freshmen before we permit them to enroll.

However it is classified, I must say that it is a pleasant experience, and I shall respond to your pioneering generosity by doing a little pioneering of my own. I, too, shall ignore tradition by stating, as frankly as I can, and before I have had an opportunity to become acquainted with my forthcoming responsibilities, my views on the responsibility higher education has for protecting, developing, and spreading the blessings of democracy.

Now, education is not a cloistered enterprise, comfortably removed from the turbulent streams of our social, physical, and spiritual life. It is an essential part of that life. For whatever glorious triumphs we of the United States have achieved, education must be given part of the credit, and for whatever failures we have experienced, education must be assigned part of the blame. Education deals with the life of the mind, and a free society rises or falls by the quality of thinking of all its participants.

This means that education must be adaptable to changing social conditions. Ideally, sound developments in education should precede social change. Ideally, we should, as a society, think before we act, using that rationality which education is concerned to develop as the driving force of progress. But this has not always been so. It has not been so, I think, in our own time. Most of us in American education are acutely aware that it has lagged behind social adjustments caused by an advancing technology—which is to say that these adjustments have been, quite often, irrationally made. They've been made, and are now being made, without sufficiently clear conceptions of the goals we wish to achieve, the values we wish to preserve or create. It is our awareness of this fact which has sparked the revolution now under way in most of our institutions of higher learning, from Maine to California, from Montana to Louisiana.

This is the second major revolution in American higher education.

The first occurred during the Civil War. That was a revolt against the restricted classical concept of higher learning, based on Greek and Latin and designed for the cultivation of a privileged class. We imported this type of education from Europe and maintained it here for many years despite the fact that it not only failed to contribute vitally to democratic development but actually, in many ways, hindered that development.

Our democratic system sprang directly from basic moral conceptions. Great ideals of human dignity, mutuality in human relations, and individual liberty motivated a social system in which social power was shared by all the people. The people were to employ this shared power to promote the common good as well as the individual good. It was a system requiring an intelligent, well-informed citizenry, each of whom realized that he was, in his capacity of free citizen, both governed and governor.

It was, perhaps, easier to meet this requirement in the early days of America than it is now. Our democracy began in a simple agrarian environment. There was a minimum of economic interdependence. True, there was a lower level of popular education; but social problems were also simpler, for no man's problems and outlook were greatly different from those of his neighbors. The average citizen mind could encompass most of the factors which must be considered in the determination of public action.

Yes; democracy was easier in those days—and it was Thomas Jefferson's realization that industrialization would make democracy more difficult which determined his initial hostility to the encouragement of manufactures. In 1787 he contended that popular government would survive in the United States "as long as agriculture is our principal object," a statement indicating at least a latent despair of democracy should industrialization proceed too fast and too far. Later, however, he modified his views. He came to regard increasing industrialization as a challenge which democracy could meet successfully, providing people generally achieved an ever-higher level of education and understanding. It must be, he saw, an education which encouraged a profound commitment to freedom while developing the skills of creative compromise.

Convinced that education is the greatest single guaranty of freedom, Jefferson helped establish the University of Virginia, whose charter declared that education must—

(a) Expound a sound spirit of legislation which leaves the individual free to do whatever does not violate the equal rights of another;

(b) Harmonize and promote the interests of agriculture, manufactures, and commerce;

(c) Develop the reasoning faculties of youth, enlarge their minds, and instill into them the precepts of virtue and order; and

(d) Form them to habits of reflection, rendering them examples of virtue to others, and of happiness within themselves.

Unfortunately, these goals for education were not widely adopted in Jefferson's time. Particularly were the first two goals neglected. Obviously, these goals implied widespread popular education and an education related to the vocational interests of the masses of the people. Yet higher education continued to be the prerogative of the few; it continued to be focused on Greek and Latin and pointed primarily to the learned professions of law, medicine, and theology. The masses of the people remained unenlightened, and distrusted the educated few.

Meanwhile the American environment was being vastly changed. An industrial democracy was developing. The percentage of people engaged in farming was decreasing while that engaged in manufacturing, trade, transportation, personal services, and professions was steadily increasing. Economic self-sufficiency was beginning to disappear. Men began to specialize, and to encounter wholly new physical and social problems, for which few seemed to have answers. A rapidly increasing population was not attaining the level of education and understanding which onrushing events made essential. Certainly a purely classical education for a relative few did not suffice. Education was failing, and failing desperately, to contribute to democratic development.

It became increasingly clear that college education must be popularized; it must be placed within the reach of large numbers of men and women; it must concern itself with their vocational interests and needs; it must help find the answers to perplexing physical problems, such as that of a rapidly declining soil productivity. The price of failure to develop this kind of education seemed, to many serious thinkers, the ultimate collapse of the democratic system.

Accordingly there developed, in the administration of Abraham Lincoln, a new charter for American education. It was the Morrill Act of 1862, establishing the land-grant college system of which Kansas State College and the Pennsylvania State College are a part. Through it a major step was taken toward the realization of at least a part of Jefferson's charter. The land-grant colleges did breathe forth a spirit of democratic legislation, laying great stress on individual enterprise and individual liberty. They did strive—and with remarkable success—to promote the interest of agriculture, manufactures, and commerce. Gradually, in research, resident instruction, and extension, they helped solve vexing problems and provided the answers to vast numbers of people in all the States.

At that time, with interest focused on physical development, the other goals in Jefferson's charter did not seem as important as they do today, especially the goals of developing reflective thinking and harmonizing the interests of specialized groups. But I shall return to this point shortly.

The establishment of the land-grant colleges initiated a chain reaction. The new concept of higher education rapidly overcame the contempt of the classicists who, to begin with, had felt that science was not worthy of a place in universities and that it was not quite respectable to be, say, an engineer. The new colleges made science a partner of the farm and the industrial classes, and demonstrated that higher education could contribute directly to man's economic advancement. No longer did the college student look only to law, medicine, or the ministry as proper vocations. More than 3,000 occupations were now open to him. And from the land-grant schools, the new concepts spread to other colleges and universities and to secondary schools as well.

This was truly a successful revolution in education. The triumph of the concept of popular education is evident in the fact that today some 10,000,000 young men and women are enrolled in American high schools, colleges, and universities. The triumph of the concept of scientific and vocational education is evident in the curriculums of nearly every college in the land. Indeed, the triumph of this latter concept was so complete as seemingly to blind us for a long time to other educational values which now are recognized as being crucially important.

Let me explain why I say this:

Beginning in the latter part of the nineteenth century, and rapidly gaining momentum in this century, our colleges contributed immensely to our scientific and technological progress, not only by turning out highly skilled scientists and technicians, but also through research conducted in their own laboratories. For several thousand years, it seemed, physical progress had languished, like the quiet waters behind a great dam. Now the dam was burst, and industrialization with its concomitant specialization flowed forth like turbulent flood waters. Industrial and agricultural productivity increased phenomenally, releasing manpower for new professions and trades. Men applied their creative powers with feverish vigor to physical and biological mysteries and came forth with machines and treatment beyond the dreams of Jules Verne.

Happy with success, and responding to the need for men of greater and greater degrees of specialization, higher education now specialized with a vengeance. Whether in the basic or applied sciences, or even in the many disciplines within the social sciences and humanities, students were encouraged to probe deeper and deeper into narrower and narrower fields. Our colleges developed more and more highly specialized minds, tremendously competent within the confines of their specialties but uninformed and often dogmatic about everything else. The tendency, at least, was to train a biological chemist who was a stranger to the social world in which he lived; or a language specialist who literally feared the physical world, for he had no understanding of it; or an engineer who knew little about the economic forces determining the very field in which he worked.

This was a tragedy of monumental proportions.

Intense specialization in every avenue of life has brought about conditions and social problems profoundly different from those of our early agrarian days. One is an exacting economic interdependence. And interdependence calls constantly for broad understanding and tolerance. But a too-exclusive specialization, either in work or education, makes for intellectual narrowness. It creates partial minds, whereas interdependence desperately demands whole minds.

If a man does only one thing, day after day—whether it be research in a laboratory, or livestock production on a western ranch, or riveting in a shipyard, he naturally—unless he has trained himself to do otherwise—judges social affairs almost exclusively in terms of their effect on the business of research, or livestock raising, or riveting. Partial minds very naturally cluster around their special vocational and economic interests, and thus are created scores of human pressure streams, running head-on into each other.

Today there is greater community of interest among similar specialists of Seattle, San Francisco, and New York, than there is between different specialists in a single geographic locality. Each interest group, each vertical part of our society, experiencing only a fraction of the whole, thinks primarily of its own welfare. These pressure streams bear upon State capitols and the National Capitol so constantly and relentlessly that if legislation promotes the general welfare it is almost coincidental.

Specialization and interdependence have induced social changes of such bewildering speed that the citizen mind can scarcely comprehend. Hence we frequently devise social action within an obsolete factual framework. When such action doesn't get good results, we become confused and frustrated, grow critical, and look for a whipping boy.

For example, our change from a debtor to a creditor status brought wholly new economic situations which, even after more than 30 years, seem not to be generally understood, especially in the Midwest, and it is not surprising, therefore, that appropriate corrective action is difficult to take. But by far the most awesome example of cultural lag is our complete ignorance of the proposed hydrogen bomb—itself a climax of research and social organization which can literally destroy the very developments that brought it into being. To scramble my examples, I may say that we should not be arguing the economics of our debtor years at a time when a single agency of destruction could well make all argument fruitless or impossible. One of the foremost problems for all the people is to gain at least a minimal understanding of today's forces and circumstances that may determine our destiny. The facts of 25, or 5, or even 2 years ago will not do. Action devised within an obsolete factual framework is a guaranty of dismal failure.

Still other far-reaching consequences flow from extreme specialization. The complexity created by it, and the tempo of working and living that accompanies it, seemingly cause us to subordinate those very spiritual values, those very ethical concepts, which are at once the foundation and the binding cement of our free society. All life is competitive, and there is great virtue in that, provided we retain a unifying compulsion which, at all critical times, is more important to us than our individual or group interests and differences. That unifying compulsion is made up of devotion to human dignity, fairness in human relations, and the protection of interdependent freedoms—political freedom, personal freedom, economic freedom. It seems to me that in this postwar period, with foreign dangers keeping our nerves taut, and with internal problems fraying our minds, we tend not only to forget unifying spiritual values but also to accentuate philosophic differences. These differences today are deeper than ever before, save in the Civil War period. Certainly they grow daily more bitter.

Now, if our modern situation requires anything from the educated man and woman, it requires a mind that is broad, trained in critical thinking, tolerant in judgment, skilled in creative compromise, and dedicated to democratc principles.

Others may state the problem differently, but what I have just said is, I think, a self-evident truth. It is the cardinal fact that is now causing the second revolution in American higher education. Everywhere, teachers, trustees, educational administrators, and students are struggling with the problem of developing and maintaining an educational experience that will help build minds capable of contributing constructively to the solution of problems caused by modern interdependence.

Success in this task requires, I think, that we focus our attention on all the goals of Jefferson's charter for higher education—not on just some of them.

You will forgive me, I trust, if in recounting specifically how education is trying to meet its new task, I become somewhat more personal. I can, you will realize, speak with authority only about Kansas State College—about how we there during the past 7 years have tried to meet these new obligations, as we see them.

We've sought to keep always before us the obvious but important fact that most students spend only 4 years or less in college. Whatever values are to be gained from college must be gained in that brief period. It is a critical period. Most students are in college at a time when they are maturing—physically, intellectually, spiritually—and we've learned that no one of these phases of maturity can be neglected without badly affecting the other two.

We have had to remind ourselves almost daily that all the values of a college experience cannot be obtained exclusively in the classroom or laboratory. How a student lives, how he participates in constructive extra-curricular activities, whether he is given opportunity to learn through experience the democratic lessons of discussion and decision—these and dozens of other circumstances have a direct bearing upon the maturing process of a student.

Specifically, we at Kansas State College have been gradually adjusting our educational program in ways which will help each student achieve five definite goals.

The first continues to be specialized training for the making of a living, or of a home. Specialization is not to be condemned merely because it has presented us with complex social problems. Indeed, specialization is an urgent necessity in modern society, and it is a necessity which education must help to satisfy. Without it, our economic prosperity would be drastically reduced, human misery vastly increased. And democracy itself requires the high productivity yielded by specialization, for a democratic society will be sustained only in an atmosphere of abundance. At least it must be said that totalitarianism spreads only in an environment of human misery.

So of course we must train competent engineers, economists, physicists, and do so with increasing skill in view of the growing intricacies of each area of specialization. But we must do more than this—which brings me to the second of the five goals we've been aiming at for Kansas State.

The second goal is to help each student achieve an understanding of all the broad fields of knowledge—the physical sciences, the biological sciences, the social sciences, the humanities. Of course, no one mind, in four brief years, can achieve specialized training in a single field and at the same time gain detailed knowledge in other fields. He can, however, achieve a general introduction to other fields which, if properly made, will not only enable him to educate himself in them throughout his life, but will also stimulate his desire to do so. Only if they achieve the foundations of self-education, will most individuals leading a specialized life be able to keep themselves broadly and accurately informed as modern democratic society demands of the responsible citizen.

As first steps toward this second goal, we at Kansas State have introduced what we call comprehensive courses in the several fields of knowledge, each built around an integrating theme—courses entitled "Man's Physical World," "Man and the Cultural World," "Man and the Biological World," "Man and the Social World." Students take those comprehensives which are outside their own fields of specialization. We're trying to build courses aimed at broad understanding, while avoiding mere compendiums of unrelated items of information.

A third goal toward which we are aiming at Kansas State is the development of the skills of communication. So many of us in America these days don't really know how to read, or write, or speak, or listen. I often think of what a great surge forward we could have in our society if all individuals and groups attained logic and clarity in communication. Every individual is dependent on others in a multitude of ways, and his true success or failure—as a producer and as a citizen—depends vitally on his ability to analyze and assess what he hears or reads, and to state logically and clearly what he knows, thinks, or wishes to ask. A fairly low level of proficiency in communication is one of the present handicaps to the successful functioning of our free society. At Kansas State, as in most other institutions, we are trying to lift the level of achievement in this field.

This brings me to the fourth goal toward which we're aiming: the fostering of wisdom, or the development of the capacity for sound judgments. Here, how students are taught is as important as what they are taught. Or, more accurately, how students learn, is as important as what they learn. Perhaps the greatest achievement a student can attain is to learn how to learn. Involved in this is learning how to select knowledge relevant to a problem. Involved in it is the exercise of critical thinking about alternative solutions. And involved in it is sensitivity—the deeper intuitions whence arise moral or spiritual values.

Precisely because this goal of wisdom is all-inclusive, it must permeate the entire college program. It cannot be developed through a single device of course. It is as important to develop the habit of critical thinking in a course in history as it is in mathematics, in philosophy as in chemical engineering. And the all-college environment must make its contribution, too. Is the school, with all its fun, really dedicated in class and out to the serious purpose of education? Are students, in class and out, given

opportunity and encouragement to formulate judgments, express them, and test them against objective facts and judgments of others? Unless the answer to these questions is "Yes," the college is not, I fear, working satisfactorily toward this fourth goal.

And this brings me to the fifth, and last of our goals.

At Kansas State we are determined that every student should gain from his total experience in college an abiding commitment to the democratic way of life—a commitment based, not upon indoctrination, but upon genuine understanding. We want this commitment to be so firm that each student will become an effective, participating citizen in all the democratic procedures open to him—working constantly and effectively for the protection and development of our interdependent freedoms.

I may be quite blunt about this: We have established and supported in this country a Nation-wide system of education designed primarily to lift the level of understanding of all the people so that the maintenance of democracy may be assured. Every citizen has a right to expect that our educational institutions will contribute directly and effectively to the democratic system which maintains them.

But I'm afraid a great many people do not realize that good results in this regard do not derive merely from preachments. A mere emotional commitment to freedom and democracy is not enough. A student who has only an emotional attachment to democracy is easy prey to contrary arguments, both here and abroad.

A genuine, abiding commitment can be achieved only if the student really understands the basic theories and practices of democracy, as well as the basic theories and practices of other systems and ideologies—in all the forms they have taken throughout history. The glory of it is that democracy, with all its shortcomings, is the best social system ever devised by man. It is the only one that is compatible in practice with man's innermost spiritual or religious convictions. It is the only one that permits man to release the springs of his own greatness. Hence, the free democratic system can stand comparison successfully with all other systems, ancient and modern. Out of comparison and the development of his own value-judgments, each student is certain to develop the kind of commitment needed in the effective free citizen.

To help along the process of commitment to democracy, both at the secondary and higher levels of education, we established a few years ago at Kansas State under a grant of $200,000 from the Volker Foundation, an Institute of Citizenship It is working with students on the campus, with adults throughout the State, and with teachers in cooperating high schools. It is constantly experimenting with both the processes and subject-matter of citizenship education. The results of these experiments—and some of them have been highly successful—are soon to be published in a series of bulletins which a few of you may wish to read.

Well this, gentlemen, is my view of the responsibility of higher education in a free society. Perhaps I can sum it all up by saying that what each student should get out of college is himself—himself as a mature personality with capacities and incentive for continued growth, himself as an informed and effective citizen in a free society, himself as a deeply moral creature of God.

If he is soundly trained in a field of specialization, has sufficient understanding of other fields of knowledge to be self-educative, has developed habits of critical thinking, can communicate with logic and clarity, and is committed, on the basis of his own value-judgments, to the democratic way, he will inevitably be a priceless asset to America. He will insist upon the maintenance and extension of liberty, regardless of what changes the waves of event may bring. He will insist upon shared power in political democracy, mutuality in human relations in personal democracy, and competition and a wide diffusion of responsibility in economic democracy. He will help to promote and harmonize the interests of agriculture, industry, labor, and commerce.

If there are enough of him—and we must see to it that there are enough—he will, in the words of Washington, "so develop the blessings of democracy as to recommend it to the applause, the affection, and the adoption of every nation which is yet a stranger to it."

Purchasing Value of the Dollar

EXTENSION OF REMARKS

OF

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Saturday, March 4 (legislative day of Wednesday, February 22), 1950

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a table showing the purchasing value of the dollar as measured by the consumers' price index. The table has been prepared by the Institute of Life Insurance.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Purchasing value of the dollar as measured by the Consumers' Price Index

[The January 1939 dollar=100 cents]

	Index
1820	214.6

Unemployment in the Pacific Northwest

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Saturday, March 4 (legislative day of Wednesday, February 22), 1950

Mr. MORSE. Mr. President, we are very much concerned in the Pacific Northwest about the growing unemployment problem. The Oregon delegation in Congress has received a communication from one of the representatives of CIO labor in the Pacific Northwest dealing with this problem and I ask unanimous consent to have it inserted in the Appendix of the RECORD.

There being no objection, the communication was ordered to be printed in the RECORD, as follows:

INTERNATIONAL LONGSHOREMEN'S AND WAREHOUSEMEN'S UNION,
Portland, Oreg., February 24, 1950.

Members Oregon Delegation in Congress, Washington, D. C.

GENTLEMEN: An unemployment survey conducted by my office indicates that on February 1, 19 percent of the State's labor force was unemployed. Statistics obtained from maritime unions, including my own, reflect up to a one-third drop-off in work since 1947.

Since longshore and offshore employment in this State is closely related to our principal cargo item—lumber—my union has made a detailed inquiry into the situation in lumber at this time. We find:

1. British Columbia is cutting deeply into our Atlantic coast and California markets. The following table is revealing:

British Columbia shipments to California (in board feet):	
1947	None.
1948	7,879,611
1949	6,885,679
British Columbia shipments to east coast (in board feet):	
1947	None.
1948	96,071,921
1949	303,525,459

By the end of 1949, British Columbia had taken over one-third of our markets on the east coast. The shipments, during the first 8 months of the year, amounted to 24.77 percent of the province's total lumber production. (Bureau of Dominion figures.)

When unemployment in west coast lumber and maritime industries is considered in the light, not only of the above but of the total volume of Canadian lumber exports to the United States in 1949, the outlook for 1950 is dark indeed.

Last year, Canada, according to the Commercial Bulletin of Boston (issue of Saturday, February 18), exported 1,627,500,000 board feet to the United States. That is a lot of lumber, and is roughly equivalent to the total shipments, both domestic and foreign, for the year from Oregon and Washington. It is also equivalent to 31 percent of Canada's total lumber production.

In job terms for Oregon-Washington workers, the British Columbia shipments to our east coast alone, in 1949, were equivalent to some 3,600,000 man-hours for woodworkers and 30,352 gang-hours (14 men to a gang)—work Oregon and Washington loggers and sawmill workers and Puget Sound, Portland, Astoria, Coos Bay, Longview, and St. Helens dockers did not get.

This represents something like a $1,000,000 wage loss for ILWU members—money they did not have to spend at the corner store.

Much of the lumber shipped by Canada to this country found its way into FHA building channels.

2. We find that some $4,000,000 in ECA funds were recently allotted Great Britain for the purchase of lumber. But out of the 87,000,000 board foot order which resulted, only 5,000,000 board feet went to our mills. Canadian mills got 82,000,000 board feet.

3. We find that Great Britain has just been issued an additional procurement order for $10,000,000 to cover purchase of some 132,000,000 board feet.

If Great Britain is permitted to spend this money in Canada, our west coast woodworkers will lose some 1,584,000 man-hours and our longshoremen will lose between 14,000 and 16,000 gang-hours.

We have information showing that the British, in considering bids on ECA allotment purchases, discriminate against certain American ports. For instance, they refuse to consider bids from Eureka, Newport, and, in some instances, from Coos Bay, although American ships and vessels in the Pacific Coast European Conference place no restrictions against those ports. Since we have locals in all three ports, this matter is of direct concern to us.

4. We find that within the next 2 months, some 29 ships are slated to load lumber in British Columbia for our east coast, in addition to 14 ships so loading between November 3 and December 31.

Apparently not a single ship chartered for the recent British timber purchase was an American ship, although ECA regulations specify that 50 percent of the cargoes must be carried in American bottoms.

The loss of California and east coast markets to Canada is reflected in figures obtained from the Pacific American Steamship Association in San Francisco on intercoastal and coastwise vessels operating out of west coast ports. Of 150 dry cargo vessels operating in the intercoastal trade before the war, there are today only one-third that number. Coastwise carriers have declined from 30 to 12.

5. We find, also, that our markets in Japan, China, and the Philippines are a total loss.

In 1931 Oregon and Washington shipped 325,764,561 board feet to Japan; 314,475,322 board feet to China; and 2,120,870 board feet to the Philippine Islands.

Last year, only 5,941,936 board feet went to Japan (of which only 22,875 was from Oregon); no lumber at all went to the Philippines; and, after March, no lumber to China.

The employment loss for woodworkers and longshoremen, as reflected in the above figures, is some 7,704,000 man-hours for woodworkers and more than 60,000 gang-hours for longshoremen.

Were we exporting lumber to the Orient in the quantity in which it was shipped in 1931, Oregon and Washington longshoremen this year would be richer by more than $2,000,000.

You know, of course, that the United States Bureau of Employment Security notes that when the unemployment is 12 percent and over, the situation is sufficiently serious to warrant consideration and remedial efforts at local, State, and possibly Federal levels.

It would appear that unemployment in many Oregon counties has reached the danger point, while American diplomats fail to deal realistically with the Chinese situation and while American tax dollars are used to boycott Northwest cargo items and to subsidize a foreign merchant marine.

The end effect of such a situation can only be to force down our American living standards, cause widespread labor unrest, force many businesses to the wall, and throw heavier and heavier burdens on the relief agencies.

In conclusion, I am urging you to (1) start a congressional probe into the ECA lumber deals; (2) move to restrict ECA lumber purchases to American mills; (3) sponsor an FHA requirement that all lumber used in FHA-financed houses be manufactured in the United States; (4) act to wall up the loophole in the ECA Act which permits cargoes in excess of the act to be carried in foreign ships; (5) urge removal of trade barriers with China; (6) extend credit to China, Japan, and the Philippines to purchase the products of our country.

Respectfully yours,

MATT MEEHAN,
International Representative.

Excise-Tax Reduction

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Saturday, March 4 (legislative day of Wednesday, February 22), 1950

Mr. CAIN. Mr. President, the junior Senator from Washington enjoys talking each week by radio with his constituents at home. The subject of war-created excise taxes was the subject of his talk on Monday, February 27. Because a good many citizens have requested copies of the remarks, I ask unanimous consent that the radio statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

This is HARRY CAIN in Washington, D. C., in your Nation's Capital.

On the 19th of January of this year it so happened that I was the Senator who offered a motion that the Senate ought to consider the merits of an excise tax reduction bill which has been quietly slumbering on the Senate Calendar since last June. This motion was vigorously debated but when the question came to a vote the motion was defeated strictly on party lines. The administration leaders, including the majority leader, Mr. LUCAS, and the Senate Finance Chairman, Mr. GEORGE, said they were sympathetic to repealing some excise taxes and reducing others but that it wasn't yet time to tackle the question. Since the motion was defeated a good many of us have been watching those who speak for the administration to determine when the time is right to get rid of taxes which are burdensome to you and which have outlived their justification and usefulness.

Last week Senator GEORGE, a very distinguished and influential Member of the Senate, spoke his piece in no uncertain terms. In doing so he spoke in opposition to what the White House wants done. Mr. GEORGE was simply speaking for himself but his voice is a big one and many Democrats and Republicans are hopeful that his recommendations will be followed, and quite soon.

Senator GEORGE came out flatfootedly for outright repeal of the wartime excise taxes, excepting only those now levied on alcohol, gasoline and tobacco. He estimated it would cost the Government about $2,250,000,000 in immediate tax revenue losses but he predicted that about half of that gigantic sum would be recaptured by the Treasury as a direct result of the incentive given the businesses affected. The remaining loss, he

thought, could be made up by cutting Government spending. It is good to have a responsible Democrat reflect on this possibility isn't it, and by going all out to plug tax loopholes. Senator GEORGE appears to be strongly opposed to the administration's proposal to make selective cuts of around $600,000,000 in these wartime levies and to increase other taxes by any war excise tax loss. Senator GEORGE maintains that this would be nothing short of a careless approach to a pressing and important problem and in his words "it would simply postpone a job we ought to do now."

The Senator stated publicly that the 1941, 1942, and 1943 increases were imposed chiefly to check consumer purchases of war-scarce commodities and services. That need passed after the war but the excises stayed on. Nearly all of them have a present-day repressive effect on business. The Senator thinks that these taxes can't be handled selectively and that the Congress ought to be wise enough and bold enough to make the cuts now. Whenever the good Senator gives the word—for either he or Senator LUCAS controls the green-light go-ahead signal—I can think of 42 Senators on the opposition, or Republican, side of the aisle who will cry "hooray" and vote to eliminate the taxes.

For the next few minutes I want to talk with everybody about these taxes and about what they are doing to our economy and to your happiness and education. Everybody must be interested in the subject because the taxes in question are of basic concern to housewives, industrialists, members of labor unions, farmers, little-business men, big-business men, landlords, tenants, veterans, nonveterans, and in fact every man, woman, and child in America.

Many of these taxes were in existence long before the war, but were raised substantially as a wartime measure. The war has been over for nearly 5 years, and the promise your Government made to you to repeal these taxes at the war's end was and has been broken. We are still paying a 20-percent admission tax on amusements, 20 percent on furs, 20 percent on jewelry, 20 percent on luggage, purses, toilet cases and handbags; 20 percent on cosmetics; 15 percent on transportation; and 25 percent on telephone and toll messages, telegraph, cable, or radio messages.

As an example of the regressive effect, which means holding back, of these taxes on business, the fur industry in Washington State is suffering badly. Those contemplating the purchase of fur coats are waiting in the hope that in the near future the tax will be repealed. As a result, business is falling off; many employees, both of the manufacturers and retailers of furs, are being reduced to a part-time work basis, if they have not been laid off entirely. Obviously, this goes far deeper than forcing the ladies, or their husbands, to pay an additional 20 percent on the retail price for furs. By depriving the industry of its normal expectancy of business, it radically imperils the industry itself as well as the income of its employees.

Strong pressure, which certainly I approve, is now being exerted on the Congress to repeal the amusement taxes, especially those affecting that great segment of the American public, rich and poor, who rely on the movies as a wholesome type of entertainment which the family can enjoy together. A 20-percent tax on a single admission is one thing for an adult; it is quite another if it is a youngster who strives to save his pennies for a Saturday movie. It is also a serious thing to the parents of large families, especially in the light of what is left of the father's take-home pay, after deductions.

Taxing the movies and circuses, the only form of relaxation many people in rural areas have, the levy is against the poor man's entertainment and the pleasure of children. It is, in part, responsible for the decline of theater attendance. In failing to distinguish between low-priced suburban or country movies and the big, high-priced, first-run city theaters, an injustice is worked on the masses, the laboring people, the women, and the children.

The levy of taxes also on admissions to agriculture fairs, again hits the great mass of the people, both rural and urban, and in addition indirectly puts a tax on the education of farmers who use this medium for the exchange of ideas and for an opportunity to learn progressive methods of operation and procedures, from one another, and from the industrial exhibits of new farm implements and machinery.

As applied to the legitimate theater, musical concerts, and operas, the tax on admissions places the United States in a position of taxing an industry that other nations have traditionally considered a proper subject of state assistance. In this country, our great symphony orchestras, large and small, are made available to more people who love music, because they are subsidized by civic-minded private citizens in the various communities, otherwise, the price of admission would of necessity be beyond the pocketbooks of a large majority of the people. There is not one symphony orchestra in this country today which does not owe its existence to the loyal financial support of those who have the heart and the money to furnish private subsidy to orchestras in order that those on limited incomes may enjoy fine music. The 20-percent admission tax which every ticket buyer must pay, only adds to his burden as well as to that of the many others who not only give generous sums each year in support of symphony and philharmonic orchestras over the land, but buy their admission tickets as well.

The admission tax was established under the Revenue Act of 1917. It was uniformly set at 1 cent for each 10 cents, until it was raised to 1 cent on each 5 cents by the Revenue Act of 1943. Previously there had been some exemptions, which ranged as high as $ between 1928 and 1932. There are no such exemptions now.

For the fiscal year 1948 the tax on general admissions alone brought in a revenue of $383,626,814. Added to that exacted on leases of boxes or seats, ticket broker sales, admissions to cabarets and roof gardens, and similar forms of entertainment, and club and initiation fees, $464,127,037 flowed in an unending stream into the Treasury of the United States in 1948 from your pockets.

The excise tax of 20 percent on leather goods, trunks, handbags, suitcases, etc., was a wartime tax adopted in 1943 as a wartime conservation measure. It puts all leather goods in the category of luxuries. I do not argue with the stand that some of the expensive ones are, but the average shopping bag, woman's purse, school bag, or suitcase is an essential.

They can in no way be considered articles of adornment, as is jewelry, for instance. It has never been made clear why these articles should be taxed when women's gloves and hats have escaped. There has been a tremendous protest both from the consumer and the industry against what both claim to be unjust and unjustified. Certainly the effect on the industry as a whole is regressive and repressive, cutting production sales and employment.

The excise tax on the transportation of persons was clearly a wartime measure designed partly to help dissuade civilians from further burdening the already overcrowded public carriers engaged in the movement of troops or other personnel essential to the wartime effort. The levy is now a sales tax upon an essential service that is not a luxury and has to be used repeatedly by a large segment of the population. It is also discriminatory against certain sections of the country far removed from the large centers of the population. Especially does this apply to us in the far West. It discriminates against us because persons in the East who under normal circumstances would be willing to pay the increased fare to say the Northwest, as compared to that of the Northeast, cannot meet the added expense of the tax which increases proportionately with the fare—a sufficiently added burden to cause the traveler to choose the Northeast instead for his vacation and travels.

The increased excise tax on telephone, telegraph, and radio messages was also a wartime measure. The most inexplainable thing about this tax is the rate. If one goes to a night club or buys a piece of jewelry, he pays a 20-percent tax. If he uses public transportation on a vacation, he pays a 15-percent tax, but if he makes a long-distance call, business telephone call, or sends a telegram, he pays a 25-percent tax. This is a tax imposed on business and social necessity, and is based on no sound principle nor has it a justification in peacetime. Certainly these cannot be considered luxuries. They discriminate against businesses which have to make frequent use of our communication services. Like the transportation tax, it also discriminates against sections of the country far removed from the centers of the population, again, included in the far West.

As to the tax on cosmetics and other toilet preparations, I am sure there isn't a woman listening to me tonight who won't agree with me that they have been articles of everyday use, and by custom a virtual necessity. Certainly they are to any woman who wants to hold her job and, shall we say, her man.

One last comment; the administration will oppose the "bold and wise" and immediate tax cuts which Senator GEORGE has so honestly recommended. The reason is simple: war excise taxes are easy to administer, they are collected automatically, and they provide large sums which the insatiable spending appetite of the administration demands.

This reason won't prevail once the question is debated by the Congress. The taxes will go at the first voting chance. A promising prediction, isn't it? Your job then is to continue to needle your Congress to do what a majority of its Members want to do for you.

Until next week at the same time this is HARRY CAIN saying good night and good luck.

Danger From Socialism

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Saturday, March 4 (legislative day of Wednesday, February 22), 1950

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a speech made by Mr. John Temple Graves, a leading southerner, orator, and writer, before the National Automobile Dealers Association, in Atlantic City on February 8, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Our danger at home isn't the march of communism, it is the creep of socialism. Into our schools and colleges, conditioning minds like those of Alger Hiss, Judy Coplon, Elizabeth Bentley. Into our government, telling it to play God. Into our literature

and the philosophies of our men of good will. Into our American spirit, persuading us to play safe and ask a security that is gone with the bomb. Into our morals, saying right and wrong are subject to change without notice. Into our churches, telling us the angels in heaven have left wings only.

The soft under belly of America for Communist attack is this creeping socialism.

A Socialist is a Communist who doesn't know the facts of life. He thinks you can be sweet and nice about it, pass around the civil liberties, be law abiding, let the people rule, and all that. But you can't. Russia knows and Britain is learning. You can't play God and be subject to the whims of a legislature and periodical votes of the people. Sooner or later, as a practical matter, you have to do it the Russian way, with a dictator and policemen.

There are many kinds of socialism now. In Europe there are national socialism, Christian socialism, democratic socialism, Soviet socialism. In this country we have the regular Socialist Party and the Socialist Labor Party. And lately, for the first time on a national scale, we have developed what may be called tax-spend-elect, or Pendergastian socialism.

The Pendergastian Socialist is cynical. He doesn't care for socialism, but he doesn't mind. He brings it about in course of handing things out. He gets his name from a political machine which flourished once in Kansas City. Some of the people in that machine are dead, some are in jail, and some have moved to Washington.

Tax, spend, elect, works. We have seen that, and are seeing it now. Only three things can stop it. One is bankruptcy. One is the full socialism to which it leads. The third is visibility of taxes. When taxes become visible as a burden, people begin to complain. The golden goose begins to squawk. They are complaining this year. A $5,000,000,000 deficit is a pretty visible thing. No wonder our tax-spend-elect Socialists want to reduce excise taxes and up taxes on business. The public can't see business taxes. Not right away.

A party line for America, it seems to me, is a line in two parts. A part against too much government and a part against government too far from the governed. Antistatism and State's rights—they are two faces of the same coin.

We need a lot of government these days, far more than 50 years ago, or, perhaps, even 15 years ago. Few dispute it now. The true issue is whether you recognize a danger point in too much government or whether you "pooh-pooh" the idea, call it a red herring out of selfish interests and say, What is statism, anyhow? Whether we have passed the danger point yet is something on which we may honestly disagree. But I don't see how anyone who believes in the free way with which we made this Nation and have lately won two wars at once on two sides of a planet can refuse the fact that there is a point in government controlling, spending, and taxing beyond which you can't go and have (1) democracy, (2) solvency, (3) incentive to work, or (4) incentive to enterprise and invest.

Democracy and too much government are incompatible. So are democracy and government too far from home. We knew that when we threw King George's tea in the water at Boston, government too far from the people governed is government that doesn't understand, government that doesn't have the sympathy of those governed, and, therefore, government that must operate more and more through force bills and police.

We talk of civil liberties, and it is precious talk. In my part of the country we need to talk and practice it more, and we are learning. But the most civil of all our civil liberties is the liberty to be governed at home on problems peculiar to us at home. Some call this home rule, some local self-government, some cross-roads democracy. In the South we use the quaint name of States' rights.

God is not mocked by our God-players of today. Still He confuses their tongues as in days of Babel, whether they play through a big government, a big business, or a big labor union. In big government we call the confusion bureaucracy. It isn't in my Bible, and my preacher didn't tell me, but I suspect that when the children of Israel had built the Tower of Babel so high that it began to invade heaven and play God, and when the Lord had decided to topple the tower over and had already confused the tongues of the builders so that they were making noises like many a one that has come out of Washington these 18 years, I suspect that at that very moment they found on top of the Tower of Babel a little fellow with horn-rim glasses and a Harvard accent, shooting rules and regulations at all of heaven's stars and bombarding all creation with questionnaires, each to be answered in triplicate. He was the first bureaucrat, on top of the first thing that got to be too big and tried to play God. His tribe has increased.

They are the two freedoms of 1950. Freedom from too much government. Freedom from government too far from home. Enough Americans believe in them to make a majority, if those who believe can be put together, and put to work. Already they make a political party. It is a party without a name and without an identified leadership, but its roots are in all the grasses of this green land, and sooner or later it is going to express itself not only in the Congress but in great realinement under our two-party setup.

Totalism is incompatible with our American set-up no matter who runs it. Total government, total business, and, especially now, total organized labor. Wisely we have passed laws against combinations in restraint of trade, but never in our history have there been such combinations in such restraint of so much trade as those over which John Lewis and several other labor leaders are presiding over. We exempt labor from the law because we say labor is not a commodity, and it isn't. That is a core principle of American being. But it begins to be a question whether we, the rest of the people, are a commodity, to have our economy crushed like a crate of eggs at the bat of a bushy eyebrow. The only solution is the simple solution. It is to include these Nation-wide totally organized unions in key industries in the operation of our antitrust laws, as Senator ROBERTSON, of Virginia, is proposing.

Not by votes alone, or speeches alone, or even by understanding, is our American philosophy of freedom to be saved now, it seems to me. It depends at last on American character, individual character. Our free enterprise depends on Americans who, in character, are fit for their freedom and full of the enterprise. You don't have to have character to be a Communist. You just memorize the party line, and take care not to deviate lest you liquidate. You don't have to have character to be a Fascist. You just march along in ranks, singing your song, wearing your silly feather or cap or button or Ku Klux Klan regalia, overcome by somebody else's false emotions. But you do have to have character to be free and self-governing in the most intricate and dangerous world that ever was, with Russia and the split atom to be lived with.

I believe our people are seeing it. I believe they are looking to a great renaissance of individual character, in public life and private. I believe, for example, that they are going to reelect Senator TAFT in Ohio next November not because he is a Republican, not because of the Taft-Hartley law or his foreign policy, but because they are bewitched at the spectacle of this not at all bewitching gentleman who nevertheless, has the courage and honesty to ask election for what he thinks is good for his country, rather than with wanton promises to put together a winning combination of pressure groups.

The character to be honest and brave and to resist hand-outs and to assume responsibility and, most of all, the character to be insecure. Roosevelt told us in 1933 that all we had to fear was fear itself. I think that was true in 1933. But it seems to me that what we have to fear in 1950 is unwillingness to live fearfully, to take chances, to accept a life of profit and loss, ups and downs, danger and change.

We can live fearfully like this, I think, only if somehow we have the balances and assurances and serenities of a faith in things eternal. Such a faith is suggested now, not challenged, by physical science. The splitting and fusing of atoms takes us to the limits of the physical world. It takes us to a dim edge where there is some other world. It takes us to a place where physics turns to metaphysics—and mathematics touches God.

1949 Progress in the Tennessee Valley

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Saturday, March 4 (legislative day of Wednesday, February 22), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. James P. Pope, director of the Tennessee Valley Authority, before the Athens Kiwanis Club at Athens, Tenn., on February 15, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

1949 PROGRESS IN THE TENNESSEE VALLEY

The chairman of your program committee has requested that I talk to you about TVA today. Since this is a rather large subject, as you know, I think it would be well for me to limit it to the progress of the Tennessee Valley during the last year. Progress has continued on all fronts and in some respects it has been very rapid as, for instance, in the field of rural electrification. The construction and installation of new generating facilities by TVA have also gone forward rapidly during the year.

Private enterprise has prospered and advanced throughout the region. Production has increased generally, both in agriculture and in industry. Interest and activity in the location of new industries have grown during the year. And some major developments, such as the proposed Oak Ridge expansion and the Air Engineering Development Center near Tullahoma, have been assured. TVA construction has included rapid progress on the New Johnsonville steam plant. And an announcement has recently been made of the location of another large steam-plant site at Widow's Creek in northern Alabama.

Nineteen hundred and forty-nine has been an important year in the development of the valley along all lines—not only in those just mentioned but in navigation, flood control, and conservation. During the year there was celebrated the planting of the two hundred millionth tree as well as the furnishing of power to the millionth customer.

The records disclose that there was substantial progress in traffic on the Tennessee River, with 470,000,000 ton-miles being carried. This was an over-all increase of 6 percent in ton-miles of traffic over 1948. The increase in 1949 was more than 40,000,000 ton-miles over the volume of river traffic in 1948. And the 1949 traffic volume was over 212,000,000 ton-miles more, or over 80 percent greater than 1945, the first full year of operations in the completed river channel.

These traffic increases apply to all commodities, with the principal exception of coal, during the year. The decrease in coal shipments was due to strikes and to the fact that TVA used less coal last year because of heavy rainfall and a good supply of water in the river. As to some important commodities the increase is remarkable. Steel shipments, for instance, increased 1350 percent over 1948. Petroleum products increased 10 percent, grain 75 percent, coke 88 percent, and automobiles 36 percent. Savings to shippers on last year's river traffic, although final calculations have not yet been made, are expected to be substantially larger than those in 1948, which were about $4,000,000.

As to flood prevention during the year the record is good. There was no flood damage of consequence either on the Tennessee, the lower Ohio, or the lower Mississippi Rivers. While there were no major floods during 1949 comparable to those in the three preceding years, the holding back of waters in the two lesser floods in the valley saved Chattanooga about $860,000 in damage. And the reduction of flood crests on the Ohio saved an estimated damage of some $200,000. These savings of over a million dollars in 1949 are worthy of mention, although not comparable to savings in past years which have totaled over $40,000,000 at Chattanooga alone.

It is of current interest that the crests of the recent floods on the Ohio and Mississippi Rivers were so reduced as to make it unnecessary to blast open the fuse plug levee of the Birds Point-New Madrid floodway in southern Missouri—according to the joint statement of the United States Army engineers and TVA. The Kentucky Reservoir held back large quantities of floodwaters in accomplishing this result. This saved millions of dollars in flood damages in the floodway where 12,000 people live.

It requires no argument to convince the people along the Tennessee, and the lower Ohio and Mississippi Rivers of the tremendous value of flood control on the Tennessee. They know its great value. They also know the large value of the all-year-round navigation on the Tennessee River. And yet one still hears in other parts of the country from those who serve the interests opposed to TVA that navigation and flood control provided by TVA are of little value—that they are really camouflages for the power development.

The fact that these contentions were made by the private power companies in numerous suits testing the constitutionality of the TVA Act, and that the courts held them invalid does not seem to deter the same interests from repeating the arguments outside the valley region. The contention is still made that TVA is primarily a power agency. But the fact is that the generation of hydropower is subject to the use of the river for navigation and flood control. The navigation channel must be maintained at a 9-foot depth and floods must be dealt with as they come. If it becomes necessary to spill water to serve these purposes, it is done regardless of the effect it has upon the production of power. Large amounts of water are sometimes spilled as has been the case within the last few weeks. Flood conditions may, and generally do, cut down the amount of water that can be used for generation of power.

In spite of these conditions, however, TVA has become the largest integrated power producer in America. It produced last year over 17,000,000,000 kilowatt-hours which was 11 percent increase over 1948. Its installed capacity was increased during the year by 258,000 kilowatts, and its transmission lines were increased by about 300 miles. Its gross revenue from sale of power was increased by $9,200,000 and its net income by several million dollars.

The most striking advance was made in the field of rural electrification. Of the 127,000 new customers served, 92,000 of them were rural consumers. Most of the 17,000 miles of new distribution lines were rural. The percentage of electrified farms increased from about 55 percent in 1948 to 70 percent in 1949. Now about 300,000 of the 425,000 farms in the TVA area are electrified and rapid progress is being made in reaching other farms. The estimated savings on power bills of the million TVA customers were about $33,000,000 last year compared with average rates on the Nation.

This progress is very well illustrated by last year's record of operations of your city of Athens. This system built 28 miles of new rural lines, increased the number of customers served 27 percent and the amount of electricity furnished them 34 percent. The number of urban customers was increased 6 percent and the amount of electricity used in the city was increased 19 percent. This is a fine record and your power management deserves commendation.

In the field of farm and forest conservation steady progress was made during the year. Research has gone forward at the Muscle Shoals laboratory and plant principally with reference to new fertilizers. Various combinations of fertilizer ingredients are being tried out. For instance, pilot plant studies during the year were successful in producing dicalcium nitrophosphate containing both nitrogen and phosphate. Tests and demonstrations of new fertilizers are being made on actual farms. The increase of cover crops and decrease in row crops are continuing. More and more winter cover crops are being planted. About a million acres of land have been shifted in the last 15 years from row crops. The valley is greener this winter than it was last winter.

No better illustration of what is going on in soil conservation and farm management can be found than that of Mr. Rex Moses here in McMinn County. Since 1940 Mr. Moses has been a TVA-Extension Service test-demonstration farmer on his 162 acres of land. In 1940 he had a dairy herd of 6 cows and 7 other cattle. By 1948 he had a dairy herd of about 24 milkers and 25 heifers and other cattle. With diversification on the land, with application of fertilizers, and with good management, Mr. Moses has built up his land, his production, and his standard of living. He has built a new home with modern electrical conveniences, a new garage and smokehouse, a tool shed and workshop, a modern dairy barn, and other new buildings and improvements. Every year this farm is improving; it was better in 1949 than in 1948.

The work in forestry conservation is going forward. About 15,000,000 new trees were planted last year, reaching the two hundred millionth from TVA nurseries since the program began. Most of these were planted on private lands by the owners. Thousands more acres of timberlands were brought under adequate fire protection and more forestry demonstration tracts were added last year. Again we have an example of such progress here in McMinn County. Almost 100,000 new seedlings were put out on the lands in the county last year. The total that has been set out in the county since the beginning of the program is almost 5,000,000.

Malaria control has gone ahead rapidly. Fifteen years ago, when the program began, about 30 percent of the people in the malarial sections were infected. Now less than one-tenth of 1 percent are infected in the areas along the reservoirs. Preventive measures of all sorts have proceeded during the year.

Recreation developments, particularly along the shores of the lakes, have gone forward rapidly during the year. Investments along the shore line have increased about $3,000,000. Gross incomes from business enterprises on the lake fronts increased during the year something like $200,000. Incomes from commercial fishing jumped about $50,000 last year. It is estimated that the total tourist income for the Tennessee Valley area was about $175,000,000 in 1949.

Industrial development of the area stands high in the record of valley development. In addition to the Oak Ridge expansion and the Tullahoma project, supplies of natural gas are being provided; the research project at the Redstone Arsenal at Huntsville, Ala., is assured; the Reynolds Metals Co. at Sheffield is making a large expansion; an important paper industry by du Pont is being established at Pisgah, N. C.; two large, new companies have located plants at Elizabethton; a Quaker Oats plant is being located at Chattanooga; and other large industries are planning or investigating locations in the region. The Redstone Arsenal project is being moved from Fort Bliss, Tex., and will employ about 1,100 scientists. These are some of the larger industrial developments and projects. Many smaller private enterprises are similarly interested.

These are some of the reasons why we can call 1949 a banner year in the history of the Tennessee Valley development. And this is attracting the attention of people all over the world. The number of visitors to the TVA projects last year increased 1,100,000—from 5,000,000 to over 6,000,000. They came from almost every nation in the world, as well as all the States in this Union. Hundreds of them are distinguished visitors, ranging from technical men to the chiefs of states. Many of them report to us that they are planning similar developments in their own countries and in some of them such developments have already begun. Interest in the Tennessee Valley and its progress is world-wide.

A Frank Review of the Hoover Report

EXTENSION OF REMARKS

OF

HON. WALTER F. GEORGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Saturday, March 4 (legislative day of Wednesday, February 22), 1950

Mr. GEORGE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address entitled "A Frank Review of the Hoover Report," delivered by Hon. James A. Farley, before the New York Press Association at Syracuse, N. Y., on February 10, 1950. It is a timely discussion of the Hoover report. Coming from Mr. Farley, with his long experience in government, I think the address is well worth reading by every Member of the Senate.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This country is composed of two kinds of people. One group believes that the Government can support all the citizens. The other wonders whether all the citizens can support the Government. I feel certain that all of us here tonight belong to the second group.

In an address early in January, President Truman said that on the basis of the growth of this country over the past 50 years we would in another 50 years have a national income of a trillion dollars. I have no doubt about his figures nor his expectations, but we can reach some frightening conclusions when we take the past 50 years as a measure of the increase of the next 50 years.

One of those conclusions is that if we take the cost of Government for 1900 and compare it with the cost of Government for 1950 and then figure the same rate of increase for the next 50 years, our Government would cost $6,000,000,000,000, or six times as much as the whole national income. On that basis, we would also have working for the Federal Government alone 20,000,000 men and women. The lesson of these simple figures is that unless we find some way of reducing the cost of Government it will soon grow so great as to consume not only everything that we all earn, but everything that we have all saved, and ultimately everything that we call property, which is owned by all of us.

This is a very sobering situation. And I think it is to the interest of every citizen to impress upon those whom he has elected to office the necessity that this increase in the burden of Government be checked, or we shall find ourselves living under a form of Government which is utterly different from that in which we were born and under which our forefathers built a great country.

This problem is not a political issue. It is an American issue, and every true American, regardless of party, owes it to himself to study it, understand it, and do something about it. It comes down to two questions. First, has our Government the capacity to control its own growth? Second, are those who are elected to office or who are running for office going to be able to tell the people the truth about what Government can do for them and what it cannot do for them?

The first part of my remarks will be about what is called the administration of government as it is. The second part will concern the broader question of what we ought or ought not to expect government to do. The first part deals with what was generally covered in the studies and the report of the great Hoover Commission which completed its work almost exactly a year ago. The second goes beyond that to the broad American question of what a government should be expected to do in our American civilization.

The Hoover Commission was created by Congress and appointments were made by both the Congress and the Executive. Its title was "The Commission on Organization of the Executive Branch of the Government." It was composed of distinguished Americans, headed by our only ex-President. Herbert Hoover deserves the respect and gratitude of all Americans for this great undertaking. While some of us may have disagreed with him when he was President, and while we may disagree with some of his views, none of us can question his sincerity, his patriotism, and his vast knowledge of Government and public policies. He undertook this job at an age when most of us will be thinking of quiet retirement and when a great many of us will be passed from this earth. The job entailed as arduous a task as has ever been laid upon an American.

In the first place, the field that the Commission had to cover involved a study of public expenditures amounting to $40,000,000,000 a year. It reached into every corner of our vast governmental establishment. Mr. Hoover's part in it, moreover, involved the reconciling of the views of the 11 men who shared with him membership in the Commission. It meant a minute examination of thousands of pages of task-force reports on dozens and dozens of technical aspects of government. It involved questions of finance, military affairs, engineering, medicine, banking, agriculture, business, labor, science, personnel, and administration generally. It involved road building, electric power, hospital care, and foreign trade. It involved the relations of our country to many foreign governments, each of which presented a special problem of need and responsibility. It involved the conduct of our foreign affairs, with all of the vast world-wide ramifications that are covered by that service. Never, I venture to say, has any commission been invested with responsibility of covering so many subjects in such detail within the limit of time that was imposed upon this task.

All of this Mr. Hoover and his patriotic associates in this Commission took as a serious responsibility. They have given us in this report the distilled wisdom not only of their own knowledge and experience, but of the hundreds of people who assisted them. It is the solemn duty of every American citizen to take this report with the utmost seriousness and to cooperate, as the years pass, in bringing about the adoption of its helpful and excellent recommendations.

This Commission started with the premise that in Government, as in business, the heart of administration is control. If Government is to control as much of our lives as it does, then there must be some means by which we can control Government. It is also essential that if Government is to control us then Government must have the means to control itself.

One of the most startling things in this report is the fact that it proves pretty conclusively, I believe, that Government as now constituted has grown so fast, so great, with such haphazard methods, that it is actually out of control of the very people who are conducting its affairs. That means that, with things as they are, Congress lacks the real means of controlling its own expenditures, and the President himself lacks the means of controlling the very departments over which he has the constitutional responsibility of direction.

In discussing this question I cannot within the time assigned to me do very much except to touch on some highlights. It is a very long report and it covers a vast multitude of subjects. But a few of the subjects selected with care will illustrate what I mean by the lack of administrative control. Let us first look at two departments of Government that were created as a means of direction and control of expenditures. First is the Bureau of the Budget, and second is the General Accounting Office. I take these two because one is responsible to the President and the other is, technically at least, responsible to the Congress.

The Budget of the United States, as you all know, is a very large and complex document. It is supposed to be a means by which the President, through his Bureau, reviews of the needs and requirements of every department of government, and, after careful counting and pruning, presents to the Congress the requirements of government for the next fiscal year. With this before the proper committees of the Congress, it should theoretically be possible for the legislative branch of the Government, which, after all, is the spending and taxing authority under our Constitution—to decide for itself whether it will grant or whether it will deny these Executive requests. However, the budget over the years has grown so large that it is almost impossible by an examination of this printed document to determine with any degree of accuracy the real necessities of government and to eliminate those which, in the wisdom of Congress, can be dispensed with.

With reference to this budget and to the Bureau of the Budget, which creates it, the Hoover Commission had some very critical things to say. These criticisms were seriously regarded by the President, and to his credit it must be said that the budget presented last month represents a great improvement over the budget presented a year ago. It shows for the first time the cost of the various projects, set up in such a way as to indicate their total cost. Previously, the costs of projects were scattered under so many classifications that it was impossible to view any one as a whole and to measure its cost against its probable benefits. This is a step in the right direction, and the Hoover Commission can be credited with at least the beginning of a reformed budget.

The other great agency of control is the General Accounting Office, at the head of which is the Comptroller General of the United States. The Hoover Commission had some rather critical things to say about this agency of government. It pointed out that in its efforts to scrutinize enormously detailed expenditures of government it had loaded upon itself such a burden that it was almost impossible to fulfill other responsibilities which had been placed upon it by law. To express it briefly, the Comptroller General, in checking over every voucher and expenditure and in determining whether those expenditures were within the law, had in substance taken away from the executive department a responsibility which in every business must rest with the executive of that business. In an American business like the one with which I am associated, the general policies are vested in a board of directors. That board of directors then employs a president and other officers. In turn, the board of directors is elected by and responsible to the stockholders.

Under the operation of such a business, the executives—the president and his associates—set up a system of accounting which at all times provides for them a picture of what is going on in the business. The board of directors, in order to have a completely unbiased and impartial picture of the business over which it presides, employs an auditor, who goes over the books of the business from time to time and reports back to the board of directors. Thus, there is in business a distinction between accounting and auditing.

In our national system, the Congress can roughly be called the board of directors of our national business. The President and the executive departments are the officers, and the stockholders are all of us. Unlike ordinary businesses, however, in Government the functions of auditing and accounting are confused. The Hoover Commission proposed that they be separated, with the Comptroller General conducting auditing business for Congress and an Accountant General in the Treasury Department conducting the accounting for the President. It will take a long time to accomplish this change, but it is one of those essential necessities of control that we shall need, if we are to bring Government clearly within the pattern set by our own modern business methods of administration.

Another thing that business does—and if it doesn't do it, it soon goes broke—is to require a real accounting of property that it

owns. Such an accounting of Government property is not present in our Government, which owns something like $27,000,000,000 worth of personal property.

I have always believed in the principle of civil service. The intent was good when it was created, some 67 years ago. As it has grown, however, it has become to some degree a hindrance, rather than a help to good and efficient administration. It is too difficult in Government now to enlist the best sort of personnel, and it is too difficult to get rid of incompetent employees. The Hoover Commission proposes that the responsibility of selecting employees be decentralized and that the Civil Service Commission limit its activities to determining the standards under which Government employment shall be carried on by the departments.

One of the reports of the Hoover Commission tells an amazing story about the records that the Government keeps. It points out that the actual paper records of the Government, if all brought together in one place, would fill six Pentagon buildings. Under a more efficient method of record-keeping, about a third of this paper stuff could be thrown away and a lot of the rest could be moved out of Washington into less expensive quarters.

As all of you know, the Government has become one of the biggest bankers in the history of the world. It has innumerable lending agencies—the best known of which, of course, is the Reconstruction Finance Corporation. The Hoover Commission makes some very clear-cut recommendations concerning these agencies. Their operations should be concentrated, and in many instances should be eliminated. Many of these lending agencies could very well be put into deep freeze and kept ready in case another depression comes along for a resumption of their operations. There is altogether too great a temptation, when Government money is being lent so readily and so broadly, to lend more than is necessary and to take from the private banks and insurance companies their responsibilities in this matter.

The Hoover Commission goes on farther and recommends a unification of Government hospitals, public health and medical research. It points out as an indication of great waste that at the time of its investigation there were in our Federal hospitals beds for 225,000 patients and that only 155,000 were occupied. Despite this fact that there was a surplus of 70,000 beds, Congress proceeded to make additional appropriations for 50,000 additional beds, at a cost of $1,300,000,000. President Truman canceled out $300,000,000 of this program. That was some help.

The Hoover Commission made a very elaborate study of what we are doing in the way of conserving our water and our water power. It was found that there was a great deal of duplication there. A great rivalry exists between the Army engineers and the Reclamation Service, which has never been a particularly economical conflict. The Hoover Commission recommended the unifications of these services, which would involve a saving of hundreds of millions of dollars.

One of the most serious tendencies in our Federal system is the extent to which the Federal Government, through grants-in-aid, is absorbing the obligations and responsibilities of our State governments. Three years before I entered the Federal service—that is, in 1930—the total of Federal grants-in-aid to the States was about $100,000,000. When I left the Government service this had risen to almost $700,000,000. I do not want to suggest to you gentlemen or anyone else that I had anything to do with this great increase. I was kept pretty busy with the Post Office Department during that time.

These grants did not increase during the 5 years of war and preparation for war. But after the war and over the past 5 years they have begun to go up at a much more rapid rate. The figure has more than doubled and, according to some estimates, will reach something like $2,000,000,000. These grants, of course, are not made in accordance with the amount of money taken out of the States. The Federal Government takes five times as much out of the State of New York as it gives back. We are a great State, and we are proud of our productive wealth. But we can hardly afford a continuation of this trend over a period of years. Nor can, in fact, many of the other States.

It may be true that the Federal Government has a proper responsibility to see that States that are unable to offer the essential services to their people should be helped by Federal grants. I am not sure, however, that these grants are disbursed on any such principle. The trouble under this system is that some States are getting more than they should and other States are giving more than they should.

The most vital part of this Federal-State relationship is that, if this thing goes on, the States will gradually give up all of their responsibilities and the Federal Government will absorb them. The result will be, not a Federal system such as was set up under our Constitution, but a centralized unitary government which can never fit the 48 individual requirements and special conditions of a country as broad as this one. The way to stop this trend is to restore to the States some of the sources of taxation that the Federal Government has taken over. Here again the Hoover Commission has some very constructive and important recommendations.

The danger in the extension of the personal income-tax system is that it becomes so easy to raise money through the Federal income tax that many other proper sources of revenue are overlooked and neglected. We must establish in this country equality of taxation. And that taxation ought to be distributed so that individual initiative and wholesome business growth will not be stifled by unwise methods of taxation.

I have been talking, so far, about the essential recommendations of the Hoover report, with a few examples. Now, as we all know, it is one thing to believe in good things and to recommend them, and another to get the recommendations accepted. Congress is under so many demands for the expenditure of funds that it finds it almost impossible to resist them. What is needed is that Americans be organized to put just as much pressure on Congress to save as the various pressure groups have put on it to spend. A start toward this has been taken since the Hoover report was issued. There has been established a national citizen's committee, the purpose of which is to support the recommendations of the Hoover report and to get them enacted by Congress and by the administration. State and local subcommittees have been created to assist in this in the various States of the Union. The efforts of this great national committee and of its subcommittees should be supported by all of us.

Up to this time I have been talking about administration, with particular reference to the recommendations of the Hoover report. I wish to make it clear that this was a nonpartisan, nonpolitical report and that its function was not to suggest the wisdom or the unwisdom of any of the activities carried on by the Federal Government. The determination of such questions becomes a matter of national policy over which Congress has final control. In short, the Hoover Commission takes things as they are and suggests, through methods of reorganization, the more efficient disbursing of existing services and a consequent lower cost. If all the recommendations of the Hoover Commission were adopted the saving would be considerable—perhaps more than $3,000,000,000. If some of the long-term recommendations were adopted, this sum might be increased over the years because of greater efficiency. All this, of course, would lighten our tax burden and help us to reduce the cost of Government and the danger of too much government.

I wish to note, however, that even if all these recommendations were adopted in the present year, we would still be running a deficit of $2,000,000,000 or more. This is not the way that a wise and thrifty country ought to be running its affairs. In time of prosperity we should be balancing the budget. A few dollars saved here and there are not going to do it, and we are not going to do it even if we adopted the most efficient principles of administration.

What we must do is to make a decision as to what should come first in the way of Government expenditures and then stop the increase.

I realize that, as President Truman pointed out, a vast amount of the present budget of more than $40,000,000,000 is required to pay the cost of past wars and the expenses of the present cold war. But, nevertheless, there can be savings in what is expended over and above military and foreign aid. I am not at all sure, moreover, that we cannot save on our military expenses and at the same time have adequate defense. I am not at all certain, moreover, that we cannot reduce our foreign aid to more reasonable proportions.

Beyond that, we are ignoring expenditures in the civil side of Government that should be carefully scrutinized by Congress. We must find some means of keeping our agriculture prosperous without involving a constantly increasing Government expenditure to pay for crops that should not be raised. I realize that such supports cannot immediately be taken away, but I think we all ought to find a means by which over a few years we can reduce the present staggering sum that we are giving for the support of one segment of our economy at the expense of other segments.

Before we undertake new and vast experiments in social services of various sorts, we ought to consider putting first things first.

These are matters that are not partisan. I have had enough experience in the National Government to know that in the scramble for congressional appropriations we cannot distinguish the energy of a Republican from that of a Democrat. The National Congress is a great body and I can count in its membership scores of warm, personal friends and fine patriots, but I sincerely feel that there ought to be much more of a spirit of national security, rather than of local urgency, in its activities. We have got to have men in Congress who look to the need for a sound national economy with a balanced budget, and a little less concern for what certain communities and particular departments are demanding. This is a national cause and it requires a national point of view.

For, as I said a moment ago, we cannot, if we expect to remain a great and growing Nation, indulge in an extension of the practice of deficit spending in times of great prosperity such as these. Our tax burden now is about all that we can support. An increase in our income taxes would probably yield less, rather than more, revenue. We must reduce our cost of Government, and we must reduce it even if some people get hurt in the process.

It will not profit any of us to be members of a Nation which is pursuing unattainable objectives and is employing unsound methods. The public welfare is the welfare of all of us, not necessarily each one of us. The public welfare is the welfare of our Nation. And in the face of that, our individual concerns should be subordinate. It is my hope that this principle may more and more occupy the serious attention of everyone faced with the responsibility of public office.

Joint Committee on Reduction of Nonessential Federal Expenditures

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Saturday, March 4 (legislative day of Wednesday, February 22), 1950

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial from the Minneapolis (Minn.) Morning Tribune discussing the attack made by the Senator from Minnesota [Mr. HUMPHREY] on the Joint Committee on Reduction of Nonessential Federal Expenditures.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AS THE DUCHESS SAID—

The Tribune must confess that it is more flabbergasted than convinced by Senator HUMPHREY's sudden entrance into the arena of Government economy. It is hard to believe that HUMPHREY really wants to slay the brute of Federal extravagance. One wonders, as he advances menacingly toward Ferdinand, if he will not ultimately sit down and sniff the pretty spending flowers with him.

The Senator wants to abolish the joint congressional committee on reduction of nonessential expenditures in the name of economy. He thinks the committee has been spending too much money, and that it serves no useful purpose. It occurs to HUMPHREY that the interests of Federal economy could be excellently served by liquidating an agency which has been vigorous and constant in promoting the interests of Federal economy. To us this is a good deal like recalling the fire department because it has been using too much water putting out the fire.

The joint committee which HUMPHREY wants to scuttle is headed by Senator HARRY BYRD of Virginia. BYRD is the foremost spokesman for economy in the upper House. Year in and year out, he has kept up a steady assault on Federal waste and extravagance. Far from being an irresponsible and superficial spokesman, he is always careful to buttress his case with facts and figures. Thus we recall one report of BYRD's joint committee which cited more than 900 cases of overlapping and duplication in the Federal Government.

This committee preceded the Hoover commission on reorganization, and its efforts have been devoted to much the same good end. Considering its cost (HUMPHREY indicates total expenditures of around $350,000 to date) it is about as cheap a fiscal watchdog as can be imagined. If the Byrd group were to be dissolved tomorrow, the whole cause of Government economy would suffer. It would be about as dreary a piece of penny-wisdom and pound-foolishness as Congress could devise.

When HUMPHREY attacks the Byrd committee for extravagance, we think that Minnesotans are entitled to a few polite snickers. A comparable absurdity would be Senator BYRD rapping HUMPHREY for being too niggardly with Federal funds, or Mr. Truman demanding the abolition of the Democratic National Committee because it was pro-Truman. The logic is awry; the pieces do not fit together; the part that HUMPHREY plays is strangely out of keeping with many of the scenes that went before.

If Minnesota's junior Senator wanted to end the life of the Byrd committee—period—we could understand it. There would be no mystery at all in that, for HUMPHREY would then be reaffirming a familiar theme, to wit, that Government spending is the lifeblood of the Nation, and that economy is a sort of measle-like rash upon the body politic.

But when HUMPHREY wants to scuttle the Byrd committee on nonessential expenditures for the sake of economy, we are completely bewildered. The mystery, though, may be dissolved in time. As the Duchess sagely remarked in Alice in Wonderland, "Tut, tut, child, everything's got a moral if only you can find it."

Communists in Government Service

EXTENSION OF REMARKS
OF
HON. HENRY C. DWORSHAK
OF IDAHO

IN THE SENATE OF THE UNITED STATES

Saturday, March 4 (legislative day of Wednesday, February 22), 1950

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD Appendix a portion of a radio broadcast made over the American Broadcasting Co. network last evening, March 2, by the radio commentator, Mr. Jack Beall.

This distinguished veteran newspaper writer and radio commentator, substituting for Mr. Elmer Davis on this program, is known as a fact-getting reporter and news analyst. His observations in this excellent analysis of one of the most controversial subjects of the day should be of interest to every citizen of this country. I respectfully commend it to the attention of every Member of the Senate and the House.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Truman's conference yielded more news today. He came out with a statement which backs down a bit from his previous declarations about the McCarthy probe of the State Department Communist situation. Previously Mr. Truman indicated he would resist the effort of the Senate subcommittee in seeing the files. Today he said he is perfectly willing to cooperate with the subcommittee in furnishing information. Mr. Truman patted himself on the back for being the only one in the Government who has taken any concrete action against the Communists—a thing which would seem astonishing to anyone who remembers his repeated statements of "red herring" when congressional committees, and even the Department of Justice, were conducting hearings and trials of Communists or their sympathizers. But the swing-about today, in attitude, would indicate that the President had taken sage counsel from his supporters in Congress, who do not wish to have any clear-cut political issue develop on the subject of administration softness toward the Communists, who may still be in the Government.

It was extremely interesting to learn today that the State Department has acknowledged to Senator KNOWLAND, of California, that 257 loyalty review cases had been pending in the Department for more than a year. It was explained that one of the reasons for the delay was that the FBI had asked for more information and clearer fingerprints on some, and that many of these cases were overseas.

In these days of State Department pouches going by plane and when no spot on the earth is supposed to be more than 72 hours away by air, the delay of a year on loyalty cases concerning people abroad representing our Government would appear to be very dilatory. With those still in this country the excuse is less, both from the standpoint of the individual and of the Government, in keeping them for more than a year on the suspect list. It would tend to bear out Senator MCCARTHY's claim that not too good a job has been done of cleaning out the State Department.

If there is one thing that should be settled doctrine by now, it is that no Communists or Communist sympathizers have any right to employment by the very Government they are striving to overthrow and defeat. They may have a right to other jobs, but not to Government jobs, and particularly not to Government jobs in a sensitive agency like the State Department.

Federal Union for World Peace

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Saturday, March 4 (legislative day of Wednesday, February 22), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Time Has Come," published in a recent issue of the Nashville Tennessean. The editorial relates to the proposed Atlantic union. Editorials such as this one will do much to convince the public that, truly, the time has come.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE TIME HAS COME

The Senate Foreign Relations Committee will open hearings next week on Senator KEFAUVER's bold proposal of last year that the signatories of the Atlantic Pact, along with other acceptable democratic nations, seek to form a federal union for world peace along the pattern set by the union of the Thirteen Colonies into the United States of America.

This idea has lost nothing of its force since the Senator placed it before Congress. It has, in fact, gained significant support. Nearly 30 Senators and Representatives have signed the bill.

The objective is world peace, a peace by law rather than precariously balanced power and variable sentiment.

Since Russia's conduct has blocked the realization of the one-world vision inspired by World War II, Senator KEFAUVER wants to work at least for one free world, for federation of democratic and like-thinking nations.

The Senator's bill does not call for such a union. It merely authorizes the President to name delegates and call an exploratory conference with delegates of other nations to see how close they can come to agreement on the legal and governmental machinery of permanent peace.

Just as Bretton Woods explored the economic phases of international agreement as a necessary prelude to San Francisco, so would the Senator's conference explore all possibilities of this new and closer concept of federal union.

The Senator's proposal will not commit the country. It will cost us nothing but the trouble of learning where we stand and what our chances are of achieving the nucleus of peace.

Without ignoring the difficulties or advocating the creation of such an international union, the Nashville Tennessean thinks the trend of world events has made Senator KEFAUVER's concept sufficiently important to warrant prompt authorization of the exploratory conference by Congress.

National Defense

EXTENSION OF REMARKS
OF
HON. EDWARD H. JENISON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, March 4, 1950

Mr. JENISON. Mr. Speaker, one of the most active and well-informed groups of air-minded individuals in the Midwest area is the organization known as the Flying Farmers of Prairie Farmer Land. It has been my pleasure to be identified with the Illinois wing of this organization, and I have found the members not only interested in aviation personally but gravely concerned over matters of national defense as well. At their State meeting, held on February 9 and 10, 1950, at the University of Illinois, in Champaign-Urbana, they endorsed unanimously a statement of policy on national defense worthy of consideration. For that reason I take the opportunity granted by the House to extend my remarks in the Appendix of the CONGRESSIONAL RECORD and include the text of their resolution, which is as follows:

NATIONAL DEFENSE

Whereas we are now living in one of two diametrically opposed worlds, and

Whereas ours could be the weaker of the two if a serious mistake is made in our defense planning, and

Whereas such a mistake might bring national disaster, even to the point of subjugation by a Communist power: Now, therefore, be it

Resolved, That we, the Flying Farmers of Illinois, do in regular convention assembled urge the Congress of the United States to take the following steps:

I

Amend the Armed Services Unification Act by adding a fourth member to the Joint Chiefs of Staff, with said member representing the United States Marine Corps.

II

Empower the Navy to proceed immediately with the construction of a prototype aircraft carrier commonly known as a flush-deck carrier.

III

Establish once and for all the right of Congress to question either in closed or open hearing members of the armed services, and to guarantee to those questioned freedom from reprisals or punitive measures.

IV

Amend the National Defense Act so that it will clearly establish the right of each of the armed services to develop its own prototype weapon without fear of veto by the heads of the other two services.

V

Be it further resolved, That the United States Navy be urged to decommission the battleship *U. S. S. Missouri* and to use the funds thus saved to bring out of moth balls and recommission *Essex*-type aircraft carriers so badly needed in our defense setup.

Whereas it is important that Members of Congress be apprised of the thinking of their constituents: Now therefore be it

Resolved, That our executive secretary be instructed to forward a copy of this resolution to each and every Illinois Congressman and our two United States Senators, and to such others as may be necessary to the end that the Congress, the military, and the executive branch of our Government may be fully apprised of our wishes.

BILL RENSHAW,
Executive Secretary, Indianapolis, Ind.
HARLAN WALKER,
De Kalb, Ill., Chairman, Resolutions Committee.
FEBRUARY 23, 1950.

Specifications for a Republican Program

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Saturday, March 4 (legislative day of Wednesday, February 22), 1950

Mr. IVES. Mr. President, there appears in the current issue of the Atlantic Monthly magazine an article entitled "Modernize the GOP—Specifications for a Republican Program," written by our distinguished colleague, the junior Senator from Massachusetts [Mr. LODGE]. It has occurred to me that this article, being both interesting and thought provoking, might well be placed in the Appendix of the RECORD. I am sure all Members of Congress, both Republicans and Democrats, will be interested in reading the article if they have not done so already.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MODERNIZE THE GOP—SPECIFICATIONS FOR A REPUBLICAN PROGRAM

(By HENRY CABOT LODGE, JR.)

(A Yankee born at Nahant on July 5, 1902, HENRY CABOT LODGE, JR., was educated at Middlesex School and at Harvard. He began as a journalist in the Washington bureau and then on the editorial staff of the New York Herald Tribune. After two terms in the General Court of Massachusetts, he was the only Republican to replace a Democrat in the U. S. Senate in 1936, defeating ex-Mayor Curley by a plurality of 142,000. He was reelected in 1942; went to Africa in the first detachment of American tanks with the British Eighth Army; then resigned his Senate seat to serve in Italy, southern France, and Germany. He was elected to the Senate for the third time in 1946, where his record stamps him as one of the strongest younger men in the party.)

The American political party, whether it be Republican or Democratic, is not an end in itself; it is significant only as a part of our two-party system. I believe the continuance of this system is absolutely essential to the United States, and that the system is in danger only when one party appears to be losing its hold. There is talk today of the realinement of the American parties, and in this talk the Republicans are too often labeled as conservatives and reactionaries. Some of them want to be, as is evidenced by the following letter published in the Wall Street Journal after the 1948 election:

"We have in this country two major political parties whose philosophies of government are becoming more and more identical with each succeeding campaign. * * * If the two-party system is to remain virile and effective, the Republican Party must * * * return to a position of unmistakable conservatism, dedicating itself to a determination not to compromise with New Dealism."

This opinion, in my view, is anchored to a dead past. It expresses a philosophy with which the overwhelming mass of Republicans disagree. It denies the spirit which gave birth to the Republican Party, and if this opinion prevails it will condemn the party to certain defeat.

We must have a program which is obviously good for the country, a program which can be stated in specific terms and which will put us back on a competitive basis with the Democrats. Such a program does not mean "me-too"; neither does it mean mere negation. Instead of scolding the darkness, let us light a lamp.

I propose to confine this article to a domestic program and shall begin with taxes—always a sensitive subject in March.

TAXES

We should inaugurate a form of tax reduction which will encourage the growth of new economic activity and will therefore, in the larger sense, be most advantageous to the Government finances.

SPECIFICATIONS

1. Republicans should support a change in the law relative to the taxation of corporations doing a business of less than $1,000,000 so that they could file their returns as a partnership. Practically all the activities of venture capital start as small businesses. This would provide a powerful lift to the little man with a bright idea who is fundamentally the source of new jobs and new wealth.

2. Penetrating analysis—on a more purposeful and optimistic basis than has ever been undertaken before—should be given to the revision of our tax laws so as to reward those businesses which lower prices, increase production, stabilize employment, and keep their people at work even though they are old. A method should be worked out to ease the taxes on young people who are starting new business ventures. There has been a defeatist attitude about this type of incentive taxation—as distinguished from punitive taxation—which should cease.

CIVIL RIGHTS

To be true to our traditions we should embark on a realistic civil-rights program. This is a field in which the Democrats will always be weak, faltering, apologetic, and divided. It is a field in which we can be vigorous, effective, and bold. We can no longer tolerate the idea of having second-class citizens in this country, and the Republican Party must be the party to bring this truth home. To do so would be in the clearest possible Republican tradition. We were born as the antislavery party and the party of civil rights at the time of the Civil War, and it would be foolish and grossly negligent for us not to seize this issue again.

SPECIFICATIONS

In our legislation for civil rights we Republicans work to:

1. Eliminate the poll tax as a prerequisite to voting for Federal officials.

2. Make lynching a Federal offense.

3. Extend the right of equal opportunity to work and to advance in life to all citizens, irrespective of race, religion, color, or country of origin.

4. Insist on administrative action which would end racial segregation in the armed services as rapidly as possible.

5. Eliminate segregation in housing projects or in educational aid projects which are financed by the Federal Government. In both these fields the present administration opposed legislation which would have effectively blocked such discrimination.

These are moderate demands which are essentially public and civic. They do not impinge on private life. They are the minimum to keep modern government in harmony with the statement in the Declaration of Independence that "all men are created equal," and with the mandate of the Constitution "to establish justice."

SOCIAL LEGISLATION

In the field of social legislation we must not try to outbid the Democrats, who, let it be noted, have not achieved satisfactory results despite all their talk and 18 years in office. There are unquestionably problems in housing, health, agriculture, and social security. We must accept the challenge of producing the best solution.

The men who fought in World War II have been impressed by the fact that, when war broke out, the Government took off its coat, rolled up its sleeves, and proceeded to do whatever needed to be done regardless of the conventional theories about too much government. Many of the veterans reason today, therefore, that if Government was such a useful servant in time of war, it had better be equally useful in time of peace.

This statement is all right as far as it goes. But it is not complete wthout stating that the reason for our great performance in World War II was the competitive system, which in peace had developed incomparable efficiency enabling it to produce wartime munitions at an accelerated pace. Even if we admit the premise that we must use the power of Government whenever it can be used efficiently, we must never carry it to the point where we destroy the free system which is the source of peacetime prosperity, the trump card of our national defense, and the foundation of political liberty.

We need to draw a line between what is good and bad in the field of social legislation.

Republicans should approach such legislation believing that the American competitive economic system is the greatest possible producer of material welfare but that, excellent though it be, it is not perfect. There are some chinks which it does not fill. If nothing is done about filling those chinks, discontent will grow until it endangers the whole system. I, therefore, favor social legislation to fill in the chinks, both as a matter of decency and humanity and in order to maintain enthusiasm for the competitive system.

This is a very different type of social welfare program from that which the Democrat Party has undertaken. The difference between the two parties would be as broad as the difference between what is wasteful and what is well managed, between what is controlled locally by public-spirited citizens or controlled centrally by political bureaucrats, between something which really serves the people and something which appears to serve the people but in effect aggrandizes the State. There are two aspects of social legislation which come close to the heart of every family: health and security for old age.

HEALTH

Here is an issue which the Republicans must meet in such a way that the sick will receive good medical care without lowering the standards of the medical profession, without depriving the patient of the choice of his doctor, and without creating a system which is so overwhelmed by goldbrickers and malingerers that the really sick cannot get proper attention. The specific problem, of course, is to ease the financial burden of medical care for the individual citizen who is neither a millionaire nor a charity case.

The administration would approach this problem by putting the doctor into a compulsory system and so forcing the community to run the risk of socializing the medical profession. This is dangerous. We can obtain the desired results if in our program we aim for these objectives:

SPECIFICATIONS

1. Take action which will increase the number of high-quality young doctors; with inducements so that they will practice in places where they are most needed.

2. Lower the cost of the hospital bill—such an important item in medical expenditures—by using public funds for hospital construction and for the maintenance of such hospital services as the care of the indigent on welfare rolls; the education of residents, interns, and nurses; accident rooms; ambulances—services which are now often rendered at much less than cost.

3. Provide free diagnostic clinics, including X-ray service, so as to catch the disease before it gets established.

4. Furnish periodic health examinations for all school children.

5. Provide expensive medicines and appliances free of charge.

6. Provide funds for research and experimentation in the field of voluntary health insurance. We need to determine the utmost possibilities of such private insurance schemes as Blue Cross and Blue Shield. Extensive study should particularly be given to schemes such as that suggested in the Ives-Javits bill, which is a clearly superior approach to that of the administration. Sixty-one million people are already covered by voluntary insurance and the number is growing. Private schemes have a much lower overhead than that which would exist if the Government were to operate them; in them the individual would receive more for his money. People who have chronic heart disease or other ills which are not insurable by orthodox insurance methods would be cared for by issuing to them Blue Cross or Blue Shield cards, entitling them to exactly the same benefits as regular subscribers to Blue Cross and Blue Shield.

These proposals are not only radically different from that which the administration is sponsoring; they are more sound and truly generous. We should work out procedures along these lines and then the amount of dollars to be appropriated for these purposes would be separately decided in the light of the need and of the state of the budget.

OLD AGE

Never before have we had so many vigorous old people in this country. Many of them are well and could be productive; none of them want to be a burden on their children. The fact that people live longer than they used to has resulted in a large group tragically described in the phrase "too old to work and too young to die." To react to this fact by saying that men over 45 are too old for industry—as some have done—is clearly inhuman and absurd. The majority party, judged by actual legislation, does not meet the issue broadly.

SPECIFICATIONS

1. The Republican Party should insist that the Government increase the coverage and amount of old-age and survivors' insurance. The bill which passed the House at the first session of the Eighty-first Congress does not go far enough. We have the word of the Secretary of Labor that today "social security gives an old couple only $41." This is obviously far too low to support even a frugal living standard in our cities where the cost of living for a couple is estimated at from $120 to $150 per month. It actually compels about one-tenth of all persons receiving old-age insurance benefits to get public assistance as well—to which, of course, they have never contributed. It constrains many persons to stay at work when they are not really fit to do so, thus defeating a prime purpose of old-age security. I propose an increase to be financed if necessary by raising the pay-roll tax by not more than 1 percent, so that an old couple would receive an average benefit of between $90 and $100 instead of the average of $40 in the present law and of $80 in the House bill. This change could give a couple who were credited with an average monthly wage of $300 a benefit of about $150.

2. We should also insist on making the coverage as broad as possible, particularly so as to cover the more than 6,000,000 farmers and farm workers who today are ineligible for social-security benefits. This should result in a more intelligent and truly constructive type of farm legislation and should ease public-assistance costs in rural areas where they are highest. I contend that the wider the coverage the better for the country.

3. Every individual should be entitled to tax exemptions up to a stated portion of his income for the purpose of investing in a bona fide annuity plan. This would encourage both individuals and employers to provide for supplementary pensions or annuities, chiefly through tax concessions. This is a point which is not covered by the House bill. Our tax system should be revamped so as to give corporations a wider latitude in the framing of pension plans to suit their particular needs.

4. The House bill does not sufficiently liberalize the eligibility requirements for the aged. If relief costs are to go down in the future, the eligibility requirements for old-age insurance should be reduced along the lines suggested by the advisory council of the Senate Finance Committee to the Eightieth Congress. Under the House bill, a man 65 years of age would have to work a minimum of 5 years before he could retire. Only workers aged 69 or over could retire in less than 5 years. Yet these are the very people who will keep relief costs up because their earning power is so low. The advisory council suggested that persons aged 62 or over be qualified for benefits after 1½ years of coverage and contributions, thus shortening the time they are on relief. Such a provision would be a vast improvement over the administration bill and would really—and not merely hopefully—help to decrease relief costs in the near future.

These changes are defensible on humanitarian grounds; they would also promote economy in Government—Federal, State, and local.

PRIVATE RESPONSIBILITY

The arrangements regarding old-age pensions which were agreed to last November by Steel are all but one on a noncontributory basis, which means that the worker has no personal rights in his pension.

The worker loses his pension if he moves away from his job. This is obviously bad for the worker, bad for business, unsatisfactory for the community, and a potential danger in case of war, when workers would be wanted for transfer to defense industries. Moreover, the agreement by the large industries to pay direct pensions outside of the Social Security System naturally creates a demand to have small businesses do the same thing, and many small businesses simply cannot afford to do so. Clearly, the progress of the pension movement should not become one more discouragement and one more obstacle to the prosperity of small business. On the other hand, pension benefits received from the Government-operated social security fund are on a contributory basis.

Worker contributions along with the contributions of industry have built up this fund on a share-and-share-alike basis. The recipient has a vested right in his pension and carries that right with him even when he changes his job.

The agreements that were reached with the big steel companies provided that industry should underwrite a guaranteed pension payment of $100 per month on the understanding that whatever amount the Government provided out of social-security payments would be deducted from the amount which industry has to pay. To the extent, therefore, that Government social-security payments are increased, the burden of industry is reduced.

This is not in conflict with the idea that the more that industry, working through labor and management, assists in developing the security of the citizen, the better. Industries which, for example, can progress toward an annual wage to their employees, or industries which will agree to keep their older employees on the job, are perhaps the most powerful forces working toward the enhancement of our private competitive economy. The more our private enterprise carries the load, the less the demand on the State and the more we enhance the private enterprise system. Wider coverage and larger amounts under social security make the citizen more mobile; his potential for production is increased. Under a system based on a contribution by the worker, taken out of his own production, the result actually is that private enterprise bears a larger share of the cost even though the payments are made in the name of the Government. The worker, too, is, in the most literal and truthful sense of the word, private enterprise.

SPECIFICATION

Republicans should start legislation which would, all other things being equal, give preference, so far as Government contracts are concerned, to industries which guarantee an annual wage to their employees. This will be an effective denial to the rather helpless reaction of the majority party that the only solution to all problems is the indefinite extension of government.

These recommendations taken together would mean a much reduced burden of old-age assistance (or relief) locally, which cost $250,000,000 more in 1949 than in 1948. There would be a consequent reduction in local and State taxation, since social security would be financed out of earnings. Instead of throwing people on charity, either private or public, when they were old, we would now insure that they would have a modicum of existence as a matter of right.

Writing in the New York Times for December 26, 1949, A. H. Raskin said that one out of every four Americans past the age of 65 is currently on relief and the cost of assistance is running nearly nine times as high as it did in 1936. This is clearly not the best way to handle this problem.

We Republicans should say to the voter: We offer you social legislation without socialism, a welfare society without a welfare state; we offer you a self-executing, self-liquidating plan. We think the desire for security is normal and human and good, in war and in peace, and that we can have it without red tape, without bureaucracy, without governmental stupidity, without sacrifice of opportunity, and without loss of personal liberty. We Americans have done harder things than that in our history.

THE FARMER

Problems of the farm involve another type of social legislation, and, to be fair, the majority party must be judged by its latest agricultural bill, which became law on October 31, 1949. This bill will not promote the best long-range interests of either the producer or the consumer because it is not soundly based on the premise that the farm must be related to human food, which is produced either directly for human consumption or indirectly as feed for animals. Without such a relationship the consumer is taxed twice—once when he pays his Federal tax, and again when he buys his food. This current agricultural act is also bad for the producer because obviously he cannot have the prosperity to which he is entitled without the existence of a prosperous market. It appears all too likely that this farm law, with its rigid price-support provisions, will have the end result of increasing agricultural surpluses which may rot before they can be eaten. It will add more speculative elements to the whole structure of agricultural economics and, by inflating the price of animal feed, will increase the cost of raising cattle so much that the average consumer will be even less able to buy meat, dairy products, and eggs than he is now. As this is written, complaints are arriving in Washington from farmers confirming the worst fears of those who opposed the administration's farm law. They charge that the so-called big-factory farms, raising speculative crops, are subsidized by Washington but that the small family farm, raising food for people to eat, is out in the cold.

Surely, this is not the only approach to the farm problem. The Republicans should, here too, offer a program which is radically different, sounder, and in the end more generous. We should say that the farm must be related to food; that we think of agriculture not in terms of Henry Wallace's "ever-normal granary," but in terms of the "ever-normal refrigerator;" that we think of the farm as a place which grows the things that people put in their refrigerators because they are the things which are good to eat—milk, cream, butter, cheese, eggs, lamb, pork, and steak. No bill has passed Congress in the lifetime of anyone reading this article which has done anything to make steak more plentiful or cheaper for the consumer, or to make the production of steak more attractive to the farmer.

SPECIFICATIONS

1. A first step would be legislation ending the discrimination against the family-type farmer who raises hogs, poultry, and cattle—human food; discrimination which is in the present law. We cannot end the system abruptly, but we can and should eliminate its flagrant defects and move gradually toward the new objective of farm for food.

2. Legislation giving automatic protection against the kind of market collapses which ruin food producers could inaugurate this farm-food relationship and be of immense benefit to producers and consumers alike. But Congress must not only start thinking of the farm in terms of food; the parliamentary alliances between food and fiber growers must also cease. Were such an approach made, the voter would be given the choice between a system which piles up unwieldy surpluses, wastes the consumer's substance, and defrauds the farmer; and one which, on the other hand, being soundly based on the mutuality of interest of the farmer and the consumer, produces a better diet for the American people and a richer market for the farmer. There must indeed be no pitchfork stuck in the back of the farmer—or the consumer. The solution I propose sticks no pitchfork in anybody's back.

3. Congress, as I have argued, should extend social security to cover farmers.

4. Help should be extended to the farmer to assist him in the procurement of capital equipment, and it would be sound policy to extend direct aid for maintenance and improvement of the quality of the soil.

5. Republicans should subscribe to the idea that a good agricultural program must be designed primarily to protect those who need protection when they need it; not those who do not need it. Above all, it must protect the national economy. If anyone is going to be favored by this type of social legislation, it is the small farmer—not only for his benefit but for the good of the whole.

6. Out of our surpluses we must see that food will get to those consumers who particularly need it, through school lunches and food-stamp programs.

7. New uses for farm products such as those being developed through chemurgy should be encouraged.

All these procedures and objectives would in time put farm legislation on a new, sounder, and eventually more economical basis than exists today. The size of appropriations would have to be determined in the light of the need and the state of the budget each year.

LABOR

Here Republicans should favor specific and prompt corrections of those clearly proven defects of the Taft-Hartley law which are causing immediate hardships and inequities. For example, a labor leader came to me the other day and said that in certain parts of the watch industry new assembly-line procedures are currently eliminating the jobs of certain craftsmen. But because of a quirk in the law the union cannot use strike action for the retention of these men on one of the new assembly-line jobs, should such action be deemed necessary by the union. Correction of such manifest imperfections may perhaps incur the displeasure both of those who wish to retain Taft-Hartley without change and of those who are satisfied with nothing short of total repeal.

In fact, the watch worker's problem may seem to be a minor matter, of consequence only to the watch worker. But the solution of his problem by specific legislation opens a way for intelligent legislative treatment of the whole labor problem.

Up to now this has been dealt with by the "omnibus" approach, which forces a vote on a single legislative package, containing many and divergent legislative proposals, some good, some bad, and labeled "all or nothing." This has resulted in the rank and file of labor and the public becoming the unhappy victims of extremists in the Democratic Party, in the Republican Party, in management, and in the labor movement. The watch worker's problem is also important because it illustrates how a group of workingmen can be compelled to wait unnecessarily, perhaps for a whole year, before "omnibus" legislation can be finally agreed to, pending which their particular and essentially simple problem cannot be solved. They, therefore, symbolize the many other groups who for no good reason are suffering from an "all or nothing" political approach to labor legislation. (Let it also be emphasized that the vital interests of the rank and file of labor are not nowadays exclusively centered in laws affecting unions, but are strongly affected by all things which pertain to economic security.)

SPECIFICATIONS

1. Republicans, accordingly, should favor a bill removing the present legal prohibition against negotiations on matters in which technological changes are involved so that the situation in the watch industry described above will be subject to the same type of labor action as applies in industry as a whole.

2. To the best of my judgment there are at least two dozen other specific defects, many of which would be corrected by Congress if they could be brought up in individual—not "omnibus"—bills. These should be acted on quickly and new defects should be corrected as fast as they come to light.

3. The rank and file of labor would also be directly benefited by specifications previously described in this article which aim to improve the worker's diet, foster his health, make secure his old age, and which, by stimulating progress toward guaranteed annual wages, would stabilize his employment.

These then are a few specifications for a modern republicanism. There are necessarily omissions, such as conservation, military affairs, and foreign policy, all of which may become issues between the parties, but have not yet done so. The specifications proposed in this paper are neither negative nor imitative and I believe that, regardless of party fortunes, they are good for the United States. With them, of course, goes the vital duty of the minority to act as a check on the majority by constant scrutiny and investigation.

Underlying the entire program is the urgent need for a balanced budget and its corollary, a stable currency. A dollar of constant value has always been necessary to the successful transaction of business; to the millions receiving checks from the Government the constancy of the dollar is a matter of economic life and death. Republicans should work faithfully and enthusiastically toward making possible a balanced budget by a definite date, following a dependable timetable. This would be based in part on putting into effect measures of the type recommended by the Hoover Commission for the elimination of overlapping and duplication in the Government—a job which we should be able to do better than the Democrats because we have no political machine to protect. It would be achieved in part by the tapering off of Marshall plan and similar expenses which has already been announced and virtually accepted by both parties.

No man can say that this program alone will elect a Republican administration. Such an achievement may well be beyond the power of any program. Also, the full Presidential program comes with the national convention in June of 1952. Success at that time will depend on the candidate and his traits as much as it will on a program. Success also depends on the extent of the desire to throw out those in power. Luck and the irresistible forces of circumstances also play a part.

When we consider the Democratic reaction to this program, we come up against the predictions of many seasoned Washington journalists that there will be no legislation of consequence at this session of Congress and that it is part of the smart politics strategy which is currently dominating national affairs not to legislate, but to keep all the glittering legislative goals intact so that the party in power will reap a harvest of votes at the 1950 election in anticipation of favors to come. Those who remember the vigorous efforts of the late President Franklin D. Roosevelt to get Congress to act will note this difference and, perhaps, wonder at it. Clearly, the lack of constructive achievement in 1949 in such fields as civil rights, agriculture, and public health lends color to this journalistic opinion, however much we may deplore it.

If these observers are right, an issue arises between the parties which is in addition to the challenge which these clear and constructive specifications propose. The strategy of smart politics paints a picture of an administration making a cynical offer of political bait and thus raises the naked issue of sincerity, of responsibility, of achievement. This is an issue on which many a political campaign has been won in the past. But Republicans should not depend on administration shortcomings for success. We must press our own program—bold, different, practical, and constructive. Inspired by the beginnings of the Republican Party in the fight for human rights, we should press this program. We should do so because we believe that it will create a political climate in which the strength and self-reliance of the individual human being will grow and flourish. On this ground we will gain the victory because we deserve to win.

Hot and Coal

EXTENSION OF REMARKS
OF
HON. HERBERT A. MEYER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Saturday, March 4, 1950

Mr. MEYER. Mr. Speaker, an old-time Hit Parade tune contains this refrain, "The song is ended but the melody lingers on." Now that the coal strike has been settled, President Truman, when he improvises at the piano, might well play that tune but change the refrain to "The coal strike is ended but my malodorous action lingers on."

Under leave to extend my remarks in the RECORD, I include editorial from the Washington Times-Herald which sets forth why President Truman might well paraphrase this refrain as suggested:

HOT AND COAL

Announcement that John L. Lewis and the northern coal operators have reached a virtual agreement is the big news today.

However, the failure to convict the United Mine Workers of contempt is one of the worst miscarriages of justice that has ever occurred in our courts.

KEECH IS BLAMELESS

And the blame for it rests completely on President Truman and his Department of Justice. The not guilty verdict returned by Justice Richmond Keech was the only one he could have found on the basis of the evidence presented to him by the Government lawyers.

But there was plenty of other evidence that could have been produced by the Government which would undoubtedly have given the judge something on which to make an effective decision.

Senator TAFT, Republican, of Ohio, coauthor of the law under which Truman belatedly and lamely has attempted to halt the coal strike, too late, has pointed out that the Government did not show the judge the 60 affidavits furnished it supporting the contention that the back-to-work order of John L. Lewis didn't mean what it said.

These affidavits state that presidents of various locals told the men the orders didn't mean what they said; that it was decided at local meetings that the members would not go back, disproving the claim that the strike is the result of individual action.

Anyhow, common sense tells anybody the violence and threats used to keep a number of miners from working were evidence that some central authority was directing the whole thing.

TRUMAN IS AT FAULT

Why weren't those affidavits used? Why didn't the Government attorneys carry on a more vigorous prosecution? There's only one answer that fits the pattern drawn by Truman.

Truman hates the Taft-Hartley law. He's tried to get it repealed and failed. So he's going to do everything he can to smear it. By failing to ask for an injunction months ago, he attempted to rig a claim that Taft-Hartley is ineffective. The mock prosecution was clearly part of the same plan.

After he had his not-guilty verdict he asked Congress to give him power to throw Taft-Hartley aside and seize the mines. And right on the heels of that request came the announcement last night that an agreement on basic principles had been reached.

Why didn't Truman direct his Justice Department attorneys to file a new charge of contempt against Lewis and his union and prove their guilt with the evidence at hand? Is he so mulish or timid that he cannot admit he was wrong?

It would do no good for the Justice Department to appeal the case they have made before Keech. They made no case on which an appeal could be based.

Industry has been closing down all over the country because of the lack of coal. Hundreds of thousands of persons are suffering from cold and loss of work. All because Truman has been ducking his sworn duty to uphold the law of the land.

He has no moral or legal right to cast aside a law because somebody doesn't want to obey it. It's up to him to see all the laws are obeyed. And he cannot make exception because he doesn't like a law. Congress should insist he enforce the law at hand before they give him any more power.

Planned Slavery

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Saturday, March 4, 1950

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to insert therein the following article by Victor Riesel, which appeared in the New York Daily Mirror. It gives a graphic description of life in the Soviet paradise:

PLANNED SLAVERY
(By Victor Riesel)

Our Government has just received detailed information from a former highly placed Russian, who slipped into the American zone of Berlin recently, which discloses for the first time the exact manner in which the MVD (Soviet secret police) operates more as a slave manpower overseer than as an internal counter-espionage corps.

The information supplied during weeks of conversations between this Russian refugee and United States officials in Germany has been made available exclusively to this column and will be used shortly by the western democracies in a public fight within the United Nations councils.

Without the exploitation of 20,000,000 people in MVD slave labor camps the economy of the Soviet Union and its vast armament program would collapse, according to the Russian, who was a top echelon official of GOSPLAN, the U. S. S. R.'s highest planning agency.

SLAVE LABOR BATTALIONS

In fact, this former Gosplan executive, now under secure guard in Western Germany, reveals that the Soviet secret police was the main construction agency of the U. S. S. R. just before the German invasion, with a great part of its work devoted to building the Russian aviation industry. It still is.

Here, then, is the first accurate picture of the Soviet security police, not as an internal spy force, but as builders of special projects ordered by the Kremlin. These details were assembled and interpreted by the Commission of Inquiry Into Forced Labor, directed by a minister, Albert Herling.

The secret police's slave labor battalions build everything from children's nurseries to housing projects, from mining facilities to logging camps, from defense areas to paved roads of national importance, from camp facilities to railroad lines running through vast isolated regions.

ACHIEVEMENTS OF FORCED LABOR

Its prisoners mine uranium, gold, coal, chrome and iron ore, cut down huge forests for timber and dig for oil. The MVD even uses its concentration camp corps to make furniture and kitchenware. The refugee Gosplaner disclosed that a year or so ago this secret police division was ordered to turn out: One-eighth of the total production in the timber industry; 10 percent of all furniture and kitchenware production; 25 percent of the total U. S. S. R. freight towage and over 40 percent of total Soviet chrome production.

This was only a small part of its assignment that year.

The refugee revealed that since 1938 the MVD has provided "slaves" to produce 75 percent of all gold production and had large quotas for machinery, cement and the operation of oil fields in the Komi area near Ukhta.

The point is that the Russians long ago abandoned arrests for suspicious political activity and now simply seize thousands on short notice from their official manpower division just to provide enough forced labor battalions to produce on the Soviet's timetable.

PLANNED HUNGER AND FEAR

For example, when the secret police chief, Lazrenti Beria, was called in and told that the Germans had captured the Donbas coal fields and new sources were needed, he merely ordered the arrest of thousands of workers on suspicion of enmity to the state and threw them into construction of a railway line across hundreds of miles of tundra to the Pechora River basin to tap the coal supplies there.

Just as recently as last June, word came that labor battalions were needed in central Asia. Some 30,000 persons of Greek, Turkish and Jewish origins were given 3 hours' notice to be ready to leave their homes and shipped en masse to the Orient. So were entire peoples, like the Crimean Tartars and the Chechens in north Caucasus, for special projects.

According to the United States Government's Russian informant, the principal force which moves the political prisoners is hunger—not violence, not wages. The amount of work performed by the MVD prisoners in corrective labor camps determines how much they will eat. Those who weaken or refuse to work are hustled into solitary confinement, receive just subsistence rations and then are left to die if they rebel for long. When the forces are depleted, a new call goes out, and other groups suddenly find themselves suspicious characters.

Another type of forced labor not yet revealed here is performed by persons too valuable to ship across the tundra. They work under police guard at their normal jobs, but for reduced wages.

The Russian refugee said that fully half the political sentences in the Soviet Union cover this sort of arrest—intended just to freeze specialists into their jobs.

So, for many a Russian the secret MVD is with him literally from the cradle to the grave, for he is born in the secret police's hospitals, raised in its nurseries and dies in its labor camps.

Expressions of Views by Service Officers

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Saturday, March 4 (legislative day of Wednesday, February 22), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Saturday Evening Post entitled "Can't a General Speak to a Senator, Even in the Strictest Confidence?"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CAN'T A GENERAL SPEAK TO A SENATOR, EVEN IN THE STRICTEST CONFIDENCE?

During the Formosa controversy, Walter Lippmann thought it necessary to remind General MacArthur that soldiers should confine expression of their views to superiors, and that they had "no right to conduct a public agitation, using the press and politicians as their mouthpiece, to challenge and discredit the policies of their government."

Of course, it is perfectly true that a soldier in uniform cannot appropriately enter public controversy. However, as we understand it, this is not what General MacArthur is supposed to have done. The assumption has been that, when he was asked certain specific questions by Senator KNOWLAND, of California, and Senator SMITH, of New Jersey, the far eastern commander gave them his opinion as to the importance of Formosa in the defense of the Pacific area against the further spread of Communist power. Was that improper? If it was, the question arises how, in existing circumstances, the views of military authorities on a military problem are to be ascertained at all.

As a matter of practical fact, the reluctance of military and naval officers to express their views has contributed considerably to the present situation. At Yalta, we now know, a high military officer did his best to communicate to the American delegation the view of the armed services that it was unnecessary and dangerous to bribe Russia to enter the war against Japan. The officer expressed his views solely through "official channels," in which they were sunk without a trace—official channels being what they were. Had there been a couple of big-eared Senators about, to hear the story, who can say how different history might have been!

A little more indiscretion on the part of military men at international conferences might have held up the deal on the Kurile Islands or even the forced treaty by which China surrendered substantial rights in Manchuria to the Reds. But the leaks would have had to be directed outside official channels, which were so clogged with Services, Davieses and Hisses as to be all but impassable to the quaint notions of the men who have to rig up an American defense in spite of what the statesmen and their befogged experts do.

Maybe General MacArthur should have taken off his uniform and resigned his command before speaking quietly to Senators. But it is a hunch at least that the American people would support the idea that the general in the field should have some way of getting his views across.

Nebraska Is 83 Years Old

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 3, 1950

Mr. STEFAN. Mr. Speaker, on March 1, I took the floor to give the membership some information about Nebraska as a Territory and Nebraska as a State. Sterling H. McCaw, editor of the Norfolk Daily News, of Norfolk, Nebr., on that same day wrote an editorial giving a more detailed and more interesting story about Nebraska. I include this editorial with my remarks:

On March 1, 1867, this State came into the Union by proclamation of President Andrew Johnson, but through no favor of his. President Johnson had twice tried to block the admission of the State, for partisan political purposes. Once he succeeded, the second time he was frustrated by two-thirds of both Houses of Congress.

A lot of history was made between the time the first attempts were made to organize Nebraska into a Territory, and the day 13 years later when it took its place as a member of the family of States.

The signing of the territorial bill on May 30, 1854, by President Pierce, according to our office encyclopedia reopened the fierce sectional conflict between north and south. The conflict split the Democratic Party, destroyed the Whig Party, led to the organization of the new Republican Party and to the series of events leading to the Civil War.

Quite an accomplishment for a Territory soon to be inhabited by a peaceful and industrious people. It might also have been said that the bill had brought back into politics one Abraham Lincoln, who was to play an important part in the events of the succeeding decade. Lincoln had retired from politics, but when the Nebraska bill was reported out he put on his fighting clothes and slugged it out with Stephen A. Douglas, sponsor of the bill, and though beaten in the early rounds, won the final victory in his election to the Presidency.

The reason for the turbulence, of course, was slavery. The bill contained a provision that the people of the Territory might decide whether it should come into the Union free or slave. The Missouri Compromise of 1820 had provided that the new States should come in as free States. The free soilers looked upon this as a betrayal.

The battle gave the United States Senate what has been called its most turbulent session. But on March 5, 1854, after an all-night session, the Senate passed the territorial bill. The House followed in a couple of months and Nebraska became a Territory.

Originally Nebraska included all the territory extending from what is now the southern border of Kansas to Canada and west to the summits of the Rocky Mountains. But luckily this vast territory was divided at the fortieth parallel of latitude, and the area below that was made Kansas Territory.

That act saved Nebraska a lot of turbulence and bloodshed, for Kansas was the fighting ground of slavery and antislavery factions for several years. Beeche's bibles, as rifles sent from the East were called, were smuggled into the Territory and used with good effect.

But this is only incidental to Nebraska's birthday story. The State legislature on January 4, 1860, passed an act looking to the admission of the State, but the people were not ready for it, and it was defeated at the polls by a vote of 2,094 for it, to 2,372 against.

A new constitution was presented on June 2, 1866, and was adopted by a majority of exactly 100, the vote being 3,938 to 3,838. It was the soldiers' vote that saved the day. The members of the First Nebraska Cavalry gave the constitution the 100 majority, breaking what otherwise would have been a tie. The soldiers' count was 134 for and 34 against.

The fight had been a bitter one. The Republicans favored statehood in order to give their slim majority in Congress two more Senators and one Representative. The Democrats opposed it because they had formed a coalition with President Johnson's liberals and had hoped to organize the new Congress.

So when Congress, just before adjournment, passed the bill admitting Nebraska as a State, President Johnson gave it a pocket veto. The President pointed out that the constitution limited suffrage to white citizens. The Republicans saw the point and repassed the bill with a provision that the State legislature must eliminate color as a qualification for voting. President Johnson vetoed that bill, but the two Houses repassed it over his objections.

But the conditions that Congress had attached to the measure almost wrecked statehood. When the color provision came before the legislature it required seven votes to carry it through the senate. Seven senators favored accepting it, all Republicans, but one was sick. It looked dark for statehood until Isaac S. Hascall, of Douglas County, a Democrat, broke away from his party and cast the deciding vote for statehood.

"The air," according to C. H. Gere's account, "was blue with Democratic expletives at that time, but if the genius of that venerable organization haunted the chamber of the offender at the solemn midnight hour, and, fixing him with his glittering eye, said, like Othello to Cassio, 'No more be officer of mine,' 10 to 1 the tough and wiry Isaac hung out no signal of distress, and the ghost retired abashed."

Thus, painfully and precariously, Nebraska was born 83 years ago tomorrow. And at 83 it is full of vigor and of faith that the best days of its life are ahead of it.

Judge Keech Decision Seen Putting Truman in a Terrible Spot

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, March 4, 1950

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence, from the Washington Evening Star of March 3, 1950:

JUDGE KEECH DECISION SEEN PUTTING TRUMAN IN A TERRIBLE SPOT—GOP HAS BEEN HANDED MAJOR ISSUE ON LACK OF RESTRAINING LAWS

(By David Lawrence)

Judge Keech, through his decision acquitting the miners' union of contempt, has put President Truman in a terrible spot, politically and otherwise. But he had a right to reject conjecture and insist on evidence of collusion by the leaders with the striking miners.

Whether the Justice Department was overconfident and presented what it believed was an adequate case based on the precedents created when Judge Goldsborough uttered his now famous "wink and nod" doctrine or whether Judge Keech, who was a former White House assistant, leaned over backward to pronounce judgment on the basis of lack of proof will be debated for a long time to come.

Certainly the Republicans have been handed a major issue on a platter. This would tend to refute any idea that the case was not pressed in good faith. For today, instead of a Taft-Hartley law that is "oppressive," especially in its injunction feature, the country suddenly discovers that its labor-management laws are not strong enough.

OPPORTUNITY FOR SPEAKERS

Plainly nobody in the Democratic administration has wanted to see such a contingency arise, for it affords an opportunity for Republican stump speakers to put further blame on the Democratic Party.

Most important is the blunt fact now dramatized beyond any doubt that there is no law on the statute books that restrains an economic group bent on causing suffering and impairing the national health and safety.

Obviously, the mine workers union could have gotten the workers back on the job if it wished to do so. There is no lack of discipline in a closed-shop type of union. Undoubtedly also the strategy to circumvent the injunction if it came was worked out in great detail long before the strike occurred. It is a question whether anyone can be tried for a conspiracy to take steps to circumvent an injunction before it is issued.

But, on the other hand, there can be little doubt that the Government, by using the resources of the FBI and serving restraining orders on every officer of local unions, could secure the necessary evidence of a concerted refusal to go back to work. As Judge Goldsborough said, many hundreds of thousands of men in a union do not operate as individuals but in unison when they disregard plainly worded orders to go back to work. If, in truth, there has been such a collapse of discipline, then the right of a national union to conduct an industry-wide negotiation can also be questioned. So can the effectiveness of any signatures that may be affixed to a contract by union officers who have lost control of their men.

WON'T RESOLVE ISSUE

Seizure of the mines will not resolve the larger issue that has arisen—the arbitrary manner in which the public interest has been damaged. Nor will any one-sided seizure bill get through Congress. If profits are held up, so probably would wage rates and working conditions be frozen until such time as both sides agree on a settlement.

Demand for a general revision of the labor-management laws will be pressed, too, and Congress may find itself taking up the Taft-Hartley amendments which have been pigeonholed by the Democratic Party at the behest of the union leaders.

The American people now are face to face with the fact that economic groups have arisen which are apparently more powerful than the Government and which can make a mockery of court orders and the whole collective-bargaining process. It certainly calls for a leadership which thus far neither party in Congress has been willing to assert.

Is Socialism a Scare Word?

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. REED of New York. Mr. Speaker, an excellent editorial in the Evening Observer is timely and to the point; therefore under leave to extend heretofore granted I am inserting the editorial in the Appendix of the CONGRESSIONAL RECORD:

ONLY A SCARE WORD

President Truman thinks socialism is just a scare word. He said so. He said, "Their (the Republicans) current scare word is socialism."

Perhaps socialism is just a scare word to many Americans, but this light treatment of it makes it all the more a frightening fact rather than just a word.

Socialism is not just a word to Russia, to Czechoslovakia, to the troublesome minorities of Italy and France, to Cardinal Mindszenty, to Alger Hiss, to the Communists convicted of treason in fair American courts, to Chiang Kai-shek, to the Koreans, to Hungary, to Tito, to Poland, to east Berlin, to the British, to the Finns.

"For the Republicans to drag out the same old moth-eaten scarecrow of socialism again in 1950 * * * is an insult to the intelligence of the American people," says President Truman.

How remote can a President get from the facts of life? Were it not for socialism today the American military budget could be cut by two-thirds, the foreign-aid program could be diminished by a like percentage, taxes could be reduced, and the budget be cut by from one-quarter to one-half. Were it not for socialism there would have been no announcement of an H-bomb, no threat of a chain reaction which might destroy the planet. Were it not for socialism the United Nations would be moving smoothly and effectively, not stalemated by veto power.

Of course the President was speaking in a domestic sense, but in so doing he seemed unaware of the subtle movements by which a nation abandons free enterprise and develops socialism. That condition which is only a scare word to the President can be approached by both revolutionary and evolutionary processes. In the end it is the same socialism which can be and usually is a far worse tyranny than any which the founding fathers resisted in the creation of our Republic.

Surely the President's eyes cannot be closed to modern history, to contemporary history. How can he believe socialism to be a red herring, a scare word? The greatest, the most deadly, and the most insidious doctrine and way of life in the world today impresses the President as no more than a political bogey man. And that, we fear, reflects the smug attitude of too many Americans.

Politics by the Bushel

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Saturday, March 4, 1950

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report from Republican State headquarters at Des Moines, Iowa:

POLITICS BY THE BUSHEL

Secretary of Agriculture Charles Brannan tossed the farm program right smack into the middle of partisan politics when he appeared at the National Farm Institute. If there was any doubt that Brannan planned to make farm legislation a political football it disappeared in the smoke of what was billed as a "discussion of farm policy" but could be more accurately described as Pendergast political harangue.

Brannan took more than an hour to lambast farm organizations and their leaders and it wasn't until after he had delivered his blistering attack and promised to stump the country for his plan that he attempted to explain.

After listening to the Secretary for more than 80 minutes—during which there was no explanation of the plan—the panel chairman asked the Cabinet member to explain it in simple terms. But Brannan the politician didn't do it. He did devote 15 minutes to generalities, skirting the subject at every

turn. He failed to give an adequate explanation of the plan—something hundreds of persons in the audience had come to hear—and many went away as a dirt farmer in southwestern Iowa put it "more confused than ever before."
